The House That (Government) "Jack" Built

EXTENSION OF REMARKS

HON. DUDLEY A. WHITE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1939

Mr. WHITE of Ohio. Mr. Speaker, I am going to try to do my part in bringing slum-clearance values down to the place where they belong in order to be within reach of genuine slum families and in order to have the program on a basis that is fair to the average American citizen. The action a few days ago during consideration of the appropriation was merely the opening gun. Before we get through some of the same people who voted "no" then will regard the authorizing act as the best place for needed corrections; they are going to reason this thing through, untangle the complicated formula by which the complete facts of the present set-up are hidden, and likewise take the firing line to bring the slum-clearance program within the boundaries of its real and proper purpose.

It will take more than U. S. H. A. lobbying activities to halt this movement when the people of the country discover and

understand what is going on.

In order to present the question of slum clearance in its proper light, I would like to submit the following questions to the House and to the thinking citizens of this country:

- (1) At what amount would you estimate the tax value of the average home in your county (counting house and lot for farm families)?
- (2) How does the tax value of your own home compare with a \$6,000 slum dwelling?
- (3) When the Government erects a \$6,000 house for a slum family, is that fair to you, considering the value of your own home and the fact that you do not get it at Government expense?
- (4) Considering the value of your own home and others in your community, whether owned or rented, and the fact that you have to "foot your own bill," what price dwelling do you think should be provided at Government expense for a family now living in a slum area?
- (5) Should the Government build homes, designed for slum families, that are more costly than the homes occupied by the average American citizen?

(6) Can a slum family afford to pay rent on a \$6,000 dwelling?

(7) Judging by your own experience and observation, what should be the top cost of a home for which a slum family would likely be able to pay the required rental charge?

- (8) Is \$6,000 (1) a fair price, (2) a reasonable price, or (3) too much for the Government to pay for a house to be occupied by a single family that is unable to provide its own dwelling?
- (9) Is it just or unjust when a private citizen living in the average home of your community is compelled to support a Government program which provides \$6,000 homes for other people as a means of taking them out of slums?

(10) If you could decide the question by vote, would you favor giving slum families (a) reasonable shelter at Government expense, or (b) some more expensive type of construction?

(11) If you could decide the question by your vote, would you support a program that provides houses for slum families costing (a) more, or (b) less, than \$3,500?

(12) In figuring the costs of a dwelling erected under Government sponsorship, should only the original cost of construction be included, or also subsequent charges borne by the Government?

Tributary Stream Control

EXTENSION OF REMARKS

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1939

ADDRESS BY HON. JENNINGS RANDOLPH, OF WEST VIRGINIA, AT THE THIRTY-FOURTH ANNUAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS, MARCH 24, 1939

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address delivered by me before the Rivers and Harbors Congress:

Floods are no respecters of our environment. They hold no briefs for our centers of population, whether located on main rivers or on tributary streams. In fact, thus far, flood-damage

studies with which I am familiar are proportionally as great on tributaries for the population affected, if not greater than those on

the large rivers.

We only awoke to flood disasters as a national problem in 1936 we only awoke to nood classters as a national problem in 1936 when we set our legislative machinery in motion authorizing protection along the banks of our main streams (notably the Ohio) by means of reservoirs and flood walls. The basis for approval of these projects was that a favorable economic ratio should exist for the proposed separate projects. In other words, the ratio of annual benefits to annual carrying charges must be greater than

Gentlemen of the River and Harbors Congress, there is no doubt whatsoever in my mind that this plan is the solution to our flood

whatsoever in my mind that this plan is the solution to our flood problems along our main streams and to date the United States Army engineers have made excellent progress in carrying it out. The portion of the comprehensive plan with which I am most familiar is the Pittsburgh reservoir plan. Already the Tygart River Dam, near Grafton, W. Va., is complete and functioning as a flood-control dam. It has saved an estimated \$250,000 during the first year of its operation. Two other dams in this same plan are almost 40 percent complete. The goal for reservoir protection of communities on the upper Ohio, for one example, is rapidly being reached. The Army engineers have not restricted their activities to the principal stream. Their plan of protection is comprehensive, and one that embraces those of us on the tributaries who know and have seen abject misery and flood suffering.

TRIBUTARY CONTROL PAYS BETTER

Studies and surveys thus far made by the Army Engineers prove that local protection of communities on tributaries is as humanely and economically justified if not more so than protection of communities along the larger rivers. Do I mean that protection for the main stream should be along other lines? Emphatically no. I mean that, dollar for dollar, protection of communities on tributaries may yield a larger return in the form of benefits, because of the peculiar characteristics of tributaries, than does protection of communities on larger rivers. I mean that where the most economical methods of protection for the main streams will on the average carry a favorable economic ratio of 2.5 to 1, especially selected projects for protection on the tributaries may show a favorable economic ratio of 3 to 1, and in one case has even reached 9 to 1.

The principal methods of protecting communities on tributaries

The principal methods of protecting communities on tributaries are channel-improvement projects where the existing stream is inadequate to carry high flows, external diversion of flow from one basin to another, protective walls or dikes, and combinations of the above. Local conditions dictate which of these would be the most economical to construct.

of the above. Local conditions dictate which of these would be the most economical to construct.

A typical example of channel improvement is in progress today at Johnstown, Pa., at the junction of Stony Creek, Little Conemaugh, and Conemaugh Rivers. This project is outstanding in its economic justification. The ratio of annual benefits to annual carrying charges is 9 to 1, which I daresay is the most favorable of any flood-protection project, general or local, in the United States. This project is well under way and when completed will have cost \$7,600,000. It is interesting to note that during the preliminary studies a reservoir plan was considered in connection with the protection of Johnstown. The obstacles to such a plan, however, were insurmountable. Because of the small drainage area (657 square miles) above Johnstown and the consequent limited number of available dam sites, a plan of reservoirs would have given only one-half as much protection, but yet would have cost three times as much as the channel-improvement plan.

An external-diversion project at Lake Chautauqua is being studied at present for the protection of Jamestown, N. Y. This plan would divert the excess floodwaters of the lake into Lake Erie. An interesting byproduct of this plan of protection of Jamestown would be the reduction of flood heights on the Ohio and Allegheny Rivers by way of Chadakoin River, a tributary of the Allegheny.

ELKINS PROJECT IS NEEDEL

The flood problem, however, of which I can give you firsthand information occurs in my home city at Elkins, W. Va., because in the past 22 years residents have seen 18 floods in that community. In 1932 I saw 25 percent of the entire town inundated, and had there been a rise of 7 feet higher in that flood it would have resulted in conditions comparable to those in the Ohio Valley during the great floods of March 1936 and January 1937. The city would have become isolated; habitation, commerce, business, industry, education, and life itself would have been seriously affected, and flood losses would have certainly required cutside relief. All this, gentlemen, would result from an increase of 7 feet above the 1932 flood, and yet studies show that the maximum probable flood at Elkins is 18 feet higher than that same flood. is 18 feet higher than that same flood.

is 18 feet higher than that same flood.

This case is an excellent example of the close relation existing between specialized flood protection and location on a tributary. Elkins is a progressive community located at the downstream end of a rich, flat valley 22 miles long and 1 mile wide, through which courses the Tygart River. To build a dam above the town for its protection would entail enormous costs in comparison to the berefits received, since the reservoir would flood one of the most fertile regions in West Virginia and a railroad running through its center.

Again the United States Army engineers have developed a practical plan for the protection of a tributary community. It is a combination of a cut-off channel across the bow of the Tygart River above town and the necessary diversion and protection dikes.

The plan as proposed will cost approximately a million dollars, and it is expected that it will carry a very favorable economic ratio.

ARMY ENGINEERS DO GOOD WORK

The comprehensive planning of the Army engineers proves con-clusively that the protection of centers of population on tribu-taries is justifiable in many instances. Economically selected projects on tributary streams are showing, and naturally should show because of their great selectivity, better ratios than large projects. I repeat again that the ratio of benefits to costs of 9 to 1, which exists at Johnstown, is, I believe, the most favorable in the entire United States.

From an engineering viewpoint, small tributaries naturally have small drainage areas, which limit the number of available dam sites and consequently make further studies necessary. Because the drainage area is small, however, is no sign that it is limited in flood potentialities. Studies of my section of the country show that the maximum reasonable expected run-off from a drainage area of 20,000 square miles is 30 cubic feet persecond nor square miles whereas for a drainage area. second per square mile, whereas for a drainage area of 200 square miles the maximum reasonable expected run-off is 370 cubic feet per second per square mile. Over 12 times as much discharge per square mile from an area 100 times smaller. Naturally, special means of protection must be designed to meet these special conditions. tions. The channel improvements, protective walls and dikes, and external diversions as I have outlined above are as definitely associated with protection on tributaries as reservoirs and flood walls are associated with protection on the main streams.

Gentlemen, the projects I have just outlined to you are a mere skeleton of comprehensive flood-control planning by the United States Army engineers who are striving to protect not only centers of population on main streams but also those on tributaries as well. First things must come first, and each project must be considered on its merit.

It is this type of national conservation and sensible planning that has made the United States a great and prosperous Nation. Supporting its progress will be the foundation of an even greater United States.

Agriculture

EXTENSION OF REMARKS

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 28, 1939

Mr. SABATH. Mr. Speaker, charges have been made that very little has been done by this administration for the farmers. Everyone familiar with the tremendous appropriations for agriculture since President Roosevelt took oath of office must be aware that these charges are not true. To bring home to those who make these charges and who are trying to fourflush the farmers into believing these charges, I insert a statement of the appropriations or Federal aid to agriculture.

Federal aid to agriculture, 1933-38, as of Dec. 31, 1938 Farm Credit Administration: Federal land banks_ 967, 016, 890 1, 120, 840, 034 174, 672, 107 72, 008, 540 3, 677, 394, 876 887, 426, 097 Total . mitments.) 574, 714, 441 loans and grants, etc.) Agricultural Adjustment Administration (All programs, including rental and benefit 2, 846, 872, 742 payments, conservation payments, cotton price adjustment payments, sugar payments, etc.)
Department of Agriculture (drought purchases)____ 83, 922, 420 Farm Credit Administration, reduction in interest 128, 071, 120 Federal Farm Mortgage Corporation, reduction in interest rates 9, 411, 173

28, 697, 331

12, 773, 526

Works Progress Administration, land utilization and loans and relief to farmers (actually expended by the Farm Security Administration)

Farm Security Administration, farm-tenant program—loans

APPENDIX TO THE CONGRESSIONAL RECORD

1928 1929 1930

Federal aid to agriculture, 1933-38, as of Dec. 31, 193 Parity payments (no disbursements as yet).	8—Continued
Federal Surplus Commodity Corporation	\$56, 493, 502

8, 305, 777, 228 66, 080, 543

Total______ 8, 371, 857, 771

Mr. Speaker, in addition to the tremendous total of \$8,371,-857,771 we have appropriated \$585,000,000 for rural rehabilitation, conservation, transmountain water diversion, irrigation, loans, and relief to farmers and livestock growers. Congress has also appropriated further moneys under title V of the Price Adjustment Act of 1938 the sum of \$212,000,-000 for parity payments to agriculture.

Out of the Federal appropriations for relief and work relief, at least 40 percent has gone to the agricultural and rural sections of the country. This amount is in excess of \$7,000,000,000 and added to the original or direct Federal appropriations to agriculture the benefits to agriculture and the rural districts amount to over fifteen and one-half billion dollars. There were also additional appropriations to aid agriculture that run to \$2,000,000,000, so that the total for relief and aid to our farmers was over \$17,000,000,000, and, with the appropriation in the present bill of \$900,000,000 the aid and benefits to agriculture to the end of the fiscal year of 1940 will be over \$18,000,000,000.

And still, Mr. Speaker, in the face of these authentic figures, the Republicans have the effrontery to claim that nothing has been done for the farmers. They have hoodwinked the farmers in the past, but the farmers of today know that this administration has been responsive in coming to their aid and they will give credit where credit is due.

The Problem of the South

EXTENSION OF REMARKS

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1939

Mr. BROOKS. Mr. Speaker, at this time I desire to review in figures the lamentable history of the cotton farmer of the South during the last 10 years. These figures tell the sad story of suffering, deprivation, and struggle under increasing odds and burdens. They indicate unmistakably the world trends in cotton production and consumption, and they sound out a warning to the entire Nation which this Congress cannot afford to ignore.

Production and consumption is equivalent language to supply and demand, the two economic forces that govern the market price of any commodity. I will, therefore, first present certain figures compiled by the Government to show the domestic production of cotton and to show likewise the foreign production of cotton. It is worthy of mention that since the year 1910 this Nation has produced annually from ten to sixteen million bales of cotton, and only in 3 years, namely, 1926, 1931, and 1938, has our production failed to come within these figures. In 2 of these 3 years our domestic production rose to almost eighteen and almost nineteen million bales, respectively. Through the years generally, however, the tendency has been largely to maintain a stable and level domestic cotton production in this Nation; but figures will illustrate this very clearly:

Production in bales

1925	16, 123, 000
1926	17, 755, 000
1927	12, 783, 000

14, 297, 000
14, 548, 000
13, 756, 000
16, 629, 000
12, 710, 000

 1931
 16, 629, 000

 1932
 12, 710, 000

 1933
 12, 664, 000

 1934
 9, 472, 000

 1935
 10, 420, 000

 1936
 12, 141, 000

 1937
 18, 946, 000

Production in bales-Continued

¹ Estimate. Final figures not available until May.

Now, an inquiring mind will naturally ask regarding consumption of cotton which our farmers have worked to produce. These figures are easily available, and I quote as follows:

Domestic consumption of cotton	
	Bales
1926	7, 190, 000
1927	6, 834, 000
1928	7, 091, 000
1929	6, 106, 000
1930	5, 263, 000
1931	4, 866, 000
1932	6, 137, 000
1933	5, 700, 000
1934	5, 361, 000
1935	6, 351, 000
1936	7, 950, 000
1937	5, 748, 000
1938	13, 391, 808

¹6 months ending Jan. 31, 1939.

It is interesting to know that United States consumption of cotton has shown a tendency to gradually increase during the last 10 years. In the year 1936 it reached the all-time high figure of 7.950,000 bales and in 1938 tabulated 6,082,808 bales. So we see that our cotton surplus is not the result of weak and shrinking domestic markets but, on the contrary, must be due to a failure of foreign markets. This fact is amply borne out by reference to the figures quoted below to show the world consumption of cotton and the consumption of cotton by nations other than the United States.

	Foreign consump- tion	World consump- tion
1926-27 1927-28 1928-29 1929-30 1930-31 1931-32	Bales 10, 121, 000 9, 709, 000 10, 556, 000 11, 857, 000 11, 346, 000 10, 368, 000 10, 601, 000	Bales 25, 869, 000 25, 285, 000 25, 782, 000 24, 878, 000 22, 402, 000 22, 896, 000 24, 986, 000
1933-34 1934-35 1935-36 1986-37	10, 368, 000 10, 601, 000 11, 544, 000 14, 149, 000 15, 211, 000 17, 771, 000 16, 042, 000	25, 324, 000 25, 198, 000 27, 627, 000 30, 820, 000 26, 748, 000

It is evident that both the world and foreign consumption of cotton has gradually increased each year; and our trouble cannot, therefore, be due to the shrinking world markets and to the declining use of cotton goods by the people of the nations of the earth. Compare these figures with those showing the export of American cotton which I place below:

Exports of American cotton (including linters)

	United Kingdom	Germany	Japan	France
1927 1928 1929 1930 1931 1932 1933 1934 1935 1936 1936 1936	2, 530, 000 1, 411, 000 1, 831, 000 1, 256, 000 1, 054, 000 1, 344, 000 1, 492, 000 738, 000 1, 410, 000 1, 144, 000 285, 458	2, 738, 000 1, 988, 000 1, 797, 000 1, 687, 000 1, 640, 000 1, 570, 000 1, 318, 000 342, 000 765, 000 650, 000 200, 135	1, 616, 000 959, 000 1, 309, 000 1, 020, 000 1, 228, 000 2, 294, 000 1, 743, 000 1, 524, 000 1, 479, 000 1, 550, 000 528, 351	999, 000 865, 000 775, 000 812, 000 914, 000 463, 000 864, 000 779, 000 681, 000 655, 000 293, 834

The figures given above are all of Government tabulation except in the table showing exports of American cotton, which figures are the best available and, I believe, are accurate. They all refer to cotton bales of 500 pounds weight.

These are tragic figures and indicate, to my mind, a losing fight which our farmers in the Southland have been making during the last 10 years. They bespeak a warning which cannot be overlooked and which demands legislation in the present session of Congress on behalf of the cotton farmer.

That this is the case is readily seen by reference to market quotations of the prices of cotton at the present time. I picked up the paper Saturday and obtained the following quotations on the New York markets which give increasing importance to this solemn warning. Saturday's closing quotations according to the New York Exchange were:

	Close	Year ago
May	8, 15 7, 93 7, 57 7, 51 7, 50 7, 53	8. 67 8. 72 8. 78 8. 79 8. 81 8. 86

The further we look toward the future in purchasing cotton the lower the price of this commodity. In the face of the cotton bill which we have before us and which contains an appropriation of \$500,000,000 for conservation payments and the additional sum of \$250,000,000 for parity payments, the world markets for our cotton continue to decline. This decline occurs in the face of the idea of the public that these funds will be appropriated to continue the conservation program and to help give the farmer a reasonable price for his cotton. If you strike from this bill the sums of money which the public mind already regards as having been appropriated by Congress, you again affect the market, and, in my opinion, will bring it to lower depths than it has reached even at the present time.

What hopes has the American farmer? What hopes has the southern cotton farmer, in the face of years of restricted production, in the face of years of promises of higher prices and greater yields?

The last 20 years have been years of struggle and deprivation for the farmers of the South. They have been years of experimentation with methods to offset the effect of subsidizing privileged industries by tariffs and payments. All during this time the situation of the cotton farmer has grown worse and the condition of himself and his family has sunk to a lower place in society financially. Nothing but radical steps on the part of this Congress to give him complete parity with the prices of other commodities, nothing short of placing cotton in its true position in regard to the other markets of this country, nothing short, in fact, of giving the farmer an equal break with the factory man and with the banker, can hope to bring back to the rural sections of the United States a reasonable degree of wealth and prosperity which is so essential to the well-being of our entire Nation.

In this hour of crisis to our farming population I urge upon you all possible consideration of his condition and his demands.

Keep American Market for the American Farmer

EXTENSION OF REMARKS

HON. BERT LORD

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1939

Mr. LORD. Mr. Speaker, we have before us one of the largest appropriation bills for agriculture that has ever come

before the House, and we should appropriate for this greatest of industries; but this bill will not help the dairy farmers only so far as the soil conservation goes.

What we need is protection of the American market for the American farmer.

This bill provides a subsidy for the cotton farmer when the Government has more than 11,000,000 bales of cotton in storage that the Government has loaned more than 9 cents a pound on when cotton is selling from 8 to $8\frac{1}{2}$ cents a pound and this bill proposes to keep on piling up cotton instead of selling at the world price.

The bill proposes to keep on paying the corn farmer 15 cents a bushel not to raise corn, and to pay the wheat farmer 28 cents a bushel not to raise wheat, to pay the rice farmer 2 cents a pound not to raise rice, and the tobacco farmer not to raise his crop.

Just so fast as farmers take any of the above crops out of production they must put the land into some crop like clover or alfalfa, and this can be used only for raising cattle and cows, so when we stop raising corn, cotton, wheat, and tobacco we put the land into clover and compete with the stock and dairy industry. In other words, the stock and dairy business is paying taxes to pay subsidies to the corn, cotton, wheat, rice, and tobacco farmers, and the dairymen get little if any benefit from the program.

The only claim for their benefit is the surplus commodities taken off the market, and this is offset in a great measure by the reciprocal-trade treaties that let the dairy products come into the States at greatly reduced tariff rates. We are buying the sugar from Cuba that would put thousands and thousands of acres of land into production in this Nation. Let us stop buying our sugar abroad and produce it here. This would take the wheat and corn and the other crops out of production and they could shift our crops so there would not be a surplus.

This would reduce the corn and other crops and also reduce the competition with the dairy industry, and there would be no need of subsidies.

Let us keep the American market for the American farmer.

Stop the Private Armies

EXTENSION OF REMARKS

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1939

RADIO ADDRESS BY HON. JOSEPH A. GAVAGAN, OF NEW YORK, MARCH 23, 1939

Mr. MARTIN J. KENNEDY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following radio address by Hon. Joseph A. Gavagan, of New York:

I do not know a more vital and important subject facing the people of this country than the one assigned me for discussion. Before the establishment of our Government the questions of private armies and the bearing of arms were vexaticus. During the Constitutional Convention the delegates strove to vest this power in the Federal Government and accordingly provided in section 8 of article I of the Constitution, as follows:

of article I of the Constitution, as follows:

"Congress shall have power to provide for the common defense; to declare war; to raise and support armies; to provide and maintain a navy; to make rules for the government and regulation of the land and naval forces," etc.

Congress and Congress alone—has the constitutional duty and power to provide, regulate, and equip the armed forces of this Nation. This grant of affirmative power to Congress is so all-inclusive that it constitutes a denial of the exercise of such power

by any State or any group, within this Nation.

The question of private armies is not new in history. We know that in feudal days great landed barons maintained and equipped

private armies for service to the king. The feudal lords maintained and kept ready, armed forces which in times of stress or conquest they offered to the king, as a token of fealty, homage, and service. Our forefathers knew history and the lessons of history, and accordingly abolished private armies, vesting in Congress alone the power to raise, equip, and provide for the armed forces.

power to raise, equip, and provide for the armed forces.

Are we, their descendants, to be less mindful of history's lesson? For answer, we need not turn back the pages of history to the days of feudalism. We need but to look across to Europe, in our own day, to behold the evil and the diabolical result of private armies. We know, for instance, that the European dictators rode to power through the use of private armies. We know that Mussolini and Hitler, before they seized power, raised private armies. The former his "black shirts", the latter his "brown shirts." Hitler boasts in his autoblography Mein Kampf of his use of terrorism through his brown-shirted troops. In passing, I desire to point a warning to those in this country who seek to wear the "brown shirt": Do you remember what happened to Hitler's "brown shirts" and their leader? Well, after his seizure of power, Hitler, on June 30, 1934, liquidated the "brown shirts" and their leader, Captain Roehm. In this he was true to the best traditions of dictators and despots. Murder and arson have always been their weapons. Murder and arson have always been their weapons.

Murder and arson have always been their weapons.

Do we Americans wish to transplant in this country the conditions existing today in central Europe? I do not believe so. In fact, I sense in this country the dawning of the realization that we who love America have been too tolerant of those in our midst who worship foreign ideologies and seek to implant them here. We are beginning to realize that there are among us those who do not properly understand and appreciate our God-given freedom of free speech and free assembly, but who, on the contrary, assume these rights to constitute a license to insult our institutions of government, heap ridicule and obloquy upon our duly constituted officials. ment, heap ridicule and obloquy upon our duly constituted officials, even seeking through force the overthrow of our cherished institutions. If such there be let them heed the warning uttered by the great Speaker of the House of Representatives, Hon. William B. Bankhead, of Alabama, who on March 4 last, on the occasion of the one hundred and fiftieth anniversary of the final adoption of our Constitution, said:

"There are evidences of certain sinister influences and minorities now seeking to sap and mine the pillars of this temple of freedom. We may have been too generous in our hospitality to them. We may have been too tolerant of some of their recent manifestations of subversive treachery. We have sought with rather grim patience to respect the guaranty of freedom of speech; but it may be only fair to admonish all such groups that they take counsel of their prudence lest by going one step too far it will be too late to escape the wrath and indignation of all real Americans."

Thus spoke the illustrious Speaker of the House of Representatives. His voice, let me assure you, is no solitary one crying in the wilderness; it is reechoed by millions upon millions of our citizens and is a clarion call to us who believe in the divine nobility of our institutions of government to make ready now as of yore, to protect and defend them against any tyrant, dictator, or despot, whatever the color of his shirt, be it brown, black, or red, and whether clean or dirty.

red, and whether clean or dirty.

Over a decade of time now, our system of government has been assailed by disciples of all varieties of "isms." We have witnessed individuals and groups in the full enjoyment of liberty hurling opprobrium and brimstone on the very institutions and principles that make that liberty possible. They resort to all manner and means of propaganda. Their panaceas are as varied as human thought itself. They have had the field unopposed, but methinks they mistook indifference for surrender—at long last, we have awakened—we perceive that which we thought silly and harmless to be a well-planned attempt to overthrow, either by force or otherwise, our system of government and to substitute therefore communism or national socialism. This challenge we shall resist with all the vigor of a patrictic people. We are determined to prewith all the vigor of a patriotic people. We are determined to preserve and maintain for the human race and especially for ourselves, those principles of liberty and government that have made us unique in the history of mankind.

us unique in the history of mankind.

With this spirit, therefore, I have introduced in the House of Representatives a bill known as H. R. 4641, making it unlawful for any person or organization seeking either to change our constitutional system of government or to amend the same, to wear or adopt a uniform or to bear arms in the course of such activities. Frankly, the purpose of the bill is to prohibit the recurrence of the shameful and un-American scene enacted recently in Madison Scarler in Nor Verk City. These was displayed the heaven the shameful and un-American scene enacted recently in Madison Square Garden in New York City. There, was displayed the brown-shirt uniform bearing the swastika; there, armed members of the so-called bund maintained and preserved order; there, were uttered contemptible denunciations of the President of the United States. All Americans resent such actions, and especially when done by persons wearing foreign uniforms in allegiance to a foreign power. Such is not free speech. Free speech will be denied in this country if orators have an army, large or small, to carry their mandates into effect.

Contemplating the scenes enacted at Madison Square, we marvel at the stupidity of those there assembled. Do they not remember the events preceding 1917? Is it possible they forget? Are they just stupid? If so, they will never learn but will persist in their stupidity until they once again feel the might of the United States

Let those in our midst who love so well the foreign dictators return to those countries and attempt the exercise of free speech

and free assembly. If they do, they'll soon experience the concentration camp or the firing squad.

We want no foreign "ism" in this country. We shall have none. We seek peace and the right to live in a free concord of nations. We shall not and cannot be bluffed or frightened. We are resolved to maintain and preserve for ourselves and our posterity the bless to maintain and preserve for ourselves and our posterity the blessings of constitutional freedom under a representative republican form of government. That is the heritage we received from our fathers; that is the legacy we are bound before God to pass on to our children. Liberty, like life, was born of pain and struggle; she demands sacrifice to preserve herself; constant vigilance is the price; at all times in the history of mankind there were those who constantly assailed her; she has known her detractors and her defenders; she has drunk the bitter gall of temporary frustration; but ever like the sun, she rises giving to struggling marking a but ever like the sun, she rises, giving to struggling mankind a new hope and joy, emblazoning life's pathway with heaven's light, inspiring men's souls to fulfill their destiny, and giving to a distracted world a benediction of peace.

Agricultural Appropriation Bill

EXTENSION OF REMARKS

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1939

Mr. DONDERO. Mr. Speaker, the bill before us proposes appropriations of \$1,060,000,000 for the Department of Agriculture and the Farm Credit Administration for the fiscal year ending June 30, 1940. This enormous sum of money represents approximately one-seventh of the entire farm income of the United States. This bill represents a potential tax of \$8 on every person in the United States. To the Seventeenth Congressional District of Michigan, which I have the honor to represent, it means a burden of two and a half million dollars.

The Secretary of the Treasury, Mr. Morgenthau, recently testified before a committee of Congress that he did not care to make a statement or a forecast as to our national safety if our national debt went beyond \$50,000,000,000. It would take but 10 bills like the one before us for consideration to send the national debt above \$50,000,000,000, so near are we to the brink of national bankruptcy and ruin.

Economy is not present in this Congress nor has it been the guiding star of this administration. While it was promised, it has never been practiced and some day the people of this Nation will answer the deception which has been meted out to them in the administration of their National Government.

This legislation would be of little or no benefit to the farmers of my district. On the other hand, it will add another heavy burden on a people already overburdened.

Two hundred and fifty million dollars was added to this bill for parity payments without a request or any authorization from the Bureau of the Budget, the Secretary of Agriculture, or even the President of the United States. In the face of declining prices for farm products, and after appropriating billions of dollars for agriculture in the last few years, we are again asked to repeat the same mistake without regard to its effect on the economic condition of the country or the general welfare of the people.

No effort has been made and no intention indicated to change the policy of this adminstration in permitting the importation of foreign agricultural products, which certainly has aided in wrecking the home market for the American farmer, a market on which he must depend to sell what he produces.

It is a fact, as everyone knows, that the urban population and the consuming public residing in the great business and industrials centers of the Nation furnish the natural and legitimate market for the products of the farm raised by the American farmer. When these great centers of population are visited by industrial and economic upheavals and the men and women who reside in them are thrown out of employment, they are no longer able to purchase the products

of agriculture and the American farmer loses the best market he has on earth.

If this administration and this Congress desire to aid agriculture, by a method which at least has not proven itself to be a mistake, then let an attempt be made at once to correct the causes of the present unstable conditions in business and industry with its resulting unemployment. Let us correct the causes of a want of faith and confidence, which everyone knows exist today, of doubt, uncertainty, and the fear that grips and holds initiative and private enterprise from going forward and which has driven private capital into seclusion and hiding.

The Wagner Labor Act was passed to bring about industrial peace and a better relationship between capital and labor. In that it has failed utterly. It has brought industrial warfare. Strikes have swept the country. Radical and irresponsible labor have ridden in the drivers' seat encouraged by acquiescence or at least by silence on the part of those high in the authority of government in some of the States and in the national administration. Business is paralyzed. Employers have become the victims of bias and prejudice and the attitude of the National Labor Relations Board and its members, perhaps excused by the provisions of the act under which they have been appointed, has resulted in the general unrest and economic conditions existing in the country today.

Our people are no longer acting in concert and cooperation one with the other for the general welfare. Class has been arrayed against class. Hatred and ill will exists between employer and employee. Legislation imposing new rules, regulations, and taxes on the business and industry of the country has added to the burden, and the loss of confidence and the fear to move forward, to expand or employ labor has grown up. Social security taxes alone have taken a billion dollars away from labor and industry and not one dollar of it will ever go back to provide a job or expand an industry. Every one knows, who honestly has the welfare of his country at heart, that the Nation will not go forward to a more prosperous time under conditions of this kind.

The President has said that the Wagner Act—National Labor Relations Act—should be amended. I agree with him, and so informed him as long ago as January 10, 1938. It is to be regretted that nothing has been done up to this time to correct the mistakes of that act, which are now so apparent to everyone. Labor has suffered most by its unwise and unfair provisions. Government must cease to interfere with the normal activities of the people and their affairs.

We can do much for the farmer to restore his market and the price of his products if we will stabilize the general economic conditions in the country by correcting the mistakes that have been made in the last 6 years. It is futile to appropriate billions of dollars and drive the Nation at breakneck speed toward bankruptcy and ruin in an effort to help the farmer without attacking the real problems of the Nation which cause conditions through which the farmer can neither sell his products, nor receive a fair price for what he produces.

The time has come when blunt frankness should be recommended, no matter where the responsibility may lay for existing conditions, for by no other method can we cooperate with each other, either in the Congress or in the departments of Government, to restore what is so sadly wanting in American life at the present time.

For the reasons which I have stated herein, I cannot support this legislation. Unless we terminate the present trend in national affairs, the American people may well look forward to the time, which may be too near at hand, when they must suffer the tragedy and disaster which will be their lot as a result of uncontrolled inflation, brought about by profligacy and waste of the public resources, or a worse alternative—repudiation of the Nation's honest debts. God forbid that such a fate awaits the greatest nation on earth, with a government which has no equal on the globe, and to a people

who have enjoyed a standard of living under that government which has never been reached or approached by any other people anywhere.

Potatoes Under the Reciprocal-Trade Agreements

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1939

Mr. REED of New York. Mr. Speaker, Republican spokesmen have repeatedly stated that the Roosevelt-Hull reciprocal-trade agreements are not reciprocal treaties but are a device for a general lowering of the tariffs. One of the best evidences of the accuracy of this statement is to examine the statistics relative to our exports and imports of potatoes.

According to the United States Bureau of Foreign and Domestic Commerce, in 1929 we exported 7,424,000 pounds of potatoes to countries which later under trade agreements reduced their tariffs-Colombia and Haiti. In 1937 we exported only 715,000 pounds of potatoes to these same countries, a decrease of 90.4 percent. Exports to other tradeagreement countries which made no concessions on potatoes fell from 125,124,000 pounds in 1929 to 61,643,000 pounds in 1937, or by 50.7 percent. In 1929 we exported to the nonagreement countries 31,524,000 pounds of potatoes; in 1937 we exported 46,985,000 pounds, an increase of 49 percent. Thus we find in analyzing our exports of potatoes that to the trade-agreement countries we have had a material decrease in the exports of potatoes, whereas to the nonagreement countries we have had a material increase. Eighty and eighttenths percent of our exports of potatoes in 1929 went to future trade-agreement countries, while in 1937 only 57 percent went to these countries. Is there any evidence here that trade agreements have helped our potato growers?

Over 99 percent of our entire potato imports come from Canada or Cuba, and we have made trade agreements with both countries. In these agreements we made concessions to both relative to potatoes, whereas Canada—the principal source of our potato imports—made no concession, and Cuba only bound the present rate of duty. The concessions we made were seasonal in nature, allowing potatoes to come into the country at reduced rates during certain periods of the year.

A few potatoes came into this country at a reduced rate of duty in 1935; but in 1936, when both the Canadian and Cuban agreements were effective, sizable quantities came into the country at the lower rates. In fact, in 1936, 56.5 percent of our entire imports came in under reduced rates of duty, and that amount increased to 75 percent in 1937. Furthermore, while total imports in 1937 were 15.8 percent less than in 1938, the amount of potatoes entering the country under agreement rates was 11.9 percent greater in 1937 than in 1936.

The tariff on potatoes was raised by the Hawley-Smoot Tariff Act of 1930 because imports of potatoes were materially increasing. Now we find duties are lower than they were before the Hawley-Smoot tariff. This is a general reduction in the duties on potatoes, whereas on our exports we have received no concessions of any value to the potato growers of this country. It is interesting to note that of the countries which have been and are important buyers of potatoes, we have trade agreements with countries that bought approximately 81 percent of the total exports in 1929 and 57 percent in 1937. However, we received concessions from a group that buy less than 1 percent of our exports. Is this reciprocity? No; it is a general lowering of tariffs in an unconstitutional and undemocratic manner.

The Late Honorable Clarence W. Turner

EXTENSION OF REMARKS

HON. CHARLES I. FADDIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1939

Mr. FADDIS. Mr. Speaker, it was with deep regret and a feeling of personal loss that I learned of the death of our dear friend and beloved colleague from Tennessee, the distinguished Hon. Clarence W. Turner. No man in this body more justly merited and enjoyed the respect and esteem of his acquaintances than this our departed friend.

I served with him on the House Committee on Military Affairs for 6 years. We sat side by side and I will miss him. He was a regular attendant of the meetings of his committee as he was of the sessions of the House of Representatives. His services were always conscientious, calm, fair, and impassionate. His viewpoint was Nation-wide and his patriotism was unsurpassed.

With his passing his State and Nation have lost an able and distinguished statesman. His family has lost a member impossible to replace and we have lost a friend. Kindly, courteous, thoughtful, and courageous. A gentleman of the old school.

May he rest in peace!

W. P. A.

EXTENSION OF REMARKS

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1939

Mr. DICKSTEIN. Mr. Speaker, in the present state of our finances, an appropriation of \$150,000,000 is important enough to be scrutinized with great care. It is true that we are overdue for some economy in Government excesses; but if any economy is to be indulged in, it should not be at the expense of those of our citizens who are least able to take care of themselves.

If Congress refuses more funds, 25,000 persons will be dropped from the rolls in New York City alone. The mayor of New York City had a conference the other day with Colonel Somervell, who is the Works Progress Administration administrator for the city of New York, and was definitely told that unless instructions from Washington would be issued to the contrary and the proper appropriation made by Congress to allow the W. P. A. to continue with its operations in New York City, it will be necessary to drop from the rolls 25,000 persons in New York, and the number of persons to be reduced in the several States because of this situation will be as follows: Alabama, 8,800; Arkansas, 8,000; Arizona, 1,500; California, 16,400; Connecticut, 4,000; Delaware, 500; Colorado, 4,400; District of Columbia, 1,800; Florida, 7,000; Georgia, 9,500; Idaho, 1,725; Iowa, 4,000; Kentucky, 9,200; Kansas, 5,000; Illinois, 34,000; Indiana, 11,000; Louisiana, 8,500; Montana, 2,880; Massachusetts, 18,000; Maine, 1,000; Maryland, 2,000; Mississippi, 7,000; Michigan, 20,000; Missouri, 17,500; Minnesota, 9,800; Nevada, 350; Nebraska, 4,200; North Carolina, 7,000; North Dakota, 2,100; New Jersey, 14,000; New York City, 25,000; New York State, outside New York City, 9,000; New Hampshire, 1,000; New Mexico, 1,200; Ohio, 36,500; Oregon, 2,700; Oklahoma, 10,200; Pennsylvania, 36,000; Rhode Island, 2,000; South Carolina, 7,000; South Dakota, 2,100; Tennessee, 8,500; Texas, 13,500; Utah, 1,950; Virginia, 4,800; Vermont, 2,500; West Virginia, 7,000; Wisconsin, 11,300; Wyoming, 675; Washington, 7,000; Hawaii,

In addition to this large number of lay-offs throughout the country, there will be another 40,000 to 45,000 W. P. A. workers dropped from the rolls in the city of New York by the end of the fiscal year June 30. The mayor of the city of New York has requested all Members of the House of Representatives from New York City, as well as the Senators from this State to stop this condition from arising.

I have before me a string of pathetic letters from constituents of my district who will undoubtedly be separated from the pay roll if the W. P. A. is not permitted to continue

with the funds which the House would vote here.

In the debate before the House last Saturday there were voices raised in opposition to this prospective cut. It is not merely a question of granting relief to a large number of Americans, but it is absolutely essential that before the wheels of industry should again turn millions of our citizens should not be caught in the throes of unemployment. The present administration has done everything in its power to put an end to this intolerable condition and within the limitation of opportunity every employable American who could not find his place in private industries was permitted to work with the W. P. A. The amount of work turned out by the W. P. A. is prodigious. Sections of the country which were lying fallow for years have begun to bloom again. Wildernesses were turned into garden spots, and the appearance of our cities at the present time, as well as the appearance of the countryside proclaims the fine manner in which employees of the W. P. A. have discharged their obligations.

Before the election of 1936 some antiadministration papers called a great deal of W. P. A. work boondoggling, but we have learned since that such is not the case, but that the existence of a body of men connected with the W. P. A. allowed this country to modernize itself, build better roads,

better schools, and better homes.

Industry will soon be able to absorb the men who are now working in W. P. A. projects, and when that day comes no one will be happier than the W. P. A. workers to disassociate themselves from the Government pay roll and become employees in industries once again, but until that time comes let us not make the burden of unemployment greater by denying the Government this appropriation for \$150,000,000.

What Happens to the Country When the President Is Away?

EXTENSION OF REMARKS

HON. BRUCE BARTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1939

Mr. BARTON. Mr. Speaker, the President will be leaving soon on his forty-eighth absence from Washington since March 1933. He well deserves these interludes in his arduous life, and all of us, regardless of party, will join in the hope that the trip may prove pleasant and restful.

We hope, too, that the country will benefit; and in this connection it is interesting to note what has happened to business during his previous absences. Is business better or worse when the Presidential pressure is relaxed? Is confidence raised or lowered? Are jobs easier or harder to find? Partisan argument on these questions is unfruitful. What we need these days is less argument and more facts.

Fortunately, the facts are available. Economists and students of business are accustomed to refer to the action of the stock market as a "business barometer." By this they do not mean to imply that the market in itself is all-important; only a small fraction of our people are interested directly in stock trading. But the term "barometer" does mean that the market reflects general business sentiment. When the market advances, it is a sign that business sentiment is better, men are more confident, more ready to place orders, expand their

operations, and put more people to work. When the market declines, it indicates that businessmen are uncertain, afraid that their operations will prove unprofitable, and for this reason hesitate to expand their pay rolls.

Now, let us study what has happened to the market on the President's 47 absences. Here is the record of advances and declines as registered by the Standard Statistics averages of 90 representative stocks listed on the New York Stock Exchange:

Absences of the President from the White House, Mar. 4, 1933-Mar. 15, 1939

	Num- ber of		market ses		market lines	Net
Type of trip	such trips	Num- ber	Points	Num- ber	Points	change, points
All absences	47	24	+88.4	23	-55.1	+33.3
Annual Florida fishing trips Hyde Park trips Speaking trips	5 22 20	5 13 6	+20.1 +35.9 +32.4	0 9 14	-13.4 -41.7	+20.1 +22.5 -9.3

What do these figures mean? An average of 1-point gain or loss in the 90 stocks used to make up the Standard Statistics averages amounts roundly to \$340,000,000.

Multiplying this out we discover that-

The 27 absences of the President represented by 5 Florida fishing trips and 22 Hyde Park trips netted a gain of 42.6 points, or \$14,484,000,000.

The 20 speaking trips netted a loss of 9.3 points, or \$3,162,-000,000, making a net gain by having the President away from Washington of \$11,322,000,000.

Dr. George Gallup, of the celebrated polls, recently observed that whenever the President went to Florida to fish his popularity increased, and as soon as he returned it began to decline. Looking at the figures above, is it any wonder that his absence makes the people's hearts grow fonder?

Let us look into these figures a bit more closely. Take the Florida fishing trips first. There have been five of them; and every one of the five, as reflected in the trend of average stock prices, has added to the wealth of the country, the confidence of business, and hence by inference to the relief of unemployment.

On most of these trips the President has left Washington with a reassuring comment. Some of them have coincided with those blessed eras formerly termed "breathing spells," and more recently designated as "periods of appearament."

Businessmen have been willing to take these promises at face value. They have gone cheerfully to work, making their plans, placing orders, and hiring more help. But alas, the rest and recuperation on the boat have served only to fill the President's fertile mind with a new crop of experiments. Back he has come with a fresh supply of "must" legislation to throw things into confusion again.

Of the trips to Hyde Park in his 6 years, there have been 22. These, of course, have been too short to show an unvarying result. Yet even here the trend is unmistakable. On 13 of these 22 absences the market advanced for a total gain of nearly 36 points, 35.9. On nine occasions there were declines to a total of 13.4 points. The country was better off for his absence by \$7,650,000,000, as measured by a net advance of 22.5 points in the market averages.

Now we come to a third category of absences—the President's speaking trips. Here the results are most interesting. Twenty times he has left Washington to go somewhere and make a speech. Some of the speeches were constructive, even conciliatory. The majority, however, proclaimed fresh crises, or abused business, or bristled with threats against members of his own party who had dared to vote in accordance with the dictates of conscience. So the beneficial effects of the President's absence were more than offset by the demoralizing influence of what he said. This stands out clearly in the box score:

	Num-		market se		market lines	Net
	ber	Num- ber	Points	Num- ber	Points	change
Speaking trips	20	6	+32.4	14	-41.7	-9.3

People who know nothing about business—and this, unfortunately, includes much of the administrative personnel of the New Deal—belittle the importance of confidence. They regard it as a bogey which the businessman has conjured as an excuse for his unwillingness to take abnormal business risks. They say that as long as billions of dollars are poured out in grants, subsidies, and extravagant public works it makes no difference whether there is confidence in business.

Yet for 6 years we have had deficit piled upon deficit, and still the unemployed figure stands stubbornly at somewhere between 10,000,000 and 11,000,000. Ten or eleven million men and women willing and eager to work cannot find jobs, even though their Government has increased its expenditures every year, tripled Federal tax collections, and at the same time more than doubled the national debt.

The action of the market reveals the secret of the New Deal failure. Government debts and Government threats have probably held two men out of work for every man that W. P. A. has hired. Fear of what the President is doing or might do, consternation over what he has said, the constant repetition of "emergency" and "crisis" have all combined to restrain and intimidate every industry in the land.

Tragic as it may sound, it seems nonetheless clear from the figures I have cited that when the President goes away and lets the country alone the people are better off.

And this conclusion appears to be sustained fully by some recent results of the Gallup poll. In a poll published about 2 weeks ago—March 17, 1939—the question was asked: "Do you think the attitude of the Roosevelt administration toward business is delaying business recovery?" Here are the answers—

		Percent of those reply	ring
Yes:	a		41
Yes;	a	little	26
No			33

Here we have a cross-section of public opinion with 67 percent of those voting declaring the opinion that Roosevelt policies are a definite and positive check upon our inherent recovery impulses and resources. Two people out of every three say that recovery is being delayed unnecessarily by the administration

Equally significant, I think, is the development of this sentiment over the last 18 months. A year and a half ago 38 percent of those voting in this poll said that the administration's attitude toward business was "not friendly enough." But by March this year 52 percent of those voting said the White House attitude toward business was "not friendly enough."

These figures indicate clearly that the people of the United States now are alive fully to the forces which are prolonging this unhappy period of vast unemployment and low farm prices.

Thus far Mr. Roosevelt's second term has been an expensive luxury for the American people. Eleven million men and women are still out of jobs. Farmers are hard up because the purchasing power of these unemployed millions in the cities is inadequate. Business profits are eaten up in taxes and bureaucracy. The Nation's economy is constantly disturbed.

These are the facts demonstrated by one of the best barometers of business activity, the stock-market averages. When the market goes up more people have jobs; when it goes down more people lose their jobs. This is history. And the corollary is—as the figures show—that when the President lets the country alone, when he goes away and makes no speeches, trade is more active, confidence improves, more people are employed.

So in response to the oft-repeated suggestion of the new dealers that Congress hasten its adjournment and give the President a free hand, the people well might ask, in the interest of national recovery, when will the President adjourn himself this spring?

God Bless America-A Tribute to Kate Smith

EXTENSION OF REMARKS

HON. THOMAS M. EATON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 29, 1939

LETTER FROM CHARLES A. GRAF

Mr. EATON of California. Mr. Speaker, under leave to extend my remarks in the RECORD. I include a letter from a constituent of mine who is chairman of the National Defense Committee, Teddy's Rough Riders Post, No. 516, American Legion. The letter follows:

Hon. Thomas M. Eaton, Washington, D. C.

Washington, D. C.

Dear Congressman: When someone performs an exceptionally humanitarian act, he is sure to be recognized by the Government. When a soldier performs an act of valor on the battlefield, the Government commends him and presents him with a medal. At the present time the people of this country and the Government are national-defense-minded, and we are fortunate in having an outstanding radio personality contributing greatly to this worthy cause, not with money or arms but with a song that exemplifies the true feelings of all real Americans. I refer to Kate Smith, who instills the love of America in the hearts of countless thousands every time she sings God Bless America.

I feel that such service as Miss Smith is rendering should receive

I feel that such service as Miss Smith is rendering should receive some sort of Government recognition, and I suggest that you bring this matter before the Members of the House or some appropriate committee so that they may extend Miss Smith a note of thanks for her endeavor.

Respectfully yours,

CHARLES A. GRAF, Chairman, National Defense Committee, Teddy's Rough Riders Post, No. 516, American Legion.

The words to the song referred to above are:

God bless America, land that I love,

Stand beside her and guide her through the night, with the light from above

From the mountains, to the prairies, to the ocean, white with foam, God bless America, my home sweet home.

Trade Agreements

EXTENSION OF REMARKS

HON. ANDREW C. SCHIFFLER OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 29, 1939

EDITORIAL FROM THE WHEELING (W. VA.) INTELLIGENCER OF MARCH 28, 1939

Mr. SCHIFFLER. Mr. Speaker, under leave to extend my remarks in the RECORD. I include the following editorial from the Wheeling Intelligencer of March 28, 1939:

[From the Wheeling (W. Va.) Intelligencer of March 28, 1939] ARE WE HOLDING THE BAG AGAIN?

When the New Deal's trade-trading program was inaugurated. two major claims were made for it:

First. That it would restore our export market and thus bring prosperity to the United States. Second. That it would stimulate international trade throughout

the world and thus promote peace.

Very little is heard of the first claim today in view of the signal failure of the policy to do anything but increase competition in the American market. But correspondingly greater stress has been laid on the peace angle as the economic failure becomes more and

more apparent and as war clouds gather over Europe.

Thus when the trade agreements with England and Canada were signed in a carefully prepared stage setting at Washington, the political phase of the transaction was emphasized. Indeed, almost nothing was said of the economic advantages supposed to flow to us through the mutual easing of trade restrictions. We were told, with a great deal of feeling, that the signing of these agreements forged another link in the chain binding together the two great English-speaking peoples, and served a definite warning on the totalitarian states that the democracies would stand shoulder to

Several incidents occurring since then serve to throw additional light on this much-stressed relationship.

several incidents occurring since then serve to throw additional light on this much-stressed relationship.

Among the trade agreements this Government had negotiated prior to the new pacts with England and Canada was one with Czechoslovakia. Germany, as is generally known, is the one country beyond the pale of our trade program. In every agreement we negotiate the concessions granted the other party are automatically extended to all the world save Germany, and that without those favored nations granting us anything at all. So when Herr Hitler completed the subjugation of Czechoslovakia this Government promptly put imports from that region under the ban. Classifying them as German goods now, the Treasury has applied to them, effective April 22, a countervailing duty of 25 percent, such as already applied to goods from Germany proper.

Thus this Government has been quick to apply the economic weapon of trade restriction to the German expansion at the first opportunity. But how about England? How about this great sister nation with whom we had just completed a strengthening of economic bonds as a warning to totalitarians in general and to Herr Hitler in particular? What has England done with respect to trade with Germany?

What has England done? England, believe it or not, has entered

with Germany?

What has England done? England, believe it or not, has entered into an export trade agreement with Germany through a conference at Dusseldorf between British and German industrialists.

A London dispatch to the New York Times quotes the Financial News of London as denouncing this agreement on the ground that "what is intended is nothing less than a full Anglo-German economic alliance—a complete reorientation of the whole of our commercial policy."

The dispatch continues:

The dispatch continues:

"It is asserted that to carry out the provisions for the division of markets between Britain and Germany, British industry must be cartelized on German lines. Then if other countries resisted, the British and German Governments would be invited 'to subsidize a united Anglo-German drive against them.'"

Put that in your pipe and smoke it as you contemplate the glories "cooperation among the democracies."

Whatever the underlying facts of the German-English transaction above referred to may be, doesn't the very fact that trade negotiations have been carried on at all suggest that we may have some babes in the diplomatic woods looking after our interests?

Doesn't it all emphasize the wisdom of returning to a frank, straightforward policy of tariff protection here in the United States, and a strict hands-off policy where the quarrels of European and Asiatic peoples are concerned, whether their governments come under the loose classifications of "totalitarian" on the one side or "democracy" on the other; and that when you preached economy in the campaign of 1932 you didn't know what you were talking about?

Sugar Production in Our National Economy

EXTENSION OF REMARKS

HON. GEORGE W. GILLIE OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 29, 1939

ARTICLE BY HON. FRED L. CRAWFORD, OF MICHIGAN, IN FEBRUARY ISSUE OF THE SUGAR JOURNAL

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a magazine article by my esteemed colleague from Michigan [Mr. CRAWFORD], Sugar Production in Our National Economy, which appeared in the February issue of the Sugar Journal.

In connection with this I desire to praise Mr. CRAWFORD for the crusade he has conducted in this body on behalf of the American sugar industry.

As the representative of a sugar-beet district, I wish also to deplore the apparent efforts of this administration to discourage, rather than encourage, the domestic sugar industry. Mr. Crawford's very fine analysis of the situation follows:

> [From the February issue of the Sugar Journal] SUGAR PRODUCTION IN OUR NATIONAL ECONOMY

(By F. L. CRAWFORD)

(Hon. F. L. CRAWFORD, Representative from the Eighth Congres-(hoh. F. L. Crawford, Representative from the Eighth Congressional District of Michigan, is one of the outstanding authorities in Congress on the American sugar situation. Mr. Crawford is from what is known as the eastern sugar-beet section. He expresses sugar opinions which are sound for Michigan, for Louisiana,

presses sugar opinions which are sound for Michigan, for Louisiana, Florida, but above all for the United States.—Editor's note.)

Today, as never before, we hear the elements of our national economy discussed over the radio; and from the platform; and we read more in the papers relative thereto than ever before in the history of our country. The very fact that there is so much discussion and consideration being given to this question is proof that our system is not functioning as it should.

The United States is perhaps more blessed with raw materials, soil, climatic conditions, the ingenuity of labor and mechanical equipment, than any other nation on earth. This fact imposes a great responsibility upon our people. The greater our opportunities, the heavier our duty becomes to keep our own house in order and to operate in a way that lends encouragement to the other peoples of the earth.

other peoples of the earth.

In recent years, and while the "surplus" philosophy has been growing so rapidly, we have learned that in the production of sugar in the sugar-beet fields of the North and West and in the sugarcane fields of the South that this nonsurplus crop is now, as never before, justifying its place in the economic life of our country. Let those who reside in the sugar-growing areas contemplate the economic value of the production of this basic food commodity in the areas where the crops are intensely cultivated. Let those who reside in proximity to the sugar-beet and sugar-cane industries also make calculations of the aggregate number of individual workers make calculations of the aggregate number of individual workers engaged on the farms where the sugar is grown, in the factories where the crops are processed, on the transportation lines, in the selling departments, as well as in those "feeder" industries closely related to sugar. Consider that should these crops be not in production, hundreds of thousands of additional people would be forced to rely on the largess of government in the form of relief checks.

While these facts are so impressive, it is time to give more serious consideration to the economic value of this industry. No one needs a doctor unless he is ill, and the value of a trained nurse is fully appreciated when the body and the mind are racked with pain. When the wheels of industry cease to turn and the smokestacks grow cold, that is when an enterprise engaged in the production of actual essentials of life can be fully appreciated. Now the ears of our people are open to comments and suggestions which deal

with the economic value of this great industry.

In the sugar-oeet sections of the North and West, there are those who have savings accumulated, and who would, in the those who have savings accumulated, and who would, in the absence of Government interference, invest those savings in long-term risks and in the building of additional plants expanding this great industry. It would not be necessary to "prime" these individuals into making such long-term investments. They stand individuals into making such long-term investments. They stand ready to take the risk and thereby increase our total supply of productive capital with all of the economic benefits that would naturally flow to those who would become employed in private industry by reason of such long-term investment. In these same areas, there are those handlers of the soil who would be delighted to increase the acreage of sugar beets. But the policy of the Department of Agriculture as well as the State Department, is such that the industry is not encouraged to expand. Instead almost every week the Government takes some step which discourages the agricultural operations, throws barriers in the way of the processors, and serves notice on those who would expand the industry through the investment of savings, that the Government's attitude is, and will continue to be, of an unfriendly nature. nature.

The progress made in recent years in the sugarcane areas of the South is remarkable. Working against the natural hazards of the business in addition to the artificial barriers, the success you have attained is further evidence of the soundness of the you have attained is further evidence of the soundness of the sugarcane industry and its place in our national economy. What has been accomplished in Florida and Louisiana in the way of combining agricultural and industrial operations is a living example of the fundamental progress our people would make if permitted to fully use the agricultural, mechanical, and scientific knowledge we have today.

The laws of Nature operate in such a manner that sunshine and moisture constitute by far the greater portion of the solids which we take from the soil in the form of agricultural products. Only a small percentage of the total weight harvested represents deprecia-

we take from the soil in the form of agricultural products. Only a small percentage of the total weight harvested represents depreciation of the soil. Therefore millions of our people should be given employment in new enterprises closely related to the handling of the soil and the extractive industries related thereto, such as is so well illustrated by the sugar operations. We should add to this the growing and fermenting of the products of additional millions of acres of crops, using the fermented products as a part of our fuel for power in the form of alcohol and converting other solids into plastics and starches. plastics and starches.

When our people come to the full realization that the United States is blessed with natural resources such as above referred to, in a manner that no other single nation now has, and that the market of the United States from a national standpoint should first be permitted to be enjoyed by those who work and serve in this be permitted to be enjoyed by those who work and serve in this country; and when we fully comprehend that our people must have work in order to preserve our institutions, we will then proceed to further utilize our acres and thereby bring into being a higher standard of living than our people have ever before enjoyed.

The sugar-cane industry of the South, as well as the sugar-beet industry of the North and West, during the past few years in this period of "surpluses" have justified their place in the immortality of our economy. If given the proper encouragement to which they are entitled future employment and production would be much

are entitled, future employment and production would be much greater than at present.

Monetary Powers of the Government

EXTENSION OF REMARKS

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, March 30 (legislative day of Tuesday, March 28), 1939

EXCHANGE OF LETTERS BETWEEN THE SECRETARY OF THE TREASURY AND HON. ROBERT F. WAGNER, OF NEW YORK

Mr. WAGNER. Mr. President, I send to the desk an exchange of letters between the Secretary of the Treasury and myself, in which I propounded certain inquiries with reference to certain monetary powers of the Government, and the exercise of those powers. I ask that my letter making the inquiries, and the answer of the Secretary of the Treasury, be printed in the Appendix of the RECORD.

There being no objection, the correspondence was ordered

to be printed in the RECORD, as follows:

UNITED STATES SENATE, COMMITTEE ON BANKING AND CURRENCY March 14, 1939.

March 14, 1939.

Hon. Henry Morgenthau, Jr.,
Secretary of the Treasury, Washington, D. C.

My Dear Mr. Secretary: My interest in our monetary policy as chairman of the Senate Committee on Banking and Currency has, of course, been intensified by the committee's present consideration of my bill (S. 910) to extend certain monetary powers. I should like your help in answering a number of questions which have arisen both before and during our consideration of the bill.

I ask these questions with no critical intent but solely with the hope of clarifying the whole subject. I realize that they relate to problems which are somewhat complex and technical and that any comprehensive answer may of necessity be somewhat lengthy.

comprehensive answer may of necessity be somewhat lengthy. Nevertheless, I feel that a satisfactory discussion of them would be very helpful to the Congress and the public, and I would appreciate your going into some detail.

The questions that seem to me most pertinent are these:

 Who owns the gold now in the Treasury?
 How much of the gold in the Treasury has been purchased with funds obtained from the sale of interest-bearing obligations of the Government? 3. Why has so much gold come to the United States in the past

5. Why are the specific of the

because it buys gold at a fixed price?

5. How much more gold do you think we will get?

6. Why doesn't the Treasury stop buying gold?

7. Of what use to us is this large stock of gold? Is there any likelihood that we will get so much of the world's gold that we will 'get stuck' with it?

8. Inn't it true that ferrigners are getting chosen of our reading.

8. Isn't it true that foreigners are getting shares of our productive industries and giving us in return gold that we have no use

9. What action, if any, should be taken with respect to the gold tuation? Should we, for example, return to the gold standard of pre-1933?

10. Did devaluation of the dollar in 1934 have an unfavorable

effect on our imports?

11. Who in England and France has the power of altering the gold value of their currencies and what is the extent of that

12. Is there any basis to the contention that the power to devalue operates to undermine the businessman's confidence so as to deter him from making loans and investments in the United

I believe that you can supply more satisfactory answers to these questions than anyone else, and I should therefore appreciate your replying to them at your earliest convenience.

Very sincerely yours,

ROBERT F. WAGNER.

MARCH 22, 1939.

Hon. ROBERT F. WAGNER,

United States Senate.

MY DEAR SENATOR: In your letter of March 14 you ask several important questions. These and similar questions relating to gold and foreign exchange have been asked so frequently that I welcome this opportunity to answer them and to make clear the policy of

the Government with respect to these matters.

As you say, the questions raised involve technical matters which cannot be adequately handled in a page or two. However, I shall be as brief as is possible with materials of such complexity.

1. WHO OWNS THE GOLD NOW IN THE TREASURY?

1. WHO OWNS THE GOLD NOW IN THE TREASURY?

Title to all gold held by the Treasury, now amounting to about \$15,000,000,000, is vested in the United States.

A large part of this gold—\$12,336,858,533 on March 15, 1939—is held as security for gold certificates—or credits payable in gold certificates—issued to and held by the Federal Reserve banks pursuant to the Gold Reserve Act. Such gold certificates may be redeemed in such amounts of gold bullion as, in the judgment of the Secretary of the Treasury, are necessary to settle international balances or to maintain the equal purchasing power of every kind of United States currency. of United States currency.

The remainder of the gold held by the Treasury is accounted for

Gold reserve—held pursuant to law as a reserve against United States notes and Treasury notes of \$156,039,430 Allocated to the stabilization fund.

Gold in general fund (against which gold certificates or credits have not as yet been issued): 1,800,000,000

(a) Balance of increment resulting from reduction in the weight of the gold dollar__

142, 288, 196 547, 899, 564

(b) In working balance The Treasury disposes of gold in the following ways:

(a) For use in industry, profession, or art. Any person needing gold for any such purpose can purchase gold from the Treasury.

(b) For the purpose of meeting the international balance of payments. To this end the Treasury sells gold to the members of the Tripartite Accord and to their stabilization funds and fiscal agencies. The Treasury also may sell gold to foreign central banks upon amplication and under special conditions. upon application and under special conditions.

Neither Americans nor foreigners can obtain gold from the Treasury for the purpose of hoarding.

2. HOW MUCH OF THE GOLD IN THE TREASURY WAS PURCHASED WITH FUNDS OBTAINED FROM THE SALE OF INTEREST-BEARING OBLIGATIONS OF THE GOVERNMENT?

The Treasury pays for gold with the cash assets in the general fund, specifically out of the Treasury's deposit account with the Federal Reserve Bank of New York. The account is normally compensated by the deposit with the Federal Reserve bank of gold certificates or gold-certificate credits issued against the gold then accounted. acquired.

acquired.

Up to December 22, 1936, it was the policy of the Treasury to issue to the Federal Reserve bank gold certificates or gold-certificate credits against the full value of the gold acquired. Under this procedure the purchase of gold by the Treasury did not involve any increase in the Federal debt either directly or indirectly. Shortly after December 22, 1936, however, the Treasury Department adopted a different procedure with respect to new gold purchases. Gold purchased was placed in an inactive gold account and paid for from the general cash balance of the Treasury without issue of additional gold certificates against the new gold acquisitions.

This procedure was departed from several times however by the

This procedure was departed from several times, however, by the issuance of gold certificates against gold released from the "inactive" account or against gold acquired but not placed in the "inactive" account. The "inactive" account was discontinued in April 1938, and at that time the Treasury issued \$1,400,000,000 in gold-certificate credits to the Federal Reserve banks against the gold released from the "inactive gold" account and thus increased its cash balance by that amount. Since that time the Treasury has followed a policy of issuing gold certificates periodically for additional gold acquired. Gold purchases are permitted to accumulate in the general fund in varying amounts before gold certificates are issued against them. On March 15, 1939, there was in the general fund \$548,000,000 of gold purchases against which gold certificates had not yet been issued but which had been paid for by checks drawn on the Treasury account with the Federal Reserve Bank of New York. This procedure was departed from several times, however, by the Reserve Bank of New York.

3. WHY HAS SO MUCH GOLD COME TO THE UNITED STATES IN THE PAST 5 YEARS?

Gold comes into the United States in settlement of the balance of international payments arising out of all transactions between the United States and all foreign countries. These international transactions include exports, imports, shipping services, tourists' expenditures, capital movements, interest payments, etc. When the demand for dollar exchange increases more rapidly than the supply of dollar exchange resulting from these transactions, the price of dollar exchange on the foreign exchange market rose. It may rise to a rate at which it becomes profitable for bankers and dealers, foreign and American, to ship gold to the United States, sell the gold to the Treasury for dollars, and then sell these dollars on the foreign-exchange market.

Therefore, to answer the question why large amounts of gold flow to the United States it is necessary only to explain why United States dollar exchange is so much in demand.

A survey of our balance of payments for the last few years re-

veals at once that the greatly increased demand for dollar exchange which has taken place during the past 5 years is largely a consequence of the huge flow of capital to the United States and, more recently, of the large favorable trade balance. None of the other categories of items in our international transactions can be held responsible for the substantial net increase in the demand for dollar exchange during this period. In fact, for several important categories the net demand for dollar exchange decreased. It is the flow of capital to this country, particularly before 1938, upon which our attention must be focused if we are to understand the chief reason for the large gold inflow.

The following figures show the contrast between the large re-corded inflow of capital in the past 5 years and persistent and large outflow of capital in the years preceding:

1928	1 850
1929	1217
1930	1 752
1931	1 490
1932	1 192
1933	1 336
1934	2 386
1935	21,537
1936	21,141
1937	2 800
1938	2 369

¹ Million outflow. ² Million inflow.

The capital inflow in the years from 1935 through 1937 was the major factor responsible for the inflow of gold, for it amounted in total to \$3,500,000,000, or 86 percent of the value of gold imported

total to \$3,500,000,000, or 86 percent of the value of gold imported during that period.

The trade item did not become important from the point of view of gold inflows until the last quarter of 1937. From 1934 to 1937 the excess of our exports over imports averaged only \$250,000,000 a year. (Incidentally, if silver imports were included in our merchandise imports, which is the procedure followed by many countries in the world, our excess of exports over imports would have amounted to only \$80,000,000 a year in this period.) In 1938, however, the favorable trade balance greatly increased and was the dominant factor inducing the large flow of gold into the United States. The excess of exports over imports totaled \$1,134,-United States. The excess of exports over imports totaled \$1,134,-000,000—the largest we have had in 17 years. This increased "favorable" balance of trade, together with other items, was re-

sponsible for the net inflow in that year of \$1.6 billion of gold.

Thus, it is evident that because there was a large inflow of capital in recent years, and in 1938 a large excess of exports over imital in recent years, and in 1938 a large excess of exports over imports, there was a great increase in the net demand for dollar exchange; and because of this large increase in the net demand for dollars there was a large inflow of gold. Therefore, in the final analysis your question: "Why has so much gold come into the United States?" reduces itself to the questions: "Why did so much capital come to this country during the past 5 years?" and "Why did we have so large a 'favorable' trade balance in 1938?" The answer to the first of these two questions, together with a description of the kinds of capital coming here, was given in some detail in my letter to Senator Vandenberg of September 22, 1936, a copy of which is enclosed for your convenience.

In section 3 of that letter the causes of capital imports into the United States are set forth as follows:

United States are set forth as follows:

"(a) Capital withdrawn from abroad by American owners because of the greater security or the more attractive field for investment offered the capital at home. The return of these funds to the United States—much of which left the country in 1930-32—is, of course, an indication of the relative strength of our recovery and of the prevailing confidence in the future of American industry and American financial institutions.

"(b) Funds sent to this country by foreigners who likewise felt that American securities offered a more attractive or more secure investment opportunity than did investments available to them

elsewhere.

"(c) Repurchase by foreigners of some of the foreign securities which Americans had purchased during the post-war decade and were now glad to get rid of even at low prices. This was particularly true of the securities of certain countries where nominal high large values were coupled with devices whereby the nationals of exchange rates were coupled with devices whereby the nationals of these countries were encouraged to repatriate these securities at an exchange profit to themselves, or where maintenance of debt service was provided for only internally but not for foreign holders.

"(d) Need created by increasing foreign trade for larger working-dollar balances to be kept in American banks by foreign banks and traders. Our international trade during 1934 and 1935 increased by one-third over the 2 years previous. It is to be expected that greater volume of foreign-trade transactions would call for larger

working-dollar balances.

"(e) Fear prevailing in some countries abroad of confiscation of property or of loss through inflation of their local currencies led during this period to a flight of capital from some of the countries

whose economic and political situations have been threatened by

disturbances with which you are doubtless familiar.

"(f) Lastly, funds sent to this country by speculators in the hope or expectation that an exchange profit will be possible if and when the currencies of their countries become depreciated in terms of the dollar.

"These are the causes which account for most of the capital inflows. Yet these capital inflows would not have resulted in such large sums being due to the United States were it not for the virtual cessation of foreign investments by Americans. Whereas in the years prior to the depression annual foreign investments by Americans of more than a billion dollars were common, since 1931 the annual sums invested abroad have been negligible; nor does it appear that the United States will approach in the near future the predepression volume of foreign investment."

Since the above was written (September 1936), nothing has occurred to alter substantially the trend of capital movements or the reasons for them. With the exception of one 9-month period, capital has continued to flow to the United States in large volume. During that 9-month period, October 1937 to June 1938, there was a net outflow of short-term capital of over \$1,000,000,000, but the flow was reversed during the fall of 1938, and more than a billion of short-term capital has since come to the United States.

Capital will continue to flow into the United States in large

amounts so long as:

(a) The opportunities for secure and profitable investment in foreign countries are not great enough to attract American capital

(b) The prospects of continued recovery here appear satisfactory

to foreigners;
(c) The political situation abroad remains disturbed;
(d) There is possibility of further depreciation of some foreign

currencies.

Whether the flow of capital into the United States will continue to take the form of gold or whether it will gradually assume the form of goods and services rather than gold depends upon the rapidity with which the mechanism of adjustments of interthe rapidity with which the mechanism of adjustments of international accounts operates. In earlier decades this adjustment process operated tolerably well and with fair speed to transform international movements of net balances into movements of goods and services. This adjustment process served to keep gold movements between countries relatively small in volume. In recent years, however, this mechanism has operated badly and haltingly. Moreover, it has had to operate under sudden and large capital and trade shifts which differed from those of earlier decades not only in magnitude but in character. To put it graphically, the mechanism of adjustment has had a heavier load to carry, the road has been uphill and the incline has grown steeper.

mechanism of adjustment has had a heavier load to carry, the road has been uphill, and the incline has grown steeper.

The reasons and nature of this change taking place in the effectiveness of the so-called adjustment process of international accounts are matters too technical to warrant discussing in this letter. Suffice to say that because the numerous obstacles to rapid adjustment still prevail in virtually all countries with free exchanges any large movement of capital to the United States in the near future will doubtless take the form largely of an inflow of gold.

of gold.

The significance of this fact as an explanation of the continuing flow of gold to the United States cannot be emphasized too strongly. As compared with the decades prior to 1930, there are now different relationships between international movements of capital and of gold, changes in domestic price levels, trade capital and of gold, changes in domestic price levels, trade changes, contraction and expansion of credit, and changes in the volume of business activity. Realization of this basic economic change is necessary to appreciate the need for treating present-day problems of gold and capital flows quite differently than was appropriate prior to 1929. Monetary experiences of those years, particularly in its international aspects, does not suffice for safe guidance for present-day policy.

4. IS IT TRUE THAT GOLD COMES HERE IN LARGE AMOUNTS BECAUSE THE TREASURY IS PAYING A HIGHER PRICE THAN OTHER COUNTRIES FOR GOLD AND BECAUSE IT BUYS GOLD AT A FIXED PRICE?

This is a question we frequently hear. Unfortunately, it is not wholly clear just what is meant, since the phrase a "higher price for gold" may be interpreted in two quite different ways, and the answer to each of the two interpretations would be arrived at through quite different lines of reasoning.

answer to each of the two interpretations would be arrived at through quite different lines of reasoning.

If the question be interpreted to mean that gold comes to the United States in large amounts because we pay a "higher price" than other countries do in terms of a money price (i. e., in terms of dollars), then the answer is definitely "no." The United States pays the same price for gold, allowing for arbitrage and transportation costs, that any other country does—no more and no less. We do not pay any higher prices for gold than does England, or France, or Belgium, or India.

The price of gold that is permitted to move freely in international channels of trade is (and must be) virtually the same the world over. An Englishman who sells gold in London gets the same return in pounds and shillings for it—with small variations to be explained in a moment—as he would get were he to send the same gold to New York, or to Amsterdam, or to Paris, or to Bombay to be sold. Right now, for example, he would get about 148 shillings for an ounce of gold in the London gold market. If he ships that gold and sells it to the United States, he gets \$35 an ounce (less one-fourth of 1 percent). When he converts the dollar proceeds of the sale of that ounce of gold back into sterling and deducts the expenses of shipping, he gets approximately the same amount of sterling as he would have obtained had he sold the gold

at home—namely, about 148 shillings. In other words, when a for-eigner translates the dollars he gets from the sale of his gold back to his own currency, he finds that the price of gold is almost the same in London, Paris, Amsterdam, or Johannesburg. We pay dollars for gold, England pays sterling, Holland pays guilders, etc., but when conversion from one currency into another is made at the prevailing exchange rates we find that an ounce of gold brings

approximately the same price in one country as in another.

I say approximately the same price. There are slight relative variations in the price as between different countries, variations variations in the price as between different countries, variations which inevitably result from changes in the supply of and demand for foreign exchange. Any change, no matter how slight, in the relationship of the supply of foreign exchange to the demand will bring about a change in the price for foreign exchange. The fluctuations of exchange rates, together with the fluctuations in the price of gold in terms of foreign currencies, result in the occurrence of relative differences in the price of gold in different national money markets when computed in terms of a single currency, but these relative variations can occur only within narrow limits.

These slight relative variations in the price of gold as among

These slight relative variations in the price of gold as among various markets which make possible a profit in shipping gold from one country to another would continue whether we paid \$10 an ounce for gold, or \$50, or \$60. Slight variations in the dollar-sterling, dollar-franc, dollar-guilder rates, etc., do give dealers small profits when selling gold in one market rather than another, but those variations operate as among all countries and at all levels of prices for gold; they are not peculiar to the United States alone, nor to the \$35 price for gold. Exactly the same condition prevailed when the price of gold was \$20.67 an ounce and when other countries had a fixed price of gold. It is the normal mechanism which has always prevailed and must inevitably prevail so long as gold is the international medium of exchange. long as gold is the international medium of exchange.

long as gold is the international medium of exchange.

To dispose briefly of another common misconception: It has been sometimes claimed that gold comes here because the United States pays a fixed price for gold, whereas other countries buy gold at varying prices. The mere fact of fixity of the price of gold in terms of any given currency has little to do with the movement of gold. For example, England does not have a fixed price of gold, and yet her net imports of gold in some of the past few years were greater than ours. Belgium has had a fixed price for gold for 2 years, yet her reported gold holdings are no higher now than they were 3 years ago. Moreover, our gold price, although fixed in terms of dollars, is not fixed in terms of other currencies. When, for example, an Englishman sells gold to the United States, the number of dollars he gets may be fixed, but the amount of sterling he gets, if he converts the dollars into sterling, is not fixed; it fluctuates with every change in the sterling-dollar exchange rate. The amount in his own currency which ling-dollar exchange rate. The amount in his own currency which an Englishman or a Frenchman receives when he sells gold is not fixed whether he sells his gold in New York, London, or Paris.

So far, in answer to this question, the discussion has been based So far, in answer to this question, the discussion has been based on the interpretation of the phrase "higher price" as meaning a higher monetary price. If, however, the phrase is to be understood to mean—as is doubtless intended by many who put the question—a "higher price" in terms not of money but of goods and services, then the question becomes a quite different one. It should then be phrased as follows: "Is it not true that gold comes to the United States in large amounts because we give more goods and services for a dollar (or its monetary equivalent in foreign currencies) than does any other country?" does any other country?"

The answer to this question is likewise "No," though less un-qualifiedly so because adequate statistical data for a categorical

answer are not available.

The purchasing power of the dollar in the United States, in terms of goods, can be compared with its purchasing power in other countries only very roughly and only with respect to those goods which do—or easily might—move from country to country. With respect to "services" comparison of the purchasing power of the dollar in the United States and elsewhere relates chiefly to shipping

services and the expenditures by tourists.

Now it is extremely difficult to measure the differences in purchasing power of gold or currency as between different countries, even with respect to such goods and services. Fortunately, for the purposes of the question we are examining, no such measurement is necessary. Were it true that an ounce of gold had a significantly higher purchasing power over American internationally traded goods than over foreign goods, indirect but definite evidence would be revealed in our trade figures. Our export excess would have so increased since 1933 that either we would have drained the outside world of all its monetary gold or we would have forced other countries to adopt strict exchange or import controls or much higher tariff schedules. No such developments have occurred. Foreign countries still have large gold holdings; many of them have not significantly heightened their barriers against imports of the world.

Convincing evidence that we do not pay a higher price for gold Convincing evidence that we do not pay a higher price for gold than do other countries in terms of goods and services is contained in the record of our balance of international payments on current account. For the years 1934 to 1937, inclusive, the balance of payments with respect to the pertinent commodity and service items was in the aggregate unfavorable by \$1,200,000,000, as far as the records show. Unfortunately, however, our international accounts, though more complete and reliable than those of other countries, are still subject to a substantial margin of error. In each year there has been a substantial "residual" item (i. e., unaccounted for) which during the 4 years in question totaled approximately \$1,500,000,000 due the United States. Some portion of this favorable

balance must be allocated to trade and services-how much it is balance must be allocated to trade and services—now much it is impossible to know. But even if we allocated the whole residual item to commodity and service items—which would be an extravagant allowance—there would result only a small balance due the United States for those items during the 4 years in question—\$400,000,000 for the 4-year period. This constitutes too small a sum relative to the magnitudes involved in our balance of payments to justify the claim that an ounce of gold can buy more here than elsewhere.

There is little basis, therefore, for the contention that an ounce of gold could in general buy more goods and services in the United States than elsewhere from the years 1934 to 1937, inclusive. Or to States than elsewhere from the years 1934 to 1937, inclusive. Or to put it in simpler and more accurate terms, the United States did not achieve any special competitive advantage in international markets as a consequence of its external monetary policy. The change in the gold value of the dollar in 1933 merely helped the United States to regain its earlier position. In 1938 the trade situation appeared to change. We did experience a sharp increase in our trade balance. Exports, as pointed out earlier, exceeded imports in 1938 by some \$890,000,000 more than in 1937. But most of this increase cannot be attributed to any changed relationship of the dollar to other currencies because the exports' excess arose from a sharp decrease in imports and not from an increase in exports. The recession in the imports and not from an increase in exports. The recession in the United States, more marked and earlier than in other countries, caused a temporary decrease in our purchases from abroad greater than the simultaneous decrease in our exports. This gap may be

expected to narrow as recovery proceeds.

The only sense in which it might be said that we give more for gold than other countries is that in addition to \$35 an ounce we also give peace, security, prospects of higher returns on invest-ment, and better speculative opportunities, with the result that foreign capital funds flow here in the shape of gold. It is these values that constitute the chief factor conducive to a flow of gold to the United States.

5. HOW MUCH MORE GOLD DO YOU THINK WE WILL GET

How much we will get depends upon the extent and direction of changes in our balance of trade and services, upon the output of new gold, and upon the trend of capital movements. Since capital movements are so sensitive to international polit-

Since capital movements are so sensitive to international political and economic developments, one can only hazard a guess as to their future trend. At this moment it looks as though the European situation will remain so disturbed as to postpone for some time any substantial repatriation of foreign balances. It also appears as though early resumption of American lending abroad such as would cause a gold outflow is extremely unlikely. As for our balance on commodity and service items, the fear of war and the preparation for war by foreign nations are likely to sustain our exports and reduce American tourist travel in Europe

sustain our exports and reduce American tourist travel in Europe and Asia—both developments making for additional gold inflows. On the other hand, continuance of our recovery here will tend to increase our imports and to increase American tourist travel in the Western Hemisphere. I believe the latter trend will outweigh the western remisphere. The leave the latter trend will outweight the other and that on commodity and service account the net balance due us will be less in 1939 than it was last year. On the other hand, capital inflows will probably be large so that, on the whole, it appears that in the near future the United States will continue to get gold, perhaps in as large volume as in recent

Current world gold production (outside the United States) now amounts to over \$1,000,000,000 per year. The bulk of this newly mined gold can go only to a few countries. Most countries now utilize practically every available dollar of foreign exchange to purchase imports or to make additional payments on outstanding foreign dollar which as they would like a processing order. chase impores or to make additional payments on outstanding foreign debts. Much as they would like to acquire gold, and much as they need it, they want to acquire additional imports even more. Therefore it is to be expected that until current hostilities and intensive preparedness for wars cease, and until the world economic situation improves, the bulk of the newly mined gold will be added to the manufacture of our form of the countries of the second of the s to the monetary stocks of only a few countries and the United States will get a substantial share of it.

6. WHY DOESN'T THE TREASURY STOP BUYING GOLD?

A simple way of stopping gold from coming into the United States would be for the Treasury to announce to the world that we will not buy any more gold for the time being. But such a step, taken unilaterally, would have disastrous effects on our economy. It would disrupt the foreign exchanges and gold bullion markets and would very soon cause such drastic disturbances in international trade and even in the domestic sphere as seriously to impede the recovery of business. the recovery of business

the recovery of business.

Present relationships among the various leading currencies would be upset. The dollar probably would appreciate immediately in terms of other leading currencies. At present, when the demand for dollar exchange increases, foreigners need only obtain gold (either at home or on the London market), ship it here and obtain dollars in exchange. Thus an increased demand for dollar exchange relative to the supply is met. If, however, this means of securing dollar exchange were removed, dollars would rise in value indefinitely in terms of other currencies. While it is impossible to indefinitely in terms of other currencies. While it is impossible to know in advance what rates of exchange would finally emerge, we can be certain of at least one thing—that no country would benefit from the ensuing international monetary disruption.

Were the United States, moreover, to declare a complete embargo

on gold imports, it might deal a serious blow to the value of gold as a monetary medium. (Such action coming at a period when there was discussion of the possibility of world overabundance of gold might have repercussions which would disturb the public's

confidence in the value of gold.) The leading gold-producing areas would be hard hit and some might even be involved in a major economic crisis.

A closely related question that has frequently been asked is: "Should not the price of gold be reduced? Is not \$35 an ounce too high a price for gold?" Possibly the simplest way to answer this question is to examine the consequences that would ensue from an increase in the gold content of the dollar (or, to phrase it another way, from a decrease in the monetary value of gold).

reduction by Congress in the monetary value of gold would probably not be as calamitous as a complete embargo. It would limit the extent of possible depreciation of gold (or appreciation of the dollar in terms of foreign currencies) and the psychological of the dollar in terms of foreign currencies) and the psychological disturbance caused by the change would not be as potent, yet it would have disadvantages serious enough to render resort to any such action most unwise. If the reduction made in the price of gold were small, our trade and service balance would not be much affected over the next year or so, nor would the inflow of capital cease. Once the drop in the price of gold was regarded by the rest of the world as definitive, the subsequent effect on capital imports would be virtually nil. Our securities would continue to be bought for the same reasons that they are bought now and dollar balances on foreign account would also continue to increase for the same reasons that they are increasing now. But were a for the same reasons that they are increasing now. But were a small decline in the price of gold to be regarded by numerous domestic and foreign investors and exchange speculators as being but the first of a series of drops, the result might well be to attract more, not less, funds to the United States, and to intensify the inflow of gold—the very thing it is designed to check. Speculators would rush to buy dollars and hold them here in anticipation of the next appreciation. Thus the effect on capital movements, both leave town and short term might more than offset the effect. both long-term and short-term, might more than offset the effect on trade and service items; instead of getting less gold we would find ourselves getting more.

On the other hand, were the monetary value of gold to be cut with one stroke substantially, and definitely—say, for ex-ample, to \$25 an ounce—the effect would be quite different from ample, to \$25 an ounce—the effect would be quite different from that described above. Such a step might reduce the volume of gold imports and perhaps give rise to an outflow of large dimensions; but the economic effects on our economy of the change in the foreign exchange value of the dollar would be little short of disastrous. The 40-percent increase in the price of American currencies to foreigners would constitute a severe handicap upon our exports. Our exports play a role in the level of business activity much in excess of the magnitudes involved and so great an appreciation of our currency in terms of other currencies would be bound to curtail our exports seriously. In the past 6 months the dollar has appreciated in terms of other the past 6 months the dollar has appreciated in terms of other leading currencies by some 5 percent and price movements in the various countries have not been such as to offset this comthe various countries have not been such as to offset this competitive disadvantage to us. The appreciation of the dollar has not been due to a change in the dollar price for gold but rather to a depreciation of foreign currencies in terms of gold. You will note that our exports during January 1939 were more than 40 percent less than they were in January 1938. Although it is too soon to evaluate the full significance of the decline, it is not unreasonable to assume that the less favorable position of the dollar in terms of other currency (i. e., higher prices of foreign currencies in terms of gold) contributed to the drop in exports. Our imports on the other hand would, in the event of a reduction in the price of gold to \$25 an ounce, be 30-percent cheaper. Our domestic producers would then be exposed to greatly sharpened competition in the American market from foreign producers both because the prices in dollars of imports would be less, and also because the numerous ad valorem duties would constitute smaller protection.

Foreigners would have a greater advantage in this market, but unfortunately even this would be of dubious value to them. The ability of Americans to buy goods, whether imports or domestic goods, depends chiefly upon the state of business activity here. It is chiefly for that reason that our imports during the recession of

goods, depends chiefly upon the state of business activity here. It is chiefly for that reason that our imports during the recession of 1938 dropped to almost one-half and that our imports began to increase in the fall of 1938. Thus, though the sharp appreciation of the dollar would make foreign goods cheaper in this country, our imports might actually be less than during the previous period, and instead of benefiting the rest of the world we would be hurting world business as well as our own.

world business as well as our own.

Judging from past experience, we could not expect the prices of domestic commodities and services to move either at home or abroad with sufficient rapidity to adjust quickly and fully to any substantial alteration in exchange rates. For many months, perhaps for years, the economic position of large groups of American producers, including farmers, would be worsened and there would be widespread unemployment. The combined effect on our domestic economy of a sharp drop in exports and of increasing competition in the domestic market would be keenly felt. Domestic prices would begin to fall. Many corporations would suffer loss of busiwould begin to fall. Many corporations would suffer loss of business and profits. In times such as the present these short-run effects-and by short-run we mean from a few months to several years—are of paramount importance. To brush aside, as some are prone to do, these short-run effects on the ground that in the long run appropriate adjustments will take place is to ignore the

unstable world in which we live and the real problems which confront us from day to day.

Moreover, were we to reduce the price of gold and were it to result in an outflow of gold, there is no reason to believe that the countries who most need gold would get it. On the contrary, were

gold to leave the United States, it would probably find a resting place in the very countries whose currencies would for the moment appear most secure. Certainly no gold would flow to Latin-American countries in any substantial amount, nor would the Far East or the Balkans obtain more gold. The loss of gold by the United States would not correct the serious maldistribution. It would rather operate only to take away some from the United States. rather operate only to take away some from the United States, which has too much, and to add it to the holdings of other coun-

tries which likewise have too much.

Thus we are confronted with the fact that though we should like to receive less gold and even to get rid of substantial amounts of the gold we already have, there is, under the existing circumstances, no acceptable alternative to the policy we have been pursuing. In the case of all the proposals we have examined, the remedy has always been worse than the disease. The best way to reduce our gold inflow on commodity and service account is for us to have full recovery so that our imports will rise more rapidly than

our exports.

7. OF WHAT USE TO US IS THIS LARGE STOCK OF GOLD? IS THERE ANY LIKELIHOOD THAT WE WILL GET SO MUCH OF THE WORLD'S GOLD THAT WE WILL "GET STUCK" WITH IT?

Gold performs two monetary functions. First, it serves as a specie base for the monetary system. Secondly, it serves as the medium for settling international balances. These are distinct and separate functions. The present gold stock of the United States is about \$15,000,000,000. The question you ask, therefore, is, "Is \$15,000,000,000 of gold more than enough to accomplish these two

functions which gold now performs in our economic system?"

It is doubtless true that we have more gold than we need to provide a specie base for our monetary system. Our laws require that a 40-percent reserve in gold certificates be held against Federal Reserve notes in circulation and a 35-percent reserve in gold certificates or lawful money against deposits of Federal Reserve banks. These legal reserve requirements are based on the assumption that gold reserve requirements operate as a control of the volume of goid reserve requirements operate as a control of the volume of means of payment, as a protection against excessive issue of notes and expansion of bank credit. At present, however, gold and gold certificate holdings are so far in excess of these legal requirements that they can hardly be said to constitute a protection against undue expansion of our currency and credit. We now have enough gold to permit an enormous expansion of credit and currency even after generous allowance for the outflow of gold that might accompany such an expansion. Legal reserve requirements do not of pany such an expansion. Legal reserve requirements do not of themselves necessarily protect us against an undue expansion of the volume of money, and the monetary authorities must be prepared, when and if the occasion arises, to apply appropriate supplementary control. This is especially likely to be true when gold holdings are as great as they now are.

as great as they now are.

But it is desirable that the reserves be above the minimum required by law. Otherwise, in a period of business recovery the limitations on the expansion of notes and deposits which the gold reserve would impose would operate to curb the rise in business activity, or an outflow of gold would tend to initiate a contraction of credit, irrespective of the legitimate needs of business. It is clear, therefore, that some excess of gold above the legal minimum is recorded to protect out deposits of gold above the legal minimum is recorded to protect out deposits of gold above the legal minimum. is needed to protect our domestic economy against effects of for-tutious inflows and outflows of gold. We now, however, have more gold than is necessary to insure this protection.

The second and more important monetary function of gold is its employment as a means of settling international balances among nations. Gold has been used for this purpose from time immemorial, and modern governments have as yet found no satisfactory substitute; nor is there any sign that a satisfactory substitute will be found in the near future.

Important commercial countries which carry little or no gold stocks have difficulties in settling their international payments. They have to see to it that their imports and exports are maintained in a certain relationship to each other. To achieve that and to keep their foreign exchange rates from fluctuating wildly they frequently have to maintain strict exchange controls so as to restrict merchandise imports and the movement of capital.

Small countries, which are not precluded by political and prestige considerations from holding their reserves in the form of foreign exchange assets, can get along more or less satisfactorily without gold. But they can do so only because the countries whose currencies they hold as reserve assets do have large amounts of gold

reserves.

Some countries (operating with very little gold or foreign exchange assets) have been pointed to as illustrations of the phenomenon that countries can carry on foreign trade and settle international transactions without resort to gold, and that gold is rapidly becoming obsolete even for this monetary role. Those who make this claim completely misread the experience of these countries. These very countries do, in fact, need and prize gold more and seek it more anxiously than do countries that use gold freely to settle balances of international payments. It is their inability to obtain gold which forces them to adopt a far less satisfaction. factory alternative method of adjusting their balance of interna-tional payments, namely, the adoption of strict exchange control, of clearing agreements, of barter schemes, and the imposition of severe penalties against evasion and all the other business- and liberty-destroying procedures necessary to make the system work. There is no one thing which demonstrates more effectively the superiority of gold as a means for settling international balances

than the experience of those countries that have tried to get along without it.

Without either gold or exchange controls, exchange rates would be very unstable. Any change in the balance of payments would have to be taken care of by international borrowing or lending, or the exchange rates would have to move to the point where the sums to be paid and the sums to be received were equated. Because we have abundant gold reserves, we do not have to apply exchange restrictions, and broad changes in our balance of international payments can take place without interfering with the

stability of the dollar exchange.

All these points have been granted by some critics, but they maintain that to fulfill both these functions much less than \$15,000,000,000 worth of gold would suffice. There is some merit to that contention, yet the future of international political and economic relationships is much too uncertain to justify our taking the steps which would be necessary if we were determined to reduce our sold heldings.

reduce our gold holdings.

One important factor to bear in mind in considering our gold policy is the psychological reaction of the public to a continuing loss of gold. Should a country be undergoing loss of gold over a considerable period of time there is likely to result impaired confidence in that country's currency and in the stability of its monetary system long before it has exhausted the gold it possessed in excess of legal or traditional reserve requirements. This has happened of legal of traditional reserve requirements. This has happened time and again throughout the world. Without greater ability to forecast future political and economic developments than is vouch-safed us, it is impossible to say with certainty that we have too much gold. We can say with some assurance, however, that we have enough gold to meet all likely contingencies and that we are in a strong position to defend the stability of our credit structure and of the dollar against any quick change in our international balance of payments, including any large withdrawal of foreign capital

capital.

The danger that gold will no longer be used as a medium of inter-The danger that gold will no longer be used as a medium of international exchange is so remote as not to merit serious consideration. Other countries will surely continue to accept gold in the settlement of favorable balances of payments, because gold is as important to them as it is to us. England has over \$3,000,000,000 of gold. France has almost as much. Holland, Switzerland, and Belgium, and many other countries have what are for them large holdings of gold. It is in the interest of these countries as much as it is in our own interest to continue to rely on gold as an essential part of their monetary system. Moreover, we must not overlook the fact that nations producing substantial quantities of gold have important vested interests in the continuation of gold as a monetary metal. The British Empire alone produces about half the world's gold. Even countries that produce relatively small amounts of gold find that those small emounts are an important source of stricts. find that those small amounts are an important source of national income to them.

8. ISN'T IT TRUE THAT FOREIGNERS ARE GETTING SHARES OF OUR PRO-DUCTIVE INDUSTRIES AND GIVING US IN RETURN GOLD THAT WE HAVE

The amount of American securities which have been recently acquired by residents of foreign countries has been much less than is generally supposed. During the past 4 years the total of net foreign purchases of American securities amounted to only one and two-tenths billion dollars, as follows:

	unons
1935	\$317
1936	601
1937	245
1938	49

There was, in addition, an increase in direct investments by foreigners as reported by the Department of Commerce of about \$175,000,000 during this period. Altogether, the total amount of investments by foreigners in American securities or directly in American industry during the past 4 years has been less than one-

fifth of the gold sent here during those years.

These sums do not, of course, represent the total of foreign capital which has come into the United States. Short-term funds owned by residents of foreign countries increased by one and eighttenths billion dollars. The bulk of these were demand deposits, which do not constitute acquisitions of shares in American indus-

which do not constitute acquisitions of shares in American industry and which do not earn any interest.

The acquisition of American securities by foreigners paid for with gold represents a transaction which admittedly is, under existing circumstances, of dubious advantage to the United States. Yet, given the relatively minor importance of the problem to date, we have not been able to convince ourselves that any of the possible remedies which we have so far examined gave promise of sufficient benefit to the national economy to offset their disadvantages.

On the other hand, it should be pointed out that if foreign holders of American securities liquidate their holdings and withdraw the proceeds, either gold or goods (and services) would necessarily be the resultant medium of withdrawal. If the vehicle of transmission were gold, its loss, in view of our large gold holdings could, of course, be regarded with equanimity. If the medium of transmission were goods, either because of direct purchases with the proceeds of the funds or because of the operations of the adjustment process, the resultant increase to our exports at a time when there exists a large volume of unemployed labor and other idle resources would have favorable effects on our economy. 9. WHAT ACTION, IF ANY, SHOULD BE TAKEN WITH RESPECT TO THE GOLD SITUATION? SHOULD WE, FOR EXAMPLE, RETURN TO THE GOLD STAND-ARD OF PRE-1933?

The maldistribution of the world's gold is a reflection of the disturbed economic situation throughout the world and the chaotic international political situation. Redistribution can come only with progress toward the solution of the basic problems confront

ing world international relations.

In our study of this matter we have examined literally scores of proposals directed toward possible action to redistribute the world's gold. The major conclusion we have drawn is that any measure which would take the form of restrictions on the flow of gold into this country would have, at this time, detrimental

what disadvantages may be associated with the gold inflow are fortunately only of minor magnitude, and should, moreover, be attributed to the factors causing that inflow rather than to the inflow itself. Foreign ownership of American securities may, however, serve as a source of disturbance to our security markets in times of stress; similarly with short-term foreign capital sent here. On the other hand, the third factor responsible for the gold inflow

to the United States—our export excess—does yield a gain.

The large inflow of gold in recent years has been a major factor in increasing excess bank reserves. These reserves do in some degree operate to stimulate an expansion of loans by banks and to keep the interest-rate structure lower, both developments helping somewhat to promote a higher level of business activity. Nonetheless, the prospect of continued large inflows of gold has been a cause of some concern on the part of those who consider a large volume of excess reserves as constituting a potentional danger of inflation, though I do not regard this problem as one of immediate

The only immediately disturbing aspect of the gold problem is the loss of gold by foreign countries. The countries losing gold may be adversely affected by the loss, and some of the adverse effects would impinge indirectly on us. This is to be deplored, but the factors producing this situation are external to us and beyond currently exting alone.

cur control acting alone.

With respect to the suggestion that the United States return to the gold standard of pre-1933, I must state definitely that such a move would be harmful to the American people and of no value to the people of other countries. In the first place, a return to the pre-1933 gold standard would mean a return to the \$20.67 an ounce price for gold. This, in the absence of similar changes in the gold value of other currencies, would represent a depreciation of approximately 70 percent in all foreign currencies in terms of the dollar.

It is obvious that an increase in the cost of the dollar to the foreigner by 70 percent and a decrease in the cost of foreign currencies to the American importer by 40 percent would seriously disrupt our foreign and domestic trade. Price movements are not so general or so rapid as to adjust economic conditions quickly to changes in exchange rates, and such movements as would occur would take the foreign of follows writers worked with a second of the contractions changes in exchange rates, and such movements as would occur would take the form of falling prices, particularly prices of agricultural products and raw materials. From experience we know that such price movements have disastrous effects upon incomes, profits, and the level of business activity. We might be precipitated into a depression rivaling the 1930-33 experience. There can be no question, therefore, of returning to a gold dollar with the pre-1933 content. The answer to question 6 above contains a full discussion of the foreseeable effects which would result from any substantial increase in the gold content of the dollar.

Even if what were proposed were a return not to the old gold

Even if what were proposed were a return not to the old gold value but to a pre-1933 gold standard with the present gold content of \$35 an ounce, such a step would be unwise at this time. Our present monetary system differs from the pre-1933 gold standard in three respects other than gold content. First, our currency is not convertible into gold coin; secondly, there are Government controls over the movement of gold in and out of the country; and thirdly, there is Executive authority to change the gold content of the dollar.

dollar.

convertibility of currency would, in my opinion, have no substantial advantages. Virtually every country in the world has recognized this fact and has withdrawn the privilege. For in normal times there is nothing to be gained by the right to convert currency into gold, whereas at all times convertibility has the potential disadvantage of creating a possible source of internal gold drain which would come into play at the very time when it would be most injurious. Internal hoarding of specie reserves has been, in the experience of many countries, one of the most important reasons for the weakening of currencies. Though the prospect of such a contingency in the United States seems at this time remote, it would nevertheless always be a possibility under a convertible currency system. Moreover, in the event that there should develop an emergency situation calling for a further change in the gold content of the dollar, the existence of private gold holdings would tent of the dollar, the existence of private gold holdings create unnecessary difficulties.

At present the movement of gold out of the country is in effect subject only to the restriction that it must be for the purpose of settling international balances. Gold moves freely to satisfy legitimate commercial and financial needs. The present powers of control over the movement of gold provide a safeguard that can instantly be used in the contingency of an international crisis. The power to change the gold content of the dollar should be

The power to change the gold content of the dollar should be lodged in an authority which can, in case of necessity, act swiftly and in a manner which will minimize the disturbances resulting from any change. This power should always be available; its existence contributes to the maintenance of stable exchange relationships, which make the exercise of the power unnecessary. It is important to realize that rumors of an impending change in the value of a currency, or any public discussion by responsible officials that such a change might be made, would in themselves be enough to induce large flows of capital either into the country or out of the country, depending upon whether the prospect is for an increase in the value of the dollar or for a decrease in the gold content of the dollar. Discussions in committees would be advance notice to speculators that such action might take place. The mere fact that it might take place would be sufficient to advance notice to speculators that such action might take place. The mere fact that it might take place would be sufficient to induce the flow of capital, because if the change did not actually occur, the speculation would have cost only the small charges attending any exchange transaction. Indeed, congressional discussion would stimulate speculators to engage in activities of a sort which would of themselves tend to force Congress to take the action which had been in contemplation, even if on its own merits and in the absence of the situation created by the operations of the speculators, a negative decision would have been in merits and in the absence of the situation created by the opera-tions of the speculators, a negative decision would have been in order. The liquidation of foreign holdings of American capital might, under such circumstances, easily be powerful enough to disrupt the security exchanges and to introduce a chaotic situation in markets and in business generally. Since the prospect of de-valuation would arise only under circumstances which were dis-turbing in any case, the outflow of capital would simply make bad things worse.

It therefore appears desirable that the Executive should have the power to alter the gold content of the national currency unit, in the public interest and within clearly prescribed limits, as it is in most of the countries in the world, so that if an emergency situation should require its exercise it could be exercised quickly and without the necessity of prior public discussion and its concomitant invitation to speculative activities.

10. DID DEVALUATION OF THE DOLLAR IN 1934 HAVE AN UNFAVORABLE EFFECT ON OUR IMPORTS?

Under one set of circumstances devaluation of a currency will induce an increase in imports and under a different set of circumstaces it may decrease imports. Devaluation of the dollar in 1934 did contribute to an increase in United States imports.

The value of American imports varies, in the main, with domestic business activity. When business is good in the United States our imports are high; when business is bad our imports are low. For example, between 1929 and 1932 imports dropped from \$4.400,-000,000 to \$1,300,000,000, a decrease of more than two-thirds. 000,000 to \$1,300,000,000, a decrease of more than two-thirds. Again in 1938, owing largely to the recession which prevailed through most of that year, our imports dropped more than one-third. On the other hand, during the years of recovery, 1934, 1935, 1936, and 1937, our imports rose from the low of \$1,300,000,000 to over \$3,000,000,000. Increases or decreases in the total value of a country's imports are due to changes in prices as well as to changes in quantity. A sharp drop in the prices of imported commodities which are competitive with domestic products has economic repercussions which are very disturbing to the country receiving the imports. At a time when business activity is declining, any potent source of further price declines serves only to lower still further the level of business activity and to increase unemployment. increase unemployment.

The best way to increase our imports is to increase our national income. Any measure which serves to promote recovery increases our imports, and, contrariwise, any measure which serves to reduce

our imports, and, contrariwise, any measure which serves to reduce business activity operates to reduce our imports.

As a consequence of falling prices and declining business intensified by the widespread depreciation of other currencies in 1931-33, we bought less because our national income was less, notwithstanding the greatly lowered cost of imported goods. Even though depreciation of the dollar made imported goods more expensive, the improvement in business activity which followed develuation. the improvement in business activity which followed devaluation was one of the factors responsible for the rise in national income and the consequent increase in imports. Whether or not depreciation of a currency will lead to increased or decreased imports depends upon the conditions which precede such depreciation, and upon other measures which accompany it, as well as upon the reaction of other affected countries.

11. WHO IN ENGLAND AND FRANCE HAVE THE POWER OF ALTERING THE GOLD VALUE OF THEIR CURRENCIES AND WHAT IS THE EXTENT OF THAT POWER?

In England the British Treasury has the power to alter the

In England the British Treasury has the power to alter the sterling price of gold through its operations in the gold market. There is no statutory restriction on the extent to which the British Treasury can change the sterling price of gold.

Similarly, the French Treasury, through the mechanism of its foreign exchange and gold operations, can alter the franc price of gold without any statutory restrictions. In addition, the Council of Ministers is authorized to fix ultimately by decree the gold content of the franc. As yet, they have not done so. The Council of Ministers, in other words, can decide whether or not there should be any statutory gold value for their currency and under existing law can fix that value at any amount it wishes.

12. IS THERE ANY BASIS TO THE CONTENTION THAT THE POWER TO DE-VALUE OPERATES TO UNDERMINE THE BUSINESSMAN'S CONFIDENCE SO AS TO DETER HIM FROM MAKING LOANS AND INVESTMENTS IN THE UNITED STATES?

A factor that more than any other will increase the confidence of businessmen in the future is the assurance that business will improve; a development contributing substantially to that expectation would be the prospect of a stable or moderately rising price level. What businessmen fear with regard to the dollar is not that the price level in the United States may remain stable or rise but that the price level in the United States may fall—that is, that the

purchasing power of the dollar may rise.

From past experience we know that falling prices have disastrous effects upon our economic system. The national income declines, business profits disappear, the security of loans is undermined, and the level of business activity falls. If the businessman could be assured that price levels will not fall sharply, he would have greater confidence that business profits and the value of investments would be maintained, and consequently would be more willing to make the contract and loans. investments and loans. At no time in modern history have lenders hesitated to lend during times of stable or moderately rising prices, and at no time has their desire to lend increased during a period of substantially falling prices. The power to devalue should thus constitute for the businessman an added assurance that prices will not be permitted to decline much or sharply in response to a marked depreciation of foreign currencies. This added assurance of domestic price stability should operate as an encouragement to

The present attitude of the owner of capital toward the prospective value of the dollar is one of full confidence. This is borne out by the eagerness of the public to invest in long-term fixedout by the eagerness of the public to invest in long-term fixed-interest bonds at almost the lowest interest rate in the history of this or any other country. The fact that people are willing to invest billions at low rates of interest, and run the risk of depreciation of the real value of the bonds which would accompany any sharp rise in the general price level, suggests that they have confidence in the way which counts most; namely, by their willingness to risk their capital.

The assertion that the continuance of the power to change

willingness to risk their capital.

The assertion that the continuance of the power to change the gold content of the dollar generates lack of confidence and hesitation in the business world is not, I am convinced, based on factual considerations. Rather, it seems to me, it stems from an effort to reestablish the validity of monetary theories that are ill adapted to the circumstances prevailing in recent years.

Monetary disturbances in the world today arise from causes almost entirely outside our control. The effect of these disturbances on our monetary system has been such as to reflect greater confidence in the American dollar than in any other currency. This tribute to the soundness of the dollar, taking the form of huge transfers of funds to the United States, creates an unbalance which is the only factor in the situation which the form of huge transfers of funds to the United States, creates an unbalance which is the only factor in the situation which gives us any cause for real concern. The powers we possess have been sufficient to prevent any significant damaging effect on our domestic system. The monetary powers granted to the President by the Congress have been employed in such a way as to be powerful forces for stability rather than instability in the domestic economy and in the international field alike. Sincerely,

HENRY MORGENTHAU, Jr., Secretary of the Treasury.

Need of Members of Congress for Additional Clerical and Research Assistance

EXTENSION OF REMARKS

HON. M. M. LOGAN

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES Thursday, March 30 (legislative day of Tuesday, March 28), 1939

ARTICLE BY DAVID LAWRENCE IN WASHINGTON EVENING STAR

Mr. LOGAN. Mr. President, on last Tuesday Mr. David Lawrence, in his column in the Washington Evening Star, had an article on the need of Members of Congress for additional facilities which I think is so filled with truth that I ask unanimous consent that it be published in the RECORD.

Mr. BILBO. Mr. President, it had been my intention to ask that the same article be printed in the RECORD. I join in the request, and hope every Member of the Senate will read the article. I think the country ought to know our predicament.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of March 28, 1939] CONGRESSMEN NEED ADDED FACILITIES-LIMITED PERSONNEL IS BLAMED FOR ERRORS IN DECISIONS MADE

(By David Lawrence)

It was disclosed the other day that 50 United States Senators had signed an informal circular advocating passage of a bill which would tax individual incomes up to 99 percent in time of war and that only about 10 Senators had read the document carefully before

This particular proposal has turned out to be impractical, because whoever drafted it forgot that out of individual incomes there must be paid State and city taxes and that if incomes are virtually confiscated when war begins the whole structure of private credit might collapse and bring on a financial crisis at the very moment when patternal unity was most desired.

collapse and bring on a financial crisis at the very moment when national unity was most desired.

Why, it will be asked, did 50 Senators sign such a preposterous proposal, and why didn't they read it carefully before giving even informal approval? The incident brings to the forefront of attention a problem on which relatively little has been said, but which is really at the root of our legislative situation, namely, the inability of Members of Congress to give personal attention to the thousand and one things that crowd before them, and the inadequacy of their office staffs to handle communications from constituents and others.

PRESSURE IS SCANDALOUS

The way the Congress of the United States is forced to do its work is nothing short of a public scandal. Just at the time when the citizens are deeply interested in an important bill or the repeal of an existing law and the mails are flooded with letters and telegrams, the Senator or Member of the House may be tied up with other matters which are his particular province of inquiry. He is importuned for answers to letters, and he is asked for personal interviews. He really does not have either the time or the staff to handle effectively the duties of his office unless out of his own pocket he is able to hire additional staff.

The entire cost of the salaries of the House and Senate Members The entire cost of the salaries of the House and Senate Members and their respective offices is about \$8,500,000 a year, and yet this group of 531 men is expected to pass minutely on appropriations totaling around \$10,000,000,000 a year. It might be thought that the congressional committees have special staffs available, but they do not. Each committee has a clerk or secretary, and occasionally an extra assistant is engaged, but on the whole the committees do not have any special staffs.

not have any special stails.

If the Congress should appropropriate a small amount of money each year to permit the hiring of a staff of at least two extra persons for each office of a Senator and Representative and make the salaries large enough to engage someone with business or economic experience, so that legislation, actual or proposed, could be carefully analyzed, the result might be a saving of hundreds of willings of dellers a year. millions of dollars a year.

RESEARCH MEANS LIMITED

If a Member of Congress wants to get a piece of research done on If a Member of Congress wants to get a piece of research done on a measure that is pending or one that he is thinking of introducing where can he go? Often he consults the executive departments or agencies, but there again the personnel isn't supposed to work for the legislative branch of the Government, and besides these officials have their own work to do. Lately it has been suggested that some Members might be able to avail themselves of the services of private research organizations, but there are not many which can afford to do work for nothing.

Worst of all is the situation that exists on Capital Hill with re-

Worst of all is the situation that exists on Capitol Hill with respect to committees. It is not at all infrequent for a Senator to find his calendar calls for attendance at three different committee meetings at the same hour. He cannot possibly go to all three, so he goes to one, stays a while, and goes on to another, or else he misses two out of the three. Yet the system assumes that each Senator who is a member of a committee will be present when legislation is being drafted.

TIME FOR ACTION AT HAND

Members of Congress hesitate to add to the legislative pay roll because of the demagogic outcries that usually arise in such instances; but the time is at hand when, unless the Senate and House get extra staffs, not only to handle the huge volume of letters and telegrams nowadays, but to analyze the numerous proposals and suggestions that come to them for serious attention, the people of the United States may expect even more ill-considered and patchwork legislation in the future than in the past.

patchwork legislation in the future than in the past.

What makes the situation even worse than ever before is that 9 out of every 10 proposals for legislation which come to the Senate and House nowadays relate to basic economic matters—either business or industry or agriculture or taxation or cognate questions. The day of the relatively simple piece of general legislation is long since passed. It is an era of technical legislation in which expert analysis is required, and yet the Congress has about the same equipment as it had in the "horse and buggy" days of a half century ago.

Small wonder that Senators and Representatives, giving hasty glances at what seems to be worthy or commendable bills, go on record favorably, only to find later that someone else has made an analysis showing that more harm than good would come from adoption of the proposal. A Call for Religious Liberty

EXTENSION OF REMARKS

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES Thursday, March 30 (legislative day of Tuesday, March 28), 1939

ARTICLE BY HON, JAMES J. DAVIS

Mr. CAPPER. Mr. President, in the current issue of Liberty Magazine, published in Washington, D. C., is an interesting and forceful article by our colleague, the senior Senator from Pennsylvania [Mr. Davis]. The article in question is entitled "A Call for Religious Liberty," and deserves the attention of the Senate and the country. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

> [From Liberty Magazine] A CALL FOR RELIGIOUS LIBERTY

(By the Honorable James J. Davis, senior United States Senator from Pennsylvania)

The most unique contribution of the United States to the science of government is religious liberty. This includes the right of all citizens to their individual opinions concerning the life of the spirit. American citizens have a right to their own beliefs in politics, economics, and religion; and this right is basic in the latter because freedom of religion is fundamental to all the free-

doms which we enjoy.

Authoritarian states can compel obedience to their man-made Authoritarian states can compel obedience to their man-made decrees, but no power on earth can control the movements of the Almighty in the minds of men. No power can equal the force of truth. No substitute can be found for productive thought. Creative ideas spring up in the minds of men everywhere. No dictator can withhold them. The power of God in the individual mind is superior to that of any earthly government. Our representative institutions of government have their roots in the thoughts and feelings of humble folk, whose minds no imperial decree can reach and whose hearts no bond of servitude can fetter.

THE POWER OF GREAT IDEAS

The most democratic thing in the world is an idea. To be the cradle of a great thought is the deepest religious experience A dominant idea will choose a humble birthplace a man can have. A dominant idea will choose a number birthplace for itself, often in the mind of some obscure man or some neglected child, and from that idea will grow the force of a mighty movement which will shake the world and rock the thrones of earthly rulers. Before the power of a great idea the forces of present-day dictators must tremble. They will give way before the shining light of truth as the blackness of midnight yields to the approach of the rights sun. proach of the rising sun.

Ingnt of truth as the blackness of midnight yields to the approach of the rising sun.

The selective power of great ideas is wonderful beyond all human intelligence. Who determined that the wisdom of the ancient world should be deposited in the mind of Aristotle? Who delivered to Moses the Ten Commandments? Who spoke to John the revelations of the New Jerusalem? Who selected Epictetus, the Greek slave, as the storehouse of Stoic wisdom? Who breathed into the mind of the Apostle Paul the truth of the immortal documents in Scripture which bear his name? Who selected Martin Luther as the champion of religious liberty? Who assigned to John Wesley his place as the founder of Methodism? Who gave to Shakespeare his power in language? Who stood at the shoulder of Bach when he designed his fugues and chorales? Who said that Thomas Jefferson should write the Declaration of Independence? Who chose Henry Ford to develop the automobile? Who called Abraham Lincoln to become the Great Emancipator? Who told Livingstone to dedicate his life to Africa? Who summoned Stanley to search for Livingstone in that dark continent? Who is it that speaks to men everywhere today, giving definite instruction to everyone who will be quiet and listen and obey?

America is the first and only place in the world where the idea of the store when the parameted at the continents of the content of the store when the dear of the store when the parameted at the content of the world where the idea of the store when the parameted at the content of the world where the idea of the store when the parameted at the content of the world where the idea of the store when the parameted at the content of the world where the idea of the store when the parameted at the content of the world where the idea of the store when the parameted at the content of the store when the st

America is the first and only place in the world where the idea of equality has been carried out on a large scale, over a long period of time, in every aspect of our common life. This equality of opportunity derives its ultimate sanction from the religious belief that before God all men are valuable beyond any earthly estimate. The American idea of life is essentially this religious belief, that this Nation under God is based on an equality of free spirits.

EQUALITY IN AMERICAN LIFE

The equality of American life is shown in countless ways. American idea of government is the equality of the executive head, the legislative assembly, and the coordinate power of free courts. The American idea of religion is the equality of men before their Maker. Every religious group in America is expected to have equal place and opportunity with all others, and this includes Episcopalians, Catholics, Methodists, Jews, Baptists, Seventh-day Adventists—all of us. Superiority complexes of ecclesiasticism have no rightful place in this Republic. The American idea of education is the equality of every boy and girl in the right to an education at public expense. The American idea of science is the equal right of thinkers to the product of their own thinking. A man's contribution to science in free America is expected to be judged not by its sources but by its social and human worth. How proud we should be that America is still the home of free science, a free press, free assembly, freedom of worship, and all the fundamental freedoms which derive their vitality from a free people.

We are proud of this American heritage which is so nobly marked in its religious tradition. It deserves and must be accorded a prac-

We are proud of this American heritage which is so nobly marked in its religious tradition. It deserves and must be accorded a practical protection. In the United States we have all manner of diverse groups and minority elements. An attack on any one of these brings difficulty to all the rest. If you strike at the Negro, you make a more ready target of the Jew. If you oppress the Jew, you make more emergent an attack on the Catholic. If you hit the Catholic, you place the Baptist or the Methodist in jeopardy, and bring conflict closer to all religious groups. This is true of all sects and denominations, because, essentially, all are minorities. If you injure any one, you injure all of them; and if you undermine religion, you introduce disorder in the realms of economics and government. Soon you find yourself in utter anarchy and confusion. The violation of justice, if permitted in a single instance, can speedily be multiplied in countless cases. In this way the fundamental precepts and practice of justice may be destroyed.

THE RIGHT TO DIFFER

Religious liberty is essentially a problem of unity through diversity. Different religious groups are all the children of one Eternal Father. We should allow room in our minds and hearts for dif-ferent forms of religious thought and expression. Life should be Father. We should allow room in our minds and hearts for dif-ferent forms of religious thought and expression. Life should be richer and fuller for us because we have the rainbow of many colors expressed in the life of the Spirit. Any attempt to make diverse religious groups conform to any one pattern of uniformity through force, is a blow at both liberty and essential religion. One conscientious man with God should be counted the equal of

One conscientious man with God should be counted the equal of any majority which refuses the counsel of the Almighty. For in the end, the truth within that true life will win.

The United States was instituted as a pattern of government under the Constitution whereby the individual citizen and the separate minority could be assured of the right to their own individual identity of life and function. Primarily, this means that in America we have the right to differ from each other and not suffer for it. suffer for it.

We must beware of present-day world trends which seek to subwe must beware or present-day world trends which seek to substitute military force and government coercion for the individual liberty for which this Nation was founded. If we allow the liberties of any single religious minority to be violated, we open the door for a loss of liberties on the part of all of us. In this time of changing world outlook, this is an increasingly grave problem with American citizens.

It must be obvious that while the United States has to date offered religious minorities their strongest refuge, we are not exempt from threatened peril of bigotry. No land could become more desperately subjected to the fierce winds of racial and religious hatreds than ours, if we once should lose our fundamental sense of equality and freedom. For we have more sources of racial, sense of equality and freedom. For we have more sources of racial, religious, and class differences in the United States than has any other country in the world. Hence, freedom of religion and an active cultivation of good will are imperative with us. Especially we should direct our best intelligence to the cultivation of good will toward those with whom we differ. Our national destiny hinges on the constant application of this principle.

NEED OF DIVINE GUIDANCE

Individual liberty is always threatened with the perils of unrestrained license unless it steadfastly is rooted and grounded in obedience to God. As the individual trees of the forest find their sustenance in the common soil of the good earth, so we as indisustenance in the common soil of the good earth, so we as individuals should find our common guidance and direction in divine intelligence and good will. The individual who seeks to stand alone, without divine guidance, is the foe of liberty, for he is sure to fall. When he fails, as inevitably will be the case, he brings into disrepute the principle of individual liberty. He makes possible the justification which dictators seek for themselves, because they are tolerated only when individualism run riot has produced the confusion and lawlessess of men disobedient to both God and the confusion and lawlessness of men disobedient to both God and man. This is the tragedy, the most desperate tragedy, of our modern world. We see all manner of individuals refusing to accept the guidance of either state or church, and at the same time refusing to accept the rule of God within themselves.

America needs strong men who put God first in their daily lives. America needs strong men, many strong men, not just one or a few. America needs strong men, many strong men, not just one or a few. America needs strong men who accept as the ideals of their lives the patterns of individual initiative and divine guidance which led our American sires as pioneers from ocean to ocean. No one has yet found a substitute for their strength of character and the stout hearts which they brought to the making of America. No sacrifice is too great which will help us conserve our American heritage of courage and faith.

Involvement of American Interests in World Activities

EXTENSION OF REMARKS

HON, LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES Thursday, March 30 (legislative day of Tuesday, March 28), 1939

RADIO ADDRESS BY HON. ELBERT D. THOMAS OF UTAH, MARCH 28, 1939

Mr. SCHWELLENBACH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by the junior Senator from Utah [Mr. THOMAS] over the Columbia Broadcasting System on Tuesday evening, March 28, 1939, under the auspices of the American Council Against Nazi Propaganda, on the subject To What Extent Are American Interests Involved in Present-Day World Activities.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This is a day of contradictions. Even accepted slogans of the thoughtless fall much as do the mighty and secure among the nations. Events stagger all. A few halt to become thoughtful. As we glance over the world we note Germany a nation of re-

As we glance over the world we note Germany a nation of re-finement, learning, and art turns upon itself and drives from itself many of its best. With them reason, historical fact, and the ability to discover new truth seem also to have gone. This self-destruction wins shouting and brutal approval. Thus a great culture ready to bloom with new life stands retarded. In India, spokesmen for a world-wide empire and an ancient despotism plead with a fasting saint and offer in return for a discontinuance of that fast a changed policy of state. Weakness

is triumphant.

discontinuance of that fast a changed policy of state. Weakness is triumphant.

Czechoslovakia, a well-armed nation created by victors' decree and sustained by covenanted alliances and collective agreement, is swallowed by a neighbor motivated by the weight of unrestrainable strength and the fever of success. Thus might prevails.

In Italy, a leader in the movement to hand the earth and its people over to the mighty presents a discarded doctrine used by ancient conquerors to justify them in the destruction of a neighboring state by declaring that when a state is unable to protect itself it is worthy of a new master.

This doctrine makes void the basic fundamental of international law which recognizes that the mighty and the weak among nations may live side by side as the rich, the powerful, the poor, and the weak within the state maintain equal protection of the law.

This loss of a basic principle of international understanding did not come at once but is the result of a gradual breaking down of process. A loss for the weak and a gain for the strong have given the doctrine that might makes right a glorified position in the center of what is loosely called "world civilization."

Again we are taught the lesson that that which is destructive of a national or individual right, at a distance, may become destructive of a national or an individual right close at home. Ideas are world-wide and soon become of concern to all.

In the Far East a student nation, maddened by the doctrines of a newer and supposedly wiser world deliberately turns were the strong have given the contents of a newer and supposedly wiser world deliberately turns were the strong have given the contents of a newer and supposed with wiser world deliberately turns were the strong have given the contents of a newer and supposed with winer world.

In the Far East a student nation, maddened by the doctrines of a

In the Far East a student nation, maddened by the doctrines of a newer and supposedly wiser world, deliberately turns upon its ancient teacher and attempts to wipe out the culture, the art, and the wisdom of the longest-lived nation on the earth. Both teacher and student are destroying the best in each.

A proud people, with enemies and friends both from within and without, stand crushed by civil war. The American people take sides but our Government stands aloof. Our divided people thus dull the voice and make weak the moral and economic force of our Nation. Where the people are divided even governments cannot act. This is our American democracy's sad example to the rulers of the single-willed states. of the single-willed states.

Attempts to gain security by collective action, alliance, isolation, a balance of power, national armed might, economic self-sufficiency, imperial, and ancient strength have all failed. They have failed because the nations of the world in endeavoring to attain national objectives have not recognized the interdependence and social

objectives have not recognized the interdependence and social nature of nations.

In the face of the facts of today's world history, I am asked to what extent are American interests involved. In my answer I am told to consider the question in the realm of ideas. First, then, this world of contradictions to which I have called your attention, this uncertain world where the fear of might has again taken hold of all, has been brought into existence primarily as result of a wide acceptance of the governmental technique of the single will within the state.

The concept of a state with a single will is the very antithesis of

The concept of a state with a single will is the very antithesis of American democracy; American democracy rests upon the fact that many wills may prevail in the state at the same time. There are within the United States of America 49 separate sovereign wills.

In the realm of idea there is, therefore, the most basic of conflicts between the American governmental system and the tech-

nique of the single-willed state.

In the realm of ideas what is it in American democracy that is of primary importance. First of all, there is the concept that the individual citizen should be the chief end and the real reason for government. Thus, the American ideal of citizenship and the ideal of the citizen's relationship to his Government are incompatible with the theory of the totalitarian state.

That which is of most concern to all Americans is the preservation of four great freedoms. These are all based upon the American

tion of four great freedoms. These are all based upon the American concept of citizenship.

The first great freedom is the freedom of the person. Government protects the individual in his rights both as to his person and as to the property which belongs to him. This is the American concept of private property. For Government to take property without just compensation would be unthinkable in America, but is justifiable under the totalitarian theory.

The second great freedom is the freedom of thought, speech, and the press. This freedom gives to man the right to evolve his own thoughts and to express them as he wishes. A right entirely inconsistent where a single will preparts

thoughts and to express them as he wishes. A right entirely inconsistent where a single will prevents.

The third great freedom is the right to an education unhampered by any system of rigidly assumed truth. Man is thus allowed gloriously to seek new and eternal truth. This freedom gives to the American the right to project his mind into the unknown and to discover the new. If a man in America wishes to make that which he discovers or invents his own, our Constitution guarantees him that right that right.

The fourth great freedom on which American democracy rests is the freedom of the soul. Man may worship or not as he wishes. He is free and unhampered in his religious beliefs. He may express his ideas about the great unknown as he sees fit. Without this freedom the American citizen would have lost one of the world's greatest lessons, namely, that men can have conflicting loyalties in regard to their gods and their dogmas and still live at peace with one another. This, of course, would be impossible in a land where the state is made the single embracer of all thought, action, and property.

These four freedoms which have meant so much to the building These four freedoms which have meant so much to the building of America were all based upon the concept of liberty. Legally, liberty embraces all the rights and beliefs of man which he has not surrendered to his government. Thus the American governmental system represents the notion that outside of the state there is much in men's lives which the state must respect. This concept is completely out of harmony with a state based upon a single will. Above all, the theory of citizenship as it has evolved in America rests upon Daniel Webster's great thesis "that morality is the first qualification for citizenship." The concept of morality cannot exist in a single-willed state, because there can be no moral rights in men when there is but one will controlling the actions and thought of men.

American democracy in the realm of idea would find its fundamental principle in Thomas Jefferson's great assertion: "I have sworn upon the altar of God eternal hostility against every form of tyranny over the mind of man."

A single will among men must be the greatest of all tyrannies.

America, therefore, cannot accept the single-will notion and remain

Over 10 years ago David Lloyd George wrote: "The war rid the

Over 10 years ago David Lloyd George wrote: "The war rid the earth of crowned autocrats but it substituted for these tyrants a number of dictators who rule vast populations." Tyranny is wider in extent in the world today than it was 10 years ago. Some cynics laugh because America found itself willing to fight for democracy in the past, but for what greater right can men offer their lives? That we were deceived in our sacrifices should not cause us to dull our minds as to the worth of the contest. It should, though, make us thoughtful of this extreme fact that force cannot be defeated by force. That way to peace has been on the earth for many years but peace is not with us; in fact, peace is no longer an aim among leaders in the single-willed states, for now we see that even the ideal of a peaceful world and the ideal of a peaceful state are challenged. are challenged.

Force running rampant among the tyrannies of the earth has already turned those nations where the single will is supreme into nations of war. America should be thoughtful about these facts.

Labor Dispute Conciliations

EXTENSION OF REMARKS

HON. ELBERT D. THOMAS

OF UTAH IN THE SENATE OF THE UNITED STATES Thursday, March 30 (legislative day of Tuesday, March 28), 1939

ARTICLE BY BEN H. MILLER PUBLISHED IN THE BALTIMORE EVENING SUN OF MARCH 21, 1939

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article written by Ben H. Miller and published in the Baltimore Evening Sun, Tuesday, March 21, 1939, on the subject

of Labor Dispute Conciliations.

Mr. President, at times like the present, when we are experimenting on a solution of our industrial labor problems, we should always welcome thoughtful deductions about our evolving conditions. Mr. Miller's article is not only thoughtful and descriptive but, in addition, he points out as a subject what has been a very successful practice in regard to labor conciliation in Canada, and he offers it to the American public for their consideration.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Baltimore Evening Sun of March 21, 1939] LABOR-DISPUTE CONCILIATOR SAYS LACK OF AUTHORITY GIVES HIS UNIT STRENGTH—DR. STEELMAN ASSERTS THAT HIS SERVICE CAN'T MAKE ANYBODY DO ANYTHING, BUT IT HAS SETTLED CASES INVOLVING 20,000,000 THE NEWS

Employees of 13 Washington hotels were returning to work today, following a 2-week-old walk-out. Dr. John R. Steelman, Labor Department conciliation chief, announced the compromise agreement that ended the strike following conferences with attorneys representing both sides of the disagreement.

THE STORY BEHIND IT (By Ben H. Miller)

Of the governmental agencies taking an active part in the cur-Of the governmental agencies taking an active part in the current attempt to solve problems of labor relationships, the Conciliation Service is the oldest. A unit of the Department of Labor, it came into being on March 4, 1913, when William Howard Taft, in his last act as President, signed the bill creating the department. Among other things, this act provided:

"The Secretary of Labor shall have power to act as mediator and to appoint commissioners of conciliation in labor disputes whenever in his judgment the interests of industrial peace may require it to be done. * * *"

Since then other agencies have been born, but, theoretically, at since then other agencies have been born, but, theoretically, at least, each has its own separate field of activity, supposedly overlapping neither with the others nor with the Conciliation Service. The two Boards set up under the amended Railway Labor Act of 1937, for instance, confine their work to labor questions in railway and air transportation. These are the National Mediation Board in Washington and the National Railroad Adjustment Board in Chicago.

N. L. R. B. CAN'T MEDIATE

The most widely discussed at the present is the National Labor Relations Board, but it is designed chiefly to protect and encourage collective bargaining and, under the express terms of the 1935

Wagner Act, which created it, is debarred from mediating.

Furthermore, the N. L. R. B. is restricted to problems arising in interstate commerce, whereas the Conciliation Service may deal

in interstate commerce, whereas the Conciliation Service may deal with interstate and intrastate situations alike.

There are other grounds for contrast. The N. L. R. B., under the law and its own regulations, technically enters a case only when complaint is filed with it by a labor organization which is a party to a dispute. The Conciliation Service, on the other hand, may respond when requested by either party, by any interested government, State, or municipal official, or, if it seems advisable, may intervene on its own initiative.

DISPOSED OF 4,231 CASES IN YEAR

The result has been that the Conciliation Service has been very busy indeed from the time of its origin. Last year, for instance, it was active in every State in the Union, the District of Columbia, Alaska, Puerto Rico, and the Virgin Islands. It disposed of 4,231 situations formally referred to it—an increase of 59.4 percent over 1937. These involved 1,618,409 workers, and included strikes and threatened strikes, lockouts and threatened lockouts, and problems of arbitration, conduct of elections, and a variety of other matters. In 95 percent of these situations disposition was made in a manner said to be satisfactory to all parties interested. said to be satisfactory to all parties interested.
"The outstanding accomplishment," says a report of the Labor

Department, "was the prevention of 339 threatened strikes, involving 230,565 workers. With an average of 20 workdays lost per striking employee, as computed by the Bureau of Labor Statistics, the number of threatened strikes averted equals a potential saving of 4,611,300 man-work days."

NO POLICE POWER

Strength, rooted in the total absence of authority, is the apparently anomalous explanation which Dr. Steelman gives for the

success of his Service.

"We have no law to enforce; we have no police power; we can't make anybody do anything," Dr. Steelman says. "Furthermore, we

have no set jurisdiction."

"The result is," he continues, "our commissioners can go in anywhere and the worst that can happen is that they may be told they aren't wanted. That rarely occurs. In only six instances last year were our services declined."

WASHINGTON CONFERENCES

Dr. Steelman's office in Washington is open at all times to any branch of labor or industry which needs advice. Into it stream

leaders of varying and often mutually hostile sections of industrial life. These men and women sit down with the Conciliation Director or one of his aides and, because their remarks always are kept in confidence, frankly discuss their problems. The result is that the Service is in almost constant touch with the situation throughout the country and frequently a word here or a suggestion there results in dissolving a potential situation even before it actually takes form

FIFTY COMMISSIONERS

Dr. Steelman's service at the present time, includes in its personnel about 50 of these commissioners of conciliation. These field representatives are drawn from varied walks of life. Some have been personnel managers for industrial concerns; some have been

trained as workers and representatives of workers; some have been trained as workers and representatives of workers; some are lawyers. Although the services of conciliators are supplied free of any charge, the cost of the unit has been kept very low. Its budget for the current year is something under \$390,000 This compares to approximately \$375,000 for the National Mediation and Railroad Adjustment Boards and well over \$3,000,000—or nearly 10 times as much—for the National Labor Relations Board.

COMPARED TO N. L. R. B.

This record has caused some students of present-day labor problems to seek in the Conciliation Service the answer to a restoration of industrial peace. Critics of the N. L. R. B., in particular, have constructed a tabulation which they say proves that there is room for improvement in the N. L. R. B.'s procedure.

They express themselves in this way:

By the provisions of the Wagner Act, N. L. R. B.'s jurisdiction is limited to about 8,000,000 workers in the country. Yet the Labor Board employs a personnel numbering more than 750 and

has secured an appropriation for this year of over \$3,000,000.

On the other hand, proponents of this viewpoint contend, the Conciliation Service has a potential field of 33,000,000 workers with which to deal, yet functions with a total staff, field and departmental, of about 80 and its \$390,000 appropriation.

There have been suggestions that the part played by the Conciliation Service be given greater recognition. One of the most frequently voiced proposals is for legislation prohibiting action before the Labor Board or any other tribunal until after the Conciliation Service shall have had an opportunity to effect settlement. Some such system already is used in Canada, where a strike or lock-out is forbidden until a report on a dispute is made by a board of conciliation or investigation.

ONE PHILOSOPHY OF LABOR-DR. JOHN R. STEELMAN, HEAD OF CON-CILIATION SERVICE, GIVES VIEWS

Washington, March 21.—A veteran student of labor affairs (he holds a Ph. D. in sociology), Dr. John R. Steelman, Director of the United States Conciliation Service, believes that the front line of democracy is in the field of employment relationships.
"Most Americans may know the theory of democracy," says Dr. Steelman, "but it is in this field, affecting wages and hours and working conditions, that the practice of it comes closest to home."

Here are some of his views:

"We can clearly see by glancing at developments abroad how dependent the successful functioning of democracy is upon harmonious relations between those who work and those who direct work. When these relations break down, democracy goes by the board."

"I believe that free, self-governing labor unions are a bulwark of democracy; that through no other means can labor bargain with industry on any semblance of equality."

"The first requisite for the company or industry desiring to follow the path of progress is that it shall have a definite, constructive policy in the matter of its industrial relations, just as it has definite commercial and technical policies. It should be understood once and for all that not even the stockholders' money is protected to advantage unless the labor relations of the company are on a sound basis."

The Conciliation Service works on the theory that a dispute settled by the parties themselves at the conference table is more enduring and leaves less bitterness and rancor than one settled by

authority of law or force."

Texas

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Thursday, March 30 (legislative day of Tuesday, March 28), 1939

ADDRESS BY RALPH D. PITTMAN

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD a speech entitled "Texas,"

delivered by Mr. Ralph D. Pittman before the Gyro Club at Washington, D. C., on March 29, 1939.

There beng no objection, the address was ordered to be printed in the RECORD, as follows:

Texas occupies all of the continent of North America except a small part set aside for the United States, Canada, and Mexico. Texas owns the north half of the Rio Grande, one of the few rivers in the world with one bank wet and the other dry. Texas is bounded on the north by 25 or 30 States, on the east by all of the oceans except the Pacific, on the south by the Gulf of Mexico and South America, and on the west by the Pacific Ocean and the rest of the world. Underneath Texas they have at this writing been down only 8,000 feet or so for oil, and up in the air Texas has in Guadalupe Peak 9,500 feet above sea level, the highest hill in the United States east of the Rockies.

Texas is so big that the people in Brownsville call the Dallas

United States east of the Rockies.

Texas is so big that the people in Brownsville call the Dallas people "Yankees," and the citizens of El Paso speak of the residents of Texarkana as being "effete easterners." It is farther from El Paso to Texarkana than it is from Chicago to New York, and Texarkana is closer to Milwaukee by airline than it is to El Paso. (Try this on your Rand-McNally.) The United States with Texas left out would look like a three-legged Boston terrier.

The chief occupation of the people of Texas is to try to keep from making all of the money in the world, and at that the wealth of Texas increased 539 percent between 1900 and 1927. At one time Texas was so wild that even the law of gravitation was not obeyed, and the chief pursuit of the Texans was Indians and Mexicans, but now it is crop records and oil production. It is so healthful in Texas that out in Eastland a horned toad lived 30 years sealed in a cornerstone without food, air, or water.

Texas that out in Eastland a horned toad lived 30 years sealed in a cornerstone without food, air, or water.

Texans are so proud of the Lone Star State that they cannot sleep at night. If a Texan's head should be opened the map of the State would be found on his brain. The word "Texas" is of Indian origin, and means "friends," and the Texas people are that way yet unless you take a slam at their State. If your front gate is not at least 18 miles from your front door, you do not belong to society as constituted in Texas. Down on the King ranch the front gate is 150 miles from the front porch and the owner is thinking of moving the house back so as not to be annoyed by passing automobiles. Other Texas landlords have whole mountains on their ranches, and one Texan has 40 miles of navigable river on his farm. If the proportion of cultivated land in Texas were the same as in Illinois, the value of Texas crops would equal that of the other 47 States combined. If all the people of the were the same as in limitors, the vatue of Texas crops would equal that of the other 47 States combined. If all the people of the United States were to move to Texas, it still would be not more densely populated than is Massachusetts. Texas has land enough to supply every man, woman, and child in the whole world with a tract 20 by 200 feet, and have enough left over for all the armies of the world to march around in five abreast.

To move the Texas corn crop would take a string of boxcars longer than the distance between New York and San Francisco. If the 1,500,000 tons of sulfur mined in Texas annually were in the 1,500,000 tons of subtribution in Texas annually were in the hands of His Satanic Majesty, they would solve his fuel problem. If all the cotton grown in Texas were baled and built into a stairway, it would reach to the Pearly Gates. If the 255,557,000 barrels of oil produced in Texas in 1928 were made into gasoline, it would run a well-known make of automobile throughout eterit would run a well-known make of automobile throughout eter-nity. If all the hogs of Texas were one hog, he could dig the Panama Canal in three roots and one grunt. If all the Texas steers were one steer, he could stand with his front feet in the Gulf of Mexico and his hind feet in the Hudson Bay, and with his horns punch holes in the moon and with his tall brush the mists off the Aurora Borealis.

Gentlemen, this finally explains why our great Vice President could not get to Dallas last summer.

Trade With Spain

EXTENSION OF REMARKS

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, March 30 (legislative day of Tuesday, March 28), 1939

ARTICLE BY HARRY W. FRANTZ IN WASHINGTON TIMES-HERALD OF MARCH 30, 1939

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the RECORD an article entitled "United States to Enter Race for Trade With Spain." This article is by the pen of Mr. Harry W. Frantz and is clipped from this morning's edition of the Times-Herald, of Washington, D. C.

I am glad to be able to observe that at last our Government—at least the press of the country—is being interested in the importance of securing some of the trade that will be coming from Spain since now peace, law, and order have been brought out of chaos as a result of the victories of General Franco in the aid of the nationalist government over communism and anarchism. I have advocated for some time the recognition of the Franco government, since General Franco's government has been recognized by both France and England and all the major powers of the world, with the exception of the Soviet Union and the United States of America, and I should hate to think of the United States as awaiting the action of the so-called sister democracy of Russia before recognizing present-day Spain. The democratic form of government is claimed by the Soviet Union.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of March 30, 1939] UNITED STATES TO ENTER RACE FOR TRADE WITH SPAIN (By Harry W. Frantz)

With Spain facing urgent reconstruction expenditures estimated at not less than \$500,000,000, an international race for commercial position there was already under way yesterday, with the United States looming as a probable late starter but powerful contender. This country's attitude toward discontinuance of the munitions embargo and recognition of the triumphant nationalist government

remained in a stage of intensive study, with political and diplomatic factors for the moment evidently regarded of greater importance than commercial.

FAVORABLE ECONOMIC SET-UP

But United States economic relations with Spain were viewed unofficially by some experts as marked by numerous favorable features which would hasten recovery of trade in the event the Government should decide to recognize the triumphant Franco

regime.
These factors were:

(1) A notable recovery in United States-Spanish commerce during 1938, as compared with 1937.

(2) The fact that Spain has no dollar bond indebtedness to the

United States, and consequently there is no legal barrier to possible loans or credits to Spain after recognition.

(3) Spain's ordinary commercial indebtedness to United States businessmen, estimated around \$20,000,000 when the civil war broke out, has been given systematic attention by a standing committee of the Matienel Foreign Trade Council at New York and mittee of the National Foreign Trade Council at New York, and under normal commercial conditions might be adjusted in an orderly manner.

A 1936 SURVEY MADE

(4) A resumption of United States cotton, tobacco, and automotive exports to Spain would conform to traditional trade ties, and this country might derive some special advantages from its Export-

Ins country might derive some special advantages from its export-import Bank credit facilities and cotton-subsidy program.

(5) Every phase of United States-Spanish commercial relations was thoroughly explored in months prior to the outbreak of the civil war in July 1936, and at that time a reciprocity agreement was in an advanced stage of negotiation.

The Cotton Surplus

EXTENSION OF REMARKS

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Thursday, March 30 (legislative day of Tuesday, March 28), 1939

EDITORIALS ON COTTON PROBLEM

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Philadelphia Inquirer entitled "Cotton Furnishes Another Headache"; an editorial from the Baltimore Sun entitled "Deeper Into the Bog"; and an editorial from the New York Herald Tribune entitled "Blame for the Cotton Surplus." This subject is before the Senate at this time and is one of the greatest examples of the mismanagement of the New Deal. I should like to have these editorials made a part of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Philadelphia Inquirer of March 30, 1939] COTTON FURNISHES ANOTHER HEADACHE

Of all the features of its ill-fated farm program the administration has scored its greatest failure with cotton. It has tried almost every alleged remedy for the ills of this vital American industry without success, until the condition has become desperate.

Now, as a seemingly last resort, Mr. Roosevelt suggests a plan to dispose of the 11,000,000 bales of surplus cotton the Government has left on its hands as collateral for loans to the farmers.

It is proposed to give the borrowing farmers a bonus of \$1.25 a bale to release this stored cotton for foreign markets, thus wiping out their debts. Then experts could buy this cotton at about 8 cents a pound from the Government, which would grant them a bounty of 2 or 3 cents a pound on all they sold abroad.

This would be fine for American exporters, getting their cotton well below present market prices and making handsome profits even

well below present market prices and making handsome profits, even though they dumped it at less than prevailing prices in other countries. It would not be so fine for the cotton growers in China, Egypt, Brazil, India, and other lands who have been corraling our world markets because of our Agriculture Department's suicidal policies

suicidal policies.

Mr. Roosevelt says this is frankly a scheme to regain our fair share of those markets while benefiting our own producers by getting rid of the enormous cotton surplus that has been hanging as a big black cloud over our southern farmers.

But what would our foreign customers receiving this generous bargain do with the American cotton? They would proceed, of course, to turn it into manufactured goods which could be shipped back to American to compete to surplus to represent the competent prices with our domestic back to America to compete at cutthroat prices with our domestic articles.

The President mentions the possibility of establishing import quotas to prevent or reduce this evil, but how would this procedure and also our cotton dumping abroad harmonize with our reciprocal trade agreements in which the administration has taken such prude as promoters of American commerce and of cordial relations with

The answer is that, like Secretary Wallace's current export wheat subsidy, it would not harmonize at all. After several months' trial the wheat surplus remains large, and the taxpayers are heavily out

of pocket as usual.

When Mr. Wallace started his scheme anybody could see it was

when Mr. Wallace started his scheme anybody could see it was bound to run into trouble. Selling our products at preferential prices to foreign customers and making up the deficit by soaking cur own people didn't seem good business.

Argentina was the first to kick—and not, of course, for fear we should be dumping any wheat on that wheat-producing country, but because its own export market was facing injury through the dumping of American wheat on Brazil. Secretary Hull had to act as "trouble shooter" to straighten that difficulty out, with Mr. Wallace's assistance.

as "trouble shooter" to straighten that difficulty out, with Mr. Wallace's assistance.

The incident is mentioned as an illustration of the complications we let ourselves in for when we start subsidizing our exporters, at the expense of the home folk, in the rush to capture world trade we lost largely through our own fault.

For nobody now denies that A. A. A. crop restriction played directly into our competitors' hands. As has been said, our Government "held an umbrella" over foreign producers of cotton and wheat and fostered their business at the cost of our own.

And so the administration is casting about for ways and means of repairing the mischief and, as always, the nonfarming taxpayers are to foot the bill. The cost of the cotton export scheme is estimated at from \$60,000,000 to \$90,000,000 a year.

This might not be a bad investment from the long-range point

This might not be a bad investment from the long-range point of view if our former customers abroad hadn't made themselves so independent of American cotton supplies that they will now buy only at bargain prices. We can't continue indefinitely to hold the bag for our foreign customers.

The fact is our own farmers have been spoiled by their Government's largess, and their foreign markets have been spoiled by their Government's short-sighted policies. It would be encouraging to think that in cutting out the \$250,000,000 for farm price parity payments the House has taken a permanent stand against extravagance in farm relief. Aside from the saving, this action, if sustained, will strike a body blow at the absurd idea of guaranteeing a price to a producer based on its supposed purchasing power at a fixed date of years ago.

But the whole hodgepodge of price fixing, crop curtailment, acreage restriction, and bounties, subsidies, and loans has got farming nowhere, while increasing the burden of taxes and the cost of living. The farm problem remains a national headache.

[From the New York Herald Tribune] BLAME FOR THE COTTON SURPLUS

In outlining the administration's newest plan for combating the In outlining the administration's newest plan for combating the cotton-surplus problem—an export subsidy—the President on Tuesday took the occasion of his press conference to inject into the record a statement so remarkable that it momentarily overshadows, it seems to us, the details of the scheme itself. This was a statement in which he clearly implied that the major share of the blame for the New Deal's cotton fiasco should be placed at the door of the Supreme Court. Said he: "The present status of the cotton industry goes back in large part to the almost 19,000,000 bales of cotton we grew in 1937. This record crop followed the invalidation by the Supreme Court of the control provisions of the original Agricultural Adjustment Act. Since that time another law enabling an effective control program has been enacted, but several years of adjustment will be necessary to bring our supplies to normal."

What does this statement imply to the casual reader? It implies, if it implies anything, that when the Supreme Court invalidated the original A. A. A. on January 6, 1936, the Government was left with no control, or with inadequate control, over cotton acreage; that in consequence of this fact cotton farmers expanded their acreage so prodigiously that they produced the largest crop in the country's history, a crop of over 19,000,000 bales, and that before the Government could regain control of the situation the present

huge surplus stock had been accumulated.

Now, what are the facts of the situation? When the Supreme Court declared the A. A. A. unconstitutional this action did not catch the administration napping. It was ready for such a decision, and in less than 3 months it had a new crop-control measure—the Soil Conservation Act—on the statute books. That act did not, it is true, include the so-called Bankhead compulsory crop-control provision of the original measure, but it is well to remember that the administration had never favored this section of the law. In 1937 land planted to cotton was about 34,000,000 acres, which, while 3,000,000 above the previous year, was still some 10,000,000, or, roughly, 25 percent, under the predepression normal. This acreage represented a generous voluntary reduction by the cotton farmers, for which they were handsomely rewarded under the Soil Conservation Act. There were no apprehensions at the time about this modest expansion in cotton acreage, because, thanks to a boom in the domestic textile industry in 1936, the statistical position of cotton was the best in 1937 that it had been in 5 years. Because of the 1936 drught moreover the second in 3 bisical position of cotton was the best in 1937 that it had been in 5 years. Because of the 1936 drought, moreover—the second in 3 years—the demand for crop curtailment generally was at a low ebb that year. The big 1937 crop did not result from any lack of control over acreage. It resulted from the fact that, because of the largest per acre yield in the Nation's history, cotton farmers were able to produce a record crop on an acreage that was actually 25 percent under normal.

There is no doubt that the 19,000,000-bale crop of 1937 complicated the problem of cotton control, but it is certainly misleading to imply that this was the fault of the Supreme Court. Moreover, to imply that this was the fault of the Supreme Court. Moreover, even this 19,000,000-bale crop would not have proved the burden that it has were it not for the administration's ill-advised loan program, which has maintained prices at artificial levels and thereby prevented cotton from going into consumption. The American cotton problem today is not basically one of oversupply. It is one of underconsumption, resulting, in the main, from the Government's interference with the price structure. So long as the administration refuses to face this simple fact, just so long will the surplus problem be with us.

[From the Baltimore Sun of March 30, 1939] DEEPER INTO THE BOG

For some months it has been clear that the administration's cotton program had completely bogged down. The failure of the program had been indicated from the very beginning, for all signs pointed unmistakably to the conclusion that the effort to restrict production and raise prices was undermining our export trade. Foreign consumers who formerly looked exclusively to this country as a source of cotton were turning more and more toward other producing areas, and, as a result, our share of the world cotton trade has steadily diminished. Where we were supplying about thalf of all the cotton consumed in the world 10 years ago we have been supplying only about 40 percent in the past few years.

It was not until a few months ago, however, that the complete break-down of the cotton program become emperat. Thanks to

the was not until a few months ago, however, that the complete break-down of the cotton program became apparent. Thanks to the mistaken policy of trying to hold cotton off the markets by advancing growers the market price in the form of loans, the Federal Government has accumulated in the past 2 years a surplus of some 11,000,000 bales. The loan program has kept prices for our cotton well above the world levels, and it has reduced offerings of American cotton to such an extent that foreigners who wish to buy our fiber often cannot obtain except to series they wonld. buy our fiber often cannot obtain enough to satisfy their requirements. As a result our exports have fallen to the lowest point in 50 years, and the whole enterprise of hoarding is about to collapse, to the injury of our growers and to the financial disadvantage of the Government, which has \$550,000,000 invested in cotton loans.

The administration's answer to this unhappy development is not

a frank confession of error and a proposal to retrace the mistaken steps which have got us into difficulty. Instead, after months of anxious cogitation, the President comes forward with a plan to advance further into the morass of arbitrary interferences with trade in which we are already deeply mired. He proposes, first of all, an export subsidy—a strangely inconsistent suggestion to come from an administration which, only 10 days ago, moved to penalize German imports because Germany subsidizes exports to us, and which for 6 years has sedulously cultivated the idea that export subsidies are of a piece with the high-tariff barriers and quota systems which Secretary Hull has been trying to scale down by means of reciprocal-trade treaties.

Nor is the export subsidy the only inconsistent device which the President proposes to use. He suggests that it may be necessary

to provide import quotas for manufactured cotton goods in order to protect ourselves against cheap cotton goods manufactured abroad out of the cotton we propose to sell foreign mills by the aid of a subsidy. And, finally, it is even suggested that we may find it necessary to pay export bounties on manufactured cotton goods in order that our own mills may not be handicapped in the world markets by having to buy their raw material at prices lifted above world prices by the various features of the cotton program already described. In brief, it would seem that having made one error after another for 6 years, the administration now finds it necessary to make three additional errors in order to get out of the unhappy mess into which it has worked itself.

For those who look on from afar this procedure may seem to be

For those who look on from afar this procedure may seem to be a comedy of errors, for a more ridiculous struggle to escape from the consequences of a Government's own misdeeds would be hard to imagine. But for the people of the Southern States, whose chief industry is being gradually undermined by these misadven-tures, the whole business threatens to become a tragedy of errors. The chief difficulty under which the South labors, as the President himself admits, is that "foreign cotton is underselling our cotton in world markets." But instead of trying to remedy this situation by the reopening of a free market, which would inevitably correct the present difficulty in a year or two, the administration proposes to adhere to, and even to intensify, a policy which prevents any fundamental correction whatever. fundamental correction whatever.

Taking the Profits Out of War

EXTENSION OF REMARKS

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 30, 1939

RADIO ADDRESS BY HON. JAMES E. VAN ZANDT, OF PENNSYL-VANIA, MARCH 26, 1939

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following address which I delivered recently over the radio:

I delivered recently over the radio:

Wars have been waged for gain—for profit—since man first trod the earth. Shaggy cavemen in the stone age fought for a fish, a beast, or a bird, for food to sustain life if you please, but none the less for profit. Down through the ages, pelf or profit have led men to war. Clans, chiefs, and countries all went to war for food, land, or gold—for profit. The profit motive is the mainspring of war. It is today no less than it was at the dawn of creation. Wars always will be fought for profit unless restraint is placed upon those who would profit from war.

Civilization advanced man in the arts and sciences but the primitive profit motive for war remains unchanged. The only changes that have come since the single combat of cavemen gradually gave way to modern war are in those who profit from war. Under jungle law the prize or profit went to the stronger man. The chiefs took the lion's share of the swag won by their bands. Now most of the profits of war go to the munitions makers. But the common man still fights the wars, dies in the wars, is crippled in the wars, and, if he is fortunate enough to come out of the wars with a whole skin, he helps pay for the wars, on the same basis as noncombatants, some of whom are the war profiteers. the war profiteers.

The arts play an increasingly important part in modern war. They are used to camouflage the motive, confuse the issue, lend romance and respectability to war, and give virtue to the cause. One of the indispensable arts of modern war is propaganda. Witness the Wilsonian slogan, "Make the world safe for democracy," as a shining example of the phrase-maker's art in lifting the cause for which we fought the World War to a noble and lofty plane. And, despite the hollow mockery of that slogan, we have us today some who strive to ring the changes on it in an effort to whip the American people into a war frenzy. You may be sure that those who cry loudest and strive hardest to embroil us in another European war would profit most from it.

War propaganda is scarcely less dangerous than war itself. For despite the hitter lesson we are supposed to have learned in the

despite the bitter lesson we are supposed to have learned in the World War, it would be only a short step to another war once the war-propaganda machinery began to function full blast. George Creel, director of the so-called Bureau of Public Information during the World Work a credited with the swind work.

the World War, is credited with the cynical statement that:
"Give me 3 weeks and the proper machinery and I can change
the so-called minds of Americans on any given subject."

Science only has served to make the weapons of war swifter and more devastating. It has not deterred war. On the contrary, science seems perversely to have added to man's passion for war. Since the war to end all wars we have witnessed an almost constant succession of wars, all apparently leading up to another general war. And if the whole world again divides into hostile camps and

clashes in monstrous mass murder, you may be sure that those who stand to profit most will remain aloof from death and destruction. In view of the menacing European situation and the threat of a

general war which grows graver every day, our duty is plain. I do not share the disheartening and fatalistic opinion, which the war propagandists have impressed upon many men in high places, that American participation in the next great war is inevitable. How-ever, I do believe we should take certain steps which are as essential to a preparedness program as guns, battleships, and airplanes. Not the least important is to curb as far as possible the profit motive, lest we be drawn into another world war which would all but end civilization itself.

motive, lest we be drawn into another world war which would all but end civilization itself.

We cannot change human nature by legislative decree. In fact, we do not want to destroy the profit motive, which is the mainspring of democracy as well as war. But we can and should strip war of all opportunity for undue profits in the future, so far as this country is concerned. By stripping war of profiteering we can do more to keep America out of war than in any other way.

Hence, that is the primary purpose of the bill to tax the profits out of war which I introduced in the House last Tuesday. That measure would put into practice the principles I preached for many years during my activities in veterans' affairs. It encompasses the abhorrence of war held by all veterans of the World War.

An identical measure was sponsored in the Senate by 50 Senators—a clear majority of that body. The House rules do not permit joint sponsorship of bills. Otherwise, I am confident the bill would have been sponsored by an overwhelming majority of the Members of the House. And unless the Roosevelt administration succeeds in scuttling it, I venture the prediction that some measure embodying substantially the same principles as my bill will become a law before this Congress ends. I say that with a full realization of the tremendous opposition which already has developed and the possibility of a Presidential veto making it necessary to muster a two-thirds majority in both Houses of Congress to override the veto and enact the law without Executive approval.

It has been suggested that instead of calling the bill an anti-war profits bill, we should simply call it an anti-war bill.

ride the veto and enact the law without Executive approval. It has been suggested that instead of calling the bill an anti-war profits bill, we should simply call it an anti-war bill. The point is well taken. It is primarily a peace measure. It was designed as a preview of the tax bill which would be rendered the profiteers of any war they may help us enter. It is a stop, look, and listen sign to those who are shouting "Halt Hitler!" It is a warning to those who would have us embark on any crusade to save religion, democracy, and international good faith among nations, such as Mr. Roosevelt suggested in his annual message to Congress. But it is no mere gesture. Those behind the basic principle of this bill—and they constitute a majority in both the House and Senate—are determined to push this measure to enactment with all possible speed. We will be content with nothing short of enactment.

enactment.

Just as we expected, the bill had hardly dropped into the hop-per in the House and Senate before a howl of anger, anguish, and rage went up from the would-be profiteers, the international-ists who would rather mind Europe's business than America's, the "Halt Hitler" crowd, congenital critics and wise-cracking

columnists who would sacrifice a principle for a figure of speech.

One newspaper, noted for its international viewpoint, made a great to-do over the fact that some of the senatorial sponsors of the bill had not studied the voluminous measure. That paper polled the senatorial cosponsors of the bill and found them all polled the senatorial cosponsors of the bill and found them all enthusiastically in favor of the principle underlying it. Others wailed that it was confiscatory, because it would leave a man with \$10,000,000 in war profits a mere \$110,000 a year to live on, when 27 out of every 100 families had less than \$750 income in the relatively good year of 1935-36; 42 out of every 100 families had less than \$1,000; and 65 families—two-thirds of the Nation's families—had less than \$1,500 a year. Hence you may imagine there will be many a dry eye in the country and Congress over the sad plight of would-be war profiteers, no matter how loud they souawk.

Even if the Government took ninety-eight and nine-tenths of a war profiteer's \$10,000,000 income, he still would have an in-come equal to that of 160 entire families in the \$750 annual income class. Certainly the bill was intended to be almost con-fiscatory, but the war profiteer would have quite a bit of loose change left.

change left.

The bill was based upon the policy that recognizes the fact that human life is more valuable than wealth, and that all citizens, poor and rich alike, are under equal obligations when the safety and security of the Nation is at stake.

I want to cite just one glaring and concrete example of unrestricted and exorbitant profits of industry in time of war, which gave rise to this bill. It is contained in the testimony of Mr. Eugene G. Grace, president of the Bethlehem Steel Corporation, before the Senate munitions committee. It was because of the unconscionable profits rolled up by industry and the fat bonuses paid to officials and employees in addition to salaries and wages that were tripled in many instances, that the question of adjust-

paid to officials and employees in addition to salaries and wages that were tripled in many instances, that the question of adjusting the compensation of the men who wore the uniform in the World War was first agitated. If you take the profit out of any future war engaged in by the United States there will be no demand for a bonus by the veterans who fight it.

Quite unabashed, Mr. Grace told the Senate munitions committee he received bonuses of approximately \$3,000,000 from his corporation during the World War and then defiantly sought to justify that huge hand-out, in addition to a princely salary. That Mr. Grace should have had the monumental gall to deplore the payment of the adjusted-service certificates to the men who

fought the World War is incidental to the question of taking the profit out of war. I cite this statement merely to illustrate the illogical and selfish position of the war profiteers in their opposition to any measure to end this unjustifiable war-profits system, as well as their inconsistent opposition to the immediate cash

payment of the adjusted-service certificates.

The enormous bonuses received by Mr. Grace are typical of the practice indulged in by industrial concerns during the World War to dodge the excess-profits taxes. By giving bonuses to highly paid officials and employees great corporations were able to split up their excrbitant profits and thus greatly reduce their taxes and rob the Federal Government of millions of dollars they should have rightfully paid into the Treasury. It was not generosity that dictated the practice. It was selfishness and greed and a determination to gyp the Government out of every cent possible in taxes. I cite Mr. Grace's testimony not only to show the failure of the excess-profits tax to take the profits out of war but even to force industry to pay its just share of taxes to the Federal Government to support the war.

to support the war.

Internationalists, would-be war profiteers, and their paid defenders, and professional calamity howlers have dug up such an imposing list of dire disasters that would overtake the United States if this bill became a law that it would be impossible to mention them even briefly in the time allotted to me. It is sufficient to say, however, that they all are picking on petty details, and none of them has dared attack the principle of the measure.

Despite the fact that the bill was drawn after extensive hearings by the Munitions Committee, and the draftsmen had the benefit of expert advice from the Internal Revenue Bureau, the Committee for Internal Revenue Taxation, and the Legislative Drafting Service of Congress, there may be defects in the details of the bill. But so long as the principle of the measure is sound the defects can be corrected quickly and easily by the committees in charge of the bill. So the almost hysterical opposition may dry its eyes and calm itself. itself.

Incidentally, it is strange that none of the critics who exhibit such deep emotion over the prospect of an economic collapse resulting from taxes to pay for the next war, which so many of them regard as a consummation devoutly to be wished, have mentioned regard as a consummation devotify to be wished, have helitables the inevitable economic collapse that would follow the war if it were managed financially like the World War. After the wartime boom the bottom fell out of our economic system, and we have been getting in and out of depressions ever since. Perhaps these critics would like to nurse a depression headache for two more decades if given the opportunity to enjoy a brief wartime prosperity spree.

Even if the would-be wartime profiteers desire that sort of frenzied financial existence, the vast majority of the American people do not. And since this measure was drawn in the interest of the people and not the war profiteers we will let the latter worry about this sharp cut in their swag so the people won't have to worry later in the midst of the post-war depression where they can dig up the price of a meal and a place to lay their heads.

can dig up the price of a meal and a place to lay their heads. This bill is dedicated to the veterans of the World War and to the boys of today, whom I hope a merciful God will spare the horrows of another war. For this bill is as much an antiwar measure as it is a proposition to tax the profits out of war. I have confidence that enactment of this bill will spare others in the future the distress of witnessing the sights I have seen in veterans' hospitals from one end of this country to the other. There you will find today the living protests against war. There you will find, 20 years after the last shot was fired in France, thousands of men still suffering with lacerated flesh, suffocated lungs, shattered legs, mangled bodies, and shadowed minds. For lungs, shattered legs, mangled bodies, and shadowed minds. many of them death would have been merciful.

many of them death would have been merciful.

I want the mothers and fathers of America, the wives, sisters, and sweethearts of men and boys of or near the draft age to consider this bill. I want them to weigh the flesh and blood of American youth against the unwarranted and grossly swollen bonuses and profits that would roll into the pockets of munitions industrialists in the event of war. Now is the time for citizens to make themselves heard. Events in a war-mad world move swiftly. Next month, next year, may be too late to demand the enactment of a measure which certainly would be a powerful influence in of a measure which certainly would be a powerful influence in keeping America out of war. Next month, next year, a white cross in some shell-torn field may be a silent protest against the failure to make the most of an opportunity to avert or avoid civilization's

most disastrous war.

W. P. A. Appropriation

EXTENSION OF REMARKS

HON. PIUS L. SCHWERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1939

Mr. SCHWERT. Mr. Speaker, we are concluding a week of most interesting legislation. The passage of the agricultural appropriation bill took up much of our time during the week. During the discussion of this bill and voting on amendments the appropriation for the Dutch-elm disease was removed. This and other items of the bill which were removed for petty reasons will have their effect on New York State. I mention this because of the fact that when we later reached the item of parity payments to farmers any Member in favor of the above items which were removed might have felt that he should vote against the parity payments; and such a vote would have been a grudge vote.

It was my privilege to be raised amongst the farmers and to have had dealings with them all my life. I know them to be a group that works continuously, making no request for reduction of hours, working for a small return and in many cases a loss, and generally speaking, having excellent character. I believe all of these characteristics could be well copied by other groups to the advantage of our whole country. I know also that the farmers began to lose money several years before the depression was felt in the city, and that, therefore, their depression has been of longer duration than that of any other group. Therefore, instead of voting against the parity payments in the nature of a grudge vote, I voted for it—first, because the farmers deserve assistance; and second, because it is my belief that the constituents sending Members to this Congress do not send them here to cast grudge votes, but rather to scrutinize carefully every piece of legislation and then vote for the benefit of constituents in the district and the country as a whole. It was my belief also that to be consistent I should favor the parity payment to farmers if on a later occasion I was going to favor a large appropriation under the W. P. A. bill.

Returning for a moment to the original W. P. A. deficiency appropriation, which was reduced from \$875,000,000 to \$725,-000,000, we find that there were enough safeguards placed in that particular bill to furnish ample investigation and information to the W. P. A. and to Congress itself. As a matter of fact, the questionnaire submitted to the W. P. A. workers since the passage of that bill not only asks them whether they hold office in any political party-including county or town committeeman, or a similar office-but it asks whether or not the W. P. A. worker is a member of any organization which is concerned with political campaigns or political management. This questionnaire is, therefore, really delving into, and, because of the installation of fear in the heart of the W. P. A. worker, is interfering with his personal privileges. Despite this fact, this week we passed a resolution ordering a congressional investigation of W. P. A. I supported this resolution, believing that no one should oppose a fair investigation of W. P. A., or of any office or department of any

governmental subdivision at any time.

I believe such a probe decently conducted will show the enormous amount of good W. P. A. has done, the vast benefits it has returned to the country: First, in the maintenance of purchasing power; second, in keeping families from starvation; and third, in the many valuable projects it has given the country—though I am frank to admit that some projects have not been of the proper caliber. This latter class, however, is in most cases due to the local governmental subdivision which made the original request. In my opinion Colonel Harrington and his associates know more about the operations and needs of W. P. A. than the Members of this Congress which argues over how many jobs they shall destroy. It seems to me that the very proposal for an inquiry is a confession that Congress does not know the needs of the W. P. A.

Not fearing the investigation, however, I repeat that I voted for it-I welcome it.

Getting down to today's appropriation: I agree with many of my colleagues that we must watch our expenditures and our appropriation items, but I am not in favor of making reductions and curtailments at the expense of the jobless workers and the poorer and more deserving classes of our country. I voted for parity for the farmers, and I am going to vote for this \$150,000,000 item. In this year of 1939 in my own county, of every dollar paid for taxes 60 cents of same is for welfare; and in the city portion of my district, the city involved cannot increase its tax rate. A curtailment of this appropriation will mean returning many to the welfare rolls. For the reasons above stated my district cannot stand such additions; and I believe that my district is similar to many, many others. Thus I believe we should follow the request of those who know the requirements of W. P. A. and support the \$150,000,000 item.

Let us investigate, but let us keep the workers working.

Education-Democracy's First Line of Defense

EXTENSION OF REMARKS

HON. W. F. NORRELL OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1939

Mr. NORRELL. Mr. Speaker, this present Congress has authorized the largest peacetime expenditure for armaments in the history of this country. Our Navy, our Army, our air force, each has been provided with adequate funds for rendering this country impregnable in defense. Defense against what? The answer is clear. Defense against any nation or combination of nations which would attempt through force to encroach upon our physical possessions or otherwise to overthrow the democratic institutions which are fundamental in our Government. No one who is informed on what is going on in the world today can doubt that democracy is in a state of siege. Week by week, month by month, we watch the march of the totalitarian states abroad, ruthless, smashing with brute force the liberties and independence of smaller nations. Within a few short months we have seen the mastery of Europe grasped by dictator hands. On this continent alone do the democratic institutions of a free people still reign supreme, nor will this supremacy remain long unchallenged. Because we value our American way of life, our freedom, and our institutions of democracy, above all material gain we stand ready to make whatever sacrifice is required for our continued security and protection against invasion.

Let us take heed that while we spend millions for armaments we do not neglect a second phase of defense without which armaments are useless. It is not by armament alone that modern wars are made. In Europe we are witnessing the death struggle of conflicting idealogies. In this struggle propaganda, cunningly devised and psychologically timed, is a weapon even more potent than bombing planes and tanks. If a democracy can be undermined by an infiltration of ideas, a bombardment of subversive doctrine, weakening the people in their faith in their own institutions, then the work of armies is rendered futile and all that we have authorized to be spent on armaments will be so much waste. We have also to arm against alien ideas and idealogies, and in this type of armament the foremost weapon is education.

Mr. Speaker, this Congress has taken all proper steps to protect our institutions from an invasion by force—the invasion from without. But our work is no more than half done if we stop at this point. The invasion that works from within is far subtler and essentially more dangerous. The invasion of ideas through propaganda, spoken and written, must be repelled also. This invasion has already begun and has been operative in this country for months—yes, years. It strikes at the very root of our liberal institutions. It challenges our rights as freemen. It is represented by scores of organizations which, while paying lip service to American ideals, at the same time acknowledge an allegiance to the dictator powers. We have these groups in our midst. know what they are. Evidence of their activities is in the hands of each of us. Our responsibility as the chosen representatives of a democratic people is great. Once faith in our American way of life has been corrupted and destroyed, our armaments will be vain. This faith, this belief in our fundamental institutions, is now the subject of a persistent and far-flung attack. How are we to meet it? By clamping

down a censorship? By legislation abridging freedom of assemblage and press and speech? Such methods constitute a violation of our fundamental principles and would in the end prove futile. You cannot destroy ideas by legislative fiat. There is but one way to meet this challenge and that way is by mass education.

Thomas Jefferson, who aptly is called the father of publicschool education in this country, once wrote in a letter to a friend:

I think by far the most important bill in our whole code is that for the diffusion of knowledge among the people. No other sure foundation can be devised, for the preservation of freedom and happiness. * * * Preach, my dear sir, a crusade against ignorance; establish and improve the law for educating the common people. Let our countrymen know that the people alone can protect us against these evils, and that the tax which will be paid for this purpose is not more than the thousandth part of what will be paid to kings, priests, and nobles who will rise up among us if we leave the people in ignorance.

These words written in 1786 might well have been addressed to us who are sitting here today. It might be added that in writing this letter Jefferson had in contemplation the conditions then existing on the continent of Europe. Who can doubt that were he a Member of this body today he would be among the first to realize the danger to our institutions which lies in this aggression of ideas, and would be the first to realize that the only way to combat this aggression is through education? Education, no matter what the price we pay, comes cheap. It is the guardian of our liberty and our happiness. In a true democracy, education is and must be universal. If we are to repel the fallacies and nostrums, if we are to repel alien ideas and idealogies, if we are to fight back this invasion which works from within, we must recognize that education is our foremost national problem and that educational opportunity must be equalized throughout this land.

One approaching this subject for the first time must be amazed and shocked at the inequalities now existing in educational opportunity here in our own United States. This is largely due to the fact that education has too long been viewed as the particular problem of the States. Public-school education has therefore varied in the opportunity it offers in proportion to the abilities of the several States to support a public-school system. Thus we find that approximately 20 percent of our children live in States where more than \$75 per child annually could be provided for education without heavier-than-average taxation.

On the other hand, another 20 percent live in States where not more than \$25 per child could be provided without heavier than average taxes. An expenditure of \$50 per child of school age would be low by city standards almost anywhere, and yet more than 60 percent of the children of the United States live in States that on a State-wide basis could not provide \$50 per child for public schools without more than average effort. These facts, gathered by the Advisory Committee on Education, are not to be doubted. As an example of the effort required if certain of our States relying on their own taxable resources of wealth were to undertake to offer educational opportunity on the minimum efficiency level, it has been estimated that it would take 116 percent of Arkansas' entire tax resources to support what has been called by educators the defensible national minimum of \$60 per unit of educational need.

Mr. Speaker, I do not come before you as an apologist for the low level of educational opportunity offered by my native State of Arkansas and by other States which occupy a low place on the economic scale of the Nation. The standard by which a State should be judged is the effort expended through taxation of available taxable wealth to provide adequate educational advantages, and by this standard the State of Arkansas ranks high, although it stands near the bottom in the per capita expenditure per child for education. A maximum of 21 mills on property can be voted under the State constitution, of which 3 mills has been levied by the State for many years for the support of State schools. The remaining 18 mills is authorized for local school tax and 86 percent of all the property in Arkansas has levied against it this 18-mill maximum tax for local school purposes.

In addition, we have levies of almost every imaginable type of special tax. We have a severance tax; we have a tobacco tax, one of the highest levied by any State; we have a beverage tax; and we have a sales tax, recently reenacted. It is no exaggeration to say that our legislature has gone through the taxable sources of wealth with a fine-tooth comb in the hopes of finding something additional upon which to levy a tax for school purposes. Compare these efforts with the efforts of States which are among the economically blessed. And yet, for all the diligent and painstaking effort put forth by the State of Arkansas, we find that Arkansas is unable to provide an 8-month term of school for approximately 34 percent of its children. Our teachers receive an average salary of \$500 a year. The lack of adequate finances is further reflected in poor housing facilities, inadequate equipment, and only the meagerest of library materials in both the elementary and secondary schools. Such is the condition existing today in Arkansas, and yet let it be said to the credit of the State's leaders in the educational field. we have made tremendous progress within the past several years in spite of our economic handicap.

Let us turn now to a broader field of comparison. In three States the amount expended per pupil in average daily attendance is less than \$30; in three others at the opposite extreme, expenditures are above \$115, nearly four times as large. The average compensation of teachers, supervisors, and principals in all public elementary and secondary schools is below \$600 in three States, while it is above \$1.800 in three others at the opposite end of the scale. In two States the average length of the school year is under 140 days; in nine States it is above 180 days. Here we are met with facts which leave no doubt of the gross inequality in educational opportunity now existing.

The Advisory Committee on Education, in reporting on these facts, makes this significant statement:

The great disparities among States in the support of education are not due to a lack of interest or of effort on the part of the States that provide the least support. * * * Those States having the adequately supported schools are, in general, the ones putting forth the greatest effort.

Mr. Speaker, if the low standard of education offered our young in certain of our less economically favored States is a disgrace—and I say that it is a disgrace—then let us recognize that it is a national disgrace and deal with it on this basis. I would remind my colleagues from certain of the economically more favored States that while the taxable wealth of my native State of Arkansas is meager in comparison, the fact remains that Arkansas and other States similarly situated have contributed heavily to the sources of wealth which now enable you to support without extreme effort an adequate educational system. Our natural resources have been exploited and the proceeds of that exploitation have passed to other States. Our farm products are shipped out in vast quantities as raw materials to out-of-State factories. Our life-insurance, fire-insurance, tornado-insurance premiums are nearly all paid to companies in other States. Our timber has been cut largely and taken away to factories. Our bauxite has been mined and taken out to be manufactured. Perhaps it is our own fault that we have permitted the great sources of our natural wealth to be stripped and exploited in the interest of groups beyond our State. I make no defense at this point, since to do so would be to digress. I merely call your attention to a significant fact—that while our own taxable sources of wealth are meager we have done much to supply taxable sources of wealth to other States; and for that reason when we come and ask that education be viewed as a national problem and that Federal aid be granted for the purpose of equalizing educational opportunity, we come not humbly in the role of beggar but as citizens asking no more than their due. It is not too much to ask that some of the wealth which we have contributed prodigally and perhaps foolishly to other States and to the national income be returned to us in part in order that our boys and girls may enjoy the same educational advantages as the children of richer States.

It is not upon such narrow grounds, however, that I base my main argument. Education should be viewed as a national problem, because it is a national problem, and just as there is no strong, healthy body of which there is a diseased or feeble member, just so we cannot boast of a strong and healthy system of public-school education as long as certain of our States fall below the national minimum requirement of \$60 per unit annually of educational need. The principle of general taxation for the purpose of equalizing educational opportunity has long been recognized in the several States. This principle should now be applied to the entire Nation as a unit. The necessity of Nation-wide application must be apparent to every thinking person. We are all aware of the social phenomena of mass migration, the movement of large numbers of people from one community to another, from one State to another. Thus the child of Arkansas or Mississippi today may be the citizen of Illinois or New York or California tomorrow. Youth in its search for opportunity knows no State boundary lines. A large part of the great increase in the population of the cities from 1920 to 1930 was provided by migration from the rural areas. Here was a movement so comprehensive that the total farm population declined. Take the population of any great industrial center and you will find boys from the cotton fields of the South, the mountains of Tennessee, the plains of the West. There is everywhere evident today the movement of our youth from one locality to another, and the result is that no community stands isolated in the matter of education. It is no longer possible to be complacent because the particular locality in which one lives and pays taxes supports an adequate system of publicschool education, whereas in adjacent or even far-removed communities the standard is incredibly low due to an impoverished condition. Thus the educational standard of the most remote community becomes a matter of national

There is this further significant fact: It is recognized that the highest birth rate is recorded in those areas which are economically poorest. It is equally true that it is in these areas that the lowest standards of public-school education are encountered. Each succeeding generation thus is drawing most heavily from the ranks of those who have been given the least in education. If this trend continues unchecked by national legislation there will result a weakening in the fiber of democracy which finds its greatest strength not in armaments but in enlightenment. It may be that this weakening is already apparent. Many think that it is. At any rate, we should not wait for further signs. Delay now, at this critical period in the world's history, when the map of Europe changes almost from week to week, when we here are subjected to a constant and relentless barrage of alien ideas that question and defy the philosopy of government upon which our institutions of democracy are builded-delay now in dealing with this greatest national problem may conceivably prove fatal, and remedial action when we are at last forced by catastrophe to take action may come too late.

This Congress has dealt courageously and realistically with the problem of national defense through armament. Let us now deal as courageously and as adequately with the problem of national defense through the equalization of educational opportunity. Here lies our first line of defense, without which armaments are useless. We cannot plead ignorance of the facts. We have in the Larrabee measure a proposal which is sound and sane. This measure should be reported out of the committee and should be enacted. It is time that we translated our good intentions into action. It is a measure which represents Jeffersonian philosophy, and I repeat Jefferson's words and invite their present-day application:

I think by far the most important bill in our whole code is that for the diffusion of knowledge among the people. No other sure foundation can be devised for the preservation of freedom and happiness. * * * Preach, my dear sir, a crusade against ignohappiness. * * Preach, my dear sir, a crusade against ignorance; establish and improve the law for educating the common people. Let our countrymen know that the people alone can protect us against these evils, and that the tax which will be paid for this purpose is not more than the thousandth part of what will be paid to kings, priests, and nobles who will rise up among us if we leave the people in ignorance. Canning Industry and Reciprocal-Trade Agree-

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1939

Mr. REED of New York. Mr. Speaker, the effects of the reciprocal-trade agreements on the canning industry show the term "reciprocal" to be a misnomer. The canning industry is of great importance to agriculture. It not only takes the surplus fruit and vegetable crops of many areas, but in some regions these crops are raised primarily for canning

While the vegetable branch of this industry is much more important in terms of value of product, the fruit branch is far more important as an export industry. In 1935 exports represented but 1.3 percent of the total vegetable pack, while 21.7 percent of the total fruit pack was

exported.

Thus it is obvious that the export market is important to the fruit-canning industry. Of the 16 trade agreements effective prior to January 1, 1938, the State Department obtained concessions on canned fruits in all of them. However, even with these concessions, our volume of canned fruit exports to agreement countries in 1937 was not as near the 1929 level as it was in nonagreement countries. though our total exports in 1937 were 87.3 percent of the 1929 level and our exports to nonagreement countries were 92 percent of the 1929 level, exports to agreement countries were but 62.6 percent of the 1929 level.

Concessions on canned vegetables were obtained from 14 of the 16 agreement countries, the exceptions being Belgium and Haiti. Our volume of canned vegetable exports has not recovered to the extent that canned fruits have, although our total exports of canned vegetables have increased each year since 1932. However, this constant increase is entirely due to our exports to nonagreement countries as our exports to agreement countries have decreased each year since 1935. While our exports to nonagreement countries were 82 percent of 1929 in 1937, to agreement countries which gave us concessions they were but 22 percent of 1929.

Thus, in spite of so-called concessions granted this country by other nations through the Roosevelt-Hull reciprocal trade agreements program, our foreign trade in canned goods is better with nonagreement countries than with agreement countries. To get such concessions the New Deal has lowered tariffs and opened our home market to foreign goods made by cheap foreign labor, which could have been grown and made by American farmers and workers. Can prosperity return and the unemployment problem be solved under an administration with such policies?

More Retaliation Against Hitler

EXTENSION OF REMARKS

HON. LEON SACKS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1939

RADIO ADDRESS BY HON. EMANUEL CELLER, OF NEW YORK, MARCH 23, 1939

Mr. SACKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address

by Hon. EMANUEL CELLER, of New York, Thursday, March 23, 1939:

Europe is again in turmoil. Its map has been unbelievably transformed in a few hours. The brutality and the rapidity of the conquest by Hitler is astounding.

Memel is stolen from Lithuania. Czechoslovakia, a free republic,

Memel is stolen from Lithuania. Czechoslovakia, a free republic, rich in culture, with a brave history, is swallowed up by the thieving brute. The world stands aghast. Hitlerian Germany, with Saxony and Austria, now is a massive black plague spot in the heart of

The empire of Hitler exceeds in force, brute force, the Holy German-Roman Empire and the empire of Charles V.

Hitler, with brazen effrontery, destroys the theories which he has propagandized so successfully. He always harps on racial unity, Aryans must be united, the Czechs, the Bohemians, the Slovaks, the Ruthenians, the Carpathians, the Ukranians are no Aryans. They are pure Slavs.

His theory of saving Europe from communism won't work. Czechoslovakia had nothing to fear from the contagion of communism. Communists were anathema there.

The world now knows only too well Hitler's cunning intrigues and lying propaganda. He has consigned to limbo the Munich pact, and, brigand that he is, has grabbed 150,000,000 of Czech's gold and

and, brigand that he is, has grabbed 150,000,000 of Czech's gold and foreign exchange, stolen rich farm land, seized 500,000 skilled workers, 3,000 airplanes, and a modern, equipped army of 1,000,000 men. However, all is not gold that glitters. He will have minority population troubles; he will lose world markets by ostracism and boycott; he must police much hostile territory; he has earned the world's everlasting ill will; he will increasingly feel the pinch of the lack of essential raw materials; his stolen gold will soon be exhausted. exhausted.

What shall the United States do? Never mind England, Russia, and France for the moment. What shall we do? Our course is

Congress will undoubtedly amend the Neutrality Act and allow all goods, including armaments, to be sold to anyone on a cash-and-carry basis. Since England and France will control the seas in the event of war with Germany, Hitler will be deliberately

denied access to arms, supplies, and equipment that will be open to the Allies.

Also, the President has pointedly spoken. Economic reprisals, Roosevelt hinted on January 3 last, as "methods short of war" within the power of the United States to invoke and which will fortilbly depresentate our abbrevious the rileague.

forcibly demonstrate our abhorence of the vileness, the thievery, the cruelty of Nazi totalitarianism.

Accordingly, beginning April 22, our Bureau of Customs will apply to all goods, directly or indirectly received from Germany, including Czechoslovakia, a countervailing or penalty duty of

including Czechoslovakia, a countervalling or penalty duty of 25 percent. This additional duty can only be lifted, or refunded, where substantial proof is offered that Germany is not subsidizing the particular export to the United States.

Pursuant to the President's policy, we will thus use against Hitler one of the strongest weapons in our economic arsenal. Why? Because as that brute Hitler says, "Germany must export, or die." He realizes that he cannot live by land grabbing alone. We will not buy—he cannot sell. He needs, and covets, our raw material, essential to German manufacture and industry—including his chief industry—rearmament. To procure raw materials, he must have foreign exchange, chiefly pounds and dollars. Only by export can he procure that money. If we, and others, boycott and refuse his export, or offer against his commerce the bulwarks of a punitive tariff, he is left in the lurch. Hence his lament, "we must export, or die." Thus we strike a telling economic blow by raising our duties against his goods.

We have it within our power to deal him many more economic

We have it within our power to deal him many more economic blows from which he can never recover. For example, under our tariff laws, the President has the right to clamp down completely

tariff laws, the President has the right to clamp down completely on trade with Germany. He can lawfully place an embargo upon all Nazi products. That is a sort of Damoclean sword that can be held over the heads of the Nazi leaders.

And there are plenty of other weapons we can use against him. More than one billion dollars of American money was invested in German bonds issued by German states, cities and corporations. Suitably after the Nazis got control, they promulgated a decree whereby the service on virtually all dollar corporate bonds was stopped. Subsequently, arrangements were made to pay only a part of the stipulated rate. And now, nothing has been paid for more than 2 years.

But, were the European countries receiving the same treatment? No! The subjects of France, Sweden, Norway and of other European countries have been paid regularly, without in-

other European countries have been paid regularly, without in-

other European countries have been paid regularly, without interruption, on all German corporate bonds which they may hold. As to the Reich government bonds, in contradistinction to the bonds of German corporations, permit me to quote from a statement of the Foreign Bondholders' Protective Council, Inc.:

" * * * the council very much regrets that despite the protests of the United States Government, of the paying agent of the Dawes and Young loans (Messrs. J. P. Morgan & Co.) and of the council, the German government persists in its discrimination against American holders of these bonds by making payments for the regular service of the interest on the British, Dutch, and French tranches at a reduced rate. and French tranches at a reduced rate. The general bond securing these loans states 'all bonds issued by the German Government in respect of the loan shall rank pari passu irrespective of date or place of issue or otherwise.' The central banks of the allied governments used their good offices to facilitate the placing

of the tranches of these loans in their respective countries. The American tranche was issued at the request of the Governments of Great Britain, France, and Belgium. The council regrets to of Great Britain, France, and Beigium. The council regrets to have to record that when the German Government defaulted on these bonds the British and French Governments, by either threatened or actual coercive measures, secured arrangements by which the coupons on the tranches of these loans held in those countries were paid in full, without heeding the request of the American fiscal agents to have those governments which had requested the issuance of these bonds in the United States, live up to the provision in the general bond above quoted which was designed to prevent any discrimination in the service and treatdesigned to prevent any discrimination in the service and treat-ment of the various tranches of the loan."

Discrimination upon discrimination has been practiced upon

Americans by the Nazis.

We pay all interest due on our bonds which the Nazis hold. We put no obstacles to the removal of moneys due Germany—yet American creditors of the Reich cannot collect what is rightfully due them.

Until recently, for example, inheritances due German subjects out of American estates were freely paid. But vice versa, moneys due American subjects out of inheritances in Germany were blocked by Nazi decrees. A courageous judge in the court of common pleas in Philadelphia, Hon. Raymond MacNeille, a few months ago refused to allow moneys from an estate to pass to a Nazi beneficiary. Fearing that other courts would follow the precedent thus set, and realizing that they have more to lose than to gain from such "reciprocity of discrimination," the Nazis quailed and are now setting up sufficient foreign exchange to permit the transfer of inheritances from Germany to the United States.

In other words, the minute we threaten the Nazis with retaliation, they shrink and slink away like whipped curs.

Not so long ago a very outstanding decision was made by a supreme court jurist of the State of New York, the late Honorable Alonzo G. McLaughlin. He stated that a holder of a Nazi corporate bond has a perfect right to seize whatever assets the Nazi corporation might have in the United States to pay that bond. Judge McLaughlin pointed out that a German decree of June 1933, which the Nazi company cited as a reason for the nonpayment of the debt in question, could not bind American citizens not subject to Germany's jurisdiction, and that this Nazi decree of June 1933 sought to suspend the payments of debts due Americans. The judge went on to say that every nation should protect its own citizens from injuries resulting from foreign laws prejudicial to its own interests and policies, and that the rights of American holders of German bonds are not controlled by the laws of the Reich. Judge McLaughlin's decision points the way.

Judge McLaughlin's decision points the way.

I thus offered the bill which provides that for the purpose of protecting American citizens who are holders of Nazi corporate securities partially or completely in default, such Nazi corporation must register all its assets in the United States of every nature, name, and description which may be owned by it, directly or indirectly, with agents or agencies to be designated by our State Department, giving an itemized account of such assets as of the day on which the present measure would become law, and also as of June 1, 1933, together with details as to any transfer or disposition thereof, in the intervening period. Likewise, American financial institutions and kindred organizations, as well as agents or agencies directly or indirectly identified with or well as agents or agencies directly or indirectly identified with or acting for such Nazi corporation in default, shall register all possible information as to such assets. Failure to comply with the provisions of the act will involve a fine of \$1,000, 1 year's imprisonment, or both.

imprisonment, or both.

I believe such a bill will be a concrete remedy against the indefensible discrimination against American holders of Nazi corporate dollar bonds. I am of the opinion that at least \$150,-000,000 can be collected—in this way—by American holders of Nazi dollar bonds by attaching the assets of Nazi corporations. At the present time, the whereabouts of such assets are hidden and secret. My bill will force disclosures. Frankly, however, I do not think there will be much need of forceful remedies, like attachment. The mere passage of my bill, like the decision of Judge MacNeille, would soon bring the Nazis to terms.

It is difficult to believe, yet it is true, that the Nazis instead of paying interest on moneys rightly due the holders of German securities, have been using such interest to repurchase the principal of the bonds at greatly forced-down prices.

That, in itself, is a damnable outrage. Furthermore, when Austria was seized by Germany, all Austrian bonds held by American citizens were virtually repudlated by the Reich. Our State Department protested.

Department protested.

The German Minister of Economics, Dr. Funk, gave a fake reason for the repudiation. He contended, first, that the British did not recognize the debts of the Boer Republic after the Boer War; second, that the French refused to assume the debt of Madagascar after its capture by the French; and third, that the

Madagascar after its capture by the French; and third, that the United States refused to recognize the obligations of the Southern States after the Civil War.

Dr. Funk's facts are inexcusably wrong. The debts of the Boer Republic have been met faithfully by Great Britain at all times. The statement to the contrary is, therefore, a lie. Madagascar, I am informed, had no debt. There was nothing for France to assume—a second lie. As to the debt of the Confederacy, Mr. Funk is indeed "in a funk." Those debts were contracted by an unrecognized body which had rebelled against the United States. They were contracted illegally, and those

who owned them had purchased them at their own peril. Mr. Funk's argument is mere balderdash—tommyrot.

We may expect in a few days repudiation by Hitler of all debts

We may expect in a few days repudiation by Hitler of all debts held by our citizens in the form of bonds and securities issued either by the Government and provinces of Czechoslovakia, as well as its corporations and entities.

Although American holders of Czechoslovak bonds do not expect or desire their Government to act as a collecting agency in the event of default, it is worth bearing in mind that the Czech loans are specifically secured by a first lien on customs receipts, which have at all times been more than adequate to meet in full the service thereon.

which have at all times been more than adequate to meet in full the service thereon.

With the profound changes which are taking place within what used to be the Republic of Czechoslovakia, it is apparent that Czech loans will, before very long, sink to the level of the Saar bonds, the Austrian issued and the German bonds.

It will be recalled that when the Japanese threatened to seize Chinese customs which were pledged to secure bonds which were held by British, French, and Germans, a vigorous protest was lodged by the American Government through its ambassador in Tokyo on the grounds that the seizure of customs would impair American investments in China. This protest was lodged even though Chinese customs-guaranteed bonds were never sold in though Chinese customs-guaranteed bonds were never sold in the American market. A protest to Germany would appear decidedly more logical than the protest lodged with Japan.

decidedly more logical than the protest lodged with Japan.

American investments in Czechoslovakia, including debts owing to the United States Government, are placed at \$195,521,000. Of this amount, the debt to the United States Government amounts to about \$165,500,000. Czechoslovak bonds are outstanding to the amount of \$25,300,000, consisting of two direct loans of the Republic, the 8's of 1951 and the 8's of 1952, outstanding at \$10,-800,000 and \$7,200,000, respectively. The bonds of the city of Prague, capital of the Republic, are outstanding at \$5,100,000; the bonds of the city of Carlsbad in the Sudetan area are outstanding at \$1,000,000, while the bonds of a Czech corporation, the First Bohemia Glass Works, are outstanding at \$1,200,000. American direct investments in the Republic are estimated at \$4,725,000, comprising an investment of \$1,008,000 in manufacturing establishments, and an investment of \$439,000 in distributing concerns; the remainder representing investments in miscellaneous enterprises, including a subsidiary of the Standard Oil combine.

While the principle of sovereign immunity is generally recognized by civilized countries, it is abundantly clear that Germany by her actions during the past several years no longer deserves to

by her actions during the past several years no longer deserves to be so classified. The seizure of the assets of the Czech Republic, notably the gold in the Czech National Bank, is in no way different from the policy adopted by hold-up men. Since the gold in the Czech bank may be considered as serving as security for Czech debts owing to the United States, would it not be proper if steps were taken by our Government to compensate American citizens for losses, sustained because of Germany's action, out of assets which Germany directly or indirectly may own in the United

States?

In conclusion, my bill for the registration of Nazi assets in this country is known as H. R. 2633. It has been referred to the House Committee on the Judiciary, of which committee I am the ranking member. Hearings will soon be held on this bill. Contact your Congressmen and urge them to give favorable consideration to this

Its passage will involve more retaliation against Hitler.

Agriculture Department Appropriations

EXTENSION OF REMARKS

HON. JAMES A. SHANLEY OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1939

Mr. SHANLEY. Mr. Speaker and my colleagues, my amendment seeks to restore the appropriations for the Dutch elm disease eradication to its 1939 status insofar as the amount is concerned. The estimated sum needed to implement past efforts against this viciously local pest was set at \$778.489. The committee not only cut down that sum to eliminate the \$400,000 increase but it almost hit rock bottom, comparatively speaking, in marking down the final sum to \$100,000. Just remember that this amount was in the official Presidential Budget with the necessary endorsement of the Chief Executive and the Budget Office, thus possessing the high sanction of the most caustic budgetary critics ordinarily needed to insure House approval.

There is a comparatively long story behind this project, though short in years, for the epidemic was only discovered in 1930 when a single tree was located at Cincinnati, Ohio, and three trees were found in Cleveland, Ohio. In the late summer of 1933 infection was discovered in trees in the vicinity of New York Harbor and inspections that season located 818 infected trees in this area, 740 of which were found in New Jersey.

The distinguished and versatile chairman who heads this bill is of the opinion that not enough satisfactory results have been obtained in this field from the amount expended. I submit that there have been unusual handicaps in this direction—one the nature of the disease. Here is what an entomological authority of high repute says.

The research work that has been done has demonstrated the insect vectors of that disease within the United States,

When the Dutch-elm disease was discovered in the United States, it was not known, either in this country or abroad, how the disease entered healthy trees. The investigations in Europe were carried on about the same time as our investigations in the United States, and in Europe they discovered that one of their bark beetles, which does not occur in the United States, carried the disease from diseased to healthy trees. Our studies demonstrated that an introducted bark bettle which came into the United States long before the Dutch elm disease did, and had established itself, and was here as a rather secondary or minor pest, or little or no importance, is the important vector of that disease. In addition to that, the investigations have demonstated that one of our native bark beetles, which occurs throughout all of the eastern United States and west to the Mississippi, is a carrier of the disease.

This past summer we have demonstrated that another one of the bark beetles, a bark beetle that attacks apples normally, will also serve as a vector; and we have discovered in our studies that one of the big borers will carry the disease under favorable conditions,

Other studies that have been carried on have been directed to finding out methods of controlling the beetle; the flight of the beetle; how to keep it from breeding in woodpiles—because it lives preferably in freshly cut timber rather than in healthy timber, and it transmits the disease only because of the habit of the adult to feed on the fresh-growing twigs of elms before it lays its eggs. A beetle will come out of a diseased tree all covered with diseased spores and fly up to a healthy tree and feed on the bark of that tree, right in the growing twigs, and cause the tree to become infected with the Dutch elm disease.

There is nothing very tangible that you can get at as to the control of the beetles. The most effective method is to remove the wood that is favorable for them to breed in. And that is one of the reasons that the part of our work against the Dutch elm disease that we call sanitation work, which is the removal of diseased, moribund, or dying trees, is so important. These trees furnish a favorable breeding ground for the vector, or the insect that will carry the disease to healthy trees. That is a pretty big job.

Then all the elm wood that is cut will serve as breeding places for the beetle, and we are carrying on experiments to determine means of protecting the trees from infestation by the beetle by sprays.

Other lines of study which have a very direct bearing on the disease itself are those concerned with the flight habits of the beetle. We must know how far this beetle will move; it covers a wider area than does the disease, and it may transmit the disease from infected trees within the area to points without the area or to new points within the area. That is one of the important studies being carried on at this time.

The repeated suggestion of the committee that removal of the elm tree is the only solution presents an even greater question. The legality of removal on private line, States' rights and agreements, and costs, including the obstacle of city streets, electric-line wires, and other hindrances of modern street transportation, communication, and utility service, though these are exceptions.

Furthermore, there has been an alleged retardation of service due to Works Progress tie-ups. Now, I heartily approve of this use, for I think there is no better project for relief workers than this project, but I maintain that we ought to be mindful of the cost and delay of teaching men how to detect wilt, discoloration, and possibly in elementary laboratories the culture progress and make allowances.

I endorse the W. P. A. uses, and I suggest that the committee and this House should take into account the handicap that this places on the entomological department of the Department of Agriculture. I think that this project fulfills the highest hopes of that great American student and philosopher, William James, when he envisaged the fight of man against nature's revages instead of fratricidal war. We now consider that the fifteen million spent in studying this disease is little enough in comparison with other studies, especially when we realize that the British, whose long-time

reverence for the elm is known, could do little with it until recently.

The chairman of the committee admits the need and thoroughly endorses the Department's statement that unless something is done the elm tree will be lost to our area. Our problem is to determine the flight possibilities of these carriers and the immediate removal of dead and dying elm trees a veritable nesting place of geometrical development, but that is costly, and an annual \$100,000 sum would be a futile gesture. Training of men, removal of trees, and laboratory studies are the needs and witness read the emphasis of one authority:

We have never had funds to make an intensive inspection of this Dutch elm disease. We have been using relief funds and relief men from the very start, and some of these men had to be taught what an elm tree was. Some of them would not know an elm tree from other trees and we had to spend some time educating them. Then we have no way of enforcing discipline among these men in such way as we could enforce it if we had men we could hire and pay wages.

We estimated that if we could employ enough trained men to do this scout work that we could cover the entire area during the summer; that we could find the diseased trees at the time.

During the last few months the Department of Agriculture imported a number of elms that have been raised in Europe with the thought of producing an elm tree that was resistant to the disease. They have been imported into this country by the Department of Agriculture and have been placed out here at the Bureau of Plant Industry station, at Bell, near the District, where they have been doing some special work.

Mr. Speaker and my colleagues, other men will stress the highly necessary part that trees play in the communities in which we live. Ornamentally so, to be sure, but we are a great vacation land. We need trees and in this need there is a utilitarian value that should appeal to the hard-headed student even if he cannot understand the essentially strong regard men have for nature's giants. We need the appropriation suggested by this amendment.

Only recently I saw the following news item in one of our liberal papers dealing with this situation and I have already secured unanimous consent to insert it in the Record.

Warned that hurricane elm wood left in the open may result in serious increase and spread of the Dutch elm disease in Connectincut, Director W. L. Slate of the agricultural experiment station here has signed an order affecting four counties. The order states that on or after May 16, 1939, Federal or State agents may remove or dispose of any elm wood infested with elm-bark beetles, four either on public or private property, in zones of infection. At the same time the director appealed to citizens throughout the State to help in the campaign to dispose of down elms so that danger of disease spread will be minimized.

The warning came from Station Forester W. O. Filley who is in charge of Dutch elm disease control work for Connecticut. Mr. Filley said that an alarming situation has developed since the hurricane. Elm wood with bark on is lying about on public and private property. Some is stored in open sheds, some is piled as cordwood, and much of it lies as it fell. All of it constitutes a menace because it is an attractive breeding place for bark beetles, carriers of Dutch elm disease.

Safety in the Air

EXTENSION OF REMARKS

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1939

EDITORIALS FROM ST. LOUIS STAR-TIMES OF MARCH 28, 1939

Mr. COCHRAN. Mr. Speaker, a great deal has been said concerning air safety. We are all interested in this very important subject. From time to time we are shocked when we read of some great disaster. In the St. Louis Star-Times of Tuesday, March 28, is a very interesting editorial on this subject as well as an editorial to which Mr. D. D. Walker, vice president of sales of the Chicago and Southern Air

Lines, Inc., objected. Under leave to extend my remarks, I include the editorials, as follows:

[From the St. Louis Star-Times of March 28, 1939] ACHIEVING AIR SAFETY

Reprinted in the next column on this page is a letter, three copies of which were received by various Star-Times executives, from D. D. Walker, vice president of sales of Chicago & Southern Air Lines, Inc. Mr. Walker is wrong in stating, "In the past, after each air-line accident, the St. Louis Star-Times has commented editorially on the fact that aviation is unsafe." The Star-Times has commented occasionally about aircraft accidents and bad flying practices, such as pulling streamers and stunting above crowds. In no case, however, has aviation as such, or the aviation industry, been criticized in a destructive way. The few comments on this subject that have appeared in the Star-Times were intended to better a good record—not show up a bad one.

The Star-Times will change its editorial policy on air safety when it believes this policy is incorrect, or when, through continued development of safety measures, an editorial policy advocating air safety measures is no longer necessary.

The Star-Times has no comment to offer on the action of Mr.

The Star-Times has no comment to offer on the action of Mr. Walker in canceling all Star-Times advertising until this newspaper discontinues its efforts to improve the safety of air travel.

Walker in canceling all Star-Times advertising until this newspaper discontinues its efforts to improve the safety of air travel. It is his privilege to advertise anywhere he pleases, or not at all if that is his idea of the way to run an air line. It is also the privilege of the Star-Times editorial writers to state their views on air safety, regardless of the opinions of persons who apparently feel that open discussion on the subject should not be permitted.

For the benefit of any Star-Times readers who missed it, we reprint, below Mr. Walker's letter, the editorial he objected to, and invite comment on the soundness of the ideas advanced therein, that true safety in the air will never come until planes are designed so that motors can be tended in flight exactly as they are in the new 74-passenger Yankee Clipper ship, which has just completed a shake-down flight across the North Atlantic.

Since the receipt of Mr. Walker's letter eight persons were killed and four injured when a twin-motored transport plane crashed and burned shortly after taking off from the municipal airport at Oklahoma City. The pilot of this plane radioed 6 minutes after the take-off, "Turn on lights. Returning to field."

Two minutes later the plane suddenly plummeted to earth, exploding and bursting into flames. The doctor who attended Pilot Claude Seaton, who was seriously injured in the crash, said Seaton told him the left motor failed, and he tried to circle back to the port and land. The Braniff Air Lines had a perfect passenger-

told him the left motor failed, and he tried to circle back to the port and land. The Braniff Air Lines had a perfect passenger-carrying record prior to this accident. The truth may never be known, but it is at least possible that this perfect record would still exist if airplane manufacturers would turn out planes designed to carry an engineer with access to the motor equipment. The British Air Ministry disclosed Saturday that apparently ice-clogged carburetor intakes were responsible for stopping two of the four motors of the flying boat Cavalier, and crippling the others, causing the ship to plunge into the Atlantic, with the resultant death of two passengers and one of her crew. If an engineer could have attended those engines in flight, is it not possible that he might have been able to correct this condition in time to avert catastrophe?

The Star-Times believes that the air lines are making a wonder-

The Star-Times believes that the air lines are making a wonderful safety record in view of the natural hazards inherent in flying. We believe further that every year the record will be improved as lessons are learned from each disaster. If, in the meantime, an improved design can be found that will mean as much to air travel as steel trains and automatic block signals mean to railroads, we believe that the major air lines almost without exception will welcome such advance. will welcome such advance.

will welcome such advance.

There is no reason to believe that the present-day airplane represents the ultimate in safety and efficiency. The passenger plane of 1950 may have a Deisel engine power plant in the fuse-lage, transmitting power by shaft and chain link belts to multiple propellers located along the wings. With expected improvements and the elimination of gasoline as fuel, the air lines may match the safety record of the L. & N. Rallroad, which boasts 21 years of service without a passenger fatality.

SAFETY IN THE AIR

Here is the editorial, published March 23, to which Mr. Walker

objected:
"A survey of airplane crashes establishes the fact that one of the major causes of disaster is still the sudden failure of a motor. "Sant ime major causes of disaster is still the sudden failure of a motor.

"Sometimes, on a multimotored plane, when only one engine fails, the ship limps to a safe landing. But all too often one failing motor, even on a two-motored or four-motored plane, means tragedy. The damaged engine vibrates and disintegrates, tearing the ship to pieces or shearing off a wing. Ground witnesses say the plane 'seemed to fall apart' in midair. Or perhaps the motor spurts hot oil, which is ignited by sparks, sending plane and passengers down in flames.

"Each time an airplane disaster occurs Government and air-line."

"Each time an airplane disaster occurs Government and air-line officials proceed with a critical investigation. Occasionally, as with a recent crash on the west coast, they find a pilot guilty of some fantastic human error. But all too often the investigation means, chiefly, meticulous examination of the wreckage, the instruments, the surviving passengers, if any, followed by a report so obviously

tentative it is meaningless. For some unexplained reason, it is decided, 'a motor failed.'
"It seems extraordinary, under these circumstances, that aircraft producers have not followed this fact to its logical conclusion—that, since motors apparently will sometimes fail, the safe plane is one which provides better facilities for checking up on the engines during actual flight. Not on the ground before take of engines during actual flight. Not on the ground, before take-off, but in the air.

"The shipping line which sent a vessel to sea without any engineers, with its boiler room sealed up, would be ruled off the ocean. Even if an automatic fuel supply were assured, a liner would not be permitted to make a voyage without day and night supervision of its power plant. The chance that something might

go wrong is too great.

"But aircraft producers have never realized that the same principle, applied to planes, would be equally sound. Why should planes be sent up with passengers without any provision for expert attention to the motors while in flight? Pilots obviously cannot always discover, even with all their instruments, that an engine is about to go out. Is it not possible, then, to design multimotored craft so that an engineer has access to the engines at

multimotored craft so that an engineer has access to the engines at all times, can constantly check on performance and preliminary signs of failure, and can make necessary repairs in flight?

"The huge new 74-passenger 'clipper' ships designed for trans-Atlantic service make provision for a flight engineer with particular responsibility for motor performance. The engineer can reach the engines, and the ship is supposed to be able to fly on two motors while the other two are being repaired.

"This exact type of construction, with control room and passenger deck separate, presumably is possible because of the ship's tremendous size. But the expert designers of planes should be able to design some kind of construction, on even smaller transport planes, enabling close attention to motors in flight. When the lives of passengers and crew depend on the discovery, early enough to prevent disaster, of pending engine failure, why should not such construction be required?

"The crash of a great plane like the Boeing stratoliner, which, officials insist, was structurally sound, suggests that present orthodox American aircraft design lacks something. Why should such a masterpiece, developed at a cost of half a million dollars, suddenly masterpiece, developed at a cost of hair a million dollars, suddenly disintegrate in midair, carrying 10 persons to death, shedding parts all the way down? Maybe a failing motor was not the cause this time, but certainly that is the way it appeared to eyewitnesses. Apparently one engine, breaking up while operating at terrific speed, literally tore the left wing off the ship. Would not an engineer, with access to the motors, have discovered evidence of its prospective failure in time to save 10 lives and a half-million-dollar plane?

"Better think it over Mr. Airplane Manufacturer"

"Better think it over, Mr. Airplane Manufacturer."

Guam, Haunted Paradise

EXTENSION OF REMARKS

HON. MICHAEL J. KIRWAN OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, March 30, 1939

ARTICLE BY W. B. COURTNEY

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Collier's magazine:

GUAM, HAUNTED PARADISE (By W. B. Courtney)

(By W. B. Courtney)

(Guam could be made an American Gibraltar within the closing gates of Japan's Pacific empire. Shall we do it? While Congress battled over this question, W. B. Courtney flew from New York to the west coast, thence by clipper to Guam—a total of more than 8,000 miles. He talked to the Navy rulers of the island and to its frightened natives. From Manila he cabled back his story—a picture of a paradise caught in the path of a juggernaut.)

You come at sundown to Guam, where 20,000 souls live in mortal dread that the United States, to which they eagerly pledge allegiance and love, is about to abandon them to the brown wolves of the Far East.

of the Far East.

You glide down among puff clouds brushed with lavish and primitive colors of a tropical sunset. There suddenly lies Guam, outspread complete within range of your eyes like a continent in miniature—ruddy hills that shoulder up from deep forests of breadfruit, mango, ipil, and palo maria. The middle plains are covered with sword grass in the valleys. Nipa huts shelter cultivators of bananas, pineapples, avocados, sapodillas, all the lush bounty of hot-country fruits, and row upon row of American sweet

On riverside and beach, on road and farm, coco-

nut palms stand like tattered mops.

Naval officers who come to meet you in the launch are upstand-Naval officers who come to meet you in the launch are upstanding, friendly, and courteous. Natives who surround the landing stage come up to your expectations with their milk-chocolate faces, their bright eyes, quick and constant laughter, and their uninhibited interest in you and your baggage. For all the tales you've heard about secret preparations, for all the ominous-sounding mystery of a closed port, barred even to our own merchant vessels unless they get special permits, there is no sign of gun or drill or fortification. On all sides there is nothing but affability, beauty, and hospitality.

AN AMERICAN DICTATORSHIP

Yet truth does not lie very deep. Four days ago you rose from Yet truth does not lie very deep. Four days ago you rose from the land of the free whence incense and hosannas rise daily in homage to all the ideals of liberty, of self-determination, of the right of the common people whose pennies and dollars support and pay for the Government. Today you have come to earth again in a territory under that same flag, governed by that same leader and cymbal-smacker among democratic powers, wherein is violated and suspended many principles for which the great home Nation virtuously postures before the world.

You have set foot in the trimmest little dictatorship on earth, a

perfected military despotism.

Two miles in the air you needed a heavy suit; now upon arrival you gratefully shift into whites. Even as you do so you reflect that it is not only the climate which is hot and steamy here. Back home you thought fortification was the main bone in Guam. On the spot you learn that fortification is, of course, of profound interest and that it conditions all other topics. But it is only part of the involved discussions, the numerous issues, which immediately

bedevil you.

At cocktail parties in the officers' club, around oil lamps in the tidy little huts of the natives wherein coconut husks are burned at night to make a smudge that discourages mosquitoes, in at hight to make a smudge that discourages mosquious, in schools and offices and ice-cream parlors, on bullock carts and in taxicabs, along palm-sheltered roads and damp jungle trails, you gradually piece out the whole story of Guam and find there is more here than can be met by mere appropriations for antialr-craft guns or for a plane and submarine base. It is a tale of 40 years of uncertainty and confusion and postgoued hopes of a craft guns or for a plane and submarine base. It is a tale of 40 years of uncertainty and confusion and postponed hopes of a people who, despite endless apologizing, intimidation, and legalistic hairsplitting by their American masters, still feel themselves really to be men without a country. It is a moving recital of the strangest agitation ever waged against a great nation, a plea from the hearts and minds of one of the least of its divisions, not for separation, not for independence, not for a hand in the relief grab bag, not for punishment for oppressors—but for closer ties.

Magellan seems to have been the first white man to stop out here, a hundred years before the Pilgrim's Mayflower got to Cape Cod. The natives helped themselves to his stores, including a longboat, probably as much from curiosity as from turpitude. Whereupon Magellan introduced them to Christian manners by killing, burning, and pillaging, named his discovery the Ladrones,

whereupon Magelian introduced them to Christian mainlers by killing, burning, and pillaging, named his discovery the Ladrones, or Robber Islands, and sailed off in a bad humor. Later Spaniards named the group in honor of Maria Ana, widow of Philip the Fourth of Spain. In June 1898 the U. S. S. Charleston steamed up and banged at Fort Santa Cruz in Apra Harbor. The Yankee aim was so bad that their intentions were misunderstood. Neither depressed to the fort por splesh of shells being observed. damage to the fort nor splash of shells being observed, and news of war not having reached Guam, the Spaniards assumed the Charleston was firing a salute with blanks. A landing party from the warship found a pleased and honored company dragging field pieces along the road from Agana 6 miles away to return the

Embarrassing explanations took place. Here Americans, through carelessness or ignorance, missed a chance. Don Juan Marina was Governor not alone of Guam but of the entire Marianas group. Captain Glass demanded and got only surrender of Guam. Spain sold the rest of the Marianas to Germany, whence they passed under the mandate of Japan after the Great War. The United States might just as easily have got the bunch for the asking in 1898 and thus have had a more tenable position in the far Pacific in 1939 if Glass had been on his toes.

asking in 1898 and thus have had a more tenable position in the far Pacific in 1939 if Glass had been on his toes.

If you will stare at your map you will see that the Marianas form a literal door 450 miles wide barring westward passage toward Asia. Bonin, near Yokohama, is the north jamb on which the door is hung and the Japanese Caroline and Marshall Islands form the south column. Move in for a closer look at Guam, talipiece of the geographic chain of Marianas. From a high-flying airplane you will see that Guam, by ironic symbolism, bears a resemblance to the shape of a human footprint. That foot is thrust right across the south end of the threshold, preventing the Japanese from closing the door tightly. It has the annoyance value of a salesman's foot in a housewife's door, rather than the menace of intrusion. This is the real crux of the fortification of Guam. It is not so much a potential Gibraltar as a wedge that would take valuable time to dislodge and give the drummer opportunity to summon up his manager, who can talk louder and faster and more persuasively.

Japanese officers told me they consider that Japan's sphere of

Japanese officers told me they consider that Japan's sphere of Japanese officers told me they consider that Japanes sphere of influence includes everything west of the 180th meridian, the international date line, where day begins. More symbolism: Japan's traditional culture speaks of her as the "first land greeted by each new day, the rising sun." Guam is the split influitive in this empire poesy, Japanese argue: "If you think it is all right

for America to fortify Guam to protect your China trade, how would you like it if we took over and fortified the Galapagos Islands to protect our trade with South America?"

The jambs of the doorway in which Guam is stuck are tough Bonin to the north is a great naval station; Truk, and sturdy. Bonin to the north is a great naval station; Truk, Yap, and Palaou to the south are mystery bases. If you're caught peeping there you will see home and mother no more. But even your amateur military eye tells you Guam could be made a hard nut, too. She grows food abundantly and could be stocked with reserves. There is adequate water for a large garrison. The island's whole east and north sides are open to heavy Pacific swells with very deep and constantly tempestuous waters, a hard lava shelf which means death to keel plates, no bite for anchors and steep jagged cliffs you would hate to try to scale. A few machine guns would make this shore costlier and bloodier than Gallipoli. The west and south coasts are guarded by coral reefs and shallow approaches which have taken vicious toll of shipping. Landings might be essayed here but contours are nicely drawn Landings might be essayed here but contours are nicely drawn for raking cross fire. The central ridge or backbone of the island is made to order for antiaircraft or heavier guns. Apra Harbor, with a little dredging, could be made a grand submarine and plane nest. Years ago before one of the disarmament conferences in Washington a joint Army-Navy board estimated Guam could be made impregnable for \$300,000,000. That figure could now be undercut in the light of modern weapons.

WHAT GUAM'S INTERESTED IN

But impregnability is one thing in a fortified island and offensive usefulness is another. Even if an enemy could not capture Guam he might be able to stand off and blockade her more or less effeche might be able to stand off and blockade her more or less effectively with a comparatively light force. Granted his submarines and his planes were based on nearby islands, he could match Guam's forces. It is not, however, the merits of the professional arguments with regard to the fortification of Guam that interests its uneasy natives. The more poignant question of what may happen to them if we don't fortify it is what makes Guamanians hang on the news from Saipan—pronounced Cy-pan—even more than on news from Washington. That's why they gaze apprehensively toward Rota, which on clear days is in full and menacing sight from Ritidian Point. Saipan is not within view—it's another 70 miles north of Rota—and advices that come from it are round-about and slow, by letter, word of mouth, or rumor.

Guam for its size compares lustily with great world capitals as a rumor factory. The talk is mostly of Saipan because that's the nearest of the Japanese fortified islands, capital of the Marianas, and bound to Guam by native ties of blood and language. You

nearest of the Japanese forthed islands, capital of the Marianas, and bound to Guam by native ties of blood and language. You hear of the mysterious disappearance of an American naval officer who went to Saipan on a tour years ago and never came back. You hear of a Japanese admiral who, visiting Guam, smilingly and slyly revealed that he knew more about the island than most

of its inhabitants.

You hear of Japanese officers making secret landings on lonely Guam beaches for a "look-see." Back in Washington a Representative tells Congress about Japanese and German airplanes that flew over Guam recently, and you hear of an American official of long ago who visited Guam, "got tight," had his picture taken with his coat off between two immaculately uniformed Japanese offi-cers and thus cost us plenty of face. But just try to pin any of these things down to names and dates.

One man who has a responsible job and was college trained in the States assured himself I would not misunderstand his mothe States assured himself I would not misunderstand his motives, then spoke up: "We want to be United States citizens and would like the benefits of civil government, although we realize perhaps not enough of our people are yet trained to take full responsibility for posts in such a government. Citizenship is more important, and we don't see why we can't be American citizens under the Navy. But understand this: Even if we don't get either, still we would rather be subjects of the United States than citizens of any other nation on earth. We don't agree that administrative expenses and consequently taxes would be much higher if we had civil government; our wage scales are lower than yours and in nearly every department we have a native assistant to the head who goes on, year in, year out, and knows the job better than his titular superior, the Navy officer who is changed each 2 years.

"We don't agree that the Oriental Exclusion Act would have to be amended in order to make us citizens if it wasn't for the

"We don't agree that the Oriental Exclusion Act would have to be amended in order to make us citizens if it wasn't for the Hawaiians. We are from the same Western Pacific roots. One general order years ago, to use the exact words, ruled we were neither 'Dagoes nor Niggers.' People of both those stocks, however, are citizens of the United States. Secretary of War Denby ruled that while the native of Guam owes perpetual allegiance to the United States he is not a citizen. Neither is he an alien and there is no provision of law under which he may become a citizen of the United States by naturalization. That answers the statement that we have all the privileges of citizenship. Yes; but we have all duties, too, without the dignity. We are citizens by innuendo.

The Navy always threatens to pull out of Guam and take away "The Navy always threatens to pull out of Guam and take away the pay roll that is so necessary to our people, if we get citizenship and civil government. Isn't that a question of national policy and a move that should be decided by the United States Government as a whole and not by the Navy Department? The Navy says it could not administer Guam if it did not have undivided authority in the event of war. But in wartime doesn't military power have full control in any area in which it operates by declaring martial law, which supersedes civil law for the emergency? We don't agree that we can look forward to future security as the State Depart-

APPENDIX TO THE CONGRESSIONAL RECORD

ment contends with the same guaranty as the mainland citizens. It is not probable you would give Ohio to Japan in order to avoid war, but we are a remote little chick far away from the shelter of its mother's wing and can see the hawk's shadow. Washington politics might very well lead you sometime to let us slip in order to avoid general bloodspilling.

"We have read with interest of your sympathy for the Jewish refugees from Germany. We only wish you could extend this

"We have read with interest of your sympathy for the Jewish refugees from Germany. We only wish you could extend this sympathy to your endangered children here who some day might have a worse fate than what has befallen the Jews in Germany, who for years have stood daily in pledge of loyalty, patriotism, and devotion. There are 22,000 people here who want your sympathy too, and hope they have earned it, who have paid you the compliment of imitating you in every possible way and wanting to be as you are."

Your last chat is with a member of the civilian American colony, one of many Americans who have elected to make Guam their home and are engaged in business there. He says: "This seems to be one of those arguments in which both sides are right and

ony, one of many Americans who have elected to make Guam their home and are engaged in business there. He says: "This seems to be one of those arguments in which both sides are right and it can be worked out, I think, giving both sides all they want. Some Navy people are inclined to believe the local politicos agitate for citizenship so they can get jobs, but I don't think so. I know these people well and I don't think they have any ulterior motive; they want security. Also, as you know, face is very important out here. Citizenship would give them plenty. The Navy has done a magnificent job when you consider these officers are not schooled in civil administration.

"In my quarter century here I have seen this inexperience lead to a few silly things. I remember one Governor who ordered the people not to whistle.

"Now it is the policy of the Navy to replace Spanish priests with Americans. The Chamorros are saying among themselves that they have been tricked into seeming to want this. Several administrations ago, when this policy was brought up, patrolmen went from door to door getting people to sign a petition for cheaper rice, which contained an inconspicuous paragraph saying they wanted Spanish priests replaced by Americans. Later the people flocked to the priests and said they hadn't known what they had done. Bishop Olano and the priests feel very bad. It is not that they mind going elsewhere if American Government policy demands it, but after their years of devoted service, they are hurt because it was made to appear that the people were driving them out. Believe me, I know these priests never interfered in politics and discipline. The virtues they taught people made it easier for the Navy to govern the island. The priests love the natives. A great wrong would be averted if they were invited to stay out their days here.

"There has been a constant procession of Governors. None wants to stay longer than his allotted 2 years, because it would hurt his promotion chances. Each new one has ridden a hobby; each

"There has been a constant procession of Governors. None wants to stay longer than his allotted 2 years, because it would hurt his promotion chances. Each new one has ridden a hobby; each dropped that of his predecessor, and so the good work of each previous 2 years has been lost. Each Governor's intentions have doubtless been praiseworthy, but the poor natives have been kept running in circles. One Governor wanted the people to grow more rice. The next boomed coffee. Another got enthusiastic about kapok. His successor had a 'plant avocados' campaign.

"Why, the tours in office don't even overlap because of housing shortage. Every officer has to pack himself and family aboard the transport the day his successor arrives. That's why Guam has two good-byes for the garrison. Transports leave here, stop in Japan, China, and Manila, stop here again on the way home 7 weeks later. I think the Navy Department should send a retired officer as a permanent Governor. About citizenship, the Navy, I'm afraid, strives for perfection in these people, and we haven't got that back home in the States. Why should they demand it of these people who are better qualified to realize what citizenship means, because of their Navy training, than millions of those who have it?

SHADOW ACROSS PARADISE

"Perhaps the greatest flaw in the Navy's relationship with the Chamorros is the effect to impose Temperate Zone civilization with its industriousness and money values on a tropical people. That's no go. Living is too easy to pick up out here. Follow the Equator around and you'll find people and countries along it ruled by nations that have the zip cold weather gives. I don't know much about military value but Guam's real place in the economic world is as an old-fashioned South Sea trading isle, a place where some big corporation sets down an agent who takes the natives' copra and gives them tobacco, muslin, and other goods in return. And a couple of times a year a trading ship comes inside the reef and anchors. Everybody goes down to the beach, sings, feasts, gets tight, and has a swell time."

You have come to the end of your stay in America's fear-haunted

You have come to the end of your stay in America's fear-haunted aradise and you are called in pitch darkness for the flight outward to Manila. For a long moment you pause when you step outdoors. The Southern Cross is still bright. There is a cool night wind in the palms on the distant shore and the muted thunder of the surf beyond. Nearby there is the occasional thud of a coconut gnawed loose by rats. Their torches glitter like monster lighting buss as speer fishermen wade deargenests. of a coconut gnawed loose by rats. Their torches gitter like monster lightning bugs as spear fishermen wade dangerously along the reef. Several hours from now in Agana school children will be gathered in the plaza in front of the palace of "Y Malagala," the great man, as they call the American Governor. When the marine guard raises the flag the children will pledge allegiance to it and sing the national anthem, but there is a little catch in their voices these days, for they know the talk that goes on around oil lamps in the eventures. in the evenings.

You leave Guam at sunrise color and when you look back regretfully upon its morning peacefulness you find another phrase belling in your mind: "The Rising Sun."

Tariff on Dairy Products

EXTENSION OF REMARKS

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Thursday, March 30, 1939

JOINT RESOLUTION OF THE WISCONSIN LEGISLATURE

Mr. JOHNS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following joint resolution of the Legislature of Wisconsin:

Joint resolution memorializing Congress for higher tariff on dairy products

Whereas the statistical abstract of the United States for the year 1937 lists the following figures for imports of dairy products into the United States for the year of 1936:

Total value of all dairy products imported into the __ \$16, 103, 000 United States_____Amount of dairy imports into the United States: Casein or lactarene pounds do 9, 874, 000 16, 209, 000 8, 029, 000 Swiss cheese_____do___ 51, 820, 000 2, 245, 000 Other cheese _ ____do____ Milk (condensed and evaporated) ______do_
Dried and malted milk ______do_ ____do__ 24, 584, 000 44,000 67,000 Cream___ ____gallons__ _do__

Whereas thousands of farmers in various sections of the United

States depend mostly on dairying for a living; and
Whereas it is evident from the foregoing figures that farmers
in other countries are taking away the market of the American dairy farmer; and

Whereas the present tariff on dairy products is ineffective to prevent the foreign farmer with his cheap production from selling dairy products in the United States in ruinous competition with the American dairy farmer: Now, therefore, be it

Resolved by the assembly (the senate concurring), That the Legislature of the State of Wisconsin hereby respectfully memorializes the Congress of the United States to place a tariff on dairy products sufficiently high to protect the American dairy farmers against foreign competition; be it further

Resolved. That properly attested copies of this resolution be

Resolved, That properly attested copies of this resolution be transmitted to both Houses of Congress and to each Wisconsin

Member thereof.

Agricultural Equality Act

EXTENSION OF REMARKS

HON. CHARLES HAWKS, JR. OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1939 JOINT RESOLUTION OF THE WISCONSIN LEGISLATURE

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint resolution of the Legislature of Wisconsin:

> WISCONSIN LEGISLATURE. ASSEMBLY CHAMBER Madison, March 28, 1939.

Hon. CHARLES HAWKS, Jr., House of Representatives, House Office Building, Washington, D. C.

My Dear Mr. Hawks: I have the honor to transmit herewith copy of Joint Resolution 33-A, adopted by the Legislature of the State of Wisconsin.
Respectfully yours,

JOHN J. SLOCUM, Chief Clerk, Assembly. Joint resolution memorializing Congress to pass the pending Agricultural Equality Act

Whereas for several years, with slight exception, the return to the producer for farm products has been less than the cost of production, which has left the farmer without purchasing power

in the face of many needs; and
Whereas it is agreed by many economists and other thinking
people that the well-being of the farmer is the criterion of the

people that the well-being of the farmer is the criterion of the Nation's prosperity; and
Whereas there is now pending in the Congress of the United States, a measure known as Senate bill 570 or the Agricultural Equality Act of 1939; and
Whereas this bill provides for regulating the world market on agricultural commodities by imposing duties on imports and manipulating exports on surpluses in a manner that will assure the producer of farm products a price therefor equal to the cost of production price of such products; and
Whereas the 18 United States Senators who introduced this bill are unanimously of the belief that the plan proposed will not only

whereas the 18 United states senators who introduced this bill are unanimously of the belief that the plan proposed will not only assure an abundant and permanent supply of such products by securing to the producers a minimum price of not less than the cost of production, but that when such prices are made a reality the general welfare of the entire country will be promoted thereby:

Now, therefore, be it

Resolved by the assembly (the senate concurring), That this
legislature respectfully memorializes the Congress of the United States to enact into the law the said Senate bill 570; and be it fur-

ther

Resolved, That properly attested copies of this resolution be sent to the President of the United States, to both Houses of Congress, and to each Wisconsin Member thereof.

Works Progress Administration

EXTENSION OF REMARKS

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Thursday, March 30, 1939

Mr. HOUSTON. Mr. Speaker, on March 20 the W. P. A. released instructions for the reduction of 400,000 in employment effective during the week beginning April 3 unless additional funds are appropriated by the Congress, and the statement that the employment authorization for the State of Kansas for April would be 28,500, or a reduction of 5,000 from the March authorization.

Believing city and county officials, and perhaps the Governor of the State, because of their proximity to and familiarity with local relief and employment problems and the state of finances of the political subdivisions for relief purposes would be in better position than I to determine the effect of a drastic cut in W. P. A. personnel and projects at this time, I directed letters to the Governor of the State of Kansas, to the chairman of each board of county commissioners within the Fifth District, and to the mayors of 20 cities of my district, asking them to notify me whether in their opinion a cut of that proportion would be advisable.

Up to this time no word has been received from the Governor of the State of Kansas, or from the county commissioners of Sumner, Harvey, and McPherson Counties, or from 15 of the 20 mayors, but I wish to insert in the RECORD the replies of those who were kind enough to give me the benefit of their views on the subject. The letters and telegrams follow:

WICHITA, KANS., March 28, 1939.

House of Representatives, Washington, D. C.: After survey of relief needs here I consider requested additional After survey of relief needs here I consider requested additional Federal appropriation justified because of lack of city, county, and other funds available for relief. Relief situation here is critical. There are 1,742 persons now on W. P. A. manual projects. If additional Federal appropriation is not granted 660 will be removed between now and June 1. Local and county funds are not adequate to meet such emergency. Suffering and want will result from this reduction. Also important and necessary public improvements will be curtailed.

ELMER R. CORN. Mayor.

ELMER R. CORN. Mayor.

WICHITA, KANS, March 28, 1939. JOHN M. HOUSTON,

House of Representatives, Washington, D. C.:
W. P. A. continuation on requested appropriation vital to situation in Sedgwick County. Reduction of W. P. A. load would

throw burden on county funds. Sedgwick County could not at present absorb any additional relief. Agricultural prices too low to boost business and create private employment

HENRY J. PELTZER. Chairman, Sedgwick County Commissioners.

WICHITA, KANS., March 28, 1939.

JOHN M. HOUSTON,

House of Representatives, Washington, D. C.:

I consider the requested additional Federal appropriation for relief warranted from standpoint of relief needs in this community because county funds and other relief funds will be inadequate to meet situation resulting from proposed reduction in W. P. A. Also, important public improvements will be jeopardized, especially development of municipal airport, which is of supreme importance from Federal standpoint, because it serves in interstate commerce, national defense, and United States mail.

ALFRED MACDONALD Director for Park Board.

EL DORADO, KANS., March 27, 1939.

JOHN M. HOUSTON,

House of Representatives, Washington, D. C.:

Due to present conditions, we are carrying the largest relief load in Butler County since 1935. We feel that you should vote for House Joint Resolution 209, for a larger W. P. A. appropriation.

ED MAHER,

ED MAHER,

ESCAL Westerne.

County Commissioner, Butler County Board of Social Welfare.

CHENEY, KANS., March 27, 1939.

Hon. John M. Houston,

House of Representatives, Washington, D. C. Dear Mr. Houston: In answer to your inquiry of March 23, wish to say that from the standpoint of conditions in this locality regarding men at present on the W. P. A. and relief rolls, the additional appropriation is absolutely warranted.

This is primarily an agricultural community which was affected

This is primarily an agricultural community which was affected with an adverse crop condition last year coupled with a low price for grain products. In addition, there is positively no oil activity in this locality at the present time, and many of the oil companies have quit paying on their leases and rentals which was formerly quite an item of income to the farm owners.

There is a possibility of a few men being absorbed on the farms for a few weeks during harvest, but, outside of this, cannot see where any men can be absorbed in permanent employment in this locality until farm conditions are in a more prosperous state.

Sincerely yours,

FRANK A. RYNIKER, Mayor, City of Cheney.

HALSTEAD, KANS., March 27, 1939.

Hon. JOHN M. HOUSTON.

House of Representatives, Washington, D. C.
DEAR SIR: As to House Joint Resolution No. 209, it is not necessary in this vicinity.

Yours truly,

R. Z. HAND. Mayor.

MULVANE, KANS., March 25, 1939.

Hon. John M. Houston,

House of Representatives, Washington, D. C.

DEAR MR. HOUSTON: I have your letter of the 23d in regard to
the House joint bill No. 209 in regard to the additional appro-

priation for the use of W. P. A.

It would seem that locally, with the spring work starting, the farming season opening up, and warmer weather, it would not be too much of a hardship to cut 5,000 from the W. P. A. roll.

It is my personal opinion that it is going to be necessary to cut our relief appropriations a lot in the near future, and now is as good a time as any to start it.

good a time as any to start it. Yours very truly,

S. F. KIMBLE, Mayor, City of Mulvane.

BURRTON, KANS., March 27, 1939.

Hon. John M. Houston,

House of Representatives, Washington, D. C.

DEAR MR. Houston: Insofar as our local needs are concerned,
I do not believe that the appropriation is needed.

Yours very truly,

EDGAR W. KAPFER. Mayor, City of Burrton.

WELLINGTON, KANS., March 27, 1939.

Wellington, Kans., March 27, 1939.

Hon. John M. Houston,

House of Representatives, Washington, D. C.

Dear Sir: Your letter of March 23 was brought to the attention of the city commissioners at their regular meeting.

It is the unanimous opinion of the board that the additional appropriation of \$150,000,000 for W. P. A. is unwarranted.

Very truly yours,

THE CITY OF WELLINGTON By BERNICE S. LINDBERG, City Clerk. Development of the White River

EXTENSION OF REMARKS

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES Thursday, March 30, 1939

STATEMENT TO APPROPRIATIONS COMMITTEE

Mr. ELLIS. Mr. Speaker, the development of the White River in Missouri and Arkansas would mean more to the happiness and prosperity of the people of those States than most anything else I can conceive of. On last Thursday, March 23, I appeared before the Subcommittee on Appropriations in an appeal for more funds for the Nation for this type of development. Money thus spent would not be an expenditure but an investment. An adequate investment of this kind now will enable us to stop liquidating our soil and many of our other resources of the present generation and to turn our great unconquered rivers into riches of human happiness. Under leave granted me by unanimous consent of the House, I quote my statement to the subcommittee in

Mr. Chairman, the gentleman here with me is Mr. Layton Coffman, of Harrison, Ark., a member of our State Flood Control Commission. Here in Washington attending the National Rivers and Harbors Congress is the entire personnel of our State Flood Control Commission, including, in addition to Mr. Coffman, Mayor-R. E. Overman, of Little Rock, chairman of the commission; Mr. John Morrow; Mr. W. C. Greason; Mr. Luke Geren; Mr. Lamar Williamson, and Mr. Ben Butler; also Mr. W. C. McClure, secretary of the Southwest Valleys Association, and Mr. L. A. Henry, of the State Planning Board.

I may say also that the congressional delegation from Arkansas and the State administration of Arkansas are united in their appeal for more funds for flood control and waterways development in our State.

ment in our State ..

My purpose in appearing before you is to give you our side of the picture from the White River Basin in Arkansas and Missouri in an appeal for an increased flood-control appropriation over and above the Budget recommendation of \$110,000,000.

In the Flood Control Act of 1938 the Congress laid down what conceivably is to be the Nation's flood-control policy for years to come: That floods constitute a national rather than a local problem and menace; that reservoir construction is the only complete answer; that the Federal Government shall bear the whole cost of reservoir construction; and that in the development of such a program navigation, power, irrigation, recreation, and other possibilities shall be developed as far as is economically feasible. The bill was signed after Congress adjourned, hence there was no appropriation. And after the bill became law President Roosevelt added another major consideration: That special attention be given to the development of hydroelectric power along our rivers to be used in the production of war materials in case of emergency.

While \$110,000,000 is more by \$35,000,000 than the Nation has While \$110,000,000 is more by \$35,000,000 than the Nation has ever spent for this purpose in any one year heretofore, yet here we are attempting to inaugurate a vast program with appropriations already authorized to the extent of \$698,877,000. But we must not drive, as I see it, toward this low figure, because projects are actually authorized to the extent of \$1,148,877,000. The Congress authorized in 1938, for instance, six reservoirs in the White River Basin which would cost a total of approximately \$75,000,000 but authorized a total appropriation of only \$25,000,000 for all six, or only one-third of the amount necessary. Furthermore, many of the choice sites on the streams were not authorized, either in 1936, 1937, or 1938, because the surveys had not been completed. in 1936, 1937, or 1938, because the surveys had not been completed or because of various other reasons.

or because of various other reasons.

General Schley, Chief of United States Army Engineers, has stated that they could use profitably \$195,500,000 during the fiscal year 1940, in developing the program. Even this is driving toward not the higher figure, representing authorized projects, but the lower figure, representing authorized appropriations. He has also stated that if only \$110,000,000 is appropriated, very few new projects can be commenced next year. be commenced next year.

THE WHITE RIVER

Naturally I am interested in the whole program, but since my district lies almost wholly within the White River Basin, since a proper development in that basin would materially affect the prosperity of all of Arkansas and Missouri, and since I have devoted 4 years of constant study to this basin, I want to show you, if I may, how we, along with the rest of the country, will be affected by an appropriation of only \$110,000,000.

FLOOD CONTROL

The White River rises in the Ozark Mountains of northwest Arkansas, flows north into Missouri, and then southeast through Missouri and Arkansas, a total distance of 690 miles before entering the Mississippi River just above the mouth of the Arkansas. It drains a total of 28,000 square miles, or more than two-thirds the amount of the area drained by the celebrated Tennessee River. Seven thousand square miles of this area is in the alluvial valley and constitutes the finest farm lands in the world, except for the ever-present flood hazards. The entire river basin except in the immediate vicinity of the reservoir sites, which are in the mountains, is densely populated.

The average annual rainfall in the basin is nearly 4 feet. The average fall of the river above the lowlands is 4 feet per mile, but in the lowlands it is barely more than one-third of a foot per mile, with the result that the floodwaters frequently come down with tremendous volume and speed and cover the entire alluvial valley, with the loss always running far into the millions of dollars.

At the height of the 1927 flood the White River discharged 440,000 cubic feet of water per second into the Mississippi, and for the period from April 23 to May 5 of that year its discharge for the period from April 23 to May 5 of that year its discharge averaged over 300,000 cubic feet per second. During the 16 highest floods of the past 50 years the White River has contributed flows that synchronized with the Mississippi floods, ranging from 50,000 cubic feet per second to 440,000 cubic feet per second for those floods. When the levees fall to hold, as is frequently the case, these floodwaters never reach the Mississippi at the mouth of the White but flow behind the levees and inundate vast regions of still other fertile lands. Furthermore, the floods contribute to the disaster all the way down the Mississippi from the mouth of the White to New Orleans, inundating vast other regions in Mississippi, Arkansas, and Louisiana. sissippi, Arkansas, and Louisiana.

During the record flood of 1927 approximately one-fifth of the floodwaters of the Mississippi below the mouth of the White were contributed by the White River.

Effective flood control by these reservoirs would immediately enhance the value of farms thus protected by several million

Mr. SNYDER. How large are the alluvial plains? Mr. Ellis. Seven thousand square miles in the White River Basin to where the river enters the Mississippi in southeast Arkansas, and 140,000 square miles below the mouth of the White including 90,000 square miles in the Red River Valley.

I believe that sizable reservoirs can be constructed in the upper basin of this river at a cost well justified by the benefits that may reasonably be expected. Factors tending to reduce their cost over similar ones being constructed and planned in other sections of the country include. Excellent reservoir and proving size and s similar ones being constructed and planned in other sections of the country include: Excellent reservoir and power sites, good foundations, no highway nor railway relocation, no towns to be moved, and no expensive lands to be acquired in the reservoir areas, for the proposed sites are all in the mountains.

Pursuant to section 1 of the River and Harbor Act of 1927 and section 10 of the Flood Control Act of 1928 an extensive survey of the White River and its tributaries was made by the United States

Army engineers.

Army engineers.

House Document 102 of the Seventy-third Congress, first session, entitled "White River, Missouri and Arkansas," a copy of which I hold in my hand, reporting that survey, contains a "general plan for the improvement" of the river "for the purposes of navigation and efficient development of its water power, the control of floods, and the needs of irrigation." The report was signed and submitted by Patrick J. Hurley, then Secretary of War. In it the engineers located and reported 29 reservoir sites, not a one of which has been developed, nor has any appropriation been made. which has been developed, nor has any appropriation been made for a single one of them.

The Seventy-fifth Congress authorized construction of six dams The Seveny-Inth Congress authorized construction of six dams at Norfork, Lone Rock, Greer's Ferry, Water Valley, Belle Foley, in Arkansas, and Clearwater in Missouri. No appropriation was made, however. Only two of the dams can be completed for the \$25,000,000 authorized, the engineers tell us, and they say they will not begin more than two because, since only two can be completed for that amount, they consider that only two, to be selected by them out of the six, are actually authorized. I will come back to this in just a minute

to this in just a minute.

According to the engineers, more than 2,000,000,000 kilowatthours of electricity can be developed annually on the White River and its tributaries without interfering with a systematized program of flood control. At the current rate of electricity in the White River Basin this power would sell for more than \$100,000,000 annually.

A cheap power is seriously needed in this region. As reflected by the reports of the Federal Power Commission, the power rate in Arkansas is the third highest in the Nation—only the States of Louisiana and New Hampshire having higher rates. This may be due partly to the fact that, as reflected by the figures of the State utilities commission, more than one-half of the power used in Arkansas annually is imported and our power depend in arkansas annually.

State utilities commission, more than one-half of the power used in Arkansas annually is imported, and our power demand is growing at the rate of 60,000 kilowatts a year.

It is my firm belief that with a power rate similar to that now enjoyed in the T. V. A. region the power consumption of this area would double in 12 months. Our rate now is from three to five times higher than in the Tennessee Valley. For instance, 25 kilowatt-hours a month under the T. V. A. retail rates cost 75 cents, while in Arkansas 25 kilowatt-hours cost us \$2.50.

Many of our municipalities are now producing their own power because of the exorbitant rates. My town of Bentonville, with a population of 2,500, is one of these. The city of Conway, with a population of 5,000, is another. All of these cities stand ready and anxious to avail themselves of a cheap power from the White River. More than 8,000,000 people live within easy power range of these six dams already authorized. This area includes several larger cities that likewise are anxious to avail themselves of cheap power from the White. Kansas City, with a population of 500,000, is one of these. is one of these

is one of these.

Rural electrification lines are being constructed throughout the region. These cooperatives will use many millions of kilowatthours annually, and all are anxious for the low rate. This power can be produced as a byproduct of flood control at around 3 mills

per kilowatt-hour.

We have vast mineral deposits in the White River Basin and within power range—lead, zinc, silica, sulphur, phosphate, man-ganese, iron, commercial clays, coal, limestone, marble, bauxite, and many others, most of which are practically untapped due to and many others, most of which are practically untapped due to the high power rate and high freight rates in this region. With a cheap rate untold millions of kilowatt-hours of this power would be utilized almost immediately in the development of these minerals. A silica plant at Rogers, Ark., for instance, has been forced, because of high prevailing rates, to install equipment recently to generate its own power. Even so, local production costs several times the amount that power could be produced for on the White

White.

The rougher regions of the Ozarks are covered with hardwoods, the development of which depends largely upon cheap power. The average year-round flow on the several tributaries of the White insure adequate storage for power purposes. Markets for all the power that can be produced on the White River now exist within easy power radius. The sale of power will help repay the cost of the reservoirs and thus reduce the output for flood control, particularly invitation, and other heapets. navigation, irrigation, and other benefits.

NAVIGATION

The White River can be made navigable as far north as Forsythe, Mo., a distance of nearly 400 miles, and the Black and Current can be made navigable for a considerable distance without interfering with the development of flood control and power. The White is already navigable the year round to Newport, Ark., and part of the year to Batesville, thanks to Government locks already constructed. A regulated river flow will aid materially in navigation below the dams.

Many small industries are ready now to avail themselves of water transportation. Batesville, Ark., for instance, is noted for its production of marble and limestone, both of which lend themselves to river transportation. Freight rates in this area are 20 to 75 percent higher than outside the South, and a water rate into this fertile region would aid materially in its development.

TRRIGATION

The rice industry of the alluvial valley, one of the State's biggest money crops, is dependent upon the water pan, supported by this river, for its irrigation system, and the water level is gradually going down. Not only would a regulated stream flow raise the water level, but it would give the rice growers gravity flow over a vast region.

RECREATION The Ozarks and surrounding region have long been recognized as a recreational center, but the construction of vast reservoirs outside of this territory in recent years has diverted the tourists elsewhere. Construction of these projects will not only restore the tourist trade, but will go far toward developing the wonderful recreational edvantages. recreational advantages.

The White and its tributaries above the alluvial plain are noted for their clear water and splendid fishing. These are benefits which we well may take into consideration in attempting to arrive at the value of this vast improvement.

NATIONAL DEFENSE

I think it well not to forget the President's warning that in ase of war we face a possible, if not certain, emergency in the shortage of electric energy for the production of war materials. The harnessing of this power that is now so rapidly wasting itself to the sea would be a great asset to the national defense.

PUBLIC WORKS

These projects are worth untold values in reducing unemployment. They place new money into circulation over a long period of years. This was true back in the Coolidge and Hoover administrations—where the program began—and it is true now. The people heartly approve of the Government shifting the emphasis in expenditures to projects that lend themselves so vitally to the progress and happiness of future generations.

EQUAL DISTRIBUTION OF PROJECTS

The White River people have stood by without murmur and watched and helped to pay for the gigantic long-range development of the Tennessee Valley immediately to their east and the development of the Grand and Red and Colorado Rivers immediately to their west, and they feel it is about time some attention should be given to the ravages and potentialities of the White River.

NEW CONSTRUCTION

Of this \$110,000,000, \$80,000,000 would be used on the construc tion of projects already commenced and only \$30,000,000 would be available for new projects. It just doesn't make good sense for this great democracy to set out so half-heartedly to do a great job like this.

The Seventy-fifth Congress authorized these sites to be developed not only for flood control but also for power where in the opinion of the engineers it is economically justified—but this requires money for higher dams.

Now, if you give the Nation only \$30,000,000 for new construction somebody is going to be left out. We have reason to believe tion somebody is going to be left out. We have reason to believe that the engineers would still start work on two of these dams—on the White and tributaries—one in Arkansas and one in Missouri—because they are among the most-needed projects in the Nation. But with such a limited fund it is not certain that power would be included in either. Penstocks would be included, of course, but you understand that it takes a broader base, a thicker dam, and a higher head for power.

If built for power also, and the added cost would be relatively low, one of these two dams that would be built would produce 217,043,000 kilowatt-hours annually and the other one 49,312,000. There is not only a ready market but a demand in our State for this amount. It would be a calamity to build them without power.

CONCLUSION

In conclusion, gentlemen, may I say that the people of Arkansas are united 100 percent for this program and are demanding action of their Representatives in Congress. I hope you will see fit to approve, not the Budget recommendation of \$110,000,000, but the amount desired by the Army engineers, \$195,500,000.

I thank you, Mr. Chairman, for giving me the opportunity to present this matter to the committee.

The Day We Celebrate

EXTENSION OF REMARKS

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1939

ADDRESS OF HON. THOMAS J. BROGAN, CHIEF JUSTICE OF THE SUPREME COURT OF THE STATE OF NEW JERSEY, AT THE ONE HUNDRED AND FIFTY-FIFTH ANNUAL DINNER OF THE SOCIETY OF THE FRIENDLY SONS OF ST. PATRICK AT NEW YORK CITY ON ST. PATRICK'S DAY, MARCH 17, 1939

Mr. MARTIN J. KENNEDY. Mr. Speaker, St. Patrick's Day, March 17, is celebrated throughout the whole world by legions of Irish men and women and their countless friends.

The Society of the Friendly Sons of St. Patrick celebrated the day at the Hotel Astor in New York City with its one hundred and fifty-fifth annual dinner.

This year our guest speaker was the Honorable Thomas J. Brogan, Chief Justice of the Supreme Court of the State of New Jersey.

The address of Justice Brogan has a special appeal to every good citizen, regardless of race, creed, or political belief, because it honors the dignity and beauty of motherhood. The influence and guidance of the mothers throughout the world is the only thing that will save civilization from decay.

Justice Brogan responded to the toast "The Day We Cele-

Mr. Toastmaster, distinguished guests, and members of the Friendly Sons of St. Patrick. At the moment two thoughts obtrude themselves: First, that when it comes to courtesy, charm, and that fine urbanity which is part of his nature, it is difficult to compete with our friend and toastmaster Mr. Justice Glennon. [Applause.] Second, when I look around at the distinguished personages in this gathering, and see the outstanding figures in church and state, authorities in law and jurisprudence, mentors in finance and diplomacy, I realize that in leaving my own jurisdiction—the State of New Jersey—and coming to a foreign jurisdiction—the State of New York—to make a speech, I violated one of the first rules or canons of caution and prudence, which reads, "Never get into fast company." [Laughter.] And yet for a man who lives a somewhat cloistered life and has not made a speech in years, I feel completely at home in this distinguished company, and that, I suppose, is quite natural, for if there is any place where a man of my antecedents—and I hope you noted that the toastmaster said we are distinguished for saintliness and piety [laughter]—is privileged to feel at home, it is here on March 17, at a dinner of the Friendly Sons of St. Patrick. [Applause.]

So, when the invitation to speak at this dinner came, though you might readily have made a better choice, I accepted, because no one should be cold enough not to accept it. In fact, I was glad and proud to accept it. And at that juncture, communing with myself, and thinking perhaps of my own shortcomings as a speaker, there popped into my mind the incident of the Irishman who boasted to a friend about his ability as a musician, particularly as an instrumentalist, and his friend, credulously enough, inquired, "Can you play the violin?" to which he replied "The violin? I guess so. I never tried it." [Laughter.] And my position is a little like that. It has never been my experience to make an address at this dinner, but here I am, ready to try it. [Laughter.] So, when the invitation to speak at this dinner came, though [Laughter.]

But, he would be cold indeed who could not give some account of himself on this day, a day set apart by all, regardless of heir nationality, for Ireland and the Irish, "The day we celebrate," the day that brings back the finest recollections of the years, the day that stirs the depths of our emotions, the day of gladness and of sorrow, as we look down the long vistas of recollections and live anew the triumphs and the failures of our fathers in their age-old

fight for recognition and liberty.

But his, my friends, is neither the time nor the place to ask you to give ear to a detailed account of the glorious history of the Irish people, to valor unsurpassed, to courage without fear, to honor without blemish, to "prisons made holy, to scaffolds made altars," where countless Irishmen suffered the martyr's death.

altars," where countless Irishmen suffered the martyr's death, Rather, is it the occasion to recall our magnificent heritage, ever present through the centuries, that spirit of Ireland that never yielded its devotion to an ideal, its consciousness of nationhood.

If it be brave to live and suffer without surrender, as our fathers did, under laws with "cruelty writ in every line," to endure under regulations described by the jurist-philosopher Montesquieu, "As contrived by the devil," and still smile, surely the Irish were brave. If it be greatness to live and struggle without surrender in a land "where liberty hung crucified for centuries, dying perpetually yet never dead, wasting forever yet enduring still," and, after all this, to win recognition and freedom in the end, surely the Irish had greatness. [Applause.]

How strange it is that this land that sent her sons as soldiers

How strange it is that this land that sent her sons as soldiers rallying to the defense of almost every nation should have received so little outside help in her own struggle for recognition and freedom. France, Spain, Austria, Canada, and our own United States felt the rallying force of the Irish volunteer in every war; and more, felt the rallying force of the Irish volunteer in every war; and more, Washington, with his Continental Army, felt not only the rallying force of the Irish manpower, for fully one-half of Washington's Continental Army was Irish, but felt as well the might of a contribution of nearly half a million dollars, when it was needed most, donated by 29 Irishmen of the city of Philadelphia, all members of the Friendly Sons of St. Patrick. [Applause.]

And this same intrepid, generous spirit lived on through the years without loss of power or stability, until, at long last, beginning in 1916 and ending in 1921—July 11, it was—that manhood which had fought the fight to advance the cause of the oppressed people of other nations, alone and unaided, an unarmed people against the might of a proud empire, won for itself recognition and liberty

other nations, alone and unaided, an unarmed people against the might of a proud empire, won for itself recognition and liberty and emerged as the Republic of Ireland. [Applause.]

"Army without banners" is the description given by the poetnovelist to that group which won the age-old fight. Army without banners indeed—army without adequate arms and equipment—army poor in everything material with which wars are won, but army, rich in courage, rich in the justice of its cause, rich in the spirit its patriots had, transmitted by their fathers in undiluted purity, the consciousness of nationhood.

Now what is it that differs the Irishmen from the other many

Now, what is it that differs the Irishman from the other mem-bers of the family of Kelts, for different he is. His nature is different from any other that ever came from the hand of God. His is a fanciful, poetic, valiant, spiritual nature. He lives in the present, but in spirit he dwells in the past, and that past for him is still a living actuality.

Not so with the rest of the British Isles. The Scot will recall the disaster of Flodden Field, will enthuse over Bannockburn, will weep over his betrayal of Mary Stuart, his martyred queen, will sit up all night supping sorrow or joy, but next day he is his practical self again.

The Welchman plots along thinking not of the days of his greatness; the Englishman will recall his yesteryear in history, the days of the Seven Kingdoms, the War of the Roses, but not for long—the spirit of utility in a moment will have asserted

But in Ireland events do not pass so rapidly. Ireland has her traditions and she meditates. Monuments of war, of nobility, of religion cover the land. The poorest peasant lingers in the noonday shadows of historic walls and towers that tell him his forefathers were not slaves, but that they lived as heroes and died as men. He ploughs the fields or walks the country roads with as men. He plotting the helds of walks the country roads with scenes before him that have been immortalized by his poets, and lying down in his humble cottage at night, he hears the wind rushing over the mountains and through the valleys or sighing through the ancient battlements, in a faint voice, a voice that stirs him to the very depths of his soul, for it brings back to his

mind the voices of scholars, of heroes, and of saints. [Applause.]

Now, what was it that kept alive this race of great souls who
never despaired of their country? What made them cling to their
longing to breathe the fresh, clean air of liberty? It was not the
poet who wrote and sang the immortal events of Irish history, nor
was it the schoolmaster, or as he has been more accurately

described, the "hedge master," unique and heroic figure that he was, for he imparted only education, kept their minds informed and their eyes open, and education is not indispensable, nor was it that irrepressible wit and humor, the blarney, the gift of the Irish and only of the Irish, that kept alive this devotion to an

Rather it was the most beautiful gift that ever came to the Irish people, the lovely, spiritual Irish mother. [Applause.] There never was a mother who was not, in the eyes of her children, almost like the Blessed Mother of us all, and there never was a mother who at eventide, as she softly crooned her lullaby to the mother who at eventide, as she softly crooned her lullaby to the babe cradled to her heart, who was not very close to Heaven, and no figure in Irish annals carries so sweet a personification of love and courage, of tenderness, patience, and spirituality as the Irish mother. Truly the Nation took its sustenance from her through the years. Generation after generation of her children went out from the land of their birth, under the benediction of her gaze, encouraged by the smile that hid the agony of her anguish, and from the Irish mother they imbibed an ambition and a richness of soul that made them equal to the tasks of the world, whether they were on the battlefield, in the legislative halls, in the professions, or in business. The Irish exile spanned the rivers, tunneled the mountains, and built great buildings, possessed of a heritage that conquered, a leadership with power which could not be his were it not for the sustaining influence of the Irish mother. [Applause.]

O mothers of the world, we acknowledge with gratitude our

mothers of the world, we acknowledge with gratitude our debt to you, and with the calm judgment that comes with the years we realize that the greatest schoolroom of all times is the place where the child learns its first lesson of what is good and

true and right and just and holy—at its mother's knee.

I am reminded of the story of Cornelia, the mother of the Gracchi, to whom pagan Rome, in ancient times, erected a column in one of its most magnificent temples, who, upon an occasion when rich, jeweled ornamentation was the order of the day, was asked. "Where are your jewels?" to which she replied, pointing to her sons, "These are my jewels." And so, too, the Irish mother who, possessing none of the jeweled adornment of wealth, may stretch out her arms to all the world and, pointing to her children, may say with pride, "These are my jewels. They left me and went forth to do the work of civilization for God. They brought progress, and culture and have advanced religion, and civilization in years. and culture and have advanced religion and civilization in every land in this fair world. The battlefields have been crimsoned with their blood. They fought the fight of the French, the Austrians, the Spanish, the Canadians, all in the cause of liberty; they fought the fight of the American colonists with Washington in the War the fight of the American colonists with washington in the war for Independence; they fought under Meagher at Fredericksburg for the preservation of this Union; they fought against the mailed fist of despotism in the World War. These are my jewels and I have given them to humanity." [Applause.] We recollect with regret that when, after the World War, the

victorious nations sat down at the great hall at Versailles to dole victorious nations sat down at the great hall at Versailles to dole out freedom and independence, there was no room for Ireland. She was the poor child, hungry and cold, left outside gazing in at the glory of the lights, tantalized by the odor of good things, straining her ear to catch the melody of the music and the laughter of happy voices, and when the roster of nations was called, she could not answer "present" to her name because her name was not on the roll. And all she wanted was a chance to be heard; all she wanted was a chance to breathe the fresh, clean air of liberty. What effrontery in this urchin to knock at the door of the banquet hall at Versailles!

But thank God she wan liberty in 1921 and since that time has

But, thank God, she won liberty in 1921 and since that time has displayed to the nations a bill of rights which is a model of Christian justice, a constitution that, like our own, is a model of pure democracy for the encouragement of the downtrodden people of the world. [Applause.]

I hope to see the day when there shall be another convocation of nations, a convocation of nations called together in the interest of peace, liberty, and democracy for all; and when that roll call of nations is thundered forth from our own Capitol Hill in Washington that the Old World nations of Europe will answer "present"; and continuing the roll, the nations of the Far East will answer "present"; and continuing on, the name of Ireland is called, and Ireland, a free and independent nation, will answer "present"; and then the name of our own country is called, and our own glorious America answers "present"; and so on and on until every State and every nation has answered "present," a swelling chorus thrown unto the high heavens by a reunited family of nations upon earth, a triumphant exultation that compels the very soul of us to get down on its knees in thanksgiving, when all wounds are healed, persecutions a thing of painful memory, rancor, strife and race madness are forgotten, and when our glorious America on this side of the Atlantic shall join with Ireland on the other side and challenge the world not to conflict, not to strife, but to excel in undying devotion to the principle of self-determination for all nations and all men. [Applause.]

And at that moment, in my mind's eye, tear-dimmed, I see an of nations, a convocation of nations called together in the interest

and all men. [Applause.]

And at that moment, in my mind's eye, tear-dimmed, I see an image crowned in pure light, her face lined a little and worn with care, her blue eyes gentler with the years but lovely as ever, smiling at me through the mist—my Irish mother and yours.

And so my toast and yours too, I hope, for "the day we celebrate" is to the Irish mother—may she ever remain enthroned in the hearts of her children, and may she always enjoy the smile of God. [Applause.]

Work of National Youth Administration in California

EXTENSION OF REMARKS

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 30, 1939

LETTER FROM THE CALIFORNIA DEPARTMENT OF INDUSTRIAL RELATIONS

Mr. VOORHIS of California. Mr. Speaker, for the benefit of those who may have any doubt of the value of the work of the National Youth Administration for the young people of America, I include herewith a letter from the Department of Industrial Relations of the State of California.

Our young people are the America of tomorrow, and any move to give them the training and the chance which N. Y. A. has given certainly deserves the support of Congress.

STATE OF CALIFORNIA,
DEPARTMENT OF INDUSTRIAL RELATIONS,
San Francisco, March 23, 1939.

Hon. JERRY VOORHIS, House of Representatives, Washington, D. C.

DEAR SIR: On behalf of the Department of Industrial Relations of the State of California, I take this opportunity to state our experiences with the National Youth Administration as administered in this State.

Since the inception of the National Youth Administration, we have had continuously in our department and the five divisions comprising it, an average of 25 of these young people. During that 4-year period we have had more than 200 of these young people in our employ and of that number only 3 have been separated from our projects for cause.

The difference between the 25 average and more than 200 total

The difference between the 25 average and more than 200 total has been brought about because these young people practically with unanimity have at all times sought private employment and have never failed to accept it when it came along.

Our department of government happens to be one that has been sorely pressed by budget limitations and the help given us by the National Youth Administration has not only been acceptable, but has proven itself to be both valuable and essential.

In view of the foregoing, may I bring this letter to a somewhat abrupt end by simply stating that the National Youth Administration has proven itself to be of real value as an organization and the young people whom they have assigned to our projects have proven themselves to be earnest, sincere, and capable. In view of the fine work that has been and is now being done by the National Youth Administration, we hope that nothing will be done to curtail their efforts.

Very truly yours,

ARCHIE J. MOONEY

Assistant to the Director, Department of Industrial Relations. P. S .- As assistant to the director, my duties bring me in per-

sonal contact with all of these young people and I feel that I have a right to speak from personal knowledge.—A. J. M.

The Interstate-Migration Problem

EXTENSION OF REMARKS

HON. ALFRED J. ELLIOTT OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 30, 1939

LETTER FROM STEPHEN EARLY AND REPORT OF THE ADMIN-ISTRATOR OF THE WORKS PROGRESS ADMINISTRATION

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from Hon. Stephen Early, secretary to the President, together with the reports referred to therein:

THE WHITE HOUSE, Washington, March 28, 1939.

Hon. A. J. ELLIOTT,

Chairman, California Delegation on Interstate Migration and its Effect on California,

House Office Building, Washington, D. C.

DEAR CONGRESSMAN: By the President's direction, I am transmitting herewith, for the information of your colleagues and yourself, a copy of Administrator Harrington's report to the President with reference to the interstate migration problem and its effect on California.

You will also find a copy of a report to Colonel Harrington from William R. Lawson under date of March 2, 1939.

The President has reviewed Colonel Harrington's letter and the attached report. He asks me to say that he concurs with the recommendations made by Administrator Harrington.

Very sincerely yours,

STEPHEN EARLY, Secretary to the President.

Works Progress Administration, Washington, D. C., March 15, 1939.

The PRESIDENT, The White House.

My DEAR Mr. President: In accordance with your instructions conveyed to me in Mr. Stephen Early's letter of February 17, 1939, conveyed to me in Mr. Stephen Early's letter of February 17, 1939, I have consulted with various agencies of the Federal Government concerning the problems presented in the letter which was addressed to you by Representative A. J. ELLIOTT, chairman of the California delegation on interstate migration and its effect on California. The following agencies were consulted: Farm Security Administration, United States Housing Authority, Social Security Board, Federal Surplus Commodities Corporation, Public Health Service, Office of Education of the Department of the Interior, and United States Employment Service.

The Works Progress administrator for northern California, who is thoroughly familiar with this problem in all of its aspects, was called to Washington for the conferences and has prepared a detailed report, a copy of which is attached. The purpose of this letter is to summarize the conclusions which were arrived at during

letter is to summarize the conclusions which were arrived at during

the conferences.

Interstate migration is the result of extremely complex social and economic factors and is, of course, not confined to California. The outstanding conclusion that I have reached after the discus-The outstanding conclusion that I have reached after the discussion of the problem is that no Federal agency or group of agencies can effectively deal with it in its entirety under their present powers and limitations. If the responsibility for solving the problem of interstate migration is to be accepted by the Federal Government, it is my opinion that special legislation to this end would have to be enacted by the Congress. Such legislation should provide for Nation-wide planning and might take the form of authorizing action along the three following lines:

(a) The resettlement of the migrants who are now in California and other destination States and who can become self-supporting there.

(b) The return of those migrants who are willing to resume residence in their State of origin and giving assistance in establishing

them there.

(c) The resettlement of other migrants in those areas where employment suited to their abilities is most likely to be found.

I believe that a decision as to whether such legislation should be enacted rests with the Congress.

Passing to the action which can be taken by the Federal agencies Passing to the action which can be taken by the Federal agencies under their present powers the representatives of all of them are in agreement that according special treatment to nonresidents that is not available to residents is bad practice and tends only to aggravate the problem of migration. This is certainly true insofar as the Works Progress Administration is concerned. It would be possible for the Works Progress Administration to set up an earmarked quota for the employment of migrants in California and to develop a work program particularly for those migrants. I believe become a work program particularly for those migrants. I believe, however, that this is highly undesirable and recommend against it. On the that this is highly undesirable and recommend against it. On the other hand, a general increase in the Works Progress Administration quota for the State of California will not do anything constructive to solve the problem, and the extent to which such an increase can be made under present limitations as to funds would not in my judgment have any marked effect in alleviating the conditions which prevail.

The lines along which other Federal agencies can be of help and the steps that they can take are as follows:

(a) The United States Employment Service can undertake a complete and systematic dissemination of information on employment to prevent the flooding of the California labor market.

complete and systematic dissemination of information on employment to prevent the flooding of the California labor market.

(b) The Federal Surplus Commodities Corporation, by cooperation with the Farm Security Administration and the California State Relief Administration, can achieve a wider distribution of available surpluses for the purpose of providing more assistance to needy migrants now in the State.

(c) The Farm Security Administration can continue its efforts within its present limitations to provide camp facilities and small homes for rural migrants. It would require additional funds and authority for it to expand its activities.

(d) The Public Health Service has a program that is of considerable aid to the local communities in the control of disease and treatment of the farm migrant. Additional funds would be

and treatment of the farm migrant. Additional funds would be

APPENDIX TO THE CONGRESSIONAL RECORD

necessary to expand these activities so as to provide adequate care for migrants.

(e) The United States Housing Authority is willing to cooperate

with local housing authorities in creating low-rent dwelling units, but at the present time all of its funds have been allocated.

Steps (a) and (b) above can be initiated at once, and, in my judgment, this should be done. To make steps (c) and (d) and (e) effective would require additional funds, which the Congress

would have to provide.

To secure the best results in California from the activities of the various Federal agencies in connection with migrants requires that a local agency familiar with the problem should accept the responsibility for planning and coordination. This is very important to avoid overlapping and confusion. In the case of California, I think the proper State agency to undertake this responsibility is the State relief administration.

This report has been concurred in by the representatives of the various Federal agencies listed in the first paragraph of this letter. Respectfully yours,

F. C. HARRINGTON, Administrator.

MARCH 2, 1939.

To: Col. F. C. Harrington. From: William R. Lawson.

Subject: Report on interstate migration and its effect on California. In accordance with your request, I have discussed with officials of the agencies most directly concerned the problems of interstate migration raised by the California delegation in their letter to the President under date of February 15. The present report is the result of a meeting with representatives of the Farm Securis the result of a meeting with representatives of the Farm Security Administration, United States Employment Service, United States Housing Authority, Social Security Board, Public Health Service, Office of Education, Surplus Commodity Corporation, and Works Progress Administration, and their memoranda to me on the aspects of the problem in their respective fields of administration. Memoranda from these agencies are appended. For convenience of reference, the discussion below follows the same subject order as that of the California delegation's letter. Nature of the problem: The problem created by interstate migration is the result of extremely complex social and economic factors among which the most important are: (1) More workers than fobs: (2) the movement of the unemployed in search of

than jobs; (2) the movement of the unemployed in search of work; (3) the migratory labor supply, particularly that in agriculture; (4) the displacement of farm operators and laborers by drought, erosion, and machinery; (5) inadequate relief; (6) ill health; (7) the attraction of areas with mild climate for the ill, nearth; (7) the attraction of areas with finial climate for the fit, aged, and dispossessed; (8) inadequate local relief; and (9) the characteristic mobility of the American population, especially when economic opportunities in their home States are limited. Much of the interstate migration that takes place each year results in successful economic adjustment. But the unsuccessful

results in successful economic adjustment. But the unsuccessful portion creates a particularly acute problem because it constitutes an additional burden on the facilities of city, county, and State already taxed to capacity to care for the resident unemployed, aged, and unemployable. Cities as well as rural areas are faced with this problem, and so long as part of the resident needy are without assistance, local opinion is strongly opposed to granting special care to the propresident. special care to the nonresident.

special care to the nonresident.

All States contribute and all States receive interstate migrants, but some few "destination" States such as California receive many more than they give, and a slightly larger number of "origin" States such as Oklahoma give many more than they receive. Although it is the inflow rather than the outflow that attracts attention in any State, there is no question that all States are

Among governmental agencies there is unanimous agreement that the problem is national in nature and therefore requires consideration on a nation-wide basis. This opinion is shared by the Cali-fornia delegation and is set forth clearly in the first paragraph of its letter.

Since no one area is responsible for the problem caused by inter-state migration, it is difficult to see how an attempted solution in a particular State can be effective. Unless there is coordination of effort in all States—particularly in States with excessive out-migration—an attempt to deal solely with local conditions in Cali-fornia would greatly complicate the problem and in the long run do more injury than good.

There is also general agreement that the problem has both an immediate and a long-range aspect. The immediate problem is one of relieving the pressure on the local relief rolls, hospital and school facilities, housing, and employment opportunities. The long-range aspect is concerned both with the conditions in the States of origin which cause the uprooting of so many in-dividuals and families, and with the most effective means of stabilizing and rehabilitating those who are already uprooted. In both the immediate and the long-range aspects joint effort by the several governmental agencies responsible for the administra-tion of some phase of this problem is essential. No agency, as now constituted, can solve so large a problem.

In the discussion of particular points below emphasis is placed upon the administrative responsibility of the several agencies consulted.

Employment: Since it is work rather than relief that the migrant wants, employment opportunities are of prime consideration in this problem. When employment is not to be found

some part of the migrant population necessarily turns to relie

for a means of subsistence.

Bringing men and jobs together is primarily the concern of the United States Employment Service. In addition, they are the agency in the best position to disseminate information on the agency in the best position to disseminate information on the service. employment opportunities as well as information on areas in which there is already an oversupply of workers. There was general agreement that immediate benefits would result from a systematic spreading of information among potential migrants in the States of origin as well as among migrants en route for the purpose of checking the continual oversupply of workers to California. Not only should the State employment service exchange information among its local agencies as to over and under supply, but great advantages could be obtained through the exchange of such information among those States now receiving or supplying the greatest bulk of the migrant population.

All regular channels of publicity should be used. Growers' associations have been particularly effective in attracting an oversupply of migrant workers through the use of handbills, signs along the road, radio announcements, and word-of-mouth advertising. The use of these same channels by the Employment Service should go a long way to direct the regular seasonal agricultural migrant to areas in which he is needed, to discourage unneeded workers from continuing their journey to California, and to advise pros-pective migrants of the general lack of job opportunities in California.

In a memorandum on their activities, the United States Employment Service reports that, through their Farm Placement Service, they are gathering and disseminating information on job openings and labor surpluses. Further, they report that by using the radio, newspapers, and bulletins, they believe that the flow of migratory labor to California has been reduced and better adjustments of supply and demand for workers achieved during the past year in California and Arizona. The United States Employers of the California and California with the California and California and California with the California with the California and California with the Cal ment Service offers its full cooperation with State and Federal agencies in further improving the distribution of workers in accordance with job opportunities.

Since industrial as well as agricultural migrants are found among the needy it would seem desirable for the United States Employment Service to disseminate information on urban as well

as rural employment opportunities and gluts.

Another suggestion made by the California delegation is that rural migrants be settled on small plots of land in areas where seasonal farm labor is in demand. The Farm Security Administra-tion has been making such efforts, but because they lack author-ity to purchase land, any expansion of this type of activity is limited. Were it possible for the Farm Security Administration to acquire land for the purpose of small plot settlements, cooperation with the United States Employment Service and the Works Progress Administration might provide a useful combination of partitime private or program employment with subsistence farming, Such a plan should operate to stabilize a badly needed labor supply and, at the same time, provide the means of permanent resettlement for uprooted farm-labor families.

Still another suggestion made by the delegation under the general heading of "employment" is, that pending the revival of employment in the Nation, W. P. A. quotas be adjusted to some degree in accordance with the movement of people from State to State. This suggestion is based upon the fact that conditions in State. This suggestion is based upon the fact that conditions in the States of origin have a very direct bearing upon the present situation in California. The Works Progress Administration is well aware of the fact that people are continuing to leave States where conditions are unfavorable, and that action in these States is essential if the continuing flow of migrants is to be stopped. The national aspect of the migrant problem is obvious here. Development of a sound course of remedial action in the States which are the major sources of migration will, however, require careful study and some time to put into operation. Long-range planning is required; it is not believed that a satisfactory program of this nature can be formulated in time to help meet the immediate need for assistance in California. need for assistance in California.

An increase of 10,000 in California's W. P. A. quota would provide the most effective immediate action. This additional quota would help to relieve the State of some of the relief burquota would help to relieve the State of some of the relief burden which, to a large extent, has been built up by the influx of migrants during recent years. If granted, the State W. P. A. administrator should report semimonthly the number of migrants assisted, by State of origin and length of time in California, and such additional information as may be required. These reports would assist materially in determining allotments to be made during the next month. This plan would permit ready adjustment of W. P. A. employment according to resident and migrant needs within the State, and, at the same time, provide information on the origin of migrants so that suitable measures could be introduced in the contributing States to check additional be introduced in the contributing States to check additional migration. Furthermore, this plan would avoid the questionable device of fixed quotas for migrants in one State.

Health: The health problem created by migrants is closely re-Health: The health problem created by migrants is closely re-lated to their economic status. Forced to live in substandard housing without adequate sanitary facilities, with insufficient incomes to provide proper diets or to obtain proper medical care, they readily become the focal point of epidemics and the carriers of communicable diseases. This threat to the physical well-being of the resident population is one that creates immediate and strenuous protest.

APPENDIX TO THE CONGRESSIONAL RECORD

The California delegation lists, with approval, the work already done by the Farm Security Administration in providing medical aid through the Agricultural Workers' Health and Medical Association. However, the delegation's letter understates the Association. However, the delegation's letter understates the amount of money expended on the program by the F. S. A. The \$100,000 mentioned was the original grant, not the total expenditure. The F. S. A. reports that \$250,000 was spent during the fiscal year ending June 30, 1938, and it is anticipated that an additional \$675,000 will be spent on the medical aid program during the support fixed year. ing the current fiscal year.

On the subject of medical aid, the Social Security Board has suggested that since the United States Health Service and the Children's Bureau now make Federal grants to States for various health activities, these services might be extended on a temporary basis in California for the assistance of migrants. The Board goes on to point out, however, that since medical care facilities for residents are wholly inadequate in most communities little can be dents are wholly inadequate in most communities, little can be expected until facilities are improved. According to the Social Security Board this could probably be done only through Federal grants-in-aid, such as those suggested at the National Health Con-

ference held here in July.

The health problem among migrants has received considerable attention in recent years from the United States Public Health This agency has allocated \$52,000 to the California State Health Department to be used in securing the services of a limited number of physicians and public-health nurses to provide medical aid to agricultural migrants during the current fiscal year. In addition, an allocation of \$103.791 has been made for work on the control of venereal disease with the specific requirement that micontrol of veneral disease with the specific requirement that migrants be accorded the same privileges for treatment as are given to residents. The Public Health Service calls attention to the possibility upon specific request from the California State Health Department of limited use of funds allocated under the Social Security Act and administered by the Children's Bureau, for prenatal nursing and delivery care among migrants. The Public Health Service officials feel that additional funds for public-health work among migrants could be used to good advantage.

Relief: Under this general heading the California delegation raises, among other questions, the need for more adequate diet, particularly for the children of migrants in that State. As an immediate measure, the delegation suggested that "* * * the Surplus Commodities Corporation furnish as nearly as possible a balanced ration of foodstuffs * * * for distribution to the balanced ration of foodstuffs * * * for distribution to the undernourished people." In discussing this suggestion, a representative of the Federal Surplus Commodities Corporation calls attention to the fact that they were limited by law to the purchase of agricultural commodities for the express purpose of relieving the market of price-depressing surpluses. As to a balanced ration the Corporation's representative states in a memorate of the commodities of the corporation of the corpo anced ration, the Corporation's representative states in a memo-

randum that

"An additional consideration is that the commodities purchased by the Corporation must be diverted from the 'normal channels of trade and commerce.' This means that commodities must be distributed on an over-and-above basis; that is, must be in addi-

distributed on an over-and-above basis; that is, must be in addition to the regular purchases of recipient families. To attempt to supply recipients with a balanced diet, therefore, would be a specific violation of the legislation setting up the Corporation."

While the scope of the Federal Surplus Commodities Corporation's activity is limited, their facilities could undoubtedly be used with increasing efficiency through cooperation with the Farm Security Administration and the California State Relief Administration. In our discussions, representatives of the Farm Security Administration and Federal Surplus Commodities Corporation agreed that a better balance of commodities distributed might be achieved by efforts to make distribution by one agency supplement the distribution made by the other. Thus, while a balanced diet is probably beyond the ability of either or both agencies at the present time, beneficial results would certainly follow from close cooperation of these agencies.

With regard to the suggestion migrants should be assisted to return to their States of former residence, it should be noted that

turn to their States of former residence, it should be noted that no Federal agency has the authority to compel migrants to return against their will. The State Relief Administration of California has in the past, and continues at the present time, to assist mi-grants who express a willingness to return to their State of

The California delegation also suggests "* * The California delegation also suggests "* * a system of Federal grants-in-aid to States, probably through the Social Security Board, to defray the cost of relief extended to nonresidents. * * * " In summarizing the comments of the Social Security Board on this suggestion, the following points seem to be most important:

1. If assistance for nonresidents is granted to California it would

have to be granted to all States.

2. Resentment would be aroused by grants to nonresident aid unless provisions were also made for assistance to needy residents not cared for under existing programs.

3. Assistance for nonresidents without a general relief program

would tend to encourage transiency.

would tend to encourage transiency.

4. For the reasons noted above, the Social Security Board's statement concludes that "It would seem desirable to establish a Federal program of assistance for nonresidents and other needy individuals and families for whom employment on public-works projects financed in whole or in part by the Federal Government is not suitable or available."

5. If such a program were established the following questions would require decision:

a. The establishment of a fourth category of assistance administered by the Board.
b. Funds for this purpose.
c. Conditions for approval of State plans.

d. Modification or elimination of State legal settlement requirements for assistance.

6. Any program for aid to nonresidents will involve cooperation on the part of a number of State and Federal agencies. As a result there is need for a continuing committee under the auspices

result there is need for a continuing committee under the auspices of some agency, to formulate plans for nonresident aid.

Housing: Bad housing facilities are the rule where migrants congregate. In rural areas the ditch-bank shack, the tent camp, or the worst type of tourist camp provide most of the shelter within the means of this low-income group. In urban areas, the "shacktown" at the edge of the city is frequently the only resort of the needy nonresident. Low income and short stays make the migrant an unprofitable or undesirable tenant. In calling attention to the substandard housing of migrants, the California delegation suggests remedial action by the United States Housing Authority, local communities, the Farm Security Administration, and the Works Progress Administration.

The United States Housing Authority, in a memorandum on

The United States Housing Authority, in a memorandum on their activities, calls attention to the fact that they do not, on their own account, undertake the construction and administration of low-rent housing. Local housing authorities organized under State laws construct, own, and operate the housing projects with the United States Housing Authority making loans which must not exceed 90 percent of the total cost. The Housing Au-thority believes that its program makes a contribution toward the solution of the migrant problem in two ways: (1) "By providing decent, safe, and sanitary dwellings for families of low income throughout the United States it will assist in drying up the flow of migrants at its source * * *"; and (2) its "* * program enables cities in California for which housing authorities

have been created to provide low-rent housing authorities have been created to provide low-rent housing facilities."

The Housing Authority officials question whether dwellings constructed with their aid can be built to rent for the very small amounts which the migratory worker can afford from his low earnings, and whether this more or less continually moving group would provide enough year-around tenants to supply economical

operation.

Although most of the local housing authorities are operating in Atthough most of the local housing authorities are operating in urban centers, there appears to be no reason why rural projects could not be undertaken by county housing authorities provided "* * * the local authority can develop a project suitable for the needs of the locality and which can be economically operated to rent low enough to meet the needs * * *." The Los Angeles County Housing Authority is cited as an example of an authority with power to operate throughout a county.

It should be noted that the improvement of housing conditions

It should be noted that the improvement of housing conditions through the cooperation of local communities and the United States Housing Authority would more properly come under the heading of long-range planning than under that of immediate action. It does, however, provide a logical and much-needed line of endeavor in which the United States Housing Authority would gladly cooperate

which the United States Housing Authority would gladly cooperate within the limits of its authority.

The Farm Security Administration is actively engaged at the present time in providing housing for farm persons in rural areas through its migratory labor camps, by means of small homes for the relocation of farm families. To date there are 10 F. S. A. camps with permanent structures in California capable of accommodating a total of 1,720 families. For the current year there is presented for templetics in California capable of accommodating a total of 1,720 families. proposed for completion in California accommodations for 1,200 additional families. The small home construction program of the Farm Security Administration has provided for 100 families in California so far, and 200 additional homes are planned for the current

In reporting on their housing activities the Farm Security Ad-

ministration states that-

"In general, the housing program of the F. S. A. has been pushed as rapidly as funds and planning would permit, but at the present time is drastically limited by lack of authorization to extend funds for the purchase of land."

for the purchase of land."

The possibility of participation by the Works Progress Administration in low-cost housing is restricted at the present time by a decision of the Project Control Division against such action, except when the occupants are to be relief recipients. Were the prohibition tion removed cooperation with local, State, and Federal agencies in low-cost housing construction might well provide a desirable field of activity. Such action would, of course, have to be restricted to properties owned and operated by agencies of the Government. Education: Proper educational advantages for the children in

migrant families is a serious problem in California, as well as in all States that have a marked influx of nonresidents. School facilities are either seriously overburdened or are totally inadequate for ties are either seriously overburdened or are totally inadequate for the demands placed upon them. Local resentment is easily aroused by the overcrowding of school facilities caused by the children of migratory families, particularly since the burden of maintaining the local schools is of immediate concern to the local taxpayer. A frequent result, as stated in the California delegation's letter, is "* * that many children of migratory families are growing up without the advantages of an American education." The delegation that the advances of the hope that if a hill for Federal edit advances of the control of the tion then expressed the hope that if a bill for Federal aid to educa-tion is passed special provisions will be included for grants in proportion to the number of nonresident children being educated at local expense.

This matter has been discussed with the Office of Education, where it stated that the problem of migrant school children is recognized as one of increasing seriousness. The Office of Education officials have pointed out:

1. That the problem is not peculiar to California, but is prevalent in a number of States.

in a number of States.

2. That at the present time the Office of Education does not have any funds that can be allotted to the States for this purpose.

3. That in connection with the hearings of S. 1305, to be held beginning March 2 by the Senate Committee on Education and Labor, an opportunity is afforded for presenting the problem of proper educational facilities for the children of migrant families.

Long-range planning: What the various agencies concerned with the problem of interstate migration can do in California and elsewhere at the present time is limited by the fact that an effective

where at the present time is limited by the fact that an effective solution requires planned action on a wider basis than one State or region. Agency officials agreed on the need for long-range planning in order to make the best use of their several authorities. Some of the subjects on which more information is needed to effect more

complete coordination of effort are:
1. Conditions in States of origin that cause migration.
2. Areas from which large numbers of migrants may be expected in the future

The industries in addition to agriculture that depend upon migratory labor, the size of the demand, and the time of year when

the demand is operative.

4. The extent to which migratory labor can be directed to areas of need and withheld for other areas by full use of publicity on job opportunities

5. The relationship of low relief standards or lack of relief to the

western migration.

6. The willingness of localities to cooperate in housing, health,

and rehabilitation projects for migrants.

7. The feasibility of W. P. A. State quota adjustments to act as a brake on migration at origin.

8. The possibility of integrating assistance for migrants with as-

sistance for residents in areas where opportunities for resettlement are good.

order that these and many other points may be investigated and the results used in planning future action, it is the belief of agency officials that a continuing committee on this problem should

be set up under the auspices of one of the participating agencies.

Such a committee could, through frequent consultation, the pooling of information, and coordinated study, formulate the long-range

planning that is so badly needed.

Agency officials are all aware that the present situation is not unique; that it is merely the current aspect of last year's and next year's problem. Existing agency activities cover parts of the problem, and in continuing and coordinating these activities lies the most hopeful prospect for an eventual solution.

A Primer of Economics: An . Essay in Adult Education

EXTENSION OF REMARKS

HON. VINCENT F. HARRINGTON OF IOWA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 28, 1939

SURVEY ON ECONOMICS BY REV. EDWARD A. KELLER, C. S. C.

Mr. HARRINGTON. Mr. Speaker, under leave to revise and extend my remarks I submit herewith a survey conducted by the bureau of economics research of the University of Notre Dame under the direction of Rev. Edward A. Keller, C. S. C. Inasmuch as this document is copyrighted, I have obtained the written permission of my good friend, the Reverend John O'Hara, president of the university, to have it reproduced in the RECORD.

FOREWORD

A few years ago the University of Notre Dame, disturbed by publicized orthodox speculations regarding our material existence, decided to conduct a research program on the national economy; that is, on the management of the household budget of the people of the United States.

This research had but one object—to find the truth about our material existence (using official governmental data) and to translate this truth into words so simple that anyone could understand it.

The first results of the research, published in this volume, are in

reality a Primer of Economics: An Essay in Adult Education.

JOHN F. O'HARA, C. S. C.,

President of the University.

FUNDAMENTAL CONCEPT OF "WEALTH"

This study is a simplification of the word "wealth" in terms of goods or things.

Ask any man on the street if he possesses "wealth," and I dare say his answer would be in the negative.

Yet the average person in this country has, in reality, more

"wealth," in terms of comfort goods, than the rich person of a relatively short time ago.

He has a home with conveniences undreamed of before—to name a few; Running water, electricity, bathtubs, radio, furnace. In other words, as a result of man's progress in science and inven-

tion, he is surrounded in his home by comfort unparalleled in the history of the world.

He is provided with an abundance and variety of good food, and with clothing of good quality and sufficient quantity to meet seasonal changes and personal preferences.

If he wishes a change from the comfort and convenience of his home, he gets into his automobile, a modern miracle of conveyance and pleasure, drives on good roads practically any place he wishes to go for entertainment or diversion.

Now ask him again if he possesses "wealth."

His answer will be different, for the average American is a very fair-minded person and quick to grasp reality once it is presented to him.

to him.

to him.

The reality is that "wealth" consists not merely of factories, stores, banks, railroads, but just as much of those goods or things which contribute to man's comfort—the home, radio, automobile. The supposedly "wealthy" person fundamentally has little more of comfort goods—he can sleep in only one bed, ride in only one automobile, listen to only one radio.

Of course, he enjoys comfort goods of better quality and in larger amount, but, all in all, the comfort he enjoys is not much different from that of the average person.

from that of the average person.

CONFUSION AS TO THE WORD "WEALTH"

"Wealth" then consists solely of goods or things, but because it is commonly thought that "wealth" consists principally of money, stocks, and bonds, there is confusion as to the meaning of the word.

That is the reason the average person will answer "no," when asked if he possesses "wealth."
Stocks, bonds, mortgages are merely evidences of ownership of

the goods or things, not the goods or things themselves.

When one purchases a house he gets a "deed" to the home, a piece of paper which is legal proof of his right of ownership of the home.

He knows the "deed" is not "wealth," the wealth is the thing itself, the house and lot.

So, from the point of view of our economy as a whole, "wealth"

consists only of goods or things.

However, since there is this misunderstanding and misuse of the word "wealth," there is substituted for it the term "physical assets," which in this study means "all useful, physical things, capable of control and ownership by human beings."

PURPOSE OF THE STUDY

The purpose of this study of the physical assets is to discover and present in simple language the truth concerning the goods or things which are the fundamentals of material well-being; what these goods or things are, how they originated, what they are used for, and who owns them.

It is all important that this truth be known since theories of government, theories of social science, theories of economics are basically concerned with human material existence.

These theories are concerned with man and things.
But the nature of man, particularly his spiritual side, is outside

the field of thought of these theories.

The spiritual truth concerning the nature of man, the reason for his existence in this world, summed up in the relation of man to his Creator, is something which must be accepted from other fields of thought.

Hence, theories of government, social science, economics are concerned only with goods or things, and with man insofar as things affect him in his attempt to live the spiritual truth for which he was created.

The truth or falsity of these theories can be discovered only by putting them to the test of reality.

Therefore it now becomes necessary to study intensively the facts of our material existence that we may be certain of the truth of our material existence.

There is much confusion of thought at the present time regarding our material existence due primarily to too much "theory," too

our material existence due primarily to too much "theory," too many words, and too few facts.

On the basis of these "too few facts" theories are taught as "proved fact" while in reality they are but half-truths.

As such they are much more dangerous and insidious than outright falsehoods, because through the use of words they are "dressed up" to give the appearance of the "whole truth."

In this guise they more easily deceive and mislead the average

Due to this lack of sufficient factual information, too many of the theories of government, theories of social science, theories of economics are presented in this disguise of words—half-truths "dressed up."

Although practically little or nothing is known of our material existence, except theories and half-truths, yet these serve as the basis for political and economic policies which vitally affect every person in this country, not only in his material well-being but also, more importantly, in his spiritual. It is "high time," then, that the truth be presented in such simple language that none may be deceived; that all may learn the real facts of our material existence; that the facts, and these alone, should serve as the basis for political, social, and economic policies. Founded on any other ground, the institutions so dear to the heart of every American will inevitably be undermined and fall.

Now is the time for clear and honest thinking if we are to save America from the ill fate of so many countries of the world.

FACTS OF MAN'S MATERIAL EXISTENCE

What are the facts of man's material existence?

Man is created equal in that all men are endowed with a soul.

But man is not born equal. Biologically men are born unequal.

Some are blessed by the Creator with better minds and better bodies than others.

This condition is the will of the Creator and as such can neither be disputed nor changed.

Also, men are born unequal in the sense that they are born into different material surroundings. But man is born naked.

He needs food, clothing, and shelter to live in this material world. The natural resources—land, water, and air—provide him with the raw materials with which, using his muscle, directed by his

brain, he provides tools of production, food, clothing, and shelter.

As man improves the tools of production he produces more and better tools of production, more and better food, more and better clothing, more and better shelter, and produces other goods or things which add greatly to his comfort and reduce greatly the hours of labor required for his material existence.

TOOLS, MAN'S ALLY IN PRODUCING MORE AND BETTER COMFORT GOODS Biologically man has not changed over the course of the cen-

Man has learned, however, through science and invention how to provide more and better tools of production to aid him in his material existence.

In very early times primitive man depended almost entirely on his muscle to obtain from nature the food, clothing, and shelter he needed to keep himself alive.

Consequently, he had to be satisfied with the most frugal of diets and with the roughest kind of clothing and shelter.

His material condition was little better than that of the animals

around him.

However having been blessed by God with intelligence, he discovered, in the course of time, an ally who could aid him, not only in obtaining the food, clothing, and shelter he needed but also could help him obtain these more easily, in greater abundance and

of better quality, than he could unaided, using his muscle alone.

This ally was tools.

In other words, man discovered that by devoting part of his labor and natural resources to the making of tools of production he could, with the aid of these instruments, produce more and better food,

shelter, comfort.

Thus, where formerly all his labor was used in producing the barest of essentials, he now, through the help of tools of production, could not only produce more and better food, clothing, and shelter but, in addition, because of the economy of time and labor, produce in great variety other comfort goods which contribute so much to man's material well-being.

In this way only could he better his material standard of living.

Without the aid of tools of production, the greater part of mankind would have been doomed to a "starvation standard of living." Fortunately, such has not been his fate.

SCIENCE AND INVENTION THE SECRET OF MATERIAL PROGRESS

The history of the material progress of the human race tells a different story, for it is the story of how man, using brain as well as brawn, has through science discovered the secrets of nature, and through invention made these forces of nature serve his needs

in striving to better his material condition of life.

Through science and invention more and better tools of production are devised, and through these better means of utilizing natural resources, with a resultant increase in quantity, quality, and variety of food, clothing, shelter, and other comfort goods.

If one were to look for any single cause to account for the material progress of the human race, he would find it in science and invention.

So we believe it necessary in order to understand government, social science, and economics, and to have sound and workable political and economic policies, to study carefully the natural resources, and man-made goods remaining unconsumed, used by man in association with his hours of labor to produce food, tools of production, shelter, and other things used by him for comfort in his material existence. material existence.

GOVERNMENT RECORDS AS SOURCE OF DATA

For data regarding the facts of man's material existence we must go to the best authority—the Government records.

The Government, through its various departments, gathers a

wealth of data relative to the material existence of the citizens of this Nation.

The most important is the Bureau of the Census, a division of the Department of Commerce, which since 1800 has taken a census every 10 years, the last being in 1930. Also the Bureau of the Census, every 10 years from 1850 to 1900, and in 1904, 1912, and 1922, authorized and directed the compilation of statistics of the aggregate physical assets of the Nation.

In addition to the aggregate physical assets of the Nation.

In addition to the decennial census, the Bureau of the Census compiles reports on: Agriculture, every 5 years; manufactures, every 2 years; electrical industries, every 5 years; religious bodies, every 10 years; financial statistics of States and cities, every year.

The Department of Commerce compiles, also, other valuable data pertaining to our material evictors.

pertaining to our material existence.

The Interstate Commerce Commission publishes comprehensive statistics of railroads.

The Department of Agriculture publishes a Yearbook of Agriculture, which has an abundance of data on the agricultural condition of the Nation.

The Bureau of Internal Revenue, a division of the Treasury Department, publishes yearly the statistics of income, which furnish the most valuable data on wealth and income of corporations and incomes of individuals.

The Department of the Interior publishes every 2 years a report on the condition of our educational system.

In addition to these specific reports, the various departments of the Government compile other inportant data on our national

CLASSIFICATION OF DATA RELATING TO MAN'S MATERIAL EXISTENCE

This study is based on the concept that an inventory of total physical assets at a given time would show two kinds of physical assets: Natural resources, which are not produced by man; and goods or things, which are produced by man from natural resources and which remain unconsumed at the time of the inventory.

That natural resources and man-made goods remaining uncon-

sumed are the totality of things which affect the material existence

of man.

Both classes of physical assets are used either for comfort or for production.

A physical asset used for comfort is one which, regardless of its present state of processing, is ultimately to be used to satisfy some want of an individual.

A physical asset used for production is one which is not used by

an individual for comfort but is a tool of production used to produce goods.

Thus land, when used for agricultural or industrial purposes, to name a few, the raising of farm products, the extracting of mineral deposits, as a site for a factory, is classified as a physical asset used

as a tool of production.

When used as a site for a home it is classified as a physical asset used for comfort.

So, too, for man-made goods remaining unconsumed.

Some are used to produce goods or things and services such as factory buildings, agricultural equipment, stores, power stations, while others are used for the comfort of individuals, such as houses,

radios, automobiles.

Therefore the totality of physical assets which affect the material existence of man has been divided into two classes:

(1) Natural resources and man-made goods remaining unconsumed used for comfort.

(2) Natural resources and man-made goods remaining uncon-sumed used as tools of production.

BROAD CONCLUSIONS

This study covers the period 1922 to 1933.

For the period under review physical assets used for comfort increased at a faster rate than physical assets used for production. The greater growth in the proportion of physical assets used for comfort was due to the invention and use of more and better tools of production, with the result that more and better comfort goods were produced, evidencing a high degree of efficiency in the organi-

were produced, evidencing a high degree of efficiency in the organization and use of the tools of production.

In a general way this study presents statistical evidence that about 50 percent of all physical assets are used for comfort; about 50 percent of all physical assets are used for production.

Thus in 1930 the country's total physical assets of \$410,000,000,000, excluding streets, public roads, etc., were used as follows: For comfort, \$222,000,000,000; for production, \$188,000,000,000.

Physical assets of \$222,000,000,000 used for comfort consisted principally of:

principally of:

Housing \$106,000,000,000 Chattel goods, motorcars, and other individually owned goods or things. 59,000,000,000 Tax-exempt property. 35, 000, 000, 000 Stocks of goods, including farm livestock_____ 22,000,000,000

The \$188,000,000,000 of physical assets used as tools of production were made up as follows:

Agriculture _____ __ \$42,000,000,000 24,000,000,000 Railroads . 31,000,000,000 8,000,000,000 5,000,000,000 Gold and silver____

OWNERSHIP OF THE PHYSICAL ASSETS

The false theories used and conclusions drawn as to the ownership of "wealth," such as 1 percent of the people own 59 percent of the wealth, and/or 13 percent of the people own 90 percent of the wealth, have been publicized on the basis of studies of probated estates.

Anyone who permits himself a little common-sense observation

will admit such a concentration cannot exist.

He sees the great mass of people in possession of homes, automobiles, radios, household furnishings, and other comfort goods in which concentration is physically impossible and which account for over 50 percent of total physical assets.

over 50 percent of total physical assets.

Thus, using the inventory method, we find that of the total physical assets of \$410,000,000,000, or 100 percent, \$222,000,000,000, or 54 percent, are used for comfort; \$42,000,000,000, or 10 percent, are owned by individual farmers and used as tools of production; \$15,000,000,000, or 4 percent, are owned by individual business and professional men and used as tools of production; \$131,000,000,000, or 32 percent, are in the possession of corporations and used as tools of production. The ownership of these is widespread: (a) Through direct security holdings by individuals; (b) through life-insurance policies and bank deposits by individuals.

Detailed ownership of physical assets will be discussed at greater length in a forthcoming study.

length in a forthcoming study.

FORTHCOMING STUDIES RELATING TO THE TOTALITY OF OUR NATIONAL ECONOMY

In our national economy the worker as a rule does not produce what he consumes but, through the use of the tools of production, specializes in the making of goods and in the rendering of services.

specializes in the making of goods and in the reintering of services.

These he exchanges for goods and services produced by others.

This exchange or barter of goods and services by the workers is carried on through the use of a receipt, which they accept for the goods and services they have produced, and exchange for the goods and services produced by others.

This receipt is called money.

The unit of expression of the receipt is the dollar and the sub-

division the cent.

The study as to how the receipt serves to exchange goods or things will be issued at a later date, and will cover the banking in-stitutions, which are by law permitted to create and circulate these

receipts.

To complete the picture of the totality of our national economy, this study of the physical assets showing the condition of the national economy will be supplemented by a further study of the operation of the national economy.

This letter study will show the cost to the Nation of the annual

This latter study will show the cost to the Nation of the annual production of goods and services expressed in the basic elements of cost, which are wage payments for hours of labor and wage payments for the use of tools.

This study will also show the annual production of goods broken down into portion used for production of other goods and portion

used for comfort.

Upon completion of the above studies, we shall have the truth concerning the facts of man's material existence and his material well-being.

Americanity

EXTENSION OF REMARKS

HON, CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES Friday, March 31 (legislative day of Tuesday, March 28), 1939

ARTICLE BY PROF. F. M. KERCHEVILLE

Mr. HATCH. Mr. President, recently an article appeared in American Speech by Prof. F. M. Kercheville, of the University of New Mexico, discussing a new word, "Americanity." Believing that this article will be of interest to Senators, I ask that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be

printed in the RECORD, as follows:

[From American Speech of February 1939] AMERICANITY

The recent belated but perfectly legitimate and sound emphasis on strengthening the cultural bonds between the Americas has demonstrated the need for adequate words and terminology to demonstrated the need for adequate words and terminology to express the concept of an old, recently reemphasized, and lasting friendship between the peoples of the Western Hemisphere. The Pan American Union, the State Department at Washington, the Committee on Cultural Relations with Latin America, the Pan American Round Tables, and many other organizations have worked long and faithfully to bring about the emphasis on, and faith in, the present era of good will. The ultimate success of the movement will undoubtedly depend upon the favorable reaction and general acceptance of the idea on the part of all the peoples of North, Central, and South America.

In the meantime, while there exist terminology and words such as "Americanism," "Pan Americanism," "the American way," "the American ideal," and so forth—all perfectly legitimate and excellent terms when understood properly and used in the broadest and the broadest and the control of the property and the proper excellent terms when understood properly and used in the broadest and best sense—it so happens, however, that many "Anglo" Americans, and certainly a great number of "Latin" Americans, unconsciously perhaps, think of the above words and phrases in the narrow and limited sense of "Uncle Samism" (in Spanish "Tio Samuelismo"), in other words, as pertaining in great measure, if not entirely, to the life, manners, and customs of the United States of America. This is rather unfortunate, but none the less true. The term "Americanism" (Spanish "Americanismo") is also used more often than not in its close connection with philology (linguistics) meaning a word originating in or peculiar to America. The Spanish term "Americanismo" is a very good one and fortunately is sometimes used in the broadest sense. Certainly "Pan Americanism" (Spanish "Pan Americanismo") is an excellent and perfectly adequate expression when used, as it should be, with the broadest possible meaning. Unfortunately, to some people of both

broadest possible meaning. Unfortunately, to some people of both North and South America, the term, through no inherent fault or limitation of its own, has become perhaps too closely identified with the economic and political destinies of the United States. It might not be out of place to state that the writer has lived

and studied in Spain and various parts of Spanish America.
Furthermore, justly or unjustly, with or without reason, there are people who hold in disfavor any word ending in "ism," not excepting even "Americanism" or "Pan Americanism." Such persons consciously or unconsciously compare and associate the above

sons consciously or unconsciously compare and associate the above words with other often misunderstood and overworked terms such as "fascism," "nazi-ism," and "communism."

In the light of the foregoing all too brief and inadequate discussion, it is suggested that we seek some other word or term to express the broad but nonetheless profound concept of the genuine spirit—the fundamental elements and characteristics—common to all the Americas (Spanish, "America" or "Las Americas"). Until someone comes to the rescue with something better, the writer suggests the word "Americanity" (Spanish, "Americanidad"). This latter term at least seems to have the advantage of getting away from the confusion caused by the philological aspect of the term "Americanism." The use of "Americanity" would also seem to eliminate any association with any "ism."

The vital characteristics, such as youth, energy, freedom from Old World traditions (to a certain extent at least), faith in the

The vital characteristics, such as youth, careful, faith in the Old World traditions (to a certain extent at least), faith in the future, the essentially democratic spirit common to most, if not all the Americas appear to be embodied in or suggested by "Americas appear to be embodied by "Americas appear to be appear to be embodied by "Americas appear to be appe all, the Americas appear to be embodied in or suggested by "Americanity." Instead of unconsciously inviting comparison with any "ism," there is just the slight possibility that this new(?) word might suggest "humanity" (Spanish, "la humanidad"), "amity" (Spanish, "amistad"), and "sanity" (Spanish, "sanidad," meaning coundres beatith).

(Spanish, "amistad' soundness, health).

soundness, health). The word "Americanity" was first used by the writer of the present article in an "aside" during the reading of a paper, Cultural Bridge Building Between the Americas, at the Institute of Public Affairs held last April (1938) in Dallas, Tex. Due to the fact that the term did not appear in the original draft of the paper (since published in the last issue, October 1937, of the Southwest Review), the word first appeared in print in Dallas, Tex., and San Antonio, Tex., newspapers. It has appeared since in Albuquerque, N. Mex., newspapers, in an article in the November issue of the magazine New Mexico, published in Santa Fe, N. Mex., and in the daily press of Mexico City. Letters expressing interest in and approval of the word have been received from several well-known authorities. inword have been received from several well-known authorities, including H. L. Mencken.

"Americanity" was first used almost as a matter of course without even considering the possibility that such a word was not found in standard dictionaries or in The American Language. The term was not "concocted" to coin a new word. It came about naturally from a sincere belief that "Americanity" expresses a vital concept (certainly not a new one) in inter-American cultural relations. It is quite possible, even probable, that the word has been used before in either Spanish or English, perhaps in both languages. It seems that it certainly should have been.

The only adverse criticism yet made of the word in question is

The only adverse criticism yet made of the word in question is that from the esthetic standpoint it doesn't sound well—that it is too short or that it sounds a trifle harsh to the ear. This may be a sound objection, but there is certainly room for difference of opinion. Though the above objection may be offered to the English version as expressed in "Americanity," it certainly fades when the concept is expressed in the sonorous and significant Spanish word "Americanidad"—as yet not listed in standard Spanish dictionaries. From a strictly "purist" viewpoint it may be argued that the term "Americanity" is not appropriate, since such a word as "humanity," for example, is derived from the classical Latin form "humanitatem" (which in Spanish gives "humanidad"), whereas apparently there existed no analogous form, such as "Americanitatem." from which the English "Americanity" might have been derived. The same strict logic might be used against the use of the Spanish "Americanidad." However, the above argument could certainly be used against most, if not all, of the useful and accepted terms whose root words are not to be found in Latin ment could certainly be used against most, if not all, of the useful and accepted terms whose root words are not to be found in Latin or other classical source. The proper name "Americus" is found in Latin. "Americanity," therefore, undoubtedly belongs in our modern speech with as much right as "American," "Americanise," and with perhaps greater right than such word as "Amerindian." The very expressive "Americana" has already been adopted. Why not "Americanity"?

It would appear that the only other valid objection to the term would be that there already exist the words "Americanism" and "Pan Americanism," which express the same idea. Even here there may be room for argument. However, it should be distinctly understood that there exists no quarrel with "Americanism" and certainly none with "Pan Americanism," when these terms are properly used and understood in their broad true meanings.

In the insistence on the cultural aspects of inter-American affairs as found in this brief article there is no intention to minimize the tremendous importance of the economic or the political. However, even in these latter fields a little more "Americanity" might be

In suggesting the word "Americanity" in English ("Americanidad" in Spanish) to the people of the Americas the writer positively refuses to enter into any long drawn-out arguments or aggressive campaigns in favor of the "recognition" of the term or insistence

campaigns in favor of the "recognition" of the term or insistence on its inclusion in the dictionaries. Such procedure would be contrary to the very spirit of the word itself.

"Americanity" (Spanish "Americanidad") is offered only as a suggestion. If the term "takes," it should be used to supplement—not to supplant any existing terminology. If the idea, honestly believed to be perhaps just a little more adequately expressed, in this new (?) word becomes a reality in the lives of the peoples of the Western Hemisphere, then we shall have need of all the existing terms and more—or perhaps having the reality we might see fit to discard them all—and begin anew.

Colonial Swedes

EXTENSION OF REMARKS

HON. JAMES H. HUGHES

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Friday, March 31 (legislative day of Tuesday, March 28), 1939

ADDRESS BY HON. EDWIN C. JOHNSON, OF COLORADO, MARCH 29, 1939

Mr. HUGHES. Mr. President, I ask unanimous consent that an address delivered by the junior Senator from Colorado [Mr. Johnson] on the occasion of the celebration of the three hundred and first anniversary of the landing of the Swedes at the rocks on the Delaware River be inserted in the RECORD. The address was delivered at Wilmington, Del., on March 29, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HALLOWED GROUND

Americans of Swedish origin and Americans of every origin ex-Americans of Swedish origin and Americans of every origin experience a deep sense of pride when they recall the heroic history depicting the experiences and exploits of the first Swedish settlers of America. To me this spot which markes that first Swedish landing is hallowed ground. As a schoolboy in a little Swedish community out on the prairies of Nebraska, I remember so well the thrill that we, the children of Swedish immigrants, got out the thrill that we, the children of Swedish immigrants, got out of the story told in our textbooks of the Swedish settlements on the Delaware. I remember as though it were yesterday how angry we were with old Peter Stuyvesant for his impudent conquest of New Sweden in 1655. We could not forgive him for ignominiously hauling down the beautiful Swedish flag in all of its glory and rich tradition after it had flown unmolested for 18 years to the storms and calms of Colonial America. We were grateful that the Indians loyally rallied to their support and offered to fight to the death in the defense of the Swedes against the conquering Dutch. We felt the bold old aggressor Governor Stuyvesant got just what was coming to him when, after 9 years of Dutch rule over New Sweden, the English snatched it away from him without over New Sweden, the English snatched it away from him without much consideration and grabbed New Amsterdam as well. Poor old defiant, determined Peter had no one to defend him in that little sod schoolhouse. We did not understand that it was inevitable that Europe's quarrels should have their repercussion in the European colonies in America. Yes; to me this is, indeed, hallowed ground. I have identically the same emotional feeling when I visit Jamestown and the other historical shrines of the colonial period which are scattered all along the Atlantic seaboard.

SWEDES BUILD FOUNDATION

Under circumstances in which pioneering was a hard, exacting life; where only the strong and the bold dared apply, courageous Swedes and Finns brought everlasting glory upon their people by establishing permanent settlements in three American colonies—Delaware, New Jersey, and Pennsylvania. Migrations from these settlements at a very early date took some of these pioneer Swedes and Finns to New Amsterdam and the new settlements in Maryland. When we contemplate the greatness of America today, measured in the leadership it is giving the world in every branch

of human endeavor—political, spiritual, cultural, and economic—when we realize the importance of America to the preservation of world civilization, and when we finally understand that America is now the hope and the light of the world, then and then only can we begin to comprehend and properly evaluate the high place in history that rightfully belongs to our forebears from England, Holland, Finland, and Sweden, who wrote the early pages of American colonial history in hardships, suffering, deprivation, and worse in these humble pioneer settlements long since disappeared

American colonial history in hardships, suffering, deprivation, and worse in these humble pioneer settlements long since disappeared and now marked only by such simple monuments as we find here.

We truly do honor to ourselves when we come here and pay humble tribute to their notable achievement in laying the foundation for the building of a mighty and honorable nation. The adventurous souls from the land of the midnight sun and the adventurous souls from England and Holland with whom they were associated in their mighty work here built far better than they knew when they established their modest homes on this new soil destined by the will of God to become the land of liberty and freedom

AN HONORABLE HISTORY

AN HONORABLE HISTORY

As we review the intimate, realistic details of the daring accomplishments of these fearless men and women from the far North, and from England and Holland, our hearts swell with justifiable pride. The least we can do in their honor is to show plous reverence to their memory and to the best of our ability emulate their courage, vision, and discipline by carrying out to a successful conclusion the task which they so nobly began. Noble folks, indeed, they were, regardless of the land from which they sprung; but none of them, I am privileged to say in simple truth and fitting modesty, left a more honorable history than did the colonial Swedes and Finns who first landed on this very bank of the Christina River. of the Christina River.

They were honest and just in their dealings with the natives

They were honest and just in their dealings with the natives—a practice so unusual and singular that it stands out in naked and lonely relief upon the pages of American history.

When William Penn and his Quaker refugees sailed up the Delaware to "Penn's Woods," he counseled with the Swedes and Finns regarding their successful handling of the Indian problem. He had had reports of Indian massacres and Indian outrages against the settlers in New England and elsewhere and wanted to learn the secret of New Sweden in her ability to live in peace and harmony with these wild savages. He was told that there was no secret to it whatever, that in fact it was all very simple—the only requirement being the application of simple honesty and simple justice in dealing with the redskins. These Swedes and Finns advised Penn to treat the savages as kindly as he would any other human being and never deceive or take advantage of them and he human being and never deceive or take advantage of them and he would secure their confidence and respect. William Penn adopted that suggestion with unqualified success and found to his delight that suggestion with unqualified success and found to his delight that the Indian problem, so far as his people were concerned, was solved for good. English and Dutch traders complained bitterly because the Swedes gave the Indians such excellent barter bargains. They said, "The Indians are being spoiled and Indian trade is being ruined by these foolish Swedes." That compliment, implied but not intended to be complimentary, told the whole story of amicable Indian and Swedish relations.

SWEDEN A WORLD POWER

To properly understand the motives and the background of the Swedish immigration to colonial America it will perhaps be advantageous to recall briefly the European situation of that period. The great Vasa had passed on to his reward, but his dream that little Sweden should dominate the whole world in commerce and on the battlefield did not die with him. After a distressing period of bungling, Carl IX, a famous soldier and a statesman, finally ascended the throne. He was followed by his son, Gustavus Adolphus, the ablest warrior and political leader of his century, who was destined to carry forward the ambitious torch of Swedish aggression. The fierce Cossacks gave way before the stubborn, unrelenting strength of Gustavus, as did the militant Poles. The Germans and the Danes felt the sheer power of his dauntless legions in many crushing blows before he finally fell, personally leading his brave soldiers in the battle of Lutzen in 1632. His daughter Christina was a minor, fortunately, making it possible for the wise and prudent statesman, Axel Oxenstierna, to assume the royal chancelorship until the princess should reach maturity. To properly understand the motives and the background of the for the wise and prudent statesman, Axel Oxenstierna, to assume the royal chancelorship until the princess should reach maturity. Under Oxenstierna the Swedish surge to power and prestige gradually went forward with traditional Swedish certainty. This was an epoch of aroused national consciousness and proud patriotism. The Baltic Sea was to become a Swedish lake. Swedish kings were planning for world power, Swedish statesmen were ambitious to direct the destinies of defeated nations, and Swedish merchants were anxious to stretch the arms of commerce into every port and every continent on the globe. every continent on the globe.

DUTCH-SWEDISH ALLIANCE

In fact, a large and profitable trade was being carried on with the entire world. It was so extensive and had grown so rapidly that Sweden, the land of shipbuilders, had to hire foreign vessels—mostly Dutch—to carry at least two-thirds of her commerce. Holland was Sweden's closest friend and ally in those glorious days of European supremacy. Holland was probably Europe's most advanced nation in many of the arts and in commerce. The Dutch West Indies Trading Co. was well established and doing a thriving business. These two peoples, the Dutch and the Swedes, had so much in common, including racial similarities and habits, that their sympathetic alliance was perfectly natural. It was fashionable for young Swedes of that day to be educated in Holland.

Dutch soldiers served in Swedish armies and Dutch captains and skippers commanded Swedish ships and directed Swedish industry. Both countries were interested in developing trade with America. Holland had already established colonies on the North River, afterward the Hudson, and suggested to their friends, the Swedes, that they establish colonies on the South River, or the Delaware. The Dutch had discovered that there was little actual mineral gold to be found in America, but they knew that gold could be had for furs and pelts and tobacco, all of which were plentiful and could be secured more readily by establishing permanent American colonies.

England was another neighbor very friendly to Sweden and with whom the Swedes cooperated harmoniously and with mutual advantage. England was doing some colonizing of her own in America and encouraged the ambitious Swedes, who needed little urging to take a hand in such an adventurous enterprise also.

In that way the world was made ready for New Sweden.

The French were in Canada; the Spanish in Florida, Mexico, the West Indies, and South America; the Spanish in Frioria, Mexico, the West Indies, and South America; the Dutch in New Amsterdam; and the British in New England, Virginia, Maryland, and Georgia. And it was not objectionable to Europe to have the rising commercial and political power in the northland establish a colony in America. There was more of room than anything else in the

PETER MINUIT

And so plans went forward for establishing a Swedish colony. After a long, tedious controversy arrangements were finally concluded for transporting the Swedish immigrants to the proposed New Sweden and the Delaware River was selected as the site for the venture. The Swedish Crown supplied two good ships, the Kalmar Nyckle and the Fogel Grip; a large supply of ammunition and arms, and considerable cash for the undertaking. A mixed company of Dutch and Swedish investors furnished the balance of the capital necessary. Peter Minuit, a Hollander, who had spent many years in America's New Netherlands, was placed in charge of the expedition. Some of his sallors were Dutch and some were Swedish. Minuit was very familiar with the whole American Atlantic seacoast and knew the South River, later the Delaware, to abound in beaver and fur-bearing animals, and that the Indians produced quantities of tobacco. He knew the trinkets and merchandise that the Indians most desired and he knew the supplies that the settlers would need. No one in all Europe was better qualified for directing such an expedition than intrepid Peter Minuit. And so plans went forward for establishing a Swedish colony. Minuit.

The selected cargoes consisted of thousands of yards of brightly colored duffels and cloth, hundreds of axes, hatchets, adzes and knives, dozens of tobacco pipes, a large supply of mirrors and looking glasses, gilded chains and finger rings, combs, earrings, and other ornaments—all for the Indian trade. Spades, hoes, and other agricultural implements for the future colonial farmers. Twelve cannon and 12 good soldiers and brave to man the garrison that was to be built. Supplies of every available kind for the sailors and settlers. Minuit was to purchase cattle, horses, sheep, goats, and pigs at New Amsterdam for his new colony, and he was to purchase the land for the new colony from the Indians at a price satisfactory to them, take possession of it in the name of the King of Sweden by erecting the Swedish coat of arms, and the proposed territory was already affectionately named New Sweden. The selected cargoes consisted of thousands of yards of brightly

NOT ONE MAN DESERTED

Not one man deserted by terrific storms and heavy seas. The two little ships became separated and, after being tossed about for a month, the Kalmar returned to Texel leaking, minus its prow and mast. A week later the Grip showed up, also badly damaged. Did they decide that the homeland, after all, was best? Did the sailors resign? Did the soldiers seek another assignment? Did Peter Minuit say that he had had enough? Did the emigrants beg to remain at home? No, indeed. These Norsemen were made of sterner stuff. Not one man deserted, but six additional would-be colonists joined them to make the next attempt. They again set sail on the very last day of the year 1637. In less than 3 months' time—a most unusually speedy voyage for that day—they reached their intended destination. Nevertheless it was a hard, trying trip. Some had died on the way over and their poor bodies tearfully laid to their eternal rest at the hour of midnight in the hungry arms of the angry Atlantic. Many were very ill and had to be carried from the vessels when the landing was made. The crew, the soldiers, and the settlers all were very tired men and women and lost no time in giving fervent thanks to Almighty God for their safe passage. for their safe passage.

MONTHS ON THE HIGH SEAS

In these wonderful days of modern travel conveniences one can no more picture the terrifying anxiety and physical misery of crossing the ocean in the cramped, crowded ships of that day, marking time for weeks awaiting a favorable wind, than could men of that day visualize the present-day ocean liner, with all of its luxurious cay visualize the present-day ocean liner, with all of its luxurious comforts and appointments, steaming across the Atlantic in 4 or 5 days. Nor could they be expected to picture Charles Lindbergh, the American son of Viking forebears, in the short space of a few hours' time making his historic and lonely flight through the clouds on the fragile wings of the Spirit of St. Louis. The daring abandon of Lindbergh's flight depicts, as it can be done in no other way, the dauntless spirit of the colonists on board the Kalmar and the Grin on that first worses to America. No trips were made in which Grip on that first voyage to America. No trips were made in which scurvy and other diseases did not take their toll. Accidents were frequent, colonists and sailors were often swept off the heaving

decks in the terrific storms. No physician or professional nurses ministered unto the sick and there were no facilities whatever for caring for them in their distress. Men and women were crowded together like animals

Minuit was given full instructions for maintaining discipline on maintaining discipline on that first voyage and he was given full power to enforce his commands. The officers and men were to keep good watch day and night and were always to be prepared for every emergency and have their guns in readiness to fight, if necessary. Stealing was to be severely punished, no fighting between the sailors was permitted. to be severely punished, no fighting between the sailors was permitted, and drunks were put into irons for 3 days. Gambling was also prohibited, and no one other than Minuit was allowed to barter and trade and dispose of the cargo. Prayers were conducted morning and evening, and anyone absent from these religious ceremonies without good cause was severely fined and punished. These were a few of the rules and regulations. Ten subsequent expeditions brought a continuous stream of new settlers to Fort Christina and the colony slowly and painfully grew and, while not prosperous, gradually bettered their condition until the day of Dutch conquest.

INTRODUCTION OF LOG HOUSES

The houses which the Swedes first erected for themselves were very poor, indeed. Little cottages built of round logs, cracks plastered up with mud, having small loopholes for windows which could be closed with a sliding board, and unadorned with ugly fireplaces slapped together with rough, odd-shaped boulders. The doors were so low that even short men had to stoop as they entered. As new and more practical colonists arrived dwellings and living conditions were vastly improved. Some authorities credit the Swedes with being the introducers of the American log house. If that be so, the

The Indians had relatively large fields of corn, which they sold to the whites. They also supplied them with game and fish. In fact, the colonists could never have survived without the aid and assistance of the lowly Indians.

RELIGIOUS HARMONY

Since there were no internal controversy in Sweden over religious questions, no Swede came to America because of religious persecution or because he was seeking religious liberty. A very different situation prevailed in England, and the English colonies profited greatly by the willing exodus of the persecuted, who turned to America as a haven of religious liberty and who were in many

instances very able men and women.

The Swedish Crown, however, saw to it that New Sweden was conthe Sweden to to that New Sweden was continuously supplied with very able Lutheran ministers, who at once became not only the spiritual leaders but the educational and cultural instructors as well. Cultural and religious ties through the Swedish clergy closely bound New Sweden to the old in language and customs and thinking.

CONSTRUCTIVE GOVERNORS

The colony was blessed, too, by able Swedish Governors, and especially was that true of Gov. Johan Printz, highly educated and experienced soldier, and a man of unusual ability and strength of character. Amandus Johnson, in his delightful book The Swedes on the Delaware, gives a graphic picture of the sensational arrival of Governor Printz. I want you to enjoy this excerpt from Dr. Johnson's descriptive pen.

Johnson's descriptive pen.

I quote:

"Commander Ridder, with his few soldiers and colonists, was quietly passing the winter of 1642-43 at Fort Christina. The New Year's festivities were over. An occasional hunting expedition, the daily morning and evening prayers, and now and then an Indian visit were almost the only diversions in the monotonous life. Storm and snow swept over the territory of New Sweden on the 6th and 7th of February, and the colonists remained around the fireplaces in their log cabins. But the sun appeared again, the snow melted, and all was as before, half spring, half winter, for the climate of the Delaware is generally undecided at this time of the year.

"About the beginning of February we may suppose that the Indians carried news to the little settlement that ships had appeared in the river. Were these Swedish vessels or Dutch? Of course, the Indians did not know. But hope revived the drooping spirits; the vessels might be from Gothenburg. Eager eyes spied the Delaware for days and about noon of February 15 two ships plowed slowly up the river with a slight breeze astern.

the river with a slight breeze astern.

"Every man in the fort watched the sails. There was a bustle and hurry everywhere. The news spread, and the colonists came running in from their plantations. Sure enough, the Swedish colors were displayed from the topmasts. In an instant the gold-blue cross-banner was flung to the breeze on the flagpole of Christiana Fort, and a shout of welcome greeted the Swan and the Fama as they passed the mouth of Fish Kill. At 2 in the afternoon the ships anchored in Christina Harbor, and the passengers and sailers went ashors. noon the ships anchored in Christina Harbor, and the passengers and sailors went ashore. Reverend Torkillus with his entire ficck stood on the bridge to receive them, and Governor Ridder, surrounded by his little staff, did homage to the arriving Governor, while some Indian lurking behind the pine trees on the island was watching the scene. The passengers were greeted with tears of joy, and the handshakings seemed never to cease. But, to work, to work! There were cargoes to be unloaded and horses and cattle to be landed. Until evening the work went on. Shelter was sought for the newcomers, but some slept on the ship for want of room in the dwellings.

"The fires were fed longer than usual that evening, and the

"The fires were fed longer than usual that evening, and the candles or fir torches were kept burning till morning hours. News from Sweden, from relatives and friends was desired, the progress of the war, the victories won by Swedish armies, what

new decrees had been issued, what new taxes levied, who among the relatives and acquaintances of the colonists had been drafted and sent to German battlefields—such and a hundred other quesand sent to German battlefields—such and a hundred other questions we may be sure were asked. And when the settlers were told of the great victories at Glogau, at Schweidnitz, and at Breitenfeld, and the glorious exploits of Tortensson and Baner, their patriotism rose within them, and they were proud of belonging to such a nation and of being its representatives in the New World. But the journey across the ocean was not forgotten. The sufferings on the way from Gothenburg to Godyn's Bay were related, and the storms and mishaps of the Horn Kill were described. Gradually the night came on; the fires went out, the tired travelers were soon asleep, and all was quiet.

"In the early morn everybody was at work again. In the afternoon all the people were assembled in Fort Christina. Ridder delivered his authority to Governor Printz, and the instructions and orders of the Swedish Government were read in the presence of the people. Within the next few days the commissioners were

of the people. Within the next few days the commissioners were busy making an inventory of the merchandise in the storehouse

and preparing for the return voyage of the ships."

EUROPEAN QUARRELS SPELL FAILURE

The Swedish colony was terribly handicapped by the constant wars occurring in Europe. Large cargoes of furs and tobacco would be purchased from the Indians and accumulated by the settlers only to be held for months and months awaiting a Swedish vessel to carry them to Europe. Often when they had an opportunity to make a large, profitable purchase from the Indians they had no merchandise on hand to barter and the bargain went to the Dutch of English traders who were always well supplied with Indian merchandise on hand to barter and the bargain went to the Dutch or English traders who were always well supplied with Indian goods. Competition was becoming very keen and the Indians were rapidly developing into shrewd dealers on their own account. Old Sweden was fighting in too many wars for New Sweden's best interests. Trade jealousies kept creeping in to mar the fine friendship that had previously existed between Sweden and Holland and this growing enmity finally culminated in the conquest of New Sweden by the Dutch. Sweden shortsightedly had made New Sweden secondary to European wars, and its complete loss to her was the inevitable result of so disastrous a policy.

Sweden's direct influence upon the New World came to an untimely end because of these things, but her indirect influence

timely end because of these things, but her indirect influence through the colonists she had planted here from her own flesh and blood, instilled with her traditional qualities of strong, virile Swedish character and culture, was privileged to contribute with-out stint to the America that was to be.

HANSON STATUE HONORS COLONIAL SWEDES

Bruce Kremer has made that point very obvious in his vivid story of the American statesman and patriot, "John Hanson of Mulberry Grove." John Hanson was a direct descendant of one of the pioneer settlers of Fort Christina who served his country during her greatest crisis with unfaltering patriotism, understandduring her greatest crisis with unfattering patrictism, understanding, and patience and exceptional zeal. Every Swede is tremendously proud that John Hanson was the first President of the United States in Congress assembled under the Articles of Confederation and that his statue in the Capitol at Washington marks him as one of his grateful Nation's first citizens. When I gaze upon that statue, as I often do, with pride and admiration I feel that it stands there in its proud place not only as an everlasting tribute to a great man but somehow that it honors also the whole group of Caloniel Swedes from whose longs he sprang and that they are of Colonial Swedes from whose loins he sprang and that they are there represented and their lives typified by that silent statue of imperishable bronze of John Hanson.

The tercentenary celebrations held last year in the Delaware Valley did much to remind the American public that the Colonial Scandinavians pioneered on the Atlantic seaboard side by side with the Dutch and English and performed with them a notable and distinctive service in the birth of a good and great Nation.

The Peril of Peasantry

EXTENSION OF REMARKS

HON. ROBERT R. REYNOLDS OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES Friday, March 31 (legislative day of Tuesday, March 28), 1939

ARTICLE BY JOHN NAPIER DYER

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an article which at this time should prove very interesting in view of our present consideration of matters and proposed bills pertaining to our farms and farmers and farming elements. The article to which I refer is one by the pen of Mr. John Napier Dyer entitled "The Peril of Peasantry."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PERIL OF PEASANTRY

(By John Napier Dyer, Vincennes, Ind.)

In a speech before the Senate Agricultural Committee very recently Senator WHEELER referred to the present status of the American farmer as a "peasantry peril." How near our farm population is to peasantry is little realized by those on the brink

The dean of the agricultural college of the University of Cali-fornia said in an address, which reflects the opinion of a great

many people—
"After all, farming is not a business intended for profit; it is a

"After all, farming is not a business intended for pront; it is a mode of living."

I wonder if the professor knows where his salary comes from. If farming is not a business for profit, I am again wondering what kind of a rainbow you and I, my dear radio audience, have been chasing for the past quarter century. A farmer has as much right to a profit from farming as a college professor has from teaching. We farmers have been lulled into a condition of "innocuous desistence," which means, in simple English, we have gone to sleep. Certainly there has been no profit in farming with corn at 30 cents, wheat at 55 cents, and cotton at 8 cents. In the years 1920 to 1939 the mortgage debt of farmers has increased from four billion to nine billion dollars and is still increasing. The total farm to nine billion dollars and is still increasing. The total farm debt is in the neighborhood of \$15,000,000,000. Not only does this not create a bright outlook for the farmer, but, as I have repeatedly said, industry, dependent upon farm buying power, need look for no prosperous upturn in 1939 or 1940.

need look for no prosperous upturn in 1939 or 1940.

In a letter from one of my intimate advisers dated February 9, 1939, commenting on the business future, he writes "concerning the outlook, the very valuable information which I have, indicates that the Wall Street high prices of this year will soon be reached and that they will not be as high again this year or next year either, for that matter. There is a long slide coming. The worst times this country has ever seen will come in 1941, 1942, and 1943. Some say we will run into these bad times toward the end of 1939 and we will have the first real hard times America. the end of 1939 and we will have the first real hard times America

has ever seen."

This is the gospel of the insiders of Wall Street. I have never known my correspondent to go wrong in his predictions in 20

I sometimes wonder how much longer Wall Street is going to run this country and if the gamblers in Chicago are to continue to be the determining factors of farm independence and the rights of farmers to a profit out of the business of farming. It took organized labor 40 years to remove the shackles of capital control and to obtain a living wage for American workers.

Labor's militant leaders still fight every day to maintain the wage standards they have won—the highest wage in the whole world. Farm leaders are "asleep at the switch." Farm wages are the lowest in the United States.

There is absolutely no reason why this country should slide into the "worst hard times America has ever seen," as is predicted by the Wall Street crowd, but if we continue on the course we have pursued for the past 20 years, there will be no way to avoid it.

The continuing destruction of the value of our basic raw materials by speculators will being us to diseason that as the second of the

rials by speculators will bring us to disaster just as truly as 2 plus 2 make 4. Out of the disaster will rise a new crop of milionaires and millions of people will lose their all. Those who have nothing now may suffer a little inconvenience for a few years and then life will go on as usual.

The greatest question involved in this predicted oncoming disaster is, Will the Nation survive or will we change our form of government? When the 3 percent who now absorb the wealth of the country are reduced to 1 percent, then you will have peasantry in America for the first time, and no longer will there be a President in Washington but in his place a fascist dictator

be a President in washington but in his place a lastist distance to protect the wealth of the 1 percent.

Would you, my good American citizens, avoid this disaster and tragedy and loss of your liberties and retain your present form of government? Then destroy now the pernicious influences which government? Then destroy now the pernicious influences which predict your immediate future, control the prices of your raw-material products, and destroy the basic buying power of the country. If this present Congress does not correct these inequalties, the revolution of the ballot box will be scheduled for 1940. Sixty families control the purse strings of America, but 130,000,000 people control its destinies.

people control its destinies.

Agricultural pursuits are followed by 44 percent of the people of the United States. That's a pretty big chunk of the total population, but out of that total of more than 50,000,000 persons, not to exceed 500,000 belong to any kind of a farm organization. Farm organizations are negative factors in the expression of agricultural opinion; they are mere political entities which are swayed by political influence. The largest and most influential of the present crop of farm organizations was promoted by the grain gambling interests which still dominate its policies.

The reason we farmers still take ticker-tape prices for our products is because our farm organizations write the farm-relief bills which carefully avoid any interference with the ticker-tape price-making system, and Congress passes the bills. These bills are so designed that they relieve the farmer instead of giving him the kind of help he really needs—a price for the things he produces, instead of charity payments for things left undone. A policy which taxes the many to pay a few farmers for not pro-

ducing corn and wheat and cotton, creating a system of scarcity, and then paying farmers out of the Public Treasury a bounty to make up for the loss on the crops not grown, is not sound

economy.

The average income of the farmer in the United States, 1920 to 1932, was \$602, while salary and wage workers received \$1,423. Out of the farmer's income he must pay for the upkeep of his equipment, the feed of his horses or the gasoline for his tractor, and the purchase of new tools, which brings his actual cash for food and clothing for himself and family to a sum so small as to be below a decent living standard. The wage and salary worker fares much better, because they do not have all the necessary expenses of the farmer and can, therefore, live according to better standards, and yet they too are underpaid under a system which destroys basic buying power, the thing which creates prosperity.

Farming is the biggest business in the United States and brings the lowest percentage of profit. It should be made to create the greatest standing power of the people. Give agriculture one dollar out of every seven of the total national income and you will see things begin to happen. W. P. A. will be a thing of the past. Jobs will be looking for men instead of men looking in vain for jobs. The average income of the farmer in the United States, 1920

Ask the merchants on your main street this question, How good would your business be if every farmer in your trade territory had money to buy the things they and their families are in great need of today? I have asked the question more than a hundred times in 40 different communities, from Wall Street to the Mississippi River, and the answer has always been the same: "Business would be wonderful—prosperity would be here." Ask 50 manufacturers, How good would business be if every small-town and big-town merchant would treble their orders? I have put this guestion to a hundred manufacturers and the enswer is the seme: question to a hundred manufacturers and the answer is the same: "Business would boom."

"Business would boom."

Well, for goodness sake, if all it takes to make business boom is to give the farmer \$1 out of seven of the national income, and that is exactly what it takes let's bring together 20 of the smartest business leaders of the country, men who have made outstanding successes of their own business, and have them tell the Department of Agriculture just how to do it. You and I know it can be done, but there must be the will to do, and those who profit out of expertity and who demend that wheat some and or t can be done, but there must be the will to do, and those who profit out of adversity and who demand that wheat, corn, and cotton shall be theirs to gamble with must be brushed aside. A farm-buying power of \$15,000,000,000 will destroy pernicious taxes on business now made necessary to support the Government's spending policies. Business will be free to expand without being

penalized.

The spending power of 44 percent of the people, the thing which creates prosperity, is being ruthlessly destroyed so that a mere handful of gamblers may use the products of our farms as "poker chips" in a great game—\$27,000,000,000 are the stakes that the gamblers and their allies, the bankers, are playing for—against a parity price for farm products and \$1 out of every seven of the national income for the farmers.

Your farm organizations, with memberships of 500,000 are help-less and impotent. For 20 years they have accomplished nothing to make farming profitable.

Will 5,000,000 farmers join together to wage a fight to win their independence and to restore prosperity to our beloved country? Five hundred farmers fought at Lexington to win their independence.

More people are engaged in agricultural pursuits than in any

other business

Farm products are the most important of all public utilities. They produce food and clothing and creature comforts.

Farm products constitute 80 percent of the raw products of

Prosperous farmers beget a prosperous nation.

Improbability of Attacks by Air

EXTENSION OF REMARKS

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Friday, March 31 (legislative day of Tuesday, March 28), 1939

ARTICLE FROM CHRISTIAN SCIENCE MONITOR OF MARCH 30. 1939

Mr. LUNDEEN. Mr. President, I ask unanimous consent to have printed in the RECORD an article which appeared in the Christian Science Monitor on March 30, 1939, under the headline "Attacks by Air on United States Viewed As Improbable."

In this article we find liquid hydrogen mentioned as a fuel, and we find further that European bombers are being built for European short-distance service—they are small bombers and cannot reach us across the great Atlantic. Our bombers are larger, due to greater flying distances.

There being no objection, the article was ordered to be

printed in the RECORD, as follows:

[From the Christian Science Monitor of March 30, 1939] ATTACKS BY AIR ON UNITED STATES VIEWED AS IMPROBABLE—SIKOR-SKY ANALYZES THE MILITARY AIR SITUATION BASED ON OBSERVA-TIONS HE MADE IN EUROPE

(By Volney D. Hurd)

(By Volney D. Hurd)

Kingston, R. I., March 30.—Only a radical development like liquid hydrogen, tripling the range of bombers, or a coalition which would bring the British Navy against the United States—both highly improbable—would make this country liable to serious air attack, said Igor Sikorsky, noted Russian-American airplane designer, in an interview at the State college here today.

In a clear analysis of the world military air situation, brought up to date by a recent trip to Europe, where the air forces and factories of most of the powers except Russia were inspected, Mr. Sikorsky made his first statement of American air defense, rare for this designing genius, who invariably confines himself to peacetime transportation.

peacetime transportation.

Bombers being the key air instrument of destruction, Mr. Sikorsky pointed out that the very large bombers, so widely dissikorsky pointed out that the very large bombers, so widely discussed in the past, are not being considered by the European air forces. Light and medium bombers dominate, showing that the entire air strategy is designed for European warfare where distances are short. To emphasize this military point, he showed that the American air force, with much longer distances to cover, had developed and was using large, heavy bombers.

HIGHLY IMPROBABLE

This concentration on small bombers makes any trans-Atlantic bombing expeditions highly improbable, he said. The range and load-carrying capacity of such ships would make a 3,600-mile trip with a load of bombs and return home without refueling impossible.

He pointed out that as a freak or publicity stunt a special ship might be built which might get away with a single trip and a small load of bombs, but such a sporadic stunt could have no

serious military import.

The development in quantities of liquid hydrogen, to be used instead of gasoline as a fuel, is far away. Since this is the only remotely possible method of increasing bombing ranges to the distance necessary for trans-Atlantic bombing, Mr. Sikorsky pointed out that there was nothing to fear from Europe in the air.

The one possible exception which might make the present type of European bombers effective against the American shores would be a coalition of powers which included Britain. With the British Navy aided by others, the American Navy could be kept ashore, permitting airplane carriers to act as their refueling stations for bombers, who could thus be sustained in the air for trips from Europe to America and return with bomb loads.

IS UNIMAGINABLE

Again, he stated, such a situation is unimaginable. Speaking of the Pacific, he said the limitation incurred by the great expanse of ocean there makes that situation even less threatening.

ocean there makes that situation even less threatening.

At the same time, benefited by being in London during the Munich crisis, Mr. Sikorsky said that at the present stage of world politics a good competent air force was necessary for the United States to keep the peace and demand respect. The present air force is excellent in quality, he added, but deficient in quantity. However, with the new rearmament bill this need is taken care of.

Mr. Sikorsky estimates the German air force at 10,000 first-class planes, with an annual possible production of 30,000. However, he added, within a year the British will have facilities for producing 30,000 planes a year, if necessary, which should balance the scales

30,000 planes a year, if necessary, which should balance the scales and probably slow down the German drives. He said he was greatly impressed by the British designs and the tremendous building now under way of new factories which would make a 30,000-a-year production possible.

Why the Preference for Stalin?

EXTENSION OF REMARKS

HON. ROBERT R. REYNOLDS OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES Friday, March 31 (legislative day of Tuesday, March 28), 1939

EDITORIAL FROM NEW YORK DAILY NEWS OF MARCH 24, 1939

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial from the columns of the New York Daily News, issue of March 24, 1939, from the pen of Captain Patterson, the editor and publisher of that newspaper, entitled "Why the Preference for Stalin?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

> [From the New York Daily News of March 24, 1939] WHY THE PREFERENCE FOR STALIN?

Among most of the Americans we talk with, there seems to be a kindlier feeling toward Josef Stalin, "red" czar of almost all the Russians, than toward Adolf Hitler, uncrowned kaiser of Greater Germany and whatever new territories he may have taken to his bosom since we went to press.

"We don't want either of these babies' political ideas prevailing in the United States," appears to be the average American feeling; "but when it comes to a show-down between Hitler and Stalin, Stalin looks a little bit the better of the two."

This in spite of the fact that the Communist regime in Russia has been and is a great deal bloodier than the National Socialist regime in Germany.

Hitler has concentration-camped a considerable number of German "reds," Social Democrats, pacifists, intellectuals, labor leaders, and Jews. Treatment of prisoners in these holes is said to be brutal in the extreme. Unknown numbers of them have died or committed suicide. The Hitler "dry pogroms" in Germany have meant mental anguish to all the Jews in Germany, property losses for the great majority of them, death or suicide for more than a few

All this is sickening enough, in the supposedly enlightened twentieth century, and we don't see how any believer in democracy and elemental human decencies can condone it.

Yet compared with what has gone on in Russia for 21 years past, the German reign of terror is mild. The Russian "reds" began by conscientiously killing off an estimated 1,000,000 members of the old ruling, professional and intellectual classes, including the caar and his family. By confiscating all their crops, including their seed, they caused between 3,000,000 and 4,000,000 farmers to starve 1931-32 for not growing enough to feed both themselves and the Russian cities.

For all this, prevailing American opinion is that Stalin's way of doing things is preferable to Hitler's way. Why?

SIMILAR METHODS, DIFFERENT IDEALS

Our theory is this:

Stalin and his Communists profess to seek as an ultimate objective the brotherhood of man—a cooperative commonwealth of the world, in which we shall all work along together, with wars and selfishness forgot, and lions lying down with lambs all over the landscape. That is what the "reds" claim to be winning for a weary world, though they have to wade through oceans of blood and break a billion human hearts to get there.

Hitler and his Nazis profess no such appealing ideal. Their aim is an all-powerful German state, which will rivet German culture on the world. Their ideal is best expressed in the old and the new

Germany's national anthem:

Deutschland, Deutschland ueber Alles, Ueber Alles in der Welt, Wenn es stet zu Schutz und Trutze, Bruderlich zusammen haelt. Von der Maas bis an die Memel, Von der Etsch bis an der Baelt— Deutschland, Deutschland ueber Alles, Ueber Alles in der Welt!

Which, roughly translated (and if anybody knows of a better translation, we'd like to hear of it), means:

Our Germany, our Germany, Shall all the world transcend, Uniting ever one in many, Both to conquer and defend. From the Maas unto the Memel, From the Etsch unto the Belt, Our Germany, our Germany, Shall all the world transcend!

Hitler is professedly a Julius Caesar, ambitious for German world domination. Stalin is professedly a worker for universal human brotherhood, though his methods combine the craft and bloodiness of Machiavelli and Ivan the Terrible. Most Americans go for any-body who preaches brotherhood with his mouth, no matter what he does with his brass knuckles, military organizations, spies, and agents provocateurs. Hitler is frank about what he wants; and sometimes that is a mistake.

That, we surmise, is why most Americans do not hold both of these gents in equal abhorrence.

The Building Construction Industry

EXTENSION OF REMARKS

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 31 (legislative day of Tuesday, March 28), 1939

ADDRESS BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE, MARCH 30, 1939

Mr. GURNEY. Mr. President, I ask unanimous consent that there be printed in the RECORD an address delivered last evening by the Senator from New Hampshire [Mr. BRIDGES].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, Colonel Sawyer, and members of the Washington Building Congress, I am appreciative of the opportunity presented to me to address you tonight. When first asked if I would consider such an engagement I hesitated to accept, because I feared that the subject was too technical, too detailed, and too filled with cold facts and figures to enable me, in no sense of the word an engineer, to present to you any thoughts of a constructive nature. engineer, to present to you any thoughts of a constructive nature. However, before declining or accepting, I asked time to consider and during that interim I made a casual survey of the building and the construction industry. I became so enthused and interested in what I discovered that I hastened to inform Mr. Aring and your committee that I would be glad to accept. I therefore appear before you in the role of a citizen who is deeply interested in the problems confronting not only the Washington Building Congress but the building and construction industry throughout the United States.

Let me say as a member of the Senate Committee on the Dis-

Let me say, as a member of the Senate Committee on the District of Columbia, I have a high regard for the building congress that you have organized in Washington. Your leaders here in the Nation's Capital deserve to be publicly praised for their effort and vision in the formation of an organization that safeguards and promotes a great industry.

In order that Washington may retain its proud position as one of America's most beautiful and modern cities, certain building enterprises must be undertaken. One of these is a project which I know is being supported by the Washington Building Congress, and which has my support as a member of the Subcommittee on the District of Columbia of the Senate Appropriations Committee the District of Columbia of the Senate Appropriations Committee—
a great public auditorium, a stadium wherein the country's great
sporting events could be staged. Building congresses throughout
the Nation are constantly working on developments that will improve and beautify our cities. To be sure, such efforts help the
building industry, but they also give employment, put money in
circulation, and speed recovery, to say nothing of increasing the
real wealth of the community. For their work, therefore, the
organizations throughout the country, congresses such as your
own, are entitled to the thanks of the people.

On the whole, our picture here in Washington is representative of
that of the building industry throughout the land. As I said before,
I have become intensely interested in the problems facing your
industry. I have within the last month devoured reports and books
on the subject. Naturally I have not been able to grasp many of
the finer points, but I have read and studied enough on the subject
to make me pause and ask this question: Where is the private
construction industry in America?

The answer to that question is important, because the private

construction industry in America?

The answer to that question is important, because the private building industry is a most important part of the entire construction industry, which is the second greatest industry in our country, ranking slightly below agriculture from point of view of money spent. I say that your industry is far greater than most people realize, and that is what I mean. The reason is simple. First, human beings must eat, and then they must have shelter. That is why, under normal conditions, agriculture ranks first, with building second. The market for the products of the construction industry is ever present. The desire to own his own home is one of man's basic wants. This has held true from the time of cliff dwellers up to the present age of penthouse dwellers. to the present age of penthouse dwellers.

to the present age of penthouse dwellers.

With this constant, ever-present demand for housing, and with the private building industry waiting to supply that demand, what factors prevent coordination between consumer and producer? Why do they not get together? When we answer that question we shall find out where the building industry is today. As I see it, there are four principal answers as to what has happened to the private construction industry: (1) Taxes; (2) Government building

program; (3) lack of confidence on the part of investors; and (4) general lack of improvement in the quality and attractiveness of

housing

housing.

The burden of taxes on real estate is crushing. Private building enterprise needs encouragement, but under the existing set-up of State and local taxation, no prudent investor can go into building under conditions where his investment is placed under unlimited liability—to take up increased local government costs. Local tax conditions, as they exist today, need reform in practically every State. Many State and local governments permit nearly all their extra expenses to be satisfied by an increase in the levy on real estate alone. Such a situation has created a liability tending to destroy real-estate credit. This, combined with the shrinkage in earnings due to the depression, has rulined thousands of owners of earnings due to the depression, has ruined thousands of owners of earnings due to the depression, has ruined thousands of owners of income-bearing property. It has wiped out that portion of the building industry which depends upon building as a private investment. The easy power to raise tax rates without limit has encouraged excessive municipal expenditures. Whether this spending be made in good faith or as a result of that wastefulness, corruption, and extravagance which has too often marked the failure of municipal governments in America is not at point.

municipal governments in America is not at point.

The depressing effects of real-estate taxes on the private construction industry have been tremendously increased, in my opinion, by the Government spending program. Federal extravagance has led to State and municipal extravagance in three ways: First, by sheer force of example; second, by general acceptance of the fallacious consumer purchasing power doctrine which has, by high-powered propaganda, become lodged in the public mind as the remedy of all economic ills; and, third, by the policy of requiring States and municipalities to match Federal funds.

Federal "pump priming," whatever its advantages, and I must confess I know of none, is surely a bad example to the States. Just as the children of profligate parents tend to be wasteful and ex-

confess I know of none, is surely a bad example to the States. Just as the children of profligate parents tend to be wasteful and extravagant so the States tend to follow the bad example set by the National Government. I speak with knowledge on this subject because, as Governor of New Hampshire, I had to contend with constant appeals for more and more State spending. Fortunately I was able to keep the State on a pay-as-you-go basis. We balanced our budget by living within our income and not by "socking" home owners and real-estate operators with unconscionable taxes. The only solution to the problem created by harmful Federal example is the practice of economcy and thrift in high places and a cessation of the bad practice of playing politics with the people's

cessation of the bad practice of playing politics with the people's money.

The President and the economic wise men with whom he surrounds himself are mainly responsible for the adoption, by large portions of the people, of the false purchasing power doctrine. "Purchasing power," as a phrase, has been abused and misused. To my mind, the term means the capacity to buy commodities and services. Real purchasing power can be created in two ways only—by the production of economic goods or through expansion of the money means of payment. The expansion of the money means of payment does not, however, necessarily entail an increase in purchasing power. No manufacture of money by Government, inflation or otherwise, really adds to the existing total of immediate purchasing power.

power.

The production of commodities and services is the basic method of creating purchasing power. This method means the production of economic goods, the very possession of which confers upon their owner purchasing power with which to buy other goods. As long as the people are willing to accept benefits from the Federal Government without regard to the effects upon the welfare of the whole Nation, or the ultimate effect upon themselves, the difficulty of security as a contradict product of the security of the street of the security of the s fare of the whole Nation, or the ultimate effect upon themselves, the difficulty of securing an attentive hearing for sound doctrines is almost insurmountable. Throughout all these pump-priming experiments, during all this period of wishful economic thinking, the Government has been taking action which has effectually prevented private industry from assuming its customary role. A tax policy, a business-relation policy, and a wage policy was adopted to follow the false doctrine of purchasing power set up as a cure-all. In short, as Professor Crum, of Harvard, so ably stated, the present administration has sought to transfer purchasing power from savers to consumers without taking the necessary step of commodity production.

The requirement that States and municipalities match Federal grants is, of course, an incentive to unnecessary expenditures.

grants is, of course, an incentive to unnecessary expenditures. At a glance, to the building industry this may seem a good idea. At a glance, to the building industry this may seem a good idea. However, a prolonged, sound recovery is more desirable than a shot in the arm. Especially you who produce durable goods must look to the long-term possibilities. As a consequence of all this spending, the local taxes on real estate amount, essentially, to confiscation. Until spending is halted and local taxes on real estate reduced (or some of the burden shifted to other forms of taxation), I see little prospect for a really healthful revival of the private-construction industry. I hope the growing public revolt against tax abuses and Government extravagance will soon remedy this situation.

On the second point, the Government building program, I do not need to dwell at great length. The private construction industry finds no fault, I am sure, with Government construction of certain public works. A sensible public-works program,

carefully planned and economically administered, is necessary. lends itself to the general welfare of our country. Properly carried out, a public-works program is really a helper, a cooperator, and a contributor to private industry. In the last few years, however, the Federal Government has been trying to build everything, everywhere. This is the incorrect approach to the solution thing, everywhere. This is the incorrect approach to the solution of the real problem—recovery. Private and Government construction industries are not competing to see which can build more. The fact of the matter is that a healthy private construction industry can and should make the Government building programs have, supposedly, been undertaken to draw up some of the "slack" of private industry.

Building is of course only one of the industries into which the

have, supposedly, been undertaken to draw up some of the "slack" of private industry.

Building is, of course, only one of the industries into which the new art of Government competition has injected itself. But in the building industry the Government can never hope to have a program extensive enough to take up the "slack." For the 11-year period 1925-35, nearly \$100,000,000,000 was spent in building construction of all types—that is utilities, public construction, and private construction. Of this enormous sum, Federal Government aid amounted to only 5.5 percent of the total. Such being the case, it is plain that the Federal Government should take a definite cooperative stand in its building programs. There is absolute proof that if this great industry is to go forward it must do so through private enterprise.

Altogether too much confusion exists in the Federal housing field. The alphabetical wizards have run wild, and the public is completely bewildered. The average family that has income enough to think of building a home searches the field in order to obtain the best possible bargain. Frankly, not only does the Federal Government compete with private industry in the building field, but the various building agencies compete with each other. When the Government goes into the model-village business, the worst example of competition with private business is exposed. Government housing removes rent-paying tenants from properties now taxed to the point of confiscation. Often these tenants are placed in properties from which the cities in which they are located will receive no income. Yet the cities provide the services which make rents possible. Such a process destroys and discourages individual enterprise. Model housing demonstrations may be desirable, but can't they be conducted in a manner which will encourage rather than discourage other building?

The third point, lack of confidence on the part of investors, is building?

manner which will encourage rather than discourage other building?

The third point, lack of confidence on the part of investors, is also obvious. Many investors still regard the long-term prospects with doubt. They are not willing to risk their funds in the private construction industry until the political and financial outlook is more favorable. Lack of investors in the building construction market is, of course, due in part to the tax mistakes, about which I have already spoken. The investor who might lend on mortgages, or go into housing or other building, has quietly left the field of investment. The prudent investor who is so greatly needed to give life and credit to housing and other building has been practically eliminated. The whole attitude of government toward business is wrong. I say this advisedly and without partisanship. So long as we, a nation, are committed to the profit system and it appears that we will be committed to this system for some time, capital must be given a fair break. Capital which starts new enterprises deserves encouragement. Such capital keeps the wheels of industry moving. Such capital keeps competition vigorous. The abundance of funds for investment in short-term, liquid securities, and its scarcity for uses which involve loss of liquidity, point to a weakness in the financial structure of our society. This weakness is the separation of the saving process from the producweakness is the separation of the saving process from the produc-

tive utilization of funds.

The remedy is a change in attitude. When you say that you mean to be friendly, act like it. For the last 4 years the administration has been harping about business not doing its share. I maintain that it's the other way around. The administration has not been doing its share. Witness the recent appeasement talk followed by the subsequent threat of President Roosevelt to keep followed by the subsequent threat of President Roosevelt to keep a club of inflation safely tucked away in his closet. Witness the unwillingness of the administration to agree to amendments of the National Labor Relations Act, although American industry and the American Federation of Labor both claim that amendments are necessary. Witness the refusal to revise the capital-gains tax or the undistributed-profits tax, although most economists of wisdom agree that they are deterrents to recovery. Witness the recent nomination of Amlie to the Interstate Commerce Commission. Witness the continued demand for more appropriations for spending

spending.

The theory that large-scale Government spending is necessary to restore prosperity doesn't make sense. Deficit spending does not produce lasting benefits. The continuance of such a policy only frightens private capital from investing in productive enterprises. Let me for a minute quote some figures to prove this fact; In the 3 years previous to 1929 an average of four and three-tenths billion dollars was poured into new corporate enterprises in this country. At the peak of the Government spending, 1937, the amount of new capital so invested was only one and two-tenths billion dollars. For 1938 it was eighty-five one-hundreths billion dollars. Private investors must be wooed back to private industry. An about face by the Government is necessary. I deplore the constant New Deal chant about business and Government getting together, and the Government doing nothing about it. This administration is still blaming business for what happened 10 years ago. To be sure some of the practices of business were bad. There has been improvement. There have been necessary changes in labor relations, in security regulations, and in bank-deposit guaranties. Now is the time to let the bad boy—business—out of the closet so that he can see the light of day and grow into a strong man and thus carry his share of the burden. To keep him forever in the closet in punishment of his past misdeeds precludes him from giving assistance in carrying his share of the burdens of industrial activity so necessary to recovery.

giving assistance in carrying his share of the burdens of industrial activity so necessary to recovery.

The fourth difficulty alluded to earlier in my talk is the fact that, in comparison with earlier periods, the dollar spent by the consumer for housing today does not buy as greatly increased a value as does the dollar spent by the consumer for automobiles, refrigerators, radios, and other similar merchandise. In other words, there has been no improvement in housing to match the improvement which has taken place in these other lines. For instance, in July 1936 the cost of frame houses was down only 13.4 percent from the 1926-29 average. Automobile prices, however, were 26 percent below 1926, refrigerator prices 58 percent, radio prices 50 percent, and electric washing machines 55 percent. In 1926 one of every three dollars spent by consumers for durable goods went to buy housing; in 1936 only one out of every seven dollars.

in 1936 only one out of every seven dollars.

The only answer must be that the building industry is not well organized to market its product. Lack of organization prevented the practice of smart marketing tactics in competition with the automobile and electrical equipment industries. Now, there is no automobile and electrical equipment industries. Now, there is no reason why the housing industry should not get a substantially larger share of the huge market for durable consumer goods provided it were willing to give the consumer more for his dollar. Other industries have shown that the real path to broadened markets is the ability to turn out a superior, better product at a lower

In my remarks I have given merely a layman's viewpoint of what I consider to be wrong with the private construction industry. Since this gathering is composed, for the most part, of experts who are really interested in finding out what is amiss with the building industry and where it is going in the future, I have not tried to paint a glossy picture. I have tried to analyze the situation in its broader aspects in the cold light of reason. Let me now summarize

and conclude.

Since the building industry is the second largest in the country it is absolutely essential to national recovery. In my estimation recovery should start with the building industry. I do not mean with any fantastic boom. I am always skeptical of spellbinders with any fantastic boom. I am always skeptical of spellbinders who claim that a latent boom is at hand and all we need is a little pump priming to get it started. We have real expansion factors before us. Increased population and advancement in electrification are factors that indicate a healthy, sane demand for building products. The move away from the cities will answer the ill-advised tax measures of which I have spoken. Electrification advances will speed up farm and country building. The demand for new homes grows constantly greater.

Once started recovery in the building industry will carry all

Once started, recovery in the building industry will carry all other durable-goods industries along with it. The administration here in Washington realizes that national recovery is necessary, but to date it has been unwilling to put recovery ahead of its put social reforms. The solution of the relief and unemployment prob-lem lies with the recovery of the capital-goods industries. There must be construction work going forward in increasing volume if the capital-goods industries are to fully recover. Their recovery alone can bring about satisfactory reemployment of men now unemployed or on relief work. This will mean a permanent recovery which does not depend on the temporary expedient of huge Government expenditures.

If poor local tax systems are the cause of real-estate foreclosures If poor local tax systems are the cause of real-estate foreclosures and general dissatisfaction, I feel the people will soon insist upon tax reforms and economy. We see the beginning of the demands for economy in our National Government. When that move gets fully under way it will set the example for the States and localities. I do not say that we shall have real reforms in the tax or spending field under the present administration, but then that can't last much longer either.

much longer either.

There is increasing public recognition of the importance to employment and recovery of opening up the flow of private invest-ment funds into industrial building equipment, commercial build-ing, public-utility construction, and other forms of private capitaling, public-utility construction, and other forms of private capital-goods production. There is an increasing demand for modernization, for reequipment, and for new construction. That the vast Federal spending programs have done nothing but get the country further in the morass of debt is a recognized fact. There is an active bloc in Congress that is insisting upon economy and sanity in government. The continued growth of this opposition, both Republican and Democratic, to the spending and business competition activities of the administration should prove of great assistance to the building industry.

The industry as a whole must reform its merchandising methods. That such reformation is under way is evidenced by the growth of such organizations as the Washington Building Congress and the other building congresses throughout the Nation. I was interested to note the current Fortune survey. In it the question was asked:

to note the current Fortune survey. In it the question was asked: "Can you name any large important thing that you would like to have and would probably buy if it cost only half as much as it now

costs?" Twenty-one and nine-tenths percent of the people answering said that a house or a home was their greatest desire. This was a higher percent than for any other desire. As Fortune says, "This was the first choice of every economic level; of every occupation except students; farm owners and farm hands; of every part of the country except the Northwest Plains; and even of the people in every-size community, including those who live in cities of more than a million." This indicate a pent-up desire for housing that give birth to a building boom if costs were materially cut. Even discounting the people who would not have the price of a new home even at half the present levels, or even with the help of easy credit. even at half the present levels, or even with the help of easy credit, the figures, plus those for renovation and repair, make a powerful argument for efforts to bring down building costs.

the figures, plus those for renovation and repair, make a powerful argument for efforts to bring down building costs.

Building congresses throughout the Nation are the instruments by which the entire industry can develop new marketing methods. There has been great progress within the last year. As a layman, I can see part of the trouble is the red tape and multitude of problems with which the prospective home builder is faced when he begins to think about building. There must be coordination between the different groups and different businesses within the building field. Recently a building-materials dealer observed—a man who wants to build is likely to go first to one of a dozen sources. He may go to the architect, the banker, the manufacturer, or the construction engineer or the lumber dealer. He may get one story from one man and another from a second man and so on. The result is that the prospective builder becomes confused and suspicious. It is up to your building companies have solved the problem by a showroom. A place where a home can be seen as a piece of packaged merchandise. The buyer should be able to purchase his home at a single transaction, with financing as liberal as it is on an automobile or a washing machine.

The development of team work within your industry will lend a more encouraging color to the future. I believe it is obvious that you cannot depend upon the Government for your construction program. You must devise and execute it yourself. You have real values, and you have a ready market. America is going ahead, there is no doubt about that. I truly believe that the private construction is not only going ahead with America, I believe it is going to take the lead. The general public is coming to realize that the era of crackpot ideas and unfulfilled promises is at an end. Economy and thrift, together with the natural incentive to build, are returning. American labor and American capital must, and will, join to bring about the return of American

tat a end. Economy and thirt, together with the natural incentive to build, are returning. American labor and American capital must, and will, join to bring about the return of American prosperity. This will begin with the building industry. There is nothing wrong with the country; it's only the way we have been treating it that is to be condemned. I saw the beginning of the new era after last November, and I truly believe we will be under way to real recovery in the very nor future.

way to real recovery in the very near future.

It has been a real pleasure to be with you this evening. I am happy to note so much enthusiasm within one of our country's first industries. It speaks well for the future of America. Despite temporary setbacks, I see real recovery, and permanent recovery, tied up with your industry. The private building industry is on its way and is eager to play its predestined part in national recovery

Navaho Indians in Southwest United States

EXTENSION OF REMARKS

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES Friday, March 31 (legislative day of Tuesday, March 28), 1939

ARTICLE BY FLORA W. SEYMOUR IN SATURDAY EVENING POST

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have inserted in the RECORD an article appearing in the last issue of the Saturday Evening Post with reference to the Navaho Indians in Southwest United States, the article being entitled "Thunder Over the Southwest," written by Flora W. Seymour.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

> THUNDER OVER THE SOUTHWEST (By Flora Warren Seymour)

(By Flora Warren Seymour)

The Navaho Indian rubs his eyes in amazement. Mirages are not uncommon in his southwestern country. But the extent, the variety, and the fantastic appearance of those he has seen in recent years outdo all his previous experience.

He hears much of soil conservation; sees great numbers of men at work, supposedly saving the soil for his use. At the same time, his own use of it is restricted here, forbidden there. He is told roughly that his own country does not belong to him at all.

He sees expensive schools built all over his reservation. At the same time he knows well that fewer than one-third of the Navaho

children are enrolled in school, with winter storms and bad roads making the attendance pitiably less than the enrollment.

He hears proud boasts about the protection of his civil liberties. But he knows that any expression of opinion counter to that emanating from "Washingtone" will mean the loss of a job, if he has one, or the refusal to employ him, if he hasn't. He knows gathering for group discussion will not improbably result in a breaking up of the session and perhaps jail for the participants.

Especially does he hear that he has "religious liberty." He finds this means liberty to take part in dances and reject the white man's ideas of religion. But if he is among those who follow the white man's faith, his "liberty" is quite another thing. He has failed to "preserve the ancient traditions." The good Indian, in modern judgment, must walk in the path of his ancestors.

In short, he concludes that for him the New Deal is handed out with marked cards. The more abundant life has brought him greater restriction than he has ever known. And all this confusion and misery has come to him from those who have always loudly publicized themselves as "friends of the Indian."

Remote in a region larger than three New England States, but

Remote in a region larger than three New England States, but so barren that his numbers all but overpopulate it, the Navaho has remained among the most primitive and the most independent of Indians. Until these late years he has gone his own way—a simple way of hardships and privations, it is true, but a way that had much to satisfy his spirit. It was the shepherd life of Abraham's time pregisting in an unenetrated cover of the modern. ham's time persisting in an unpenetrated corner of the modern industrial world.

THE NAVAHO MAGNA CARTA

In the sixtles the Navahos, for their turbulence, suffered an exile of 4 years in eastern New Mexico, at the Bosque Redondo. When in 1868 they joyfully trekked back to their beloved wastes of sand and sagebrush and tumbled rock they made their first and only treaty with the United States. That treaty of 1868 has been the magna carta of the Navaho ever since. He promised to keep the peace. He has done so. He took the sheep issued from Fort Defiance, the headquarters of the reservation staked out for the tribe, and went about his business.

The count at this issuence of sheep showed between nine and

The count at this issuance of sheep showed between nine and ten thousand Navahos. Today they are 50,000 or so in number. No "vanishing Americans" these. And they have achieved something in which many another tribe has been laggard-self-support. On their bare acres even the sagebrush grows a bit half-heartedly. But they have sustained their herds of sheep and their hogans full

of children, asking little from any man.

They have paid no taxes on their desert land. A certain proportion of their children have been cared for at various Government boarding schools. Aside from this the tribe has survived without such doles and rations and subsidies as have made mendicants of

such doles and rations and subsidies as have made mendicants of other groups of Indians.

Long since, they outgrew their original reservation. Additions have been made from time to time by Executive order, until there were six different jurisdictions, each with its "natahni," or superintendent, and its staff of Government employees. Each of these superintendencies was an isolated dot in the vast swirling sand that is the Navaho country—Crownpoint and Shiprock, N. Mex., and Leupp, Tuba City, Keams Canyon, and Fort Defiance, Ariz. Even today these places are not notably easy of access.

There are no Indian towns in all this region. Your Navaho is no villager, like the Rio Grande dwellers in terraced pueblos. Sheep must follow the grass, and he—or rather she, for the woman is owner and manager of the herd—must follow the sheep. The hogan built for use in the growing season is deserted as

The hogan built for use in the growing season is deserted as colder months make a different range desirable. As the years have gone by, Navaho sheep, adaptable like the people, have learned how to exist 12 miles from the water hole. Six miles is said to be the usual limit.

Always the sheep--mutton for the chief food, wool to exchange Always the sheep—mutton for the chief food, wool to exchange at the trader's store for flour and sugar and coffee. Rugs to be made of wool as time permits, always a gay blanket hanging on the rude wooden loom suspended beside the hogan. Lambing season in the spring, shearing in the summer, wool shipped to pay the debts that have accumulated during the year. Navaho life centered about the sheep.

Some of the tribesmen became men of substance. Always in Navaho history, there have been the rices Specials is the Navahola.

Some of the tribesmen became men of substance. Always in Navaho history there have been the ricos—Spanish is the Navaho's second language—who stood out from the others by virtue of their possessions. No notion of communal ownership existed among these people. The greater number of families had small herds; a few score head of sheep, some goats, a string of indefferent horses. The average household would consume some dozens of sheep in a year's time, so a family with a herd of but a hundred or two was dangerously near the subsistence line. But their wants were few dangerously near the subsistence line. But their wants were few and the skies were blue above them.

Now a cloud was beginning to drift across the azure. Little larger at first than a man's hand, how it did grow! From a fleecy wisp of educational theory, wafted in on a breeze of high-sounding promises, it spread out into a leaden blanket of harsh regimentation, oppressive, deadening. The deluge descended—a veritable flood of theorists and experimenters. If the Indian got in the way of this experimentation, so much the worse for the Indian.

THE WHEELER-HOWARD BILL

The incoming Commissioner of Indian Affairs was a man who for a dozen years had made his living by denunciatory propaganda against the Government's handling of Indian problems. Now that he had become the responsible administrative head of the office had so roundly abused he announced that the Indian would no longer be forced to fit into the white man's mold. He should direct his own destinies, follow his own desires. "We shall teach the Indian to be an Indian." Or, "We shall foster the native arts, crafts, and traditions." All this sounded plausible to the sentimental audiences the Commissioner was used to swaying, people whose notion of an Indian probably came from a childhood reading of Hiawatha. It didn't mean a great deal to the Indian, but, so far as it seemed to mean that he was to be left alone, he could scarcely

He found out, instead, this meant he was to live his own life, whether he wanted to or not. That he was to be an Indian, even though nature and training had made him share the white man's blood and follow the white man's ways. That he was supposed to hark back joyfully to the "native religion," though his ancestors might have embraced another faith under Father De Smet or Eleazar Wheelock. That he was to be an Indian in fact, according to the specifications of Indianism laid down by the white man.

to the specifications of Indianism laid down by the white man.

The ideals of the new Indian administration were embodied in a bill proposed in Congress early in 1934, known as the Wheeler-Howard bill. Senator Wheelers, however, introduced it only upon request, and has since offered the Senate a bill for its repeal.

The original form of this 52-page pronouncement was fantastic in the extreme. One must conclude either that its framers had never read the Constitution of the United States or had decided that it could safely be disregarded. The Secretary of the Interior, holding Indian lands in trust for individual owners, was to be authorized to return the property to the tribe as a whole. This is, putting it mildly, a strange type of guardianship. Indians forming tribal corporations were to exercise the right of eminent domain and exclude from their boundaries any whites who might have purchased land and settled there. All over the Indian country, such a scheme would have resulted in the abolition of an incredible number of counties, towns, and cities. In these vastly enlarged wastes the tribe would carry on, aided always by large Government subsidies. It would hold its property in common as an idyllic state of communal ownership was presumed to have been the Indian's before he was exposed to the contaminating influences of civilization.

The Indian's were expected to welcome this with delicht. In ences of civilization.

The Indians were expected to welcome this with delight. Instead strong protest arose from many quarters. Congress was supposed to pass it without inspection, as it was treating all legis-

lation that came to it from the throne.

Somehow this bill did not slide down the greased way so easily.

The President wrote two letters in praise of it—two, because the first was prepared by someone so obviously unacquainted with the bill as to excite mirth among those who did know what it contained. The delights of the proposed new regime were presented eloquently to Indian congresses held throughout the country.

In spite of all the ballyhoo, the bill at final passage contained but the country.

but five pages. Most of the dreams had been eliminated. Chiefly it promised a lot of appropriations; but as the act had squeaked through in the closing days of a busy Congress, the actual money had to wait for another session.

One of the provisions of this Indian Reorganization Act, as the Indian Office called it eventually, was that the tribes should vote whether or not to accept it

whether or not to accept it.

There ensued a campaign all over the country to high-pressure the Indians into favoring it. Never had there been such a mass production of eloquence, such an outburst of rosy promises and dark warnings. Vote "yes," and the future lay shining before them. Vote "no," and they would speedily fall a prey to the conscienceless and rapacious white man. All white men are conscienceless and rapacious except a few of the more recent officials of the Interior Department Department.

None of this beating of tom-toms need have been dinned into Navaho ears at all. Their huge reservations had never been divided into individual allotments. There was no reason to suspect that such a thing would ever be proposed. The conditions of desert shepherd life precluded that.

But the powers that be were determined that, by hook or by crook, the Navaho should enjoy a greater measure of communal life. He was assured that if he failed to adopt the plan, the immediate result would be the partitioning of his land and its "loss"

to the greedy whites.

Propaganda descended upon the Navaho country with the force of a hurricane. Secretary Ickes' gag rule, promulgated while the bill was under discussion in Congress, provided for the "summary dismissal" of any employee, white or Indian, who should speak against his policies. This rule is still enforced. Only a few weeks ago Navaho employees were dismissed from the Service because ago Navaho employees were dismissed from the service pecause ago Navaho employees were dismissed from the service pecause they were suspected of having talked about reservation conditions with a friend of many years' standing from a society sincerely de-voted to Indian interests. The identification was erroneous, and made no difference.

THE NAVAHO COUNCIL

Storms of argument on behalf of the new law and arbitrary treatment of any who dared oppose it were kut a small part of the tempest that raged over the desert. In addition to this proposal, the Navaho Council had presented to it three Government plans, any one of which would have been enough to work vast and serious changes for the tribe. They were faced with a complete reversal of their school system; with the merging of their six superintendencies into a single central agency; and with a huge program of soil-erosion control which would pierce to the very heart of their economic life by diminishing their range and cutting down the herds of sheep from which they drew their livelihood. This was a staggering program. staggering program.

The powers that be might have learned from previous Indian congresses, had they been capable of learning, that an Indian council regards itself not as a lawmaking body but as a deliberative assembly. The Navaho Ccuncil, at that time about 10 years old, had been formed when discoveries of oil in northern New Mexico had made it desirable to have some means of sounding out the views of the tribe and giving them expression. Since then, at two elections, the council had been chosen by the Navahos. The 12 councilmen, 2 from each of the 6 superintendencies, did not exert, nor expect to exert, power either over Government procedure or over their fellow Navahos.

But they were assured that the new day was at hand. Self-government was to be granted to all the tribes. In this particular case self-government was to mean pleased acquiescence in whatever

government was to be granted to all the tribes. In this particular case self-government was to mean pleased acquiescence in whatever the Government suggested.

The council deliberated, demurred; wanted, as is always the way of Indian councils, to take these weighty matters back to their people. An immediate and favorable vote was urged.

"There is no further appropriation for boarding schools," they were told; "the money can be spent for day schools only." In a word, the choice offered them was no choice at all. A glittering word picture was painted of the Navaho capital that would be built for them at a cost of nearly a million dollars. Eventually it was nearer two millions. And a reduction in their herds of sheep would result in better land and more grass for future herds. Promises and warnings at length prevailed. But the vote was 7 to 5. Rather reluctantly, the councilmen returned home to break the unwelcome news to their people.

As a publicist, the Commissioner of Indian Affairs had made Indian boarding schools the especial object of his attacks. They disrupted family life and destroyed native culture. Indian children, torn forcibly from anguished parents, were condemned to a life of scant food and bitter slavery. "Forced child labor" and "slow starvation" were among the slogans he had been active in popularizing.

popularizing.

As Commissioner, the agitator learned with surprise that great numbers of Indians protested against the abolition of boarding schools. But what difference did that make? "We must teach the Indian to be an Indian."

At first, Navaho day schools were planned to resemble as nearly as possible what official bulletins called "the traditional eight-sided hogan." The traditional form had really been circular, the eight-sided form developing about a half century ago, when the advent of the railroad made the Navaho acquainted with the usefulness of ties for building purposes. The eight-sided hogan resulted from unobstructed visits to the right-of-way. This change is typical of the Navaho's receptiveness to new ideas. He does not let ancient tradition stand in the way of what he deems improvement.

The hogan schools, with their low ceilings and dirt floors, the Navaho viewed with alternate amusement and disgust. So obvious was Navaho disapproval that but four or five of these were perpetrated. Completed in 1935 these are by now badly in need

Followed plans with which the New York architects doubtless thought to please the Navaho. It was instead a form that would have been quite appropriate for their ancestral enemies in the Rio Grande villages. The same style was adopted for the new capital rising at Window Rock. "This is Taos," Navahos would say derisively, as they approached the red stone monument.

TEACHING INDIANS TO BE INDIANS

Thirty or more day schools were built, at from twenty-five to a hundred thousand dollars per plant. Besides from two to eight schoolrooms each, there were the school kitchen and dining room, washrooms, and, nearby, incredibly cramped quarters for em-

Progressive education had fallen upon the Indian schools with the force of a tornado. The child was to direct his own develop-ment unhampered by any rules or plans. Not even furniture, blackboards, books, or teachers would be forced upon him to repress

his freedom.

With much fanfare and a gathering of both Indians and whites, a typical two-room day school was opened at Canyoncito, N. Mex., in the spring of 1935. The young Navaho who had been appointed leader for the expected pupils interpreted—not very smoothly—the words of the school supervisor in charge of the

reservation work.

"You must not be surprised," she told the Indian parents, "to see your children outside the schoolroom, working about the place, making chairs or tables, laying out walks, building a goat corral, or in the kitchen preparing their meals. That is what they are

so "forced child labor" had become "vocational training." It is as simple as that. She went on:

"And while they do this they will talk about it in Navaho and learn the Navaho words for what they are doing. By and by they want to know the English words for them, too. He will tell them if they ask him. After they become fluent in speaking English they may want to learn to read it. When they show, by their interest in books and magazines, that they are ready to learn, that will be all right."

Exposed to no word of English and unfurnished with books

Exposed to no word of English and unfurnished with books and magazines, this interest might not develop very speedily. "Then, when they are really prepared the teacher will send for me. I will come and teach the teacher how to teach them to read."

The Navaho parent found this quite too progressive. Protests came from all directions. Some groups even sent in formal petitions that the course of study for the State schools be followed.

SCHOOLS WITHOUT PUPILS

Even more striking was the protest of nonattendance. The new schools simply did not muster up numbers large enough to justify the title of school at all. In defense, the idea was spread about that they were more than schools. They were to be real about that they were more than schools. They were to be real community centers, regardless of the absence of communities to be centered. So, when Mrs. Two Horses came in to sew up her wide ruffles on a Government sewing machine, or Mr. Big Man sought some warm water to wash his shirt, great was the official rejoicing. This was true civic service. The new community centers were functioning. They were integrating Indian life. And so on. Still, an occasional clean shirt was not enough—particularly as the new schools, supposedly much less expensive to operate than the boarding schools proved to cost quite as much per capita. It must have irked the professed upholder of all ancient traditions to turn again to qualified teachers. Of course, these must be new employees—those who had been turned away from the closed boarding schools would never do.

employees—those who had been turned away from the closed boarding schools would never do.

So they came—girls fresh from college, with no idea of what lay before them. The desert, the isolation, the responsibilities of isolated life, were eye-opening. They came—and they went. Today the Indian Service is announcing that appointments to teaching positions will be given only to those familiar with the conditions of rural life.

But it has taken 5 years to learn this most elementary of lessons. In that interval some few Indian children have participated in various projects, such as feeding a pet snake or chicken or building a diminutive hogan in a corner of the schoolroom. There is a definite 5-year gap in which Navaho pupils in Government schools made no advancement at all comparable with even the least suc-

cessful of public schools.

cessful of public schools.

If you doubt that the Navaho really wants his children to learn, look at the mission boarding schools at various points on the reservation. A few years ago these inaugurated the plan of charging a small tuition, chiefly as a guaranty of real desire to attend. From \$5 yearly this amount has advanced a little each year, with no protest from the Navaho parents. All these schools have as many pupils as they can accommodate, with others waiting to take the place of those who graduate.

The Navahos know that these missionaries, of several denominations, are their friends. They do not in the least share the attitude

The Navahos know that these missionaries, of several denominations, are their friends. They do not in the least share the attitude of the Indian Office employee who, writing in the semimonthly publicity sheet sent out everywhere by the Office, spoke of "the cheap rascality of Christian soul saving."

Meanwhile the Navaho capital was growing. "Nee Alneeng," the Commissioner called it, having been assured that this phrase meant "center of the Navaho world." The Indians grinned. "There are 11 Navaho words for hell, and this is one of them," they explained. Eventually even the Commissioner became aware of the joke. When occupation of the stone buildings made a post office necessary, the name given was what the English speaking had always called the place—Window Rock.

The Navaho by this time realized that this meant the end of his six superintendencies. The council had voted for Nee Alneeng

his six super intendencies. The council had voted for Nee Alneeng under the impression that it was to "coordinate and correlate" the work of the others, not to supersede them. The Navaho was deeply

disturbed.

disturbed.

Carry his problems to Window Rock as he had been wont to do to his own superintendent? He might live 250 miles away. By this time there was no one there whom he knew, no one who felt any interest in the Navaho and his personal affairs. The place was swarming with experts on land and range management and soilerosion control. He could look long and in vain for a familiar

His chapter organization of previous years—75 or so of them—had been discouraged. The new regime could not admit that anything good could come out of previous administrations. The 18 supervisors who had been appointed to function for the superintendencies and chapters, had no authority to decide questions. Bit by bit the Navaho was losing his means of communication with his official guardian. The Great Witte Father was instead playing the part of a harsh and indifferent stepparent.

THE LAW AGAINST NATURE

Great areas of the reservation were set aside for experimentation. The magic shibboleth "soil-erosion control" swelled from a mere whisper to a thunderous roar. Nature's unwelcome operations were to be checked. No more freshets, no more silt washed down to Boulder Dam. As one school child, made soil-erosion conscious,

put it, there was to be no more erosion at all.

Erosion created soil in the first place, but should the mere laws of Nature stand in the way of a new day? The land, saved at an expense per acre of fifty to a hundred dollars, would still be worth barely 50 cents to a dollar per acre. What of that? Water was the real need, but there was no excitement about that, nothing

As a matter of fact, the millions spent experimentally on the Navaho Reservation in the past few years, with the results, if any, still highly problematical, would have sufficed to do an enormously effective job of water development, or to purchase enough irrigable and irrigated land to enable the Navahos to settle down and farm, but these would have been retailed and to enable the set of the

but there would have been nothing new about that.

As the experimenters descended like swarms of mosquitoes, Indian Office Service employees were pushed aside, eased out by

transfer, retirement, dismissal—what you will. They still had a lingering idea of service to the Navaho; the newer group thought in terms of sand and silt. "We don't give a damn for the Indians," frankly said one of the erosionists.

The two groups, moreover, reported to two different Cabinet officers. An agreement was finally signed between the Secretary of the Interior and the Secretary of Agriculture, putting the direction of the reservation in the hands of the experimenters. "There is no longer any Indian Service here," said the Commissioner, in installing the latest superintendent at Window Rock, "no longer any soil erosion service. There is simply a Navaho service."

Good words, these; but what, asks the Navaho, does this do to the trusteeship of the land? Can a guardian hand over the property of his ward to another for experimental purposes? The whole thing is admittedly a long-range experiment which may prove of benefit a generation or two hence. Where, the Navaho wants to know, will he be a generation or two hence? Why save the land for the Indians if you are not going to save the Indians

the land for the Indians if you are not going to save the Indians

for the land?

With great acreages of his reservation fenced off for demonstration purposes, with his sheep and goats and horses cut down below his modest subsistence level, the Navaho feels he is getting a very his modest subsistence level, the Navano feels he is getting a very unfriendly type of guardianship. And when, last summer, his guardian haled members of the tribe into court in Arizona to enjoin them from grazing their own sheep on their own land, his opinion of that guardian dropped lower still.

The long-tried patience of the tribe very nearly reached exhaustion. Put to their credit the fact that they went to a lawyer instead of polishing their rifles. The Navahos still observe the treaty of 1868, though their guardian seems to have forgotten it. But we are getting a bit ahead of our story. To be set upon by swarms of researchers and experimenters was bad enough. To have

the children's schooling reduced to a minimum was bad enough. To lose contact with those who had been his advisers was bad But when the blight of reduction fell upon his sheep, the Navaho felt that the very core and center of his life was being destroyed.

The council, reluctantly agreeing to reduction, had understood that it would apply to those families which possessed more than a hundred head. When the time came, this promise was violated. The owner of a few head must give up a substantial proportion of his already insufficient supply. This meant deepening poverty, often actual hunger.

Work for wages had been promised to offset this loss of income. A man might be employed in the building operations. He might help in planting the thousands of little tree shoots that were set out, each with a swirling little question mark cut in the ground around it. He might pile up the little mounds of chips that were supposed to hold back floodwaters. All these things, for a year or two at least, brought pay checks. This would meet the situation

but it just didn't. In the first place, it is the Navaho woman who owns and manages the herd. It is she whose means of livelihood was curtailed. It was the Navaho man who got a job, and he might not be the one who had any responsibility for the families suffering from herd reduction. Loss and recompense might travel like parallel lines and never meet.

In any case, the Navahos are entirely unused to a money econ-

Credit and barter have been their way of meeting their

omy. Credit and parter have been their way of inceting their needs.

"What is money?" they had asked. "We can't cut any wool from it. It doesn't bring us any lambs." From the native point of view, dollars were simply things that came and went. They came—and they went. The shortage of sheep and wool remained the most vital of problems. The superintendent demanded further reduction; he became aware that such a program could not be enforced.

THE HAND-PICKED COUNCIL

In the midst of such confusion, the Navaho, unaccustomed to elections and voting, still managed to express his distaste for the Indian Reorganization Act. Despite every pressure brought to bear upon them, their vote was to reject it. It was a sad disappointment to the theorist who had hoped to point out this largest of tribes as making a happy return to communal life and the ancient

traditions.

Since the council was not proving subservient, the office announced its intention to secure a "truly representative" body. This was assured by sending out men from the central agency to select the "representatives." The old council was summarily wiped off the slate and a new and much larger one installed. The Navahos as a whole, looking on the whole procedure with marked disfavor, never referred to this body during its months of life under any other name than the "hand-picked council."

The Navahos as a whole, did we say? Yes; that is the strangest part of it all. Out of this chaos the tribe has achieved a unity it had never before known. The ugly and venomous toad of oppression has had a precious jewel concealed about it after all.

The Chippewas, French-mixed Indians with generations of civilized training behind them, when the removal of their agency was decreed, staged a riot and nearly tore their superintendent

was decreed, staged a riot and nearly tore their superintendent in twain before the police came to the rescue. The Navahos, con-sidered the most primitive of tribes, have made their protest in thoroughly dignified manner, by petition and by appeal in person to Congress. Several times in these past few years these people have mustered their scanty resources and sent a delegation to Washington to plead their cause.

From the Secretary of the Interior, their official guardian, they have had scant comfort. Indeed, on occasions they have had such peculiarly malignant abuse as only he knows how to purvey. They did not reply in kind. Such language does not comport with the

did not reply in kind. Such language does not comport with the Indian sense of propriety.

But their petitions for a real council election carried many thousands of signatures and thumb marks. These could not utterly be disregarded. Early in 1938, it was announced, an election would be held. Postponed again and again, the voting actually took place in September.

Leader of the Navahos was a man from Farmington who had represented the Shiprock jurisdiction in the old council, but had been pointedly and purposefully excluded from the "hand-picked council." Jacob Casamero Morgan, who has boarding-school and council." Jacob Casamero Morgan, who has boarding-school and mission education, a man in the latter fifties, is a symbol of the strength that is in the Navaho character when there is opportunity for development. He has been, indeed, a man diligent in business. For years past his efforts have been bent to the double task of bringing his people together and presenting their situation to the world without.

A half century ago he was an Indian shepherd boy in a rough hogan. Today he is the acknowledged leader of 50,000 people who had never before had a leader.

had never before had a leader.

The result of the election for president of the council was inevitable. To the very last the Government forces threatened to cancel Morgan's nomination because his home at Farmington is just across the border of the reservation. All the familiar high-pressure, steam-roller methods were brought to the aid of the candidate favored by the Indian Office. The newly installed broadcasting system at Window Rock chanted his praises. But Jake Morgan has what the Government has lost—the confidence of the Navaho people. He won by a vote of 4 to 1.

But he knows, and the Navahos know, that this victory is only a prelude to more serious trials. Whether stubborn theorists will ever acknowledge facts, whether the eyes of Government officials can be opened to the real needs of the Navahos, is a grave question. We must wait to see what, if any, cooperation is possible

tion. We must wait to see what, if any, cooperation is possible between the Navaho people and the guardians who have done such a poor job of guardianship. There is very little sign yet that the administration has really learned any lessons. There is a long way to go before they can even start to win again the trust of an aroused people who feel themselves betrayed by those who most of all should have been their friends.

of all should have been their friends.

The Indian Office is preparing some fine window dressing. A fresh coat of whitewash was recently administered in the form of a pamphlet emanating from Civil Liberties Union sources. This publication praises the glory and effulgence of the New Day that has dawned for the Indian. This may make public opinion in the East, but it affects the Indians not at all.

A teacher from a Navaho day school visited a hogan. She saw the agitation of the Navaho mother upon inquiry about her children. "What is the trouble?" she asked her interpreter.

"She say you count the sheep and take half of them away. She say you count the horses and say she got to get rid of them. She say you not to count the children. She not going to let you get rid of them, too." To such a state of distrust have these years of doctrinaire regimentation and wild experiment brought a fundadoctrinaire regimentation and wild experiment brought a funda-mentally friendly and reasonable people.

Relief and Work Relief

EXTENSION OF REMARKS

HON. LAWRENCE J. CONNERY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 31, 1939

Mr. CONNERY. Mr. Speaker, in January this House was asked to appropriate \$875,000,000 for the purpose of continuing the activities of the W. P. A. during the remainder of the fiscal year which will end on June 30, 1939. The House saw fit at that time to cut from the requested appropriation the sum of \$150,000,000, and as a result the sum of \$725 .-000,000 was granted by the Congress.

Today we have before us another emergency appropria-tion bill. We know that unless additional funds are made available immediately, thousands of worthy relief cases are going to be thrown off the W. P. A. immediately and that from month to month hereafter until the end of the fiscal year additional thousands will lose their W. P. A. jobs.

The Appropriations Committee has set as the figure necessary for carrying on this work the sum of \$100,000,000, regardless of the fact that Colonel Harrington, Administrator of W. P. A., has clearly stated in testifying before that committee that the granting of any sum less than \$150,000,000 can but result in drastic cuts in the rolls of relief recipients.

It seems to me, Mr. Speaker, that this is no time to quibble over the difference between \$150,000,000 and \$100,-000,000. Yes, of course, I realize that \$50,000,000 is a lot of money, but I cannot feel that it is a large sum when we are called upon to consider that amount in connection with the daily bread of millions of our unemployed who through no fault of their own find it necessary to seek assistance from our Government.

When it is realized that just within the past few weeks we have appropriated millions of dollars for the Interior Department to establish and maintain public parks for recreational purposes, and that, as I pointed out when this matter was before us in January, we have voted to spend millions upon millions of dollars for weapons of war to be used in defense of our country, I am sure that not one Member of this House can disagree that \$50,000,000 is a small amount when it means a guaranty against absolute want to millions of our citizens.

Many arguments have been advanced during this debate that this appropriation should be cut to \$100,000,000 because of mismanagement within the W. P. A. To my mind, such arguments are beside the point. If such mismanagement has existed, or does exist, I do not condone such activities, and I feel that the forthcoming inquiry into the matter recently authorized by Congress will show us to what extent such abuses have been carried on. And I feel certain that when the results of this investigation are forthcoming we will learn

that, considering the magnitude of this great Nation-wide relief program, the abuses have been negligible.

But in this particular bill we are not dealing with the proposition of alleged abuses in the W. P. A., but rather with the proposition of how much money we are going to allot for the continued well-being of those of our citizens, innocent of all wrongdoing, who are looking to Congress as their only hope. In this bill we are talking about bread and butter and not investigation. Investigation has already been authorized.

And so, Mr. Speaker and ladies and gentlemen of the House, let us deal with this matter only from the angle of doing what is right for those who are less fortunate than ourselves.

I feel certain that if we will approach the problem along these lines every Member of this House will vote for the amendment which will restore to this bill the full amount of \$150,000,000.

Why Not "Smother" Him?

EXTENSION OF REMARKS

HON. JAMES SECCOMBE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Friday, March 31, 1939

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hon. Felix Hinkle, editor of the Canton (Ohio) Economist:

[From the Canton (Ohio) Economist of March 28, 1939] WHY NOT "SMOTHER" HIM?

(By Felix Hinkle)

If a man is hungry and does not have the means to buy food, or if he feels society has treated him unjustly, conventional rules lose much of their moral weight insofar as he is concerned. Quite likely such a man will take whatever he can through such measures as seem most expedient to him. He looks upon his victims as fair

on the other hand, if a man is secure in his own material requirements and holds no particular grudge against anyone, he seldom resorts to any form of pillage or plunder. He is content to abide by the laws and seeks to maintain a status quo. He views with alarm all revolutionary tendencies and stands firmly upon the principles of organized control.

It seems to me that the conflicts throughout the world today are

It seems to me that the conflicts throughout the world today are fundamentally predicated upon the points in this observation. Disputes between nations are not really fanned by the flames of differing ideologies. All the "isms" are nothing more or less than man-made vehicles—vehicles made to support the passions of aroused peoples. The real battle is between the "haves" and the "have-nots"—between the "offenders" and the "offended."

Take the case of Germany as an illustration. I am not attempting to condone the ruthlessness with which Hitler pursues his objectives. I am merely focusing attention on some of the reasons why central Europe is now a verifable madhouse. I wish to review just

central Europe is now a veritable madhouse. I wish to review just a few high spots of the Versailles Treaty and then leave it to you to decide whether or not the world had any right to expect a different result.

ent result.

This travesty in statesmanship was concluded between Germany and the Allied Powers on June 28, 1919, and, technically, brought to an end the World War. Following are some of the conditions imposed upon Germany in this treaty:

Parts 2 and 3 required Germany to demilitarize the left bank of the Rhine forever. It ceded the coal mines of the Saar Basin to France, as well as the Provinces of Alsace and Lorraine, thus turning over to "the enemy" 2,000,000 inhabitants and over three-fourths of the German-produced iron.

It demanded that Germany demolish the fortifications of Heligo-

the German-produced iron.

It demanded that Germany demolish the fortifications of Heligoland, and presented the northern part of Schleswig to Denmark. It established the Polish Corridor, separating East Prussia from Germany proper, and gave the city of Memel to Lithuania. In all, about 6,000,000 German inhabitants were handed over to other powers, together with most of the iron and minerals of the country. In addition to this, it ceded all of Germany's overseas colonies to the principal Allied Powers. In Africa, the Cameroons were divided between France and the British Empire; East Africa went to Great Britain and Belgium; Great Britain got Togoland; also, Southwest Africa was ceded to the Union of South Africa.

In the Pacific, Germany lost Marshall Isles to Japan; Samoa to New Zealand; New Guinea to Australia; and the Naura Island to Great Britain. Germany also had to renounce, outright, the peninsula of Shantung to Japan.

Great Britain. Germany also had to renounce, outright, the peninsula of Shantung to Japan.

In addition to all of this, Germany lost all of her state property, movable and immovable, in her colonies. An absolute clean sweep was made of her transmarine possessions—properties, powers, and rights. She even had to give up the properties and stations of the German missions.

German missions.

Part 5 had to do with the German Army and Navy. The Army was placed at a maximum of 100,000 men and the Navy was restricted to 6 battleships, 6 light cruisers, 12 destroyers, and 12 torpedo boats. Submarines were banned entirely and Germany was commanded to destroy all existing fortifications.

Part 6 took up the matter of reparations. If anyone wants to

commanded to destroy all existing fortifications.

Part 8 took up the matter of reparations. If anyone wants to learn how far sound reasoning and statistical facts can be twisted to meet the hate of a revengeful people, let him read the full text of part 8 of the Versailles Treaty. It is significant to note that the Allied Powers were given the right "to confiscate private properties of German citizens" in their respective countries.

Of course, the world now realizes how impossible it was for Germany to fulfill the pledges made in this section of the treaty. Not only were the demands impossible for Germany to meet but they bankrupted the nation and made a political farce of the efforts to establish a wholesome democracy.

But worst of all, the Versailles Treaty fertilized the egg which finally hatched in a Munich beer cellar on November 8, 1923. It mally hatched in a Munich beer cellar on November 8, 1923. It was responsible for the birth and growth of Adolf Hitler, with all of his insane ideas of persecution and religious intolerance. It projected a menace upon the political horizon which challenges the social and economic status of civilization itself.

What the rest of the world is going to do about it, poses a difficult question. I have a hunch we have not approached the basis of a real solution as yet. I believe the "republics" have a bitter pill to swallow. If they stop Hitler they will have to smother him to death.

Peace-loving countries must sooner or later climb

pill to swallow. If they stop Hitler they will have to smother him to death.

Peace-loving countries must, sooner or later, climb over on Germany's side of the fence. They must give back their colonies and confiscated properties. They must reduce the trade barriers, extend liberal credits, buy German products, and generally accord the German people an equal place under the sun.

These things must be done even though the negotiations go through the Third German Reich. My whole point is that a differentiation must be made between the German people and Adolf Hitler. The best way to stop Hitler is to make him unnecessary. I cannot help but feel that the country which gave the world Martin Luther, Mendelssohn, Goethe, Steinmetz, Einstein, and hundreds of other outstanding men and women, must be a pretty decent spot on the globe. I believe the great mass of German people are peace loving and sportsmanlike. I have an opinion that they would welcome the generous overtures of the rest of the world with deep appreciation and instantaneous cooperation. I suspect they would rather have our good will than a Hitler.

Of course, I realize this point of view will not be popular but, at least, it represents my best judgment, and I am willing that it be filed alongside of the Versailles Treaty for the perusal of future generations.

generations.

Jute and Cotton

EXTENSION OF REMARKS

HON, STEPHEN PACE

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 31, 1939

Mr. PACE. Mr. Speaker, on February 28 the Department of Agriculture reported as follows with respect to the cotton

On February 1 domestic stocks of American cotton totaled about 17,500,000 bales. This was nearly 2,000,000 bales larger than the previous record stocks as of that date and more than twice as large as the average for the 6 years ended 1930.

From August through December foreign consumption of American cotton was the smallest in 20 years. Exports of American cotton continue exceptionally low. During the 8 weeks ended February 22 they were about half as large as the comparatively small exports of a year earlier. In January they were the smallest for that month since 1872, or in 67 years. Total domestic exports from August through January were 43 percent less than a year earlier, the smallest for the period since 1881–82.

This surplus of 17,500,000 bales is the largest in the history of the Nation, and another crop of around 12,000,000 bales is now being planted.

We must increase our exports of cotton; we must recapture our foreign markets, and at the same time we must increase the use of cotton in this country. Otherwise I see little hope in the future for the cotton farmers of the South.

I think the time has come when the Congress should solemnly resolve to save the American market for the American farmer. We can never increase the farm income and raise the standard of living on the farm as long as our farmers must compete with farm products grown in foreign countries like India and the Philippines, where the cost of living and the standard of living are much lower than in our

For example, jute is grown in India, a country with the very lowest standard of living. Yet we are importing into this country each year jute and other hard fibers in sufficient quantity to displace over 2,000,000 bales of cotton. Here are the figures:

Estimates of the quantities of cotton that would be consumed if jute and hard fibers were replaced entirely by cotton

IMPORTED JUTE [Bales of 478 lbs. net]

Bags:	
Mill feed	248, 000
Fertilizer	
Sugar	
Potatoes (white)	56,000
Wheat (bran and shorts)	50,000
Flour (all kinds)	
Other (for other products and sundry purposes)	19,000 111,000
Contract products and saidly purposes/	111,000
Total	620,000
Bagging for wrapping bales of cotton (12,000,000 bales)	135, 000
Textile wrapping (bales covering manufacturing goods)_	
Wool carpets and rugs	95, 000
Twine and cordage (including tying United States	20,000
mails)	75,000
Road building	100,000
Rags for U. S. Navy, low-grade cotton	200,000
Other	8, 000
Other	
Total	588, 000
Grand total	1 208 000
	2, 200, 000
IMPORTED HARD FIBERS	
Binder twine and rope	550,000
Other (mostly twine and cordage)	600,000
Grand total, hard fibers	1, 150, 000
Grand total, jute and hard fibers	2, 358, 000

For the last 2 years I have been trying to cooperate with the Department of Agriculture in its efforts to find new uses for cotton. Their research work is not only very interesting, but I believe it is soon going to result in establishing new and economical uses for cotton.

I have been particularly interested during the present session of Congress in the activities of the Division of Cotton Marketing in trying to perfect a cotton twine which will fully compete with the jute twine now in use by the Post Office Department. When the appropriation bill for that Department was before us 2 weeks ago I secured adoption of an amendment requiring the use of at least 50 percent cotton twine. That cotton can compete with jute, both in service and in price, is fully shown by the following letter which I have received today from Mr. R. J. Cheatham, who is in charge of cotton utilization research, who understands the problems of the southern cotton farmers, and who merits the praise of every southern Representative.

MARCH 30, 1939.

Hon. Stephen Pace,

House of Representatives.

Dear Mr. Pace: In response to your telephone request of March 28 for a report on the small-scale tests which we have recently completed on a new cotton twine for tying out packages of letters and other types of mail, I am summarizing, herewith, the results obtained from these trial shipments.

The cotton twine used in these tests was developed by the

Cotton Utilization Section of the Bureau of Agricultural Economics in cooperation with a prominent cotton manufacturer of your State. Trials of cotton twine conducted in the past by the Post Office Department showed that the types generally available at that time possessed several undesirable properties, and this new cotton twine represents the result of an effort to produce a twine which would obviate these difficulties.

The tests were conducted as follows:

The tests were conducted as follows:

Five lots, each consisting of eight bundles of letters, four tied with cotton and four tied with jute twine, each bundle weighing approximately 2 pounds, were sent from Raleigh, N. C., to offices of this Bureau in the following places: San Francisco, Calif., Atlanta, Ga., New York, N. Y., Chicago, Ill., and Dallas, Tex.

The 40 packages were tied by an experienced mail clerk in the Raleigh (N. C.) Post Office in order to insure, so far as possible, attaining equal tension on the packages. All jute twine used in the experiment had a small section marked with red dye so that it could be determined whether or not the twine had broken and was replaced in transit. No mark was placed on the cotton twine, as no post office or Railway Mail Service had such twine in stock and any replacement made would be evident.

Our representatives in these cities were asked to report particularly on the following points: (1) Comparative looseness of the jute and cotton twine; (2) condition of the letters, as to whether or not they seem to have shifted in the packages; and (3) whether the ends of the envelopes had been cut by the twine.

the ends of the envelopes had been cut by the twine.

Reports made by Bureau representatives upon receipt of the packages at the various points showed that both the packages tied with cotton and those tied with jute twine arrived in sufficiently good condition to be returned without the necessity of having the twine replaced or retied. The packages tied with cotton twine appeared to be in slightly better condition, on the average, than did the packages tied with jute twine, but no appreciable differences were noted in any respect.

The various packages of letters were then retagged and returned

examined each bundle and found their condition to be as follows:

All bundles, with the exception of one tied with jute and one tied with cotton, both sent from Chicago, were received into the condition of the All bundles, with the exception of one tied with jute and one tied with cotton, both sent from Chicago, were received intact. The twine on these two bundles had evidently slipped off the ends or broken during the return trip. The original jute twine on one other package had been replaced with a heavier twine. As a whole, the bundles tied with cotton twine were tighter than those tied with jute. No appreciable difference as detected in regard to cutting of envelopes and disarrangement of letters in bundles.

Although these tests indicate that this new cotton twine is fully satisfactory, I think it is well to point out that the trial was on such a small scale that the results should be considered as preliminary in nature until the twine can be tried out more extensively

nary in nature until the twine can be tried out more extensively by actual regular use in the Post Office Department.

On a yardage basis this new cotton twine is only slightly higher in price than the last jute twine supplied on bids to the Post Office Department.

We shall be pleased to keep you advised on subsequent develop-ments and greatly appreciate your interest in our efforts to extend

the uses of American cotton.

In the meantime, if there is any further information which we may be able to supply you, please let us know. Sincerely yours,

R. J. CHEATHAM, In Charge, Cotton Utilization Research, Division of Cotton Marketing.

W. P. A. Appropriation

EXTENSION OF REMARKS

HON. MICHAEL J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1939

Mr. MICHAEL J. KENNEDY. Mr. Speaker, Members of the House, the President of the United States by a message in writing, dated January 5, 1939 (H. Doc. No. 8), informed the Congress that an appropriation of \$875,000,000 was necessary to meet the relief situation in the country. On February 4, 1939, Congress appropriated the sum of \$725,000,000 on the false assumption that such sum was wholly adequate to meet the needs of relief for the fiscal year ending June 30 next. The President, on March 14, 1939 (H. Doc. No. 205), by message in writing, informed the Congress that its partial compliance with his previous request for funds would not and could not meet the required needs of relief for the balance of the fiscal year, and he therefore demanded that the Congress meet the situation by appropriating the balance of the original request; that is, the sum of \$150,000,000.

Until today nothing was done to comply with this request. We are now attempting a further compliance therewith. The Committee on Appropriations has reported House Joint Resolution 246, wherein it is sought to appropriate an additional sum of \$100,000,000. In my judgment, this sum is inadequate to care for the relief situation of the country. Private employment, either willfully or otherwise, has not taken up the slack of unemployment. This, in spite of the fact that the Congress acted to and did repeal certain taxes claimed by big business as a detriment to it. It was the complaint of big business that these taxes made it impossible to meet their need of development of plant and personnel, that if these taxes were removed business and industry could go forward and take up the slack of unemployment, subsequently relieving the W. P. A. and relief rolls. The removal of these taxes has not, however, prompted business and industry to so act. We are, therefore, faced with the same situation for relief legislation as prevailed when the President first advised the Congress thereon, to wit: January 5, 1939.

The attitude of the Congress has been piecemeal—first, it was claimed that the sum of \$725,000,000 was sufficient. Recently, the Congress has conceded its error, but in an attempt to save face the concession was only partial. In its greater wisdom, Congress now claims that the sum of \$100,000,000 is sufficient to meet the immediate needsrather than the \$150,000,000 advocated by the President. Due to the parliamentary procedure by which the House of Representatives is governed, we are compelled to adopt a practical attitude in order thereby to protect properly the unemployed and the needy. Were we to reject the proposed appropriation proffered in House Joint Resolution 246 we would thereby fail to meet the demands of the immediate situation in any respect. Under House rules, it will prove a virtual impossibility to obtain a roll-call vote to increase the appropriation to \$150,000,000. We must take or leave what is offered. To my mind such a situation is unworthy of a truly legislative body. Opportunity should be provided for a full and open attempt to comply with the President's request. The House committee in its report states, "recognizing that time is of the essense just now because of the pressing need, however brought about, to project administrative procedure for the remainder of the fiscal year, the committee perforce has pursued a more liberal policy than a searching inquiry probably would justify."

This language constitutes a feeble apologia for the committee's failure to comply fully with the President's request and a weak excuse for its failure to meet the actual situation of relief for the unemployed, which is such a vital issue at this time. We should not temporize with necessity and want. Millions of our citizens look with hope and confidence to the Congress for relief from a pressing economic situation, over which they have no control. To lessen or liquidate at this time the W. P. A. enterprises is tempting economic fate. The very attempt so to do will further destroy the already inadequate purchasing power of millions of our people to the ultimate harm of business and industry. If people cannot buy, business and industry cannot sell. It is our duty as a nation, during the period business and industry are unable to go forward and take up the slack, to maintain W. P. A. programs in order to give purchasing power to the unemployed. Unless we can maintain this equilibrium between purchasing power, consumption, and production, the entire economic edifice founded thereon will cease to function, bringing in its wake further chaos and distress to all, and especially to the unemployed and the needy.

Due to circumstances beyond their control a rather high percentage of the people in my district have been forced to resort to the relief rolls in order to sustain themselves and their families. Therefore, Mr. Speaker, while I deeply regret the parliamentary situation that practically prevents this House from raising the amount of the appropriation reported by the House Committee on Appropriations, I shall be constrained, in order to act in the best interests of the people whom I represent, to support the resolution as reported, reserving my rights to attempt by all parliamentary means possible to increase the same to the amount of \$150,000,000 as requested by President Franklin D. Roosevelt.

Should the Wagner Law Be Amended?

EXTENSION OF REMARKS

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Friday, March 31, 1939

RADIO TALK BY HON. CLARE E. HOFFMAN, OF MICHIGAN, GIVEN OVER WJSV ON MARCH 30, 1939

Mr. HOFFMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert herein copy of talk delivered by me on March 30, 1939, over the Columbia Broadcasting System from station WJSV in Washington:

Fellow Americans, one of the most important questions now be-

fore Congress is this: Should the Wagner law be amended?

As expressed in its title, the National Labor Relations Act, commonly known as the Wagner law, was passed "to diminish the causes of labor disputes burdening or obstructing interstate and foreign commerce."

foreign commerce."

If figures mean anything, it has not lessened the causes of such labor disputes, for though we find, from the Department of Labor's own figures that during 1928, 1929, 1930, and 1931, a 4-year period, we had in this country 2,972 strikes, involving 1,127,579 workers, and causing a loss to industry of 28,193,455 man-days of production; we also find that in 1 year, 1937, which might well be said to be the first year during which the Wagner law manifested its full strength, we had 4,740 strikes, which involved 740,000 more men than did the strikes during the 4-year period beginning with 1928, and these strikes caused a loss of almost 300,000 more man-days of production than were lost during the 4-year period.

In 1934, we had 1,856 strikes; in 1935, 2,014; in 1936, 2,172; and in 1937, as stated, 4,740.

The number decreased in 1938 to 2,350, but a number still greater

The number decreased in 1938 to 2,350, but a number still greater than in any year between 1921 and 1933.

The decrease can be attributed largely to the fact that business was flat on its back; lacked the funds to carry on a losing fight against the C. I. O. and the Board and found it easier temporarily to submit to the demands of the Board than to do costly battle

in the courts. Within the week the president of the American Federation of Labor said:

"The American Federation of Labor is the friend of the National Labor Relations Act. We sponsored it in the beginning. We helped draft it. We contributed largely toward its enactment into law."

He then demanded the amendment of the law.

At the time the law was enacted the A. F. of L. was the only great labor union, and apparently it proceeded in the drafting of this law.

on the theory that the Board interpreting and enforcing it, if it did not favor organized labor, would at least maintain a judicial attitude.

Unfortunately for the A. F. of L., the C. I. O. was organized, and, falling under the domination of Communists, although its leader, John L. Lewis, is not one, and using Communist methods, it proceeded by means of the sit-down strikes, threats, intimidation, and violence, not only to unionize the unorganized but to raid the mem-

violence, not only to unionize the unorganized but to raid the membership of the A. F. of L.

The National Labor Relations Board, the enforcing agent of the National Labor Relations Act, became the active ally of the C. I. O. until, as President Green said last week, it—

"Through decisions clearly in favor of the C. I. O. and against the American Federation of Labor, is working out the destruction of the American Federation of Labor."

Again, he said:
"We saw in this measure a new 'bill of rights' for labor; it has been used to nullify the rights of unions established during half a been used to nullify the rights of unions established during hair acentury. Under this act, workers were to be safeguarded in organizing, free from employer interference. Instead, labor has found itself coerced by a new and powerful bureaucracy."

Here we have the reason for the demand of the A. F. of L. that the Wagner law be amended.

Too many people have assumed that the act was passed solely in the interests of organized labor. While the A. F. of L. may have a membership of between three and four million and the C. I. O. claims a like number, a total of somewhere between six and eight million organized workers, the census of 1930 tells us there are more than 38,000,000 employees in this country, exclusive of agri-

cultural, forestry, and fishing workers.

The fundamental fault with the act is that it is basically unfair. All admit that the employer is without remedy for unfair labor practices on the part of his employees; that the act, by its terms, not only fails to acknowledge that organized labor or employees can not only fails to acknowledge that organized labor or employees can be guilty of unfair labor practices; that it not only fails, after granting certain rights to workers, to grant reciprocal rights to employers, but that it, in fact, places the employer, in the conduct of his business, absolutely at the mercy of the Board, organized labor, and employees, and that under it his business can be destroyed without legal redress.

Proof that the Wagner law permits the business of the employer to be injured or destroyed; the right of the worker to refuse to join a union without losing his job to be taken from him; the right to collect dues and bargain with the employer to be taken from a labor union and the union destroyed—by the action of the Board is found in three recent cases decided in the United States courts.

States courts.

States courts.

In the Zirkin case, decided by the Circuit Court of Appeals for the District of Columbia on the 27th day of March 1939, there were, among other employees, 11 fur workers. After an organizing campaign, 1 joined the C. I. O.; later another joined. The other 9 workers joined the A. F. of L., with whom the employer, obeying the provisions of the act, made a collective bargaining agreement.

The two C. I. O. workers, assisted by men who were not employed at Zirkin's, picketed the plant. The court said:

"The persons picketing Zirkin's place of business were disorderly in their conduct, made assaults and attempted assaults upon the fur workers of Zirkin's, intimidated and coerced them by threats of bodily harm, and interfered with customers of Zirkin's while they were entering or leaving the business establishment."

Zirkin's would have been guilty of unfair labor practice under the act, had it refused to bargain collectively with the A. F. of L. union.

of L. union.

Although Zirkin's had complied with the law in every particular and its business was being destroyed, the Court, in dissolving an injunction which had been issued to restrain the pickets from assaulting, intimidating, and coercing the workers and customers said.

"The result is an inequality before the law as between an employer and employees in this particular, namely, that while the employer has a right to carry on his business, he lacks a legal remedy for protecting it against injury through the struggle of

competing unions."

The Court further held that Zirkin's only remedy was through

The court further held that Zirkin's only remedy was through an amendment of the law by Congress.

The employer and the A. F. of L. employees were told that, while they might have rights which were being taken from them, there was no legal remedy under the Wagner Act.

The effect of this decision is that, if you have a business, employ men, and those men cannot agree upon which organization they desire to represent them for the purpose of collective bargaining, and if you bargain collectively with one faction—as you can, under the act, be forced to do—the other faction, if the Board fails to call an election, as it has in many cases, can picket your place of business, use force and violence insofar as the Wagner Act is concerned, and absolutely destroy your means of livelihood.

Such a condition, in a country which claims to be free, should not be tolerated for a moment and Congress has been remiss in its duty, in its failure to take up and solve this problem long ago.

Not only is the law unfair to the employer, but, as interpreted Not only is the law ultilar to the employer, but, as interpreted and administered, it absolutely deprives the worker of the very right guaranteed to him; that is, the right to bargain collectively through representatives of his own choosing.

As authority for this I cite the statement of the chief counsel of the A. F. of L., Joseph A. Padway, who, arguing before the Supreme Court of the United States in a labor case, said:

"One would imagine that every employee under section 7 (of the

"One would imagine that every employee under section 7 (of the act) has the absolute right to freedom of choice in respect to representatives for the purpose of collective bargaining. Nothing can be further from the truth."

Proof that the Board has the power to destroy, and has destroyed, independent unions is found in the decision in the Harris case, reported in 100 Federal (2d) 197, affirmed by the United States Supreme Court on February 27, 1939.

Supreme Court on February 27, 1939.

There the Board disregarded the result of an election called by it, certified as representatives for collective bargaining those who did not represent the majority, and, when the majority, represented by an independent union, appealed from this order or certification, the employees and the union were told that they had no right to appeal, that they could not bargain collectively through representatives of their own choosing; that they could not exercise the right which was expressly given them by section 7 of the act.

Another case, where the A. F. of L. was the victim of the Board's arbitrary decision, is that of American Federation of Labor et al. v. National Labor Relations Board, decided on the same day, February 27, 1939, by the Circuit Court of Appeals for the District of Columbia.

There, for the purpose of selecting the representatives for collec-

There, for the purpose of selecting the representatives for collective bargaining, the Board designated the whole west coast as the bargaining unit, or election precinct, from which these representatives should be elected.

sentatives should be elected.

Many individual employers, many cities, many ports of entry were included in this district, and it was matter of common knowledge that, throughout that district as a whole, Harry Bridges, the alien Communist, held sway.

Ignoring the claims of the A. F. of L., which had many members in this territory, an election was held and the C. I. O., having a majority in the whole district, was designated as the bargaining

The result is that from Mexico to Canada all of those members of the A. F. of L., if this decision stands, will be forced either to join the C. I. O., pay dues to Harry Bridges' communistic organization, or lose their jobs.

zation, or lose their jobs.

In this case, acknowledging this injustice, the Court said: "So that what happened was precisely what in a proper case the act designed should happen, but, as we have seen, with the result that petitioner, in the localities in which its members constituted a majority, was—if the Board's decision as to the representative unit is valid—deprived of the very thing which petitioner insists it was the purpose of Congress to secure and protect."

Your attention has been called to these three cases for they establish the fact that, under the Wagner law as it stands, as it is interpreted and administered by the Labor Board, an employer can be deprived of his business, the individual worker can be forced to join a union, pay dues, or lose his job, and labor unions can be destroyed—all without remedy under the act.

Other circuit courts of appeal have held, as has the United States Supreme Court in the Harris case, that, from the order certifying

Supreme Court in the Harris case, that, from the order certifying representatives for collective bargaining, the employees had no appeal to any court; thus, they were deprived of the right given

them by section 7.

The Wagner Act does not in all cases give to the employee the right to bargain collectively through representatives of his own

choosing.

That act does not protect an employer, the man who furnishes the jobs and pays the workers, from the unfair, the unlawful activities of either labor organizers or his own employees.

The act does not protect the employee against intimidation, coercion, and force on the part of labor organizers.

The act does not protect the millions of unorganized employees.

The statement of the president of the A. F. of L. is true. The act is being used to raid and to destroy that great labor organization. ization.

The conclusion, therefore, is that Congress should so amend the law as to accomplish the purpose stated in its title, and to that end I have offered amendments which I sincerely believe will do much to aid labor, restore industrial peace, and protect the worker who wants to join or not to join a union.

A New Deal Exhibit

EXTENSION OF REMARKS

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Friday, March 31, 1939

EDITORIAL FROM THE SHELBYVILLE (IND.) REPUBLICAN

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Shelbyville Republican of March 30, 1939:

[From the Shelbyville (Ind.) Republican, of March 30, 1939] A NEW DEAL EXHIBIT

Three times in the last 3 months President Roosevelt has insisted that W. P. A. has not enough money to feed the hungry unemployed. But in spite of this relief emergency, the W. P. A. will spend a quarter of a million dollars for an ornate pavilion at the New York World's Fair, the only Government activity to have

New York City Relief Administrator Somervell has announced that this W. P. A. show will be housed in a building not far removed from the bubble dancers of the fair's great white way.

removed from the bubble dancers of the fair's great white way. The structure, with a 256-foot frontage, will contain an open-air court 126 feet long and 80 feet wide, filled with shade trees, comfortable benches, gravel walks, flower beds, and a fountain. The interior, opulently adorned with murals by W. P. A. artists, will be a living panorama showing W. P. A. workers at their desks in laboratories and classrooms; at work benches repairing books, furniture, and toys; in kitchens cooking; and sewing. Elaborate models and charts will show W. P. A. workers constructing highways, bridges, airports, and other large projects. There will be a ways, bridges, airports, and other large projects. There will be a 299-seat theater equipped with a revolving stage and motion-picture projection booth and a band shell for concerts and folk dancing. It has been admitted that the \$250,000 cost of the building is only a start, and the completed project will come to be a start of the project will come to be a start of the project will come to be a start of the project will come to be a start of the project will come to be a start of the project will come to be a start of the project will come to be a start of the project will come to be a start of the project will come to be a start of the project will come to be a start of the project will come to be a start of the project will be a st more than twice as much. Apart from the workers who participate in the actual displays, a characteristic New Deal note will be an administrative staff of some 200 persons.

administrative staff of some 200 persons.

Congress has already appropriated \$3,000,000 for a Federal exhibit at the New York World's Fair and it did not authorize any separate exhibit for W. P. A. If, as President Roosevelt has stated, the W. P. A. is seeking "all possible economies," why should a quarter of a million dollars of relief money be used to house an exhibit at the world's fair? At prevailing rates that sum would have kept 1,388 workers on W. P. A. rolls for the next 3 months. Looked at from the taxpayers' point of view, it would require the taxes on more than 5,200 incomes of \$5,000 each to pay the cost of this exhibit.

this exhibit.

this exhibit.

Not only is this exhibit a flagrant waste of relief money but, as is the case with so many New Deal activities, it is an interference with private business as well. The W. P. A. Theater, which will provide free entertainment by a series of 40-minute plays, has already evoked a protest from the owner of the Merrie England exhibit, which includes a reproduction of the famous Shakespearean Globe Theater. This free competition endangers the entire enterprise representing a considerable investment and the employment

Taken all in all this pavilion is well calculated to show the spirit of the New Deal in the World of Tomorrow. It is a perfect exhibit to present the viewpoint of an administration which has nothing to offer the unemployed but relief, an administration which makes it difficult for private enterprise to succeed, an administration which is so anxious to spend taxpayers' money that its activities make it difficult for the unemployed to get jobs in private industry.

private industry.

Josephine Brownson of Detroit Awarded Laetare Medal for Catholic Action

EXTENSION OF REMARKS

HON, LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 31, 1939

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I wish to have preserved in the Congressional RECORD an event of memorable significance.

On Sunday, March 19, 1939, Miss Josephine Brownson, a respected and beloved citizen of my congressional district in Detroit, Mich., was awarded the Laetare Medal by the University of Notre Dame. This honor, the highest a Catholic layman can receive in the United States, is bestowed

annually by the university.

Miss Brownson, president of the Catholic Instruction League of Detroit, is widely known for her educational activities. In 1906 Miss Brownson established the league in Detroit for the purpose of instructing Catholic children in public schools. At the present time she has some 400 teachers and 13,000 students under her supervision. Formerly an instructor of mathematics in a Detroit high school, the medalist resigned her position to devote her time to religious instruction.

In recognition of Miss Brownson's contribution to the cause of Catholic Action, the late Pope Pius XI conferred on her the papal decoration Pro Ecclesia et Pontifice in 1933.

Both in Catholic Action and in the field of writing Miss Brownson carries on the literary traditions of her family, begun by Orestes A. Brownson, the "Father of American philosophy." Her published books include Living Forever, Feed My Lambs, and To the Heart of a Child. Miss Brownson's father, a philosopher and author, was awarded the medal in 1892. This is the first time that a descendant of a former medalist has received the honor.

The Laetare Medal is given annually by the University of Notre Dame as a recognition of merit and as an incentive to greater achievement, the award originated in the ancient Papal custom of bestowing the golden rose on a member of the Italian Catholic nobility on Laetare Sunday, the fourth Sunday of Lent. Its modern counterpart was inaugurated at Notre Dame in 1883, when the Very Reverend Edward Sorin, C. S. C., founder of the university, bestowed the first medal on the late John Gilmary Shea, eminent Catholic historian.

Others who have received the medal include Dr. Albert Zahm, present occupant of the Guggenheim chair of aeronautics in the Congressional Library; John McCormack, Irish tenor; Hon. Alfred E. Smith, statesman; Richard Reid, southern editor and writer; and Dr. Irvin Abell, former president of the American Medical Association.

Below is the complete honor roll of the men and women. who in their particular fields of endeavor have achieved such distinction as reflects glory upon their Catholic faith:

1883. John Gilmary Shea, historian. 1884. Patrick J. Keeley, architect. 1885. Eliza Allen Starr, art critic. 1886. Gen. John Newton, engineer. 1887. Edward Preuss, publicist. 1888. Patrick V. Hickey, editor, founder of Catholic Review. 1889. Anna Hanson Dorsey, novelist. 1890. William Onahan, organizer, First American Catholic Congre 1891. Daniel Dougherty, orator. 1892. Henry F. Brownson, philosopher and author. 1893. Patrick Donohue, founder of the Boston Pilot. 1894. Augustine Daly, dramatic producer. 1895. Mrs. James Sadlier, novelist. 1895. Mrs James Sadlier, novelist.
1896. Gen. William S. Rosencrans, soldier.
1897. Thomas Addis Emmett, physician.
1898. Thomas E. Howard, jurist.
1899. Mary Gwendolin Caldwell, philanthropist.
1900. John A. Creighton, philanthropist.
1901. William Bourke Cochran, orator.
1902. John B. Murphy, surgeon.
1903. Charles J. Bonaparte, lawyer.
1904. Richard Kearns, diplomat.
1905. Thomas B. Fitzpatrick, philanthropist.
1906. Francis Quinlan, physician.
1907. Katherine E. Conway, journalist.
1908. James C. Monaghan, economist.
1909. Mrs. Frances Tiernan (Christian Reid), novelist.
1910. Maurice Francis Egan, author and diplomat.

1910. Maurice Francis Egan, author and diplomat.

1911. Agnes Repplier, author. 1912. Thomas M. Muiry, philanthropist. 1913. Charles B. Herberman, editor in chief of the Catholic

Encyclopedia.
1914. Edward Douglas White, jurist, Justice of the United States

Supreme Court.
1915. Mary V. Merrick, philanthropist.
1916. James Joseph Walsh, physician and author.
1917. William Shepherd Benson, admiral and Chief of Naval

Operations.

1918. Joseph Scott, lawyer.

1919. George Duval, philanthropist.

1920. Lawrence F. Flick, physician.

1921. Elizabeth Nourse, artist.

1922. Charles P. Neill, economist.

1923. Walter George Smith, lawyer.

1924. Charles D. Maginnis, architect.

1925. Albert Francis Zahm, scientist.

1926. Edward N. Hurley, businessmar

1925. Albert Francis Zahm, scientist.
1926. Edward N. Hurley, businessman.
1927. Margaret Anglin, actress.
1928. Jack J. Spalding, lawyer.
1929. Alfred E. Smith, statesman.
1930. Frederick P. Kenkel, publicist.
1931. James J. Phelan, banker.
1932. Stephan J. Maher, physician.
1933. John McCormack, concert singer.
1934. Genevieve Garvan Brady, philanthropist.
1935. Frank H. Spearman, author.
1936. Richard Reid, lawyer and journalist.
1937. Jeremiah Denis M. Ford, scholar.
1938. Irvin William Abell, surgeon.
1939. Josephine Brownson, founder of the Catholic Instruction eague.

League.

Florida and Old Erin-Contributions of the Irish to the "Land of the Free and the Home of the Brave" Since the Days of St. Brendan

EXTENSION OF REMARKS

HON. JOE HENDRICKS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Friday, March 31, 1939

ADDRESS BY HON, VINCENT F. HARRINGTON, OF IOWA

Mr. HENDRICKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I offer herewith the manuscript of an address delivered before the Friendly Sons of St. Patrick in Miami, Fla., on Friday, March 17, by the Honorable Vincent F. Harrington, a Member of Congress from the State

Ladies and gentlemen, to visit Florida at any time is esteemed a great pleasure, but to sojourn in Miami on St. Patrick's Day, as the guests of the loyal sons and daughters of old Erin, is a delight that warms the heart of an Irishman and lifteth the cup of joy

that warms the heart of an Irishman and lifteth the cup of joy to the brim of overflowing.

About 4 weeks ago it was my privilege to enjoy the hospitality of your neighboring city of Jacksonville, but one really has to come down to Miami on such an occasion as this to plumb the real depths of Florida cordiality and to discover where the real wonders of this gorgeous winter land are really located. Incidentally our congressional committee visited Jacksonville to investigate the matter of digging a ditch across northern Florida, thus separating the two sections of the State. Those northern Floridans want that canal very much and if I were a Miamian. I wouldn't want that canal very much, and if I were a Miamian, I wouldn't object too strenuously. Just think of the extra inducement your Miami boosters would have to offer us northern tourists—a visit to the only island State in the Union—a sojourn in a southern Florida paradise surrounded entirely by the Gulf Stream. I can think of no adequate rebuttal whatever from the Los Angeles Chamber of Commerce.

When one considers, too, that this is the same Gulf Stream that kisses the southern shores of the Emerald Isle it is easy to con-ceive of there being a bit of Florida transplanted in Ireland, and the physical affinity between the two islands would be such that no loyal Irishman would ever again want to spend a winter in California. He would have to come to Florida, not only because of the inherent virtues and superiority of this magnificent winter land, but also simply as a matter of sentiment. And sentiment is no light matter with the Irish.

Before venturing down here I thought I had better look up a little of the early history of Ireland and Florida to see if I could establish any natural affinity other than the Gulf Stream. So I went over to the Congressional Library and browsed around a bit, and believe you me I think I really found something there. The first thing I learned—and this may sound like heresy coming from a good Knight of Columbus—the first thing I read was that Christopher Columbus was not the first European to discover America but that an Irishman had beat him to it by something like a thousand years and had voyaged over here in the sixth century. sand years and had voyaged over here in the sixth century. However, when you stop to consider that 14 centuries later another Irishman got off the track with his airplane, flew backward, and landed in Ireland by "mistake," you can see that these Irish are capable of doing almost anything, and it is consequently quite believable that one actually did visit our shores many hundred years ahead of Columbus.

years ahead of Columbus.

Of course, this is largely legend and tradition, but an exploration of the lore of early medieval times discloses that the discovery of a western world is frequently alluded to, and that this land was commonly referred to as Irland it Mikla, or Great Ireland. It all seems to date back to the voyages and discoveries of an Irish monk named Brendan. For the benefit of any Scandinavian constituents from my district who may be listening in and who cling to the belief that it was Leif Ericson or Eric the Red who first discovered America, let me say that the source of the tradition of St. Brendan America, let me say that the source of the tradition of St. Brendan is as much Norwegian as it is Irish. In the oldest Norse sagas the southern coasts lying between Virginia and Florida are designated as the land of the white men. They are expressly called Great Ireland, and it is maintained they were peopled by the Irish. Later volumes in which corroborative accounts are recorded were com-piled 3 centuries before the birth of Columbus, and evidently represent the then prevailing belief in a Great Ireland beyond the

western sea.

Irish annals also make special mention of the same fact. They credit the first voyage westward to St. Brendan, who flourished from the year A. D. 550 till the beginning of the following century. Another thing: Two centuries before Columbus the discovery of St. Brendan's Land is an accepted tradition in Italy and the Italian geographers set it down on their conjectural charts as "opposite Europe and Africa, from the south of Ireland to the end

of Guinea."

Pursuing the legend further, we arrive at a description of this new world which seems to have been settled and peopled, for a time at least, by the Irish. In the thirteenth century the Golden Legend was written by the Bishop of Genoa (the native city of Columbus), and special prominence is given in this work to the new world discovered by St. Brendan. And here is the interesting point: The frequent references of the Golden Legend to the "singing of the birds," the "greenness of the vegetation," the "promised land," and the "semitropical paradise" of this new world can lead to but one conclusion in the mind of any unbiased southern Floridian. And this conclusion is that the land discovered, settled, and peopled for a while by St. Brendan was none other than your beloved Florida. What happened to these prehistoric Irish settlers, of course, no one knows. Perhaps the Indians wiped them out, or the mermaids lured them to their doom, or it may have been the alligators. been the alligators.

Now, having demonstrated to your satisfaction that an Irishman discovered Florida and that the first white settlers of this sweet land of sunshine were the sons of Erin, I want to point out that, appropriately enough, it was another Irishman who made it possible for Florida to become a part of the United States. I refer to one other than the great patron saint of the Democratic Party, the illustrious Andrew Jackson. After his defeat of the British at New Orleans in the War of 1812, General Jackson prosecuted the Seminole war to a successful conclusion and thus paved the way for the acquisition of Florida in 1819.

Andrew Jackson was the unlettered son of poor Irish immigrant parents. Untutored in the technique of the schoolroom, he was nevertheless the recipient of a rich heritage of common he was nevertheless the recipient of a rich heritage of common sense and tenacity and a richer heritage of courage to defend and maintain those rights for which his forefathers fought. So it is that we find Jackson meeting the challenge and turning back the same reactionary trend in this young Republic that had contributed to such misery and tragedy in the homeland. Being of the common people it was but natural that this simple son of the American frontier should rise to the defense of the common people when avarice and special privilege and the principle of property rights above human rights threatened to circumvent the Constitution and make a mockery of the Declaration of Independence. A sense of justice and fair play and the courage to fight on the side of the underdog are inherent characteristics of the Irish race and Andrew Jackson personified these typical virtues to the highest degree. virtues to the highest degree.

I wish it were possible to continue the analogy by producing some evidence that Irish blood flowed in the veins of the romantic

I wish it were possible to continue the analogy by producing some evidence that Irish blood flowed in the veins of the romantic Ponce de Leon who was undisputably Florida's first and foremost press agent. Broadly speaking, however, the Irish and the Spanish, the Scotch and the French spring from a common Cettic ancestry, remote as it may be, so it is easy to understand that the romantic flair which inspired Ponce's quest for the fountain of perpetual youth could readily have been of Irish origin. And, if the Spanish explorer had only known it, the object of his search—the fountain of youth—existed and lives forever in the hearts of every true son and daughter of Erin, for the Irish are essentially a people of youth, love, and laughter.

As we are gathered here tonight to celebrate the birthday of the man who brought Christianity to the Emerald Isle some 1,600 years ago, it would seem in order to touch lightly on the background of the Irish. We sons of Irishmen may well be proud of our ancestry which dates back beyond that of almost any other European people. Long before the great event in Galilee, Irish kings were enthroned in Erin, and while England and most of Europe was yet a savage and uncouth wilderness the seeds of learning and culture were firmly planted on Irish soil. From the fifth to the twelfth centuries the schools and University of Ireland enjoyed a widespread renown and attracted students from many parts of Europe. Irish travelers penetrated into every part of the then known world and contributed their knowledge and genius to the development of civilization and Christianity. Throughout the Dark Ages of European history, Ireland alone cradled the spark of liberty and kept alive the torch of intellect, and when Charlemagne welded together his empire he recruited Irish scholars and monks to bring about a revival of learning and a renaissance of culture and civilization.

Ultimately, however, Ireland was to succumb to military force and for several centuries she bore the yoke of oppression which

Ultimately, however, Ireland was to succumb to military force and for several centuries she bore the yoke of oppression which has been lifted only within the memory of this generation. Consequently the settlement of the new world and the establishment sequently the settlement of the new world and the establishment of a free and independent government on the shores of America offered a heaven-sent sanctuary to the suffering and suppressed back in the old country. The part played by Irish immigrants in wresting a foothold in the American wilderness and later on in helping to free the colonies is well known to every school-

Irishmen served in the Continental Congress and aided in drafting the Declaration of Independence and in writing the Constitu-tion. Their gallantry in many of the battles of the Revolution is a matter of record. It is said that at least half of Washington's Continental Army was composed of Irishmen while "Mad Anthony" Wayne's command was recruited almost entirely from the sons of Ireland. It is interesting, too, that when the British evacuated

Boston on March 17, 1776, General Washington's password on that day was "Boston" and the countersign, appropriately enough, was "St. Patrick."

"St. Patrick."

Likewise the Irish have conspicuously displayed their valor in every other war this country has engaged in. They fought at New Orleans, in Mexico and Texas, and on both sides at Gettysburg. In the late World War, it is estimated, 500,000 of them fell on the battlefields of France.

On the other hand, since the very beginning of this Nation, the descendants of Irishmen have also distinguished themselves in peaceful pursuits—at the bar, in government, in oratory, and in letters. They have made lasting contributions to every avenue of American life. Men of Irish blood have served as governors, as Supreme Court Justices, and as President of this great Nation. They have contributed their genius to our literature, our halls of education, our music and arts, and our stage and screen. Their peculiar talent for politics and government has helped to keep our comparatively youthful ship of state on an even keel with the compass of that ship ever pointed toward the stars of liberty, freedom, and justice. They are forever interwoven into the fabric of Americanism. Americanism.

Americanism.

Recently I read a history of Irish Settlers in North America, written by Thomas McGee in the year 1850. It recounts the conspicuous activities of the early Irish-Americans up to about the middle of the last century. What impressed me greatly was the statement that, in spite of their contribution to the new republic, the people of Irish descent were still being persecuted in America as late as 1840. Bigotry seemed to have been running rampant for a time, resulting in the Philadelphia riots and to other religious persecutions. At any rate, the children of Irish blood and Irish names seemed to be shrinking from the epithet of Paddy, and the book concluded with a stern admonition to Irish blood and Irish hames seemed to be shrinking from the epithet of Paddy, and the book concluded with a stern admonition to Irish parents that unless their progeny were instilled with the proper pride of ancestry and respect for their religion that the rich heritage of Irish-Americans would cease to be in another

generation or two.

I am most happy that this warning either had the desired effect or proved to be unwarranted after all. For today there is not a man or woman in America whose ancestry springs from the a man or woman in America whose ancestry springs from the Emerald Isle but who is proud and sometimes—as on St. Patrick's Day—a little boastful of the fact. Likewise, I believe that we descendants of Irishmen enjoy the respect and, I might add, the affection of most other American citizens. The World War and its liberalizing aftermath did much to break down the bigotry and intolerance of the old order. By their conduct and example the people of Irish blood in this country have convinced

and its liberalizing aftermath did much to break down the bigotry and intolerance of the old order. By their conduct and example the people of Irish blood in this country have convinced the world that they are good citizens and good Americans, and that they have contributed generously not only of their blood and brawn but of their loyalty, industry, genius, and intellect to make America the great nation that it is.

America today is confronted not so much by direct dangers from without as by perils from within which originate on foreign soil. Philosophies of government alien to our ideals and our traditions are seeking to insinuate themselves into the minds and hearts of our citizens. These insidious propagandas would seek to substitute communism on the one hand and fascism on the other for the true American ideals conceived by our forefathers and written into the Declaration of Independence and the Constitution. They would reverse the time-tried theory that the state exists only for the benefit of the individual and made the individual the vassal of the state. They come cloaked in the guise of economic salvation, and what a palpable disguise it is! In the countries where these so-called Utopian forms of government are in effect the people no longer enjoy free speech, a free press, and the freedom of worship. For the most part, they do not even enjoy the normal gratification of physical appetite. They have nothing left to enjoy and they barely exist under the grinding heels of self-deifying dictators. I am proud that the Irish of America are too perceiving, too experienced, and too liberty loving to have anything to do with these false philosophies and that in both the Communist and Fascist movements our Irish-Americans have been very conspicuous by their absence.

It is to be devoutly hoped that communism and fascism will

the Communist and Fascist movements our Irish-Americans have been very conspicuous by their absence.

It is to be devoutly hoped that communism and fascism will never gain a foothold in this land of the free and home of the brave. But in the event of such a threat I am quite sure on which side the Irish would promptly align themselves. Like the patron saint whose birthday we celebrate tonight and who is credited with ridding the Emerald Isle of reptiles, I feel certain that Irish-Americans would be the very first to raise the shield of liberty and help to exterminate the alien agitator and the pagan philosopher.

So, in repeating this ditty that is being sung in more and the pagan philosopher.

So, in repeating this ditty that is being sung in many parts of Ireland tonight I would like you to bear in mind that the objects of St. Patrick's wrath were merely figurative and that they really symbolize all the evil things that endanger our moral and political structure today:

"St. Patrick was a gentleman, and he came from decent people; In Dublin town he built a church, and on it put a steeple; His father was a Wollaghan, his mother an O'Grady, His aunt she was a Kinaghan, and his wife a widow Brady.

"Och! Antrim's hills are mighty high, and so's the hill of Howth, too;

But we all do know a mountain that's higher than them both, too; Twas on the top of that high mount St. Patrick preached

He drove the frogs into the bogs and vanished all the vermin,"

The legends of Ireland are both copious and beautiful. One of the most enchanting tells us that when God set about to create the earth he first put in England to give the world solidity; next he earth he first put in England to give the world solidity; next he fashioned France to give the world a rainbow hue; he added Italy to give the world art, music, and literature; and then he rested content when he gave the world adventurous Spain. But the legend says that St. Patrick, turning to God, said, "Master, Thy work is incomplete—now give us, good God, a country with the heart of a child, the love of a lassie, and the smile of God."

And thus Ireland was born, and hence it is that Irish humor and good nature ever since have warmed the blood and blessed the life of every people; Irish poetry has stirred the deepest depths of the human heart and lifted it to heights sublime; Irish oratory has moved men to high endeavor and daring deeds of valor in noble causes; Irish learning and culture have brightened and

oratory has moved men to high endeavor and daring deeds of valor in noble causes; Irish learning and culture have brightened and softened barbaric peoples and advanced civilization; and Irish love and laughter have penetrated the fiber of all mankind.

Tonight, as the sons and daughters of Irish kings—and all of us are—we may look back upon the story of Ireland, upon its checkered history, upon its heroic struggles, upon its ennobling traditions, with both affection and veneration. And, as Americans, we can look forward into the unnumbered years of the future with serenity and confidence, knowing that as long as the blood of Ireland beats in American hearts, no dictator can impose his will upon American editizens and no oppressor no matter box. his will upon American citizens, and no oppressor, no matter how artful or mighty, can enslave our people. The love of liberty, of truth, of justice, and of free government is seared deep in the souls of Irish-Americans, and their courage to defend these rights is as unquenchable as the sands of Sahara.

A Citizen's Comments on Current Topics

EXTENSION OF REMARKS

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Friday, March 31, 1939

LETTER FROM A CONSTITUENT

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein an interesting and provocative letter from a resident of my congressional district. Honest and sincere thinkers may differ as to the arguments and conclusions contained in the letter. However, I think the comments and observations in the letter are well worthy of scrutiny. It seems to me the author of this epistle is to be congratulated for his interest in national and international problems. I do not want it understood that I necessarily agree with comments of the writer or in his conclusions, but I do feel that his approach to the problems provides an interesting sidelight on what is motivating the impulses of many of our citizens at home today.

The letter is as follows:

EATONVILLE, WASH., March 20, 1939.

Hon. John M. Coffee, M. C.,

Washington, D. C.

Dear Mr. Coffee: In writing this letter I am merely trying to express as concisely as possible certain conclusions that seem to me inescapable and obvious if one attempts a common-sense evaluation of events and conditions today.

of events and conditions today.

Today democracy is under severe pressure. It approaches the diverging road which forks to the left and to the right. Can we avoid those diverging branches and carry on the democracy of our fathers without material changes in the structure thereof? That, it seems to me, is the basic question we can no longer evade.

The pressure for change is terrific. Internally we have our bunds and other subversive groups; dissatisfaction of industrialists on the one hand and of poverty-stricken unemployed on the other; cranks and crackpots of every hue everywhere. Externally we have the saber-rattling egocentrics of Europe and Asia (promoters of a new Dark Age), whose success will probably mean civilized society's end. In the struggle of the European democracies against totalitarian egomaniacs whose one precept is force and more force, I feel that we cannot merely stand by and hope for the best. We must so slant our neutrality that friends of democracy will be aided and its foes assisted only in making a hurried exit. For I believe that democracy can be militant without being militaristic. When pressure is put upon us, counter pressure must be applied. Without some assistance from America to the democracies of Europe in the seemingly inevitable war to come, it may well be that America will heave the ich to de clove and unvestited at a later date. seemingly inevitable war to come, it may well be that America will have the job to do alone and unassisted at a later date.

Present attempts in the Senate to revive the war-referendum idea can have no effect but to weaken our democracy by checkmating its leaders in their efforts to apply the rule of reason to interna-

tional morals. Such a referendum is contrary to the Democratic principle of "government by elected representatives;" it would mean government by emotion in place of reason and would place a premium on demagogues of the Coughlin type who work up mob

premium on demagogues of the Coughlin type who work up mob passions by every device of modern propaganda.

Our magnificent facilities for industrial production are only partly utilized for lack of purchasing power on the part of most of our people. Were it used to the full, and the people able to absorb the production, the resultant well-being in the United States would exceed our most sanguine dreams.

I believe that conditions approaching that ideal can only be attained through the growth of a more tolerant, more democratic spirit among those who hold the reins of economic and political power in America. Our captains of industry and the press and politicians of the reactionary stripe must realize that the days of the rugged individual with the grasping fingers is past. They must understand that the nether third is entitled to something more than a bare subsistence. They must be made to concede the necessity for so ordering our economic life that the efforts of our liberals toward the attainment of a fuller life for the masses can succeed.

sity for so ordering our economic life that the efforts of our liberals toward the attainment of a fuller life for the masses can succeed. Nothing is more disgusting than to read the speeches of our obstructionists in Congress and the Senate. Their one purpose in life appears to be to prevent passage of any and all legislation that can possibly be of benefit to the people. The tragedy is that such a negative attitude hastens the day of crisis when subversive organizations may gain the upper hand. Revolution is bred of misery and the eclipse of hope. By refusing to sanction progressive legislation our reactionaries are preparing the way for Fascist propagandists who are only too active in the propagation of their unholy cult.

of their unholy cult.

I believe the solution lies in restoring to the people their rights as cosharers of the wealth they have produced by their labor. This end can be accomplished by the encouragement of cooperative societies; by the fostering of nonprofit publicly owned utilities, including such necessary utilities as the railroads, coal, gas, and oil; and by the levying of very heavy income taxes in the higher brackets. By these means and others would be accomplished a gradual redistribution of wealth, resulting in improved purchasing

power and greater national well-being.

Let us make no mistake about it, the obstructive tactics of our die-hard conservatives in Washington are as truly subversive in

die-nard conservatives in Washington are as truly subversive in effect as are the equally blundering tactics of the bunds.

By contrast the sane and constructive attitude of your small band of genuine liberals in Congress is heartening in the extreme. The shame is that you are so few. My hope is that voters will some day awake and put into office more men of the type who will work for the interests of all the people, instead of plugging mainly for the special-interest crowd.

I remain, sincerely,

WATT MCHENRY.

WATT MCHENRY.

A Report From Puerto Rico

EXTENSION OF REMARKS

HON. SANTIAGO IGLESIAS RESIDENT COMMISSIONER FROM PUERTO RICO IN THE HOUSE OF REPRESENTATIVES Friday, March 31, 1939

RADIO ADDRESS BY MAJ. GEN. BLANTON WINSHIP, GOV-ERNOR OF PUERTO RICO

Mr. IGLESIAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Maj. Gen. Blanton Winship, Governor of Puerto Rico, over the Columbia Broadcasting System, Saturday, March 25. He spoke from the studios of WJSV, Columbia's station for the Nation's Capital.

Our lovely island of Puerto Rico during the last few months has assumed a new importance to the United States. Although the little Caribbean territory has long been prominent commercially as one of the 10 leading customers of American business, it now has come into even greater prominence because of the new emphasis on national defense and because of President Roosevelt's desire to improve cultural relations between North and South

desire to improve cultural relations between North and South and Central America and the islands to the east and south of us. Puerto Rico, as a Territory of the United States, is closely tied to this great democracy, and I am hopeful that these recent developments will result in a still closer relationship and thus bring about more quickly a solution to Puerto Rico's pressing economic

and social problems.

and social problems.

The island originally was acquired from Spain in 1898 as a consequence of the Spanish-American War, because it was considered to be strategically located for the defense of our eastern seaboard. Ideas changed, however, and plans for establishing defense bases there were abandoned, only to be suddenly revived when President Roosevelt's plan for continental solidarity was announced. It now is deemed essential to provide for complete protection, not only of the Atlantic seaboard of the United States but also of

the Panama Canal and South America, and Puerto Rico has been termed by various military and naval experts as the keystone in our national-defense program. Strategically located in the Caribbean Sea, 1,400 miles south

and east of New York, about 1,000 miles east of Panama, and less than 600 miles from the north coast of South America, Puerto Rico is ideally situated, not only for the large proposed naval air base but also as a full-fledged base for naval vessels. In addition, plans have been advanced for fortifying the island to guard against possible seligure by general forces.

tion, plans have been advanced for fortifying the island to guard against possible seizure by enemy forces.

At the present time there are no modern fortifications of any kind in Puerto Rico nor are there any large armed forces. As for fortifications, Puerto Rico has only its historic forts built three and four hundred years ago by the Spanish Government. These forts are of no value today, except for their great appeal to the thousands of tourists who visit Puerto Rico each year. We have one United States Army reg'ment, the Sixty-fifth United States Infantry, and two National Guard regiments. Our National Guard regiments rank with the best of all National Guard regiments in the States. The Sixty-fifth Infantry now stationed on the island is a consolidation of two regiments which were sent from Puerto Rico to guard the Panama Canal during the World War. Their service there was characterized as outstandingly good and furnishes another example of the unmistakable loyalty of the Puerto Rican people to the United States Government.

Rican people to the United States Government.

Without question, Puerto Rico looks forward to the solution of its problems and to the future happiness of its people under the United States flag. All evidence points to the fact that the people of Puerto Rico are devoted to the idea of cooperation with our Government, and to the preservation of American ideals under

the American flag.
Some individuals with un-American ideas have endeavored to Some individuals with un-American ideas have endeavored to foment trouble in the island, but their ideas find no lodgment there. The people of Puerto Rico want an orderly, democratic government. The island now has been a part of this country for 40 years. Its people have been United States citizens for nearly 22 years. They have been living under a form of government which is as truly democratic, in every respect, as that of the United States mainland. Like their fellow citizens in the States, they enjoy to the utmost the freedom of speech and of worship, the freedom of the press and of civil liberties, and other democratic institutions which make the United States the envy of the civilized world. The Puerto Rican people fully recognize the many advantages which the United States flag has brought them and have no intention of relinquishing those privileges.

Construction of the naval base in San Juan Harbor will prove of great importance to our tourist industry inasmuch as extensive

great importance to our tourist industry inasmuch as extensive dredging of the harbor will be required. To some extent our tourist business has been hampered by the fact that the channel leading into San Juan Harbor was narrow and there was a shortage of anchorage space. But now, since a huge quantity of material will be needed to fill in the landing field, harbor improvements can will be needed to fill in the landing field, harbor improvements can be effected at no additional cost to either the Federal Government or the island. These harbor improvements, together with those already in process at the present time, will make it possible for the largest vessels in the world to enter our harbor, bringing thousands of visitors from the United States and foreign countries. We are counting heavily on the income from our growing tourist business to help the island financially. Not only will the additional tourists help business in Puerto Rico, but so will the several thousand enlisted men and officers and their families who will be stationed there.

will be stationed there.

The plan advanced recently by the Inter-Departmental Committee on Cooperation with the American Republics, of which Under Secretary of State Sumner Welles is chairman, for utilizing the University of Puerto Rico for the improvement of cultural relations between the Americas, also should be beneficial to Puerto Rico, as well as to the United States and the "good neighbor" countries

One byproduct of this plan undoubtedly will be improvement in our steamship service, especially with South and Central America. At the present time the island and its tourist business are ham-At the present time the island and its tourist business are hampered by a shortage of steamship accommodations. In fact, there now is no regular service between Puerto Rico and South America by water. With hundreds of students and scientists from the South American Republics coming to our island each year to study in our university and observe our many outstanding social improvements, some way certainly will be found to include Puerto Rico on the routes of the ships which now travel from the United States to the South American countries. In addition, we will need more ships to carry students from mainland educational centers to Puerto Rico and from the island to the mainland. This improved transportation will benefit our commerce and tourist business as

regretation will benefit our commerce and tourist business as well as facilitating the cultural program.

Perhaps of greatest importance to Puerto Rico is the fact that both the defense program and the cultural-relations proposal should help directly to center the attention of the United States on the island's basic problems—overpopulation and declining

During its first 40 years as a part of the United States, living standards and business conditions in Puerto Rico improved gradually but steadily, reaching a new high point in 1937. At the same time Puerto Rico became increasingly more prominent as a customer of business concerns in the States. In 1937 our purchases were so great—amounting to more than \$90,000,000—that we bought the products of 800,000 acres of farm land in continental United States. Not only that, our purchases of manufactured goods, meant 33,000,000 additional man-hours of work to industries on the

mainland. Puerto Rico became the sixth largest buyer of goods shipped from the States, surpassing all but five large foreign coun-

tries as a customer.

Meanwhile Puerto Rico had come to lead all of Latin America in living standards. Our 1,500 miles of highway, our 2,000 public schools, and our splendid system of sanitation have attracted great attention throughout Latin America and the tropical world. Puerto Rico has been deriving its income almost entirely from the pro-Rico has been deriving its income almost entirely from the production of sugar, coffee, tobacco, and fruits, together with its needlework industry and a few other lesser manufacturing enterprises. Unable to produce many of the everyday necessities of life, such as lard, wheat, flour, machinery, fuel, and so on, Puerto Rico's economy developed on the basis of selling to the outside world most of what it produced and buying from the outside world most of what it consumes. Being a part of the United States, more than 90 percent of this external trade was with the United States mainland.

States mainland.

Business was improving gradually until 1937 when there suddenly came the first of a series of economic blows which have seriously restricted our income, greatly increased unemployment, and made the future a matter of grave concern. These developments for the most part are the result of Federal legislation and

ments for the most part are the result of rederal legislation and regulation.

Because of these conditions, sales of our products to the States declined \$18,000,000 in 1938, a serious blow to an island whose income already was too low.

Our tobacco industry, which once brought us \$25,000,000 a year, returned only \$9,000,000 last year because of market conditions and Federal crop control. Our greatest source of income—sugar and its byproducts—has been reduced sharply under the sugar-control system. Puerto Rico which could produce 1500,000 tons of sugar system. Puerto Rico, which could produce 1,500,000 tons of sugar a year, with employment for 200,000 people, is restricted to a production of 845,000 tons in the current year and can furnish only about 120,000 jobs. When the quota system was adopted Puerto Rico was the only domestic sugar-producing area compelled to make a drastic reduction in its output, and further reductions were ordered for 1938 and 1939.

were ordered for 1938 and 1939.

Reciprocal-trade agreements negotiated with foreign countries by the United States Government for the purpose of aiding mainland business as a whole unfortunately have handicapped a number of Puerto Rico's leading industries. The Swiss treaty, for example, lowered duties on certain types of handkerchiefs and resulted in transferring a considerable portion of our needlework industry to foreign countries where wage rates are miserably low.

The Cuban agreement has brought about a substantial decline in our pineapple industry and proposed amendments to that treaty threaten to reduce further the price of sugar—our main source of income—which already is at low levels. The agreement recently approved with Great Britain has put our coconut industry

on an unprofitable basis.

On the other hand, none of these treaties has opened up new markets for Puerto Rican products to compensate for the losses we have suffered. We realize, of course, that Puerto Ricci is only a small part of the United States, but we are hopeful that the Federal Government will find some way in the immediate future to remove some of these handicaps which have been placed on

our products.

our products.

As a result of these developments and of the application of the Federal Wage and Hour Act to Puerto Rico, unemployment on the Island is about to reach the highest level in history. The Wage and Hour Act, if continued in its present form, will mean at least 90,000 fewer jobs in our needlework industry and other smaller manufacturing enterprises. We are hopeful that Congress will find it possible to amend this act so as to take into consideration special conditions existing in Puerto Rico. As Governor of the island, I am as eager as anyone else to see wages raised to the highest possible level. But I hope that goal can be obtained in a way that will enable the island gradually to adapt itself to higher costs without suddenly throwing large numbers

itself to higher costs without suddenly throwing large numbers of people out of employment.

Our economic difficulties do not, of course, affect the island's tourist attractions. Our visitors will find the same comforts and conveniences as ever. The people welcome visitors, being by nature most generous and hospitable.

Puerto Pico deserves and must have the symmethatic bein and

Puerto Rico deserves and must have the sympathetic help and cooperation of every branch of the United States Government, if it is to survive the developments of the last 2 years. Fortunately there are a few hopeful signs on the horizon which should, to some extent, make up for the losses we have suffered. For one thing, we are asking that Puerto Rico be included under certain provisions of the Social Security Act, and are requesting that the island be included in other Federal programs which will herefit the people from the standpoint of health agriculture. will benefit the people from the standpoint of health, agriculture, and commerce.

Our rum industry shows signs of growing steadily. Sales to the

Our rum industry shows signs of growing steadily. Sales to the States last year totaled close to \$3,000,000, and we hope that this figure will grow each year. We have good prospects also for increased sales of fruit juices, vanilla, and various tropical products not produced in continental United States.

To aid in feeding the large percentage of our population which will be unemployed this summer, the island's landowners have generously loaned many thousands of acres of good farm land to the insular government for the growing of food crops which will be distributed among the unemployed. The land owners also are furnishing oxen and plows to prepare the land, and in some cases are supplying seed and fertilizer. All agricultural agencies in the insular government and in the Puerto Rico Reconstruction

Administration also are assisting wholeheartedly in the success of this really wonderful enterprise.

Our tourist industry, to which I have referred, has shown a steady improvement. We have everything any visitor could ask in the way of climate, natural beauty, historic forts and monuments, and other natural attractions. We expect to obtain several new hotels within the next few months and are endeavoring to work out the necessary arrangements for transporting touriest from the mainland to the island in large numbers. In tourists from the mainland to the island in large numbers. cidentally, we are to have the privilege this summer of entertaining the annual convention of the United States Reserve Officers Association, and expect other large groups to visit the island during

While the island faces serious handicaps, its people have shown great capacity for developing their slender resources and running their government in an efficient and businesslike manner. Even during the recent depression years, with great fluctuations in income, Puerto Rico has balanced its budgets each year and built up a sizable surplus. Labor has gained many advantages through progressive legislation, and until the last year we have been able to make steady advances, at the same time receiving much less Federal aid per capita than any State in the Union or any other Territory.

Now, in view of our newly recognized importance to the United States, we have every reason to hope that the Federal Government and the people of this great country will do everything in their power to aid this little territory in attaining a more stable

economic position.

National Labor Relations Board

EXTENSION OF REMARKS

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Friday, March 31, 1939

Mr. ANDERSON of Missouri. Mr. Speaker, at this time I want to call attention to one of the most vicious phases of the activity of the National Labor Relations Board, that is, its pressure against the small manufacturer and businessman. Those aware of conditions know that despite the fact that we have a tremendous number of large corporations it is the little fellow who makes or breaks the business structure.

As typical of the abuses by the Labor Board I submit the case of the Oil Well Manufacturing Co. of Los Angeles. Calif. This company manufactures oil-well equipment and its owners are workers in the business. Its gross volume of business amounts to about \$165,000 per year and it has a total of 23 employees. Six of these are clerical and 12 more are engaged in production work. The president of the company is a Mr. Clarence White, who is also the company's principal salesman.

The National Labor Relations Board filed a complaint against this company charging that it violated the Labor Relations Act in discharging one Ethan E. Harris and one George E. Falardeau for union activities. The hearing commenced November 9, 1937.

The Labor Board offered its evidence on Falardeau on November 10, 1937, in which he testified that he was dismissed for labor activities.

I had to forfeit it-

He testified on page 159 of the official Labor Board transcript of this case-

I had to take off a couple of days with respect to this matter, and I was more or less discharged. I was laid off. It wasn't due to my workmanship. I had a good reputation there. I worked there previously a couple of years.

Later he testified as follows under questioning of the Labor Board attorney, beginning on page 178 of the official transcript of the case:

Q. I believe you testified that your employment was terminated

on October 4.—A. Yes.

Q. What took place on that day?—A. Well, before coming to work I went to the clock rack for my card to punch in, and it wasn't there. I looked around to ask Thomas Garey, the shop foreman, about it, and he explained that they had to let me go on account of that was the instructions in the event I was off any more time. I was sick with pleurisy, and whenever you are sick you are supposed to call up. I had relayed a message to them and they had no notice of what was wrong with me, so I explained to him that I had a verification of that fact; that I was sick and that the message should have been relayed. I couldn't depend on my nephew. I had an experience like that before, and I said, "It must have been his fault." He called up the wrong place and he said he notified them. That is the way I got it.

By Trial Examiner O'BRIEN:

Q. Would you repeat as best you can remember what was said to Mr. Garey and what Mr. Garey said to you, so it will clarify it?—A. I explained that I had been sick with an attack of pleurisy, and I supposed he got the message; and he replied, "No, George we had to have the work done and we had to hire some-

George, we had to have the work done, and we had to hire some-body else," and "No, George; there is nothing I can do about it. I will just have to let you go." I said, "O. K. There is nothing I can say to make it different." He said he had to hire two men, one for nights and one for days. I went back out, and Mr. Walker, the superintendent, told me the same thing more or less; that they just had to have the work and that they put a man on nights and a man on days on that machine.

Q. Were you laid off that day?-A. What? Q. Did you receive your pay check that day?—A. I did not have any money coming. Their system is that they pay you up to the minute on pay days, and it was 2 days after pay day that I was off. I got paid that night. I was out a Friday and Saturday, and I

returned to work on Monday.

On cross-examination Falardeau testified to the name of the doctor he had called in attendance and of the doctor's diagnosis and treatment of his ailment. He also testified that he had been off from work previously because his wife had been in an automobile accident and he denied ever being drunk. He also testified that he had never been involved in a criminal proceeding while being absent from work.

Now remember, this was on November 10, 1937. On the next day, which was a holiday, the attorney for the company made an investigation and at the trial on November 12 made an offer of proof based on the following information:

First, that the complainant Falardeau did not see the physician as he testified to on the days he was absent from work. But he did call the doctor on the phone and request him to say that he-Falardeau-had pleurisy if the company

Second, that his wife was not in an automobile accident as he so stated in his testimony at the trial as his reason for being absent from work.

Third, that he had a police record for attempted burglary, threatening to kill, being drunk, and disturbing the peace.

Fourth, that he had been discharged from other places of employment for being drunk and disorderly and was considered an habitual drunkard.

Now, remember if you please, that this offer of proof was made at the opening of the hearing on the day after Armistice Day, or 36 hours after Falardeau had testified.

The Labor Board's attorney made this amazing statement on page 308 of the official transcript following the offer of

If the examiner please, counsel for the Board knowing that much of the offer of proof of the respondent can, in fact, be proven and is correct, and Mr. Queen, representative of the union, having stated to counsel for the Board that a motion to dismiss the complaint as to Falardeau would meet with the full approval of the International Association of Machinists at this time I move that the complaint as to George Falardeau be dismissed and the evidence heretofore given by George Falardeau be stricken from

Now, Mr. Speaker, I do not charge here that the Labor Board attorney knew these facts before the offer of proof. But I do demand of the Labor Board itself an explanation as to why its attorney was not so informed. Did not their field representatives, these many and expensive investigators, make an investigation of the circumstances of this case before it was filed?

Does every employer have to defend himself before this Board because someone comes in and makes a complaint? Is it not the duty of these investigators to find out if there is any basis for the filing of a complaint? Certainly it would have been a very simple matter for the Labor Board to acquaint itself with these facts. The defense even on a holiday had no difficulty in finding out so much that the Labor Board attorney immediately moved to dismiss the complaint.

It must have cost this little company many hundreds of dollars to defend itself against this complainant, Falardeau, which was later dismissed by the Board. All of this needless

expense could have been avoided if the Labor Board had fulfilled its obligation of investigating the circumstances of the case before filing the complaint. This case is positive proof of the miserable and inefficient conduct that has marked the entire career of the Labor Board.

On another occasion I shall address the House concerning the disposition of this case with regard to the other com-

plainant.

Shall We Copy Hitler?

EXTENSION OF REMARKS

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Friday, March 31, 1939

Mr. ALEXANDER. Mr. Speaker, on March 2, in connection with my remarks on the export wheat-subsidy plan of the Department of Agriculture, which has been operating since last September, I introduced House Joint Resolution No. 192, which calls for suspension of the subsidy plan, first, because of its apparent failure to benefit the farmer; and, second, in order to give Congress opportunity to make a study of its operation and ascertain where the export-subsidy plan, which is the method of totalitarian countries, is leading us.

Two events have taken place since March 2 that would seem to make the adoption of that resolution a wise step at this time.

First, the Treasury and Department of Justice have issued rulings against subsidized exports coming from Germany on the ground that they violate section 303 of the tariff act. Following these Department rulings, the President on March 23 issued a proclamation canceling trade treaties with Czechoslovakia and sundry provinces over which Germany has recently obtained control—all on the ground that subsidized exports violate the antidumping clause of the American tariff act.

Second, and a still more urgent ground for investigation of the effects of the export subsidy on breadstuffs, is the message of the President on March 28 suggesting that the export-subsidy plan be extended to cotton. Certainly this country ought to make a prompt study of the export-subsidy experiment already in operation before we launch a more ambitious program of subsidized exports. Respect for the interests of our constituents, the people who elect us to represent them in this House, would seem to demand of us at least an attempt to inform ourselves of the effect of this plan, which in 6 months has broken down the wheat markets of the world, before we further commit the United States to the export-subsidy plan of Germany against the provisions of our own tariff law.

The export subsidy on wheat discriminates against American processing industries that pay out over \$300,000,000 a year in wages and buy a wheat crop of over 600,000,000 bushels from the farms. It would seem to be our duty to ascertain the effect of selling this wheat abroad with a subsidy of 25 cents a bushel to foreign mills, before we go further on the way of copying the trade policy of Germany.

In this connection I desire to extend my remarks by including therein the editorial of the Washington Post of March 30 under the significant caption "Copying Germany."

> [From the Washington Post of March 30, 1939] COPYING GERMANY

By its action in pegging the price of cotton above world-market levels, the administration has deprived the American farmer of export outlets and has accumulated a vast store of cotton against which the Government has loaned more than the reserve is currently worth.

Barring its intentional destruction, there are only two ways in which markets for this stored surplus can be expanded. We must either abandon the price-boosting policies which have helped to squeeze our cotton out of foreign markets or we must resort to export subsidies. And, as the President is opposed to withdrawal of loan subsidies, it is a policy of dumping which he advocates. It is scarcely necessary to emphasize the economic folly of first raising prices by subsidies and then subsidizing further because prices are too high. More to the point is the complete inconsistency of the new program with the reciprocal-trade program of the Department of State. Neither President Roosevelt's assertion to the contrary, nor Secretary Hull's grudging admission that a particular situation may require temporary emergency treatment, cerries the slightest conviction in this respect.

the contrary, nor Secretary Hull's grudging admission that a particular situation may require temporary emergency treatment, carries the slightest conviction in this respect.

The proposed subsidy would, of course, result in lower production costs of cotton textiles in foreign countries. That would lead to the imposition of compensating import duties, or, as the President suggests, application of definite import quotas to protect domestic industries against the competition of foreign goods made from this subsidized cotton. To offset the handicap imposed on American exporters of goods manufactured from high-priced cotton, still another export subsidy would be required. Nor is there any likelihood that the trend would stop at that point.

In establishing one price within the home market and another for export the United States would be copying procedure which we have self-righteously condemned when practiced by others with more excuse than we have. Only a few days ago it was decided to levy penalty duties on German goods to offset German export sub-

more excuse than we have. Only a few days ago it was decided to levy penalty duties on German goods to offset German export subsidies. What economic ground for such action is there if we are about to embark upon wholesale subsidization of our cotton exports? Moreover, by what strange process of reasoning does the President persuade himself that the creation of new obstacles to foreign trade fits into a program intended to remove such obstacles? The simple truth is that the administration's agricultural program, being designed to raise prices of exportable commodities above world levels, has from the beginning actively discouraged foreign trade. The irreconcilability of this program with Secretary Hull's efforts to remove artificial trade barriers is obvious. So long as no effort was made to deal with the problems presented by loss

as no effort was made to deal with the problems presented by loss of our cotton-export markets, it was possible to pretend that harmony ruled. Now that pretense is abandoned and the President has elected to follow the methods of the totalitarian states by resorting to export subsidies and import quotas.

His faith that a few years of artificially arcountered.

His faith that a few years of artificially encouraged cotton exports "will bring our supplies to normal" will be shared by few, in view of the abnormal conditions created by governmental interference with the normal course of production and distribution.

Technological Trends and Their Social Implications-Continuation of Discussion of Report by National Resources Board

EXTENSION OF REMARKS

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, March 31, 1939

Mr. SMITH of Washington. Mr. Speaker, in a previous discussion I referred to the report on Technological Trends and Their Social Implications, which was prepared by the National Resources Committee. In a communication to President Roosevelt transmitting the report, which consists of 388 pages, Secretary of the Interior Harold L. Ickes, Chairman, stated that the Science Committee, which supervised the preparation of the report, included members designated by the National Academy of Sciences, the Social Science Research Council, and the American Council on Education, and that they, through a special subcommittee headed by Dr. William F. Ogburn, professor of sociology, University of Chicago, assembled the materials which comprise the report.

Secretary Ickes is Chairman of the National Resources Committee and Secretary of War Harry H. Woodring, Secretary of Agriculture Henry A. Wallace, Secretary of Commerce Harry L. Hopkins, Secretary of Labor Frances Perkins, Frederic A. Delano, Dr. Charles E. Merriam, Henry S. Dennison, and Beardsley Ruml are members of the Committee. Secretary Ickes wrote the President that-

This document is the first major attempt to show the trends of new inventions, which may affect living and working conditions in America in the next 10 to 25 years. It indicates some of the problems which the adoption and use of these inventions will inevitably bring in their train. It emphasizes the importance of national efforts to bring about prompt adjustment to these changing situations, with least possible social suffering and loss, and sketches some of the lines of national policy directed to this end.

Mention is made of the cooperation and assistance rendered in the preparation of the report by leading universities, laboratories, and governmental bureaus.

SOCIAL CHANGES MANY AND VARIED

The foreword sets forth in general outline the main objectives of the survey and investigation and the ground intended to be covered in the report. Commenting on the changes resulting from the advance of science, the statement is made:

The chemical inventions making substitutes of wool and cotton from cellulose, gasoline, and coal, and rubber from coal and chalk, may affect cotton, coal, and timber production and no doubt policies in regard to other natural resources. * * * Invention is cies in regard to other natural resources. * * * Invention is a great disturber and it is fair to say that the greatest general cause of change in our modern civilization is invention. Certainly development in technology cause a vast number of changes in a great variety of fields. For instance, the air-conditioning developments, which lower inside temperatures during hot weather, may or may not within the next generation affect southern cities and stimulate the growth of factories in warmer regions. Or again, tray agriculture, which produces a high yield per plant when the roots are suspended in a tray of liquid chemicals instead of in the soil, may or may not be used sufficiently to be of much social significance within the reader's lifetime.

INVENTIONS LIKELY TO INCREASE

The findings indicate that the large number of inventions made every year show no tendency to diminish and that the trend is toward further increases. "No cessation of social changes due to invention is to be expected. It is customary to speak of the present age as one of great change, as though it were a turbulent transition period between two plateaus of calm, but such a conclusion is illusory. Though the rate of change may vary in the future there is no evidence whatever of a changeless peace ahead."

TECHNOLOGICAL UNEMPLOYMENT AND EMPLOYMENT

The comments in regard to the important and far-reaching subject of technological unemployment and employment are most illuminating and informative. Briefly summarized, the findings are as follows:

Although technological unemployment is one of the most tragic effects of the sudden adoption of many new inventions (which may be likened to an immigration of iron men), inventions create jobs as well as take them away. While some technological changes have resulted in the complete elimination of occupantions and even entire industries the serve of these characteristics.

changes have resulted in the complete elimination of occupations and even entire industries, the same or other changes have called into being new occupations, services, and industries.

No satisfactory measures of the volume of technological unemployment have as yet been developed, but at least part of the price for this constant change in the employment requirements of industry is paid by labor since many of the new machines and techniques result in "occupational obsolescence." The growth and decay of industries and occupations caused by technological progress necessitate continuous and widespread—and not always successful—readjustments and adaptations on the part of workers whose jobs are affected by these changes.

The question whether there will be a large amount of unemployment during the next period of business prosperity rests only in part on the introduction of new inventions and more efficient industrial techniques. The other important elements are changes in the composition of the country's production (such as appreciable changes in the proportion which service activities constitute of the total), the growth of population, changes in the demands for goods and services, shifts in markets, migration of industry, hiring-age policies of industries, and other factors discussed in the body of the report. For instance, even if industrial techniques remained the same, the volume of production would have to be greater in the future than in 1929 in order to absent the interest in the future than in 1929 in order to absent the interest in the future than in 1929 in order to absent the interest in the future than in 1929 in order to absent the interest in the future than in 1929 in order to absent the interest in the the same, the volume of production would have to be greater in the future than in 1929 in order to absorb the increase in the working population and keep unemployment to the level of that date. If the productivity of 1935 (the latest year for which figures are available) continues the same, and the composition of the Nation's total product remains unchanged, production would have to be increased 20 percent over that of 1929 to have as little unemployment, and if labor efficiency is increased by new inventions or otherwise, then the production of physical goods and services must be more than 120 percent of what it was 1920.

then the production of physical goods and services must be more than 120 percent of what it was in 1929.

Aside from jobs, subtracted or added, new inventions affect all the great social institutions—family, church, local community, State, and industry. The committee find that in all the fields of technology and applied science which were investigated there are many new inventions that will have important influences upon society, and hence upon all planning problems. Farticularly impressive were new inventions in agriculture, communication, aviation, metallurgy, chemistry, and electrical tools and appliances.

A large and increasing part of industrial development and of the correlated technological advances arises out of science and research. Invention is commonly an intermediate step between science and technological application, but this does not make less important the point that the basic ideas upon which these problems

science and technological application, but this does not make less important the point that the basic ideas upon which these problems are developed come out of scientific discovery or creative activity. Advance of many aspects of industry and the correlated technologies is dependent upon scientific research and discovery. This fact is made clear by the increasing importance of research laboratories in the great industries. The research conducted is not only well organized but it is carried forward with the cooperation of investi-

gators having high rank in the field of science. If the contribution of research were to be reduced, the industries would tend to freeze in a particular pattern.

The report revealed the imminence of a few very important inventions that may soon be widely used with resultant social influences of significance. The committee recommended that studies be made of the following inventions: The mechanical cotton picker, air-conditioning equipment, plastics, the photoelectric cell, artificial cotton and woolenlike fibers made from cellulose (wood pulp), synthetic rubber, prefabricated houses, television, facsimile transmission, the automobile trailer, gasoline produced from coal, steep-flight aircraft planes, and tray agriculture.

Since the patent laws have considerable influence on the rate of technological progress, it was recommended that the whole system be reviewed by a group of social scientists and economists.

The most important general conclusion to be drawn from the report is the continuing growth of the already high and rapidly developing technology in the social structure of the

Relief of Distress in Spain

EXTENSION OF REMARKS

HON. LEE E. GEYER OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Friday, March 31, 1939

LETTER TO THE PRESIDENT

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I am putting in the RECORD a letter addressed by me to the President. Even in this short time that has passed since this letter was written, the news from Spain has become more distressing. I am sure that all the Members of this House join with me in hoping that the influence of our Government may be used to halt the bloody revenge being wrecked upon Spaniards by the invading army of Fascist Italy. I am sure, too, that all my colleagues desire to see the Red Cross and other relief agencies give aid to the Spanish refugees and thus carry on the humanitarian traditions of our country.

The letter is as follows:

CONGRESS OF THE UNITED STATES, House of Representatives, Washington, D. C., March 29, 1939.

The PRESIDENT,

The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: In spite of the censorship which is evident in newspaper reports coming from Spain, I cannot avoid reading between the lines a tragic story of brutal reprisals against the people who so long and so bravely defended their democratically elected Government.

I am confident that you are doing and will continue to do all in your power to express this Government's desire that the end of the Spanish conflict may bring a real peace to the Spanish people. Surely all Americans, whatever their sympathies may have been while the war wes in progress, must now disapprove on humanitarian grounds the persecution of Spaniards whose only "crime" was loyalty to the Republic and its defense against foreign invasion. For my elf I do not hesitate to say that I feel America owes a heavy responsibility to the republican forces whose valor and sacrifice kept back the Fascist advance for more than 2½ years and

sacrifice kept back the Fascist advance for more than 2½ years and so served the cause of world democracy and peace.

I most respectfully request, Mr. President, that you take all possible steps to intervene, through the usual diplomatic channels, on behalf of the Spanish loyalists, military and civil. It is my hope that you will also find a way, either through the Red Cross or other appropriate relief agencies, to extend American assistance to refugees in France and in Spain itself. I have read Colonel Fuqua's statement that no ships are available for the evacuation of political refugees from the Fascist terror. I earnestly request that you consider also the possibility of aiding in the evacuation of these unfortunate victims, many of whom have already been assured the right of asylum in other lands.

Among the measures "short of war" which the United States can take to register its horror of Fascist aggression and barbarism, none,

take to register its horror of Fascist aggression and barbarism, none,

I am sure, will have a more overwhelming support among the American people than immediate assistance to the people of Spain. In this, as in all questions of foreign and domestic policy, I am proud to follow your courageous leadership and to assure you of

my continuing loyalty.

Please believe me, Mr. President,
Most respectfully yours,

A Selected List of Prominent American Statesmen Who Changed Their Political Views

EXTENSION OF REMARKS

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, March 31, 1939

Mr. COFFEE of Washington. Mr. Speaker, because of the interest many people have manifested in the changing attitude of public officials on questions of the day, I have compiled a brief list of some prominent figures in American history who have changed their minds. One of the outstanding characteristics of most American statesmen is their mutations on public questions. Increased maturity, variety of contacts, travel, and study have often induced public officials to alter their attitude with respect to burning and controversial issues. One hears frequently the statement that the longer one remains in public life the more conservative he becomes. In order that some light may be thrown upon this question, I am presenting the following information:

John Quincy Adams (1767-1848): Approving Jefferson's embargo in the United States Senate, Adams became estranged from the Federalists and acted with the Republicans. After his retirement Federalists and acted with the Republicans. After his retirement from the Presidency, to which he was elected as a National Republican, he reentered Congress in 1831 as an Independent and served until his death in 1848. (Source: J. F. Jameson and J. W. Buel, Encyclopedic Dictionary of American History, vol. I, p. 22. [American History Society, Washington 1900.])

John Tyler (1790-1862): The Jacksonians, under the lead of John Randolph and Thomas Ritchie, of the Richmond Enquirer, got control of the State of Virginia and Tyler became a member of the opposition and a Whig. He resigned from the Senate rather than vote for the expunging of resolutions censoring Jackson. (Source: Dumas Malone, ed., Dictionary of American Biography, vol. 19, p. 90. [Scribner's, New York 1936.])

Caleb Cushing (1800-1879): In a pamphlet addressed to his constituents, Cushing defended President Tyler's vetoes as being matters of conscience. * * * Cushing then enlisted with the "Corporal's Guard," a little group of Congressmen who supported

constituents, Cushing defended President Tyler's vetoes as being matters of conscience. * * * Cushing then enlisted with the "Corporal's Guard," a little group of Congressmen who supported Tyler against Clay. Despite his protests, he was ignored in the Whig councils, and from that date until the Civil War he was known as a Democrat. * * * He supported every Civil War emergency measure, and on the night before the election of 1864 he spoke in Faneuil Hall for Lincoln and against McClellan. He remained a Republican until his death. (Source: Allen Johnson and Dumas Malone eds. Dictionary of American Biography vol 4

he spoke in Faneuil Hall for Lincoln and against McClellan. He remained a Republican until his death. (Source: Allen Johnson and Dumas Malone, eds., Dictionary of American Biography, vol. 4, pp. 624, 627. [Scribner's, New York, 1930.])

John Charles Fremont (1813–1890): Left the Free Soil Party in 1856 to become the first Republican nominee for the Presidency. (Source: Allen Johnson and Dumas Malone, eds., Dictionary of American Biography, vol. 8, p. 22. [Scribner's, New York, 1931.])

Martin Van Buren (1782–1862): Van Buren, a Jacksonian Democrat, was elected to the Presidency in 1836. In 1848 he left the Democratic Party because of the opposition in New York to the administration of James K. Polk and became the Presidential candidate of the Free Soil Party. (Sources: E. M. Shephard, Martin Van Buren, pp. 364–66. [Houghton-Mifflin Co., New York and Boston, 1888]; Jameson, J. J., and Buel, J. W., Encyclopedic Dictionary of American History, vol. 2, p. 323.)

Alexander H. Stephens (1812–1883): At the time of the Kansas-Nebraska debate, Stephens left the Whig Party and became a Democrat. (Source: E. Ramsay Richardson, Little Alex: A Life of Alexander H. Stephens, The Fighting Vice President of the Confederacy, pp. 162–168. [Bobbs-Merrill Co., Indianapolis, 1932.])

James Longstreet (1821–1904): Longstreet was involved in a struggle with poverty. In this same year, President Grant, with whom he had been intimate in early years and who seems always to have cherished a friendly feeling for him, gave him the place of the surveyor of customs in New Orleans. Longstreet held this place from 1869 to 1873.

It carried with it the necessity of becoming a Republican.

* * To the people of the South, Longstreet seemed a de-

It carried with it the necessity of becoming a Republican,

* * * To the people of the South, Longstreet seemed a deserter—a kind of traitor. (Source: H. J. Eckenrode & Bryan Conrad, James Longstreet: Lee's War Horse, p. 374. [University of North Carolina Press. Chapel Hill. 1936.])

LXXXIV-App--80

APPENDIX TO THE CONGRESSIONAL RECORD

Andrew Johnson (1808-1875): 1853-1857. Johnson was Democratic Governor of Tennessee. During the Civil War he was a strong Unionist and was appointed by Lincoln military governor of Tennessee. 1864 Johnson was selected by the Republicans for the Vice Presidency. (Source: J. F. Jameson & J. W. Buel, Encyclopedic Dictionary of American History, vol. 1, p. 361. [American History Society, Washington, 1900.])

Charles Francis Adams (1807-86): Originally a Whig, Adams in 1848 became the candidate of the Free Soil Party for the Vice

Charles Francis Adams (1807–86): Originally a Whig, Adams in 1848 became the candidate of the Free Soil Party for the Vice Presidency on the ticket with Martin Van Buren. During the Civil War, Adams became a Republican and was sent by Lincoln as the United States Ambassador to London. 1872–76: Adams was a member of the Liberal Republican Party. (Sources: E. D. Ross, the Liberal Republican Movement, p. 228 (Henry Holt Co. 1919, E671 R82); J. F. Jameson and J. W. Buel, Encyclopedic Dictionary of American History, vol. 1, p. 20 (American History Society, Washington, 1900).)

Theodore Roosevelt (1858–1919): Roosevelt broke with President Taft in 1911 because Taft had not continued the policies of Roosevelt, and had not heeded Roosevelt's advice on certain Cabinet appointments. In 1912, Roosevelt organized the Progressive Party and ran against Taft in the Presidential election of that year. (Sources: H. H. Kohlsaat, From McKinley to Harding, pp. 184–190 (Scribner's, New York, 1923); Dumas Malone, editor, Dictionary of American Biography, vol. 16, pp. 142–143 (Scribner's, New York, 1935).)

1935).)

Resolutions of Democratic Women's Clubs

EXTENSION OF REMARKS

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Friday, March 31, 1939

RESOLUTIONS OF DEMOCRATIC WOMEN'S CLUBS

Mr. SNYDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions recently adopted by the Democratic Women's Clubs affiliated with the Woman's National Democratic Club:

Whereas there has been a concerted effort by a few intolerant persons to discredit the ability and service of Hon. Frances Perkins, Secretary of Labor, we, the members of the Democratic Women's Clubs affiliated with the Woman's National Democratic Club, do hereby declare our faith and confidence in Secretary Perkins and congratulate her on the splendid manner in which she has administered her office; and further be it

Resolved, That a copy of this resolution be sent to Secretary Perkins and the chairman and members of the Judiciary Committee of the House of Representatives and be published in the Democratic Digest

Digest.

Whereas the members of the Democratic Women's Clubs affiliated with the Woman's National Democratic Club, and representing a Nation-wide view of Democratic affairs, are ever mindful of the brilliant and far-visioned leadership of our matchless President Franklin D. Roosevelt, whose high purpose is always to advance the Jeffersonian principle of "equal opportunity to all and special privilege to none". Therefore be it

Resolved, That we, in convention assembled in Washington, March 23, 1939, do hereby pledge continued loyalty to Franklin D. Roosevelt and the New Deal and assure him that we will continue to give active and wholehearted support to his policies to the end that the United States will continue as the leader of the nations of the world to advance the cause of justice, freedom, and peace; and

further be it

Resolved, That a copy of this resolution be sent to President Roosevelt, the Democratic Members of the Senate and House of Representatives, and be published in the Democratic Digest.

W. P. A. Appropriation

EXTENSION OF REMARKS

HON. A. F. MACIEJEWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Friday, March 31, 1939

Mr. MACIEJEWSKI. Mr. Speaker, I appreciate the privilege allowed me to extend my remarks in the RECORD on one of the most important measures to come before this House in a number of years, namely, providing additional funds to permit the Works Progress Administration to carry on its humane activities for a further period. Coming from an industrial district, I thoroughly appreciate the severe suffering to a great number of my constituents who are now deriving a meager existence under the W. P. A. unless additional funds are provided.

I propose to support the maximum amount of \$150,000,000 recommended by the President of the United States and hope the majority of the Members constituting this great body will also lend their support to the President in his effort to relieve suffering in the country by voting for the passage of a bill providing the full amount asked for by our great leader.

P. W. A. Savings on Bridge Construction Project in Ontario County, N. Y.

EXTENSION OF REMARKS

HON. MATTHEW J. MERRITT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Friday, March 31, 1939

Mr. MERRITT. Mr. Speaker, the soundness of the Public Works program has often been commended and I am sure that many of the Members here have concrete examples in their own communities of the fine work now in operation with the financial assistance made possible by the Public Works Administration.

I came across a newspaper article the other day which demonstrates that construction work undertaken by this Government agency is not only done efficiently but also, in many instances, effects a real savings to the taxpayers. This article called attention to the fact that up in Ontario County, N. Y., a saving of \$40,000 in a \$200,000 bridge-construction project will make possible four additional spans. Think of it. a saving of approximately 27 percent on the estimated costs of the project.

The article to which I have referred appeared in the Rochester Democrat and Chronicle of March 9, 1939, and I submit it here for the information of the House:

ONTARIO PLANS FOUR NEW BRIDGES

CANANDAIGUA .- A saving of \$40,000 in Ontario County's \$200,000 P. W. A. bridge construction project will provide funds for four additional spans, County Highway Engineer Gordon S. Chester reported yesterday.

reported yesterday.

As soon as approval of P. W. A. officials and the Bureau of Public Roads is procured, work will be started on these additional spans: Littleville Bridge over Canandaigua Outlet; Shortsville Village Bridge, over Canandaigua Outlet; William Street Bridge, Phelps, over Flint Creek; Carlton Road Bridge, Seneca, over Flint Creek. All are widening projects.

A saving of approximately 27 percent on estimated cost of 15 bridges now under construction was made through low bids on contracts, Engineer Chester explained. This saving will cover the cost of the four additional spans without added cost to taxpayers.

cost of the four additional spans without added cost to taxpayers.

The Multiple-Purpose Project

EXTENSION OF REMARKS

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES Monday, April 3, 1939

ADDRESS BY HON. JOHN C. PAGE BEFORE THE RIVERS AND HARBORS CONGRESS MARCH 23, 1939

Mr. NORRIS. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Hon. John C. Page, Commissioner of Reclamation, before the Rivers and Harbors Congress on March 23, 1939, on the subject The Multiple-Purpose Project.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The key to the gate from which will flow the best use of the water resources with which Nature has endowed this country is the construction and operation of projects serving more than one function in the public interest. The engineer has used his increasing technical skill and his greater vision in perfecting the multiple-purpose project in response to a general demand by the public itself that maximum benefits be made to flow from public expenditures for stream improvements. It is an expression in

expenditures for stream improvements. It is an expression in engineering terms of a new social consciousness.

It has not been long since the day when an irrigation dam was designed for no purpose in addition to irrigation; when a structure for the improvement of navigation was designed with only that thought in mind; when a power dam was a power dam and nothing more, so far as the designer and the operator were concerned. In that time many structures were built which serve well their individual purposes but failed to develop valuable related uses, structures which will have to be duplicated because the related uses were overlooked.

You will notice that I have said these dams were designed with only a single purpose in mind. Despite this, many of these structures do serve other ends to a limited and inadequate degree. Others have actually defeated or obstructed the performance of related functions that might have been included.

Almost every reservoir designed to reduce floods would serve, ill or well, some other purpose. The water held back would have to be released at times of lower flow. This definitely would affect other activities on the stream below.

It would be impossible to design a dam that would concentrate the fall of a stream and so make water power available but would serve no other purpose. Every dam creates a reservoir, large or small, and every reservoir delays the flow of water at high stages. The multiple-purpose project, which now is the subject of much discussion, is the result of recognition by forward-looking engineers that the single-purpose project in many instances needs little expansion when in the planning stage to serve as well important related functions. Through thus increasing the efficiency of the parison when in the praining stage to serve as wen important related functions. Through thus increasing the efficiency of the project, 50 cents has been made to do the work of a dollar in some instances in the provision of storage for irrigation, for example, and the other 50 cents has, at the same time, served to lower the cost of providing protection from floods or of the generation of electric energy.

electric energy.

Perhaps the multiple-purpose project should be defined in order that we can be perfectly sure that no misunderstanding exists. Such a project may be, for example, a dam; a dam and other works; a series of dams; or a series of dams and other works designed and operated so as to perform efficiently more than one function in the field of water utilization and control. The project may serve navigation and, in addition, power; or flood control and also irrigation. River regulation for pollution abatement or improvement of domestic or industrial water supplies may at the same time provide recreational facilities for millions. The multiple-purpose project may join any and all of these with still other useful functions. useful functions

There is one great project now under construction, for example, that will serve the following diverse purposes: Improvement of navigation on two important rivers; reduction of flood damages to highly developed lands along these rivers; irrigation of about 1,000,000 acres of equally rich lands now inadequately supplied with water; the production of low-cost power for a rapidly growing market; and the regulation of the fluctuating flow of the river for domestic water supply, for industrial water supply, and for the protection of 400,000 acres of fertile delta lands now threatened with ruin by the infiltration of salt water. Westerners will recognize from this description the Central Valley project in California. At this point I want to make it perfectly clear that not every project can be adapted for multiple purposes by special provisions in the plans for more than one use. Some projects are so simple or are so situated that only one purpose is worthy of special consideration. Some necessarily involve dam sites which are inade-There is one great project now under construction, for example,

or are so situated that only one purpose is worthy of special consideration. Some necessarily involve dam sites which are inadequate for structures capable of serving fully more than one end. Some are on streams and in areas where the water and the need are limited. It is essential, however, that all possibilities be studied in every instance, and that, wherever feasible, all related functions be included or provided for in the final designs for the project.

In the West, where the Bureau of Reclamation operates, there are more than 740,000,000 acres of arid and semiarid lands. The streams are comparatively few and their flow fluctuates more widely than the flow of rivers in humid regions. Mountainous areas receive most of the precipitation, much of which comes as snow in winter. When the snows melt in spring, floods occur. When the floods pass, the streams dwindle and some of them actually go dry. Fortunately, these conditions make most floods predictable, dry. Fortunately, these conditions make most mous predictions, so that it is easy to combine flood reduction with irrigation storage. Irrigation is necessary in the West for general farming, and it is essential for close settlement of rural areas. Since the maintenance of most of the population is dependent on irrigation, the use of

use, excepting only its use for domestic purposes.

The regulation of most streams in the arid and semiarid regions has irrigation as its first purpose. The character of the streams

and the requirements made by irrigation on reservoirs are such, however, that nearly all irrigation-storage dams are valuable also for flood reduction. The regimen of the streams and the operation of the reservoirs for irrigation also make many of these dams valuable from the standpoint of power development, usually without very material alterations in the plans for the structures that would

be required for irrigation alone.

Where water is scarce, particularly, and where it must be conwhere water is scarce, particularly, and where it must be com-served for irrigation to support the population, it would be ridic-ulously wasteful to refrain from making more than one use of this limited and vital resource. In passing through a turbine before entering an irrigation canal water loses none of its usefulness for irrigation; but by passing it through a turbine the over-all benefits from the irrigation project may be greatly increased, and the cost to the irrigators may be greatly reduced.

There has been much discussion in recent months about the

principle of developing the streams for more than one purpose in the public interest. There has been criticism to the effect that more than one function could not be well performed. Some of this criticism may be traced to a resistance against comprehensive planning for conservation and control of our waters. Some of it is apparently inspired by those who would becloud a larger issue in order to prevent the use of public-owned power resources that otherwise would be wasted.

otherwise would be wasted.

The multiple-purpose project is much too important a weapon in our offensive against riotous nature to permit these general attacks upon it to go unanswered. As a result of a flood on the Colorado River of Texas, where a multiple-purpose project involving several dams has been begun, a flurry of attacks, mostly editorial, were made recently against the idea of combining flood control and power in a single project. Last July when the flood occurred only one of the series of dams was completed and in operation. It was the upper dam. Buchanan, designed primarily for power to produce the upper dam, Buchanan, designed primarily for power to produce revenues and help to pay for the rest of the project. Farther downstream, the Marshall Ford dam, being constructed by the Bureau of Reclamation and designed as the major flood-control unit of the

of Reclamation and designed as the major flood-control unit of the series, had not progressed above the river level. The project as a whole, involving several dams, was incomplete when the flood came. It is still under construction today.

Based on the fact that the single dam which was completed did not prevent but only reduced one of the largest floods ever recorded on the Colorado River of Texas, a powerful and dangerous stream, a hue and cry was raised against the combination of flood control and never the single project. Withtully all the published control and power in a single project. Virtually all the published comments neglected entirely to mention the fact that the project as a whole was not completed and that the principal flood-control dam at Marshall Ford was not above river level. Many of the editorials were in strikingly similar language. Apparently there was concerted agitation behind such misrepresentation, the purpose of which was to mislead the public.

What are the facts? There are multiple-purpose projects already

completed and operating. Let us examine a few of them.

Mr. Nathan B. Jacobs, president, Morris Knowles, Inc., consulting engineers of Pittsburgh, Pa., in a paper presented before the American Society of Civil Engineers, said:

can Society of Civil Engineers, said:

"Another typical multiuse reservoir is the one on the Tygart River, in West Virginia, which was designed primarily to aid navigation on the Monongahela River which can and will be used for flood-control purposes as well. * * * The Pymatuning Reservoir, on the Shenango River in Pennsylvania, was designed primarily for low-water control and for recreational purposes. Since its completion in 1933, however, it has been responsible for lowering flood heights at Sharon, Pa., and other communities."

Concerning this seems reservoir in another paper presented before

fiso completion in 1933, however, it has been responsible for lowering flood heights at Sharon, Pa., and other communities."

Concerning this same reservoir in another paper presented before the same society, E. K. Morse and Harold A. Thomas, members, American Society of Civil Engineers, said:

"Experience with the recently completed Pymatuning Dam demonstrates the effectiveness of the reservoir method of flood control under conditions encountered on the rivers of western Pennsylvania. This dam was constructed by the Commonwealth of Pennsylvania to provide an adequate supply of water for manufacturing and domestic use during periods of low discharge on the Shenango River. * * * The first year's operation of the Pymatuning Dam has proved its effectiveness in improving dry-weather flow and in controlling floods. * * * Since its completion the Pymatuning Dam has prevented two floods. * * * The owners of important industries in the Shenango Valley claim that the Pymatuning Dam paid for itself the first year of its life."

Edwin S. Cullings, hydraulic engineer, of Watertown, N. Y., in a letter published in the February 1939 issue of Civil Engineering, describes the successful operation of a multiple-purpose project by the Black River regulating district in New York State. This project has been in operation since 1925 and controls about half the flow

has been in operation since 1925 and controls about half the flow of the river. He says, in closing:

"While multiple-purpose reservoirs can be successfully operated "while multiple-purpose reservoirs can be successfully operated for several purposes, such reservoirs will not be 100-percent effective for every purpose. Compromise will be necessary in cases of conflicting usage, but"—says Mr. Cullings; note this carefully—"the aggregate benefit to the community can be made far greater than would be possible if the reservoirs were operated for only a single purpose."

Mr. Cullings was discussing a comparatively small project which did not even provide complete control of the river. What he says is true for such projects. It is possible, however, to construct multiple-purpose projects on rivers to provide complete control of

the flow when the conditions are right. This was done with the construction of Boulder Dam. This dam serves each of its several

purposes without compromise.

Frederick S. Delenbaugh, who went with Maj. John Wesley Powell down the Colorado River on one of his memorable expeditions long ago, described the Colorado River as a wild bull of a river. He compared the more gentle rivers of humid regions with cows, saying they were easily domesticated and put to use by men, but the Colorado was the untamable bull of the herd. Yet a ring was successfully put in the nose of the Colorado River with the construction of Revider Deep Colorado River with the construction of Revider River River

cessfully put in the nose of the Colorado River with the construction of Boulder Dam. The Colorado now has been broken to yoke to serve in many and varied ways.

Lake Mead, created by Boulder Dam, has a capacity about twice the average annual flow of the Colorado River at Boulder Dam. Of this capacity, 9,500,000 acre-feet, or more than half the average annual flow of the river, is reserved for flood control. Three weeks ago, early in March, we completed drawing out of the reservoir 1,500,000 acre-feet in anticipation of the flood which annually comes in May or June. If later snow surveys indicate that more than 9,500,000 acre-feet of storage will be needed for flood control this year, we shall draw Lake Mead down still lower.

The storage in Lake Mead is about five times the annual demand

The storage in Lake Mead is about five times the annual demand for irrigation downstream. It can be safely stated that no flood is anticipated which would necessitate release of water at Boulder

is anticipated which would necessitate release of water at Boulder Dam in quantities which would cause a serious flood below. It can be stated with equal assurance, in addition, that through regulation of the flow at Boulder Dam the irrigators downstream will never again have to face the water shortages which formerly threatened to destroy their crops each year.

In 1934, the year before Boulder Dam was completed, the Colorado River went virtually dry in the late summer after the flood had passed. Farmers in the Imperial Valley alone as a result sustained crop losses estimated at more than \$10,000,000, and many of them lost trees and groves of mature and bearing fruit, that could not be replaced in less than 5 years. But early in the summer of 1935, the newly completed Boulder Dam, caught and held a flood, which otherwise probably would have breached the levees protecting the Imperial Valley, since the levee system was in poor condition as a result of extended drought. Had the levees been burst the damage would not have been less than \$10,000,000.

It is difficult to evaluate in dollars the contribution made by Boulder Dam in regulation of the flow for domestic water supplies. An indication of the value of this service can be gained from the

Boulder Dam in regulation of the flow for domestic water supplies. An indication of the value of this service can be gained from the fact that the 13 cities in Los Angeles and adjacent counties in southern California have prepared to spend about \$220,000,000 in construction of an aqueduct to the Colorado River. This aqueduct is nearing completion. It would not have been built except for the control of the river provided by Boulder Dam. It is hard also to assign monetary values to such recreational uses of Lake Mead and the streams as are now being made as a result of the construction. and the streams as are now being made as a result of the construc-tion of Boulder Dam. More than 500,000 people last year visited the project to spend a part of their leisure time. They go to glory in the spectacle of the dam and its magnificent surroundings, to

in the spectacle of the dam and its magnificent surroundings, to fish, to bathe, and to boat.

A definite monetary value can be placed, however, on the power generated at Boulder Dam. With less than half the units installed, revenues from the power plant to the United States approach at this time \$400,000 a month. Power is incidental to the other uses, but the sale of the energy under contracts now in force will repay the entire cost of the project in 50 years—the whole cost of this great project, \$130,000,000, for all of these highly valuable purposes—with interest at 4 percent.

Other outstanding examples of successful multiple-purpose projects are the Tennessee Valley dams and the Sacandara Reservoir

Other outstanding examples of successful multiple-purpose projects are the Tennessee Valley dams and the Sacandaga Reservoir project of the Hudson River Regulating District. Good recent discussions of these projects can be found in the section on Water Power and the Drainage Basins in the report of the National Resources Committee entitled "Energy Resources and National Policy," recently transmitted by the President to the Congress.

Doubts have been aroused in the public mind in recent months with respect to whether it is practicable to combine flood control and power. The answer to these doubts should be clear from the examples I have cited. I am not giving you merely my own opinion. There is agreement on this point.

Maj. Gen. Julian L. Schley, Chief of Engineers, United States Army, answered this question last spring as follows:

"Yes; the same dam and reservoir can be used for both purposes under either one of two conditions: First, what amounts to two reservoirs but both behind a single dam, one on top of the other, the flood-control reservoir being on top; and second, where the identical capacity can be used for both purposes because you know exactly when the storm rains are going to start and stop."

In its report, Drainage-Basin Problems and Programs, 1937 revi-

exactly when the storm rains are going to start and stop."

In its report, Drainage-Basin Problems and Programs, 1937 revision, the National Resources Committee, representing all the interested Federal agencies, said on the subject of multiple benefits:

"Not to promote the integrated development and utilization of latent water resources as promptly and fully as all relevant technical, economic, and social conditions warrant is to invite waste of potential wealth, and so is incompatible with the public interest.

"Integrated control and use of water implies planning and constructing projects for dual or multiple benefits wherever practicable. Actually, almost every water project of magnitude may be made to contribute to the solution of more than one problem. Not to realize all of its feasible potentialities is inimical to the public interest. A large dam and storage reservoir built and used solely for flood control is a wasteful maladjustment, socially if not economically, provided it could have been practicable to design, construct, and operate the dam to regulate the flow of

the stream for other purposes as well as flood control, to develop marketable power, or to realize incidental reservoir values in connection with recreation and wildlife conservation. Coming years, like the last few years, should witness increasing emphasis on multiple-purpose projects. The regulation and integrated development of rivers for all useful purposes is an attainable

This report was prepared by the water resources committee of the National Resources Committee. It is the considered judgment of representative State engineers and university authorities, as well as that of all of the major Federal agencies engaged in

water planning.

The Congress, 14 years ago, was seeking a comprehensive national plan for multiple-purpose development of all our navigable rivers, as shown in section 3 of the Rivers and Harbors Act of March 3,

The public long since has approved the multiple-purpose project as a means of increasing the efficiency of public works in the development of our water resources. There are indications that public opinion has gone a step further than general approval of the multiple-use principle.

"Whether for better or worse, people are beginning to view the control of a stream for flood reduction as an integral phase of the use of that stream for power, navigation, irrigation, public water supply, and sanitation. To the writer it is an evolutionary step of merit."

This is abstracted from a paper by Mr. Abel Wolman, chairman of the water resources committee and president of the American Public Health Association, delivered recently before the American Society of Civil Engineers.

It is my experience also that public opinion is insistent that power development be included in the plans for irrigation projects,

power development be included in the plans for irrigation projects, where feasible from the engineering and economic standpoints.

Before closing it should be noted that multiple-purpose development has been accomplished almost entirely through public enterprise. For the very good reason that by its very nature the multiple-purpose project is not inviting to private developers, who must look for an actual cash return on their investments, it is apt to remain the responsibility of public agencies. With few exceptions, water power is the only one of the many purposes which can be served by river development which now interests private industry. Conservation and control of water for other purposes very largely has been a public endeavor for many years. It is generally accepted today that flood control, irrigation, domestic water supply, navigation, recreation, wildlife protection, and, for the most part, sanitation, are fields for community action, either local, State, or national. Since this is so, I do not see how the public can be denied the right to develop all of the possibilities which are created by the public's work.

It is the duty and the task of the designer, as stated in Energy Resources and National Policy, and of those who guide the appli-

Resources and National Policy, and of those who guide the application of public policy to develop all of the potential benefits of great river systems in such manner that their sum shall be a maximum. Each should be and can be developed in harmony with the others; each should contribute its share to obtain a total benefit much larger than would be possible by separate exploitation and that at lower total cost.

tion, and that at lower total cost.

The New Deal Era

EXTENSION OF REMARKS

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES Monday, April 3, 1939

RADIO ADDRESS BY HON. THEODORE F. GREEN, OF RHODE ISLAND, MARCH 28, 1939

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered over the radio by the distinguished Senator from Rhode Island [Mr. Green] at Washington on March 28, 1939. The subject of the address is the New Deal Era.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow citizens, this month we observed the sixth anniversary My fellow citizens, this month we observed the sixth aninversary of the administration of President Franklin D. Roosevelt. Ordinarily, a 6-year span in peacetime is hardly significant in the life of a great nation which has already existed for a century and a half. Yet even the most captious critic of the administration will concede that the course of action now being pursued by the Federal Government will have a deep influence on American life for generations generations.

This has come to be known as the New Deal era. Some worthy citizens despise the term, but to millions more it has become a

symbol of hope and encouragement. The fact is that deep-seated changes are taking place in the social and economic life of the Nation and a period of change is always marked by sharp differences

of opinion.

of opinion.

In this brief address it is not my purpose to add fuel to the controversy over the New Deal but to outline in broad terms the problems which President Roosevelt has faced and to review some of the steps taken to meet them. To avoid misunderstanding let me say that I advocated these policies before he became President, and that now I stand behind his policies and firmly believe that the course he is pursuing is the only course that can bring us through

safely.

The United States is not alone in coming face to face with new problems. Social upheaval is world-wide. It has brought on revolutions and wars. International trade is disorganized. Force has taken the place of law and order in world affairs. Some dehas taken the place of law and order in world affairs. Some democracies have given way to dictatorships which menace the peace of all humanity. Let us rejoice that the United States is coming through this period of chaos in better shape than most nations. This is because the one great objective underlying every action taken by President Roosevelt has been the determination to provide a measure of social and financial security for the mass of average men and women who must contend with the exactions of this machine age.

The standards of living in this country 100 years ago, or even 50 ears ago, were far below what they are now. There were then no The standards of living in this country 100 years ago, or even 50 years ago, were far below what they are now. There were then no telephones or automobiles or airplanes or electric lights or radios. Farmers and laborers worked longer hours for lower wages. Yet, although it may be difficult for us to realize it, the vast majority of citizens in those days had security and for that reason were reasonably happy. The majority of the population lived on the land. They were assured of a place to sleep, warm clothing, and enough wholesome food to meet their needs, whether times were good or bad. Industrial employment was far more stable than it is today and periods of unemployment were rare. Those conditions no longer exist.

longer exist.

The standard of living has been raised by the modern industrial system, but the cost of living has also been raised. At the same time the bedrock of security has been taken away from millions of citizens. After a century of machines, there is a surplus of industrial workers in the cities and no intelligent person can say that it is their own fault that those men and women are out of worker that they should be able to care for themselves until they that it is their own fault that those men and women are out of work or that they should be able to care for themselves until they find reemployment. The farmers raise far more food than the Nation is able to consume, and as a result millions of them are compelled to exist on the borderline of poverty with no hope of attaining a decent income. This paradox of want in the midst of plenty has been brought about largely by the introduction of laborsaving machinery. May I quote from an address I made several veers are? years ago?

"It takes less time for a man to make something and he can make "It takes less time for a man to make something and he can make it with the expenditure of less energy. So he can make many more things with the same effort or in the same time. In other words, the same number of men can make the same number of things in a shorter workday, or fewer men are needed if the workday is unchanged. * * * The question of what we are going to do with the men no longer needed * * * is one which is put to us every day by hungry men and women out of work and out of money and whose hope of relief is almost dead. If that hope should die, how tragic would be its funeral! Millions of poverty-stricken in this the richest country in the world, millions of economic slaves in this the land of the free, millions of hopeless in this the promised land, would file by in the funeral procession. No tradition of the past, no appeal to moderation or to reason might hold in check an past, no appeal to moderation or to reason might hold in check an attack on our social and economic system or even on our form of government." I said this in June 1932.

This was the problem which the Roosevelt administration had to

This was the problem which the Roosevelt administration had to meet. It remains a task almost superhuman in its proportions, which other governments have tried to solve, only to meet with failure and often with disaster.

Great Britain is often singled out by the opponents of the Roosevelt administration as a nation that was able to ride out the economic storms of the last decade without unbalancing the national budget. They overlook the fact that a liberal and farseeing government carried out a drastic program of social security in England more than 20 years ago, a system that bears a remarkable resemblance to the present program of the Roosevelt adminisable resemblance to the present program of the Roosevelt adminis-tration. The late President Woodrow Wilson attempted to do the same thing for this country until the World War interrupted his efforts. It is a matter of common regret that the successive Repub-lican administrations which ruled this country after the war had terminated failed to act with similar enlightenment.

Although President Roosevelt and the Congress have been com-

Although President Roosevelt and the Congress have been compelled to carry on the struggle for social and economic justice along many fronts, the many worth-while acts of his administration are shaped together into a single pattern.

The first labor which he was called upon to perform was to tabilitize the banking system and to root out the evil banking practices that brought about the financial crisis of 1933. This labor was done well, and along with it the New Deal Congress enacted the bill insuring bank deposits. This latter act, of course, was opposed by short-sighted individuals, who predicted that it would strain the entire banking structure and bring about a worse series of disasters than those it sought to correct. On the contrary, the insurance of bank deposits has proven itself to be a wholesome piece of legislation, the advantages of which have been felt in every community. community.

During the Coolidge administration a series of measures designed

to relieve the agricultural population was rejected on the ground

that it would be dangerous and un-American to use funds from the Federal Treasury for the benefit of a single class. The farmers had been left to rescue themselves from the menace of depressed world prices or else to perish in the attempt. The short-sightedness of that attitude was soon exposed because the subsequent collapse of agriculture was a major factor in bringing on the general economic depression. The present administration has done everything in its power to lift the income of farmers and producers and to halt the power to lift the income of farmers and producers and to halt the wholesale eviction of those falling behind in mortgage payments. This sane policy is designed not only to help agriculture but to safeguard and protect the whole national economy.

The men and women who toil in factories and mills have not been forgotten. A wage and hour law has been placed in operation to put a floor under wages and a ceiling over hours of labor. This measure is just beginning to make itself felt and already the benefits are apparent.

The relief administration has given a means of subsistence to

The relief administration has given a means of subsistence to millions who had no other means of obtaining a livelihood, and the public works program has provided good jobs on needed projects for millions of others.

The C. C. C. camps have opened the doors of opportunity and

The C. C. camps have opened the doors of opportunity and health to an army of young men, while at the same time helping to reduce the supply of surplus labor.

The Social Security Act is now looked upon as a landmark along the path of human progress. The most cruel hardship of the industrial system was the fact that millions of persons worked a lifetime for meager wages only to approach old age without means of support. Eventually, when the new act becomes fully operative, I venture to predict that social security will be looked upon generally as a basic principle in the American system.

The case for the Roosevelt reforms was well put, by a writer in

ally as a basic principle in the American system.

The case for the Roosevelt reforms was well put by a writer in a recent issue of the Yale Review. In response to those individuals whose daily prayer is "Get rid of Roosevelt," he asked:

"Will any political party dare to propose that the Federal Government repudiate ultimate responsibility for keeping people from starving? Will any party dare to announce to the farmers that hereafter they will hoe their own row, without assistance from the Government in time of need? Will any party announce that it means to abolish old-age security; that it means to set finance free to blow up a bigger bubble still than under Hoover's grandfatherly eves: that it means to withdraw from the field of industrial rela-

to blow up a bigger bubble still than under Hoover's grandfatherly eyes; that it means to withdraw from the field of industrial relations and let labor and capital fight it out with tear gas, stink bombs, and propaganda?"

Much has been done; yet much remains for us to do. The great problem of unemployment has not yet been solved. The old-age benefits should be broadened and increased. There needs to be a permanent Public Works Administration to take up when needed the slack in employment. Loans for small-business men should be provided. The farmers' problem is still unsolved and, in the interest of the whole country, they should be made sure of a decent livelihood on the farm. The great success of the home building undertaking justifies its further extension.

In the heated controversies of the moment, we are apt to forget

In the heated controversies of the moment, we are apt to forget the long-range perspective that has guided President Roosevelt in his efforts to reshape the Nation's economic and social fabric. He

his efforts to reshape the Nation's economic and social fabric. He has labored to bring about a well-rounded prosperity, in which every citizen shall obtain a fair share in return for his labor.

He has devoted all his vast energies to uprooting the old system under which a few classes reaped most of the benefits, while the masses struggled along without adequate income or hope of security. He has revitalized the moral thinking of America. He has taught the Nation that if we go forward with converge it is possible to should destination in this lead of courage, it is possible to abolish destitution in this land of

courage, it is possible to abolish destitution in this land of plenty.

Best of all we are restoring economic liberty to America without sacrificing a single one of the basic rights which we look upon as the fundamentals of American democracy. We have preserved liberty of conscience, freedom of speech, and freedom of the press. The ugly practice of throwing political dissenters into jail or concentration camps, so common to other lands, is just as alien to America as it ever was. Instead of weakening democracy, we have made the United States the one great outpost of government of the people, by the people, and for the people.

The Social Security Act and the Townsend Plan

EXTENSION OF REMARKS

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES Monday, April 3, 1939

RADIO ADDRESS BY HON. FRANCIS T. MALONEY, OF CONNECTICUT, APRIL 2, 1939

Mr. MALONEY. Mr. President, I ask unanimous consent that there may be published in the Appendix of the RECORD a talk which I delivered last evening over the radio during

a joint discussion with the junior Senator from California [Mr. Downey].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I was pleased to have Senator Downey say that he did not regard I have a great admiration for Senator Downey, because I recog-

I have a great admiration for Senator Downey, because I recognize his sincerity, his devotion to the cause of his distressed fellows, and his determination to give people who are approaching the wintertime of their lives economic security with a reasonable measure of comfort. I want to say at the outset that although the original Townsend plan was far beyond my range of vision, I note with some degree of satisfaction that the continuing studies of Dr. Townsend and Senator Downey are bringing them closer to what seems to me a safe approach to a long overdue proper pension system. I am pleased to know that Senator Downey is soon to offer his pension philosophy in the Senate, and I am sure that other Senators, like myself, anxiously await that discussion.

I would not be fair to a determined and tender-hearted man if I did not pay a word of tribute to Dr. Townsend, who has compelled all of us to undertake a more intensive search of a plan to protect people who have exhausted their physical value to industry but who have earned a lasting share in the benefits of society through years of usefulness to business and the Nation. It seems to me most unfortunate that the industries of our country have always set aside funds to replace outworn machinery, but that at the same time many of them, without intending it to be that way, have permitted the outworn human machine, the handiwork of God, to suffer neglect when he became physically worn.

My presence here is dedicated to the purpose of helping to arrive at a proper pension system. Senator Downey, like the rest of us, is devoted to the principle of democratic government, and

because of his self-sacrifice in the cause of the aged, I am among those attentive to his views. The Government has a responsibility, and "the true test of a nation is its care of the weak."

I do not agree, however, that the present Social Security Act is a tragic failure. There are weaknesses in the act, but modification seems at hand in the places where the law has penalized industry and labor, and corrections are certain to be made in the instances where the act is insufficient.

Because there are imperfections in our system of government, we cannot now or ever rest on our oars. Democratic government has tolerated many abuses but the history of our country teaches us that the abuses are corrected when the people so desire, and there is no occasion for fear so long as we correct them by the democratic process, or approach the correction by such a type of democratic discussion as we have here this evening.

Democracy cannot correct its ills by placing its destiny in the hands of any one group. Its basic objective must be the greatest good for the greatest number. Those who criticize the democratic process as slow-moving and inefficient should remember that there is something in life dearer to us than efficiency; and that is our freedom—our freedom to do our own thinking and planning-our freedom to educate our children according to our

planning—our freedom to educate our children according to our own ideals—and to worship God according to our own wishes.

Senator Downey has not only clearly portrayed the plight of the aged but has pointed to the problem of the youth of our land, many of whom are years out of college, fortified with a spiendid education, and still seeking their first job. He reminded us of the millions of unemployed. All Members of Congress are of this torrifying problem, and the Congressiant Propriet. aware of this terrifying problem, and the Congressional Record will show my interest in it. The records also disclose that I was first, or among the first, to suggest a regulation of working hours as a means of stimulating employment and purchasing power. Unemployment has been the principal factor in aggravat-ing the distress of elderly people.

The subject of pensions can only be touched in the few minutes given to me on this program. If it appears that I am critical of the viewpoint of Senator Downey, it is not actually because of the viewpoint of Senator Downey, it is not actually because of opposition, but rather because I want to contribute toward the study of his idea. I have grave doubt as to the wisdom of providing funds for old-age pensions by way of a transaction tax, which is, in reality, a multiple sales tax. Such a tax would mean several sales taxes on everything consumed, and I have the fear that this would prove an unbearable burden upon the less feature of the construction of the less construction. fortunate of the American consumers, and would prove detri-mental to business, and particularly to small business. I share the view that any pension plan should be on a pay-as-

we-go basis, and I believe that the system can be developed. The great insurance companies have shown, by way of sound annuity policies, that small payments over the years will provide a reasonable retirement income as people approach that time of their lives when a speeded up industrial system is likely to abandon

We know that every business depression excites the advancement of financial panaceas. We had them after the depression in 1837 and again after the depressions of 1857 and 1872. At such periods people get the idea that there is something radically wrong with the people get the idea that there is something radically wrong with the monetary system, and that if that problem could be solved, the road to Utopia would be straight and easy. Actually what people are seeking at such times (and no class is immune from the desire) is a freedom from the debts they have incurred and a return of the income they have lost. Unfortunately economic relationships are not so simple. Prosperity cannot be restored by handing a few hundred dollars to each of many million people. Actually that kind of purchasing power might even bring a greater unbalance in our economic system. Money that is too cheap destroys itself, and since the World War we witnessed one nation pass through a period during which it required enough money to fill a suitcase to buy a ham sandwich.

sandwich.

While I want pensions sufficient to provide comfortable security for elderly people, I cannot believe that it is possible under any system to pay a great part of our population a larger income during a period of forced unemployment or during old age than the recipient was able to obtain while physically strong and gainfully employed. Such planning carries us to "the dream city of the sun." Let me say again, lest I be misunderstood, that it is my understanding that the Townsend plan, as a result of study and sincerity of purpose, is approaching the middle of the road.

In the old-age pensions section of the Social Security Act we have a system of old-age security that may be put in harmony with the

a system of old-age security that may be put in harmony with the dignity and independence and traditions of American life. No selfrespecting American wants something for nothing. He does want a full share of opportunity, without gratuity and without a pauper oath, and it was with that in mind that the Social Security Act was written and is being developed.

was written and is being developed.

It was the original plan that old-age insurance under the Social Security Act should be payable January 1, 1942. Now the Social Security Board has recommended that it be payable January 1, 1940. The Board has also recommended liberalizing pensions. Under its proposal a single man reaching the age of 65 on January 1, 1940, who had earned an average of \$50 a month for the 3 years since the old-age insurance plan went into effect on January 1, 1937, would retire on his birthday in 1940 with benefits amounting to \$20.60 per month for the rest of his life. A married man with a 1937, would retire on his birthday in 1940 with benefits amounting to \$20.60 per month for the rest of his life. A married man with a wife over 65 would receive \$30.90 a month. A single man who had earned an average of \$100 a month during the preceding 3 years would receive \$25.75 per month, and a married man with a wife over 65 would receive \$38.63. When a worker died his widow would receive a monthly benefit of three-fourths of her husband's monthly payment. The plan not only provides a reasonable amount of oldage security, but also protects the American family against part of its loss due to the premature death of the breadwinner.

Thus when a young worker dies his widow would receive three-fourths of the monthly amount due her husband on the basis of his wage credits. She would receive for each child one-half as much as her husband's wage credits would allow.

Pending the organization of the insurance program of the Social Security Act, it was found that some temporary provision had to be made for a large number of aged persons who had been reduced to destitution. More than a million and a half of them were on the relief rolls. A number of States passed old-age-benefit legislation, but were without adequate funds to meet the needs. Con-

lation, but were without adequate funds to meet the needs. Congress came to the rescue by setting up a system of Federal grants-in-aid to the States. The Federal Government decided to meet 50 in-aid to the States. The Federal Government decided to meet 50 percent of the cost up to a maximum of \$30. It was an imperfect plan. The original bill provided that in order to receive the Federal grants the State should pay a certain minimum pension, but through an enthusiasm for States' rights Congress eliminated that provision. Now, the Federal contribution of 50 percent means 50 percent of \$6.15 a month in one State and very little more in some others.

I personally feel that this is outrageous, but we are dealing with the "rock-ribbed" traditions of the poor law, which are still deep-rooted in many comunities in the United States. We can pour

Federal funds into them, but in some instances they are administered according to standards that belong to an ancient past.

While we recognize the limitations of our program, we cannot fall to be impressed by progress made since the passing of the Social Security Act. It was legislation long overdue and passed in a period of world-wide confusion and under the pressure of time and distress. and distress

and distress.

My State of Connecticut is close to the head of the list of States in its average monthly grants for the aged. Its average grants are \$26.66 a month. Only California and Colorado provide more. To fully express my feelings, I should say that Connecticut should go further. The amount is not sufficient, and an effort is being made to improve the Connecticut law.

The number of persons over 65 years of age in the United States are reportly increasing, and the ratio of dependancy among them.

is constantly increasing, and the ratio of dependency among them is mounting. Therefore, providing of security for them has become a problem of the first magnitude. Radical changes are necessarily fraught with danger. Most men desire to be fair, and I know people would prefer a slightly hesitant approach to a proper pension (and by that I mean careful study and test) than to risk the destruction of the greatest system of government yet devised.

The problem demands determined and charitable consideration, and I am hopeful that Congress is anxious to assume its responsiand I am hopeful that Congress is anxious to assume its responsibility. I think that a part of its responsibility is study of the suggestions of Dr. Townsend and Senator Downer. For myself, I shall not be reluctant to oppose a plan that appears to me to be economically unwise, though I would be bold if convinced that a generous distribution of pension money would contribute to the country's welfare as it provided comfortable security for people who are moving nearer to the everlasting beauties of eternity.

I am not so self-satisfied as to look with scorn upon the views of men of good heart, who devote their energy, without a hope of personal reward, to the welfare of their less fortunate neighbors. I seek enlightment, as I am sure most men do, and for that reason I have been willing to participate in the discussion of a subject that is difficult and that some people might consider politically

that is difficult and that some people might consider politically wise to avoid. I am confident of the future and grateful for a

national leadership that has at long last moved America toward a rehabilitation and a protection of forsaken groups, who are no less noble than other people and in the eyes of God equal to the most fortunate of their fellows.

The Lake Erie Canal

EXTENSION OF REMARKS

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES Monday, April 3, 1939

EDITORIAL FROM THE PITTSBURGH PRESS OF MARCH 20, 1939

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Pittsburgh Press of March 20, 1939, entitled "The Lake Erie Canal." This article gives a clear answer to questions raised by many of my constituents and shows the tremendous difficulties that confront such a venture at the present time.

There being no objection, the editorial was ordered to be

printed in the RECORD, as follows:

[From the Pittsburgh Press of March 20, 1939]

THE LAKE ERIE CANAL

The recent recommendation of the Corps of Army Engineers for

The recent recommendation of the Corps of Army Engineers for construction of the long-discussed Pittsburgh-Lake Eric Canal has revived public interest in this project. In Youngstown a tremendous campaign is under way to obtain funds from Congress to build the canal to Youngstown. In Pittsburgh, groups favoring and opposing the waterway are getting busy again.

Before the merits of the proposed canal can be discussed, an explanation of its background and purpose is necessary. As long ago as 1919, the River and Harbor Act authorized a survey of a waterway connecting the Allegheny River and Lake Eric via French Creek. In 1922, the Chief of Army Engineers recommended a survey of three routes, including one from Pittsburgh to Ashtabula, on the lake, by way of the Beaver and Mahoning Rivers.

This survey was not made and reported back to Congress until 1934, when the engineers recommended the canalization of the Beaver and Mahoning Rivers to Struthers, a point above Youngstown. This was the famous "stub end" canal which Youngstown wanted but Pittsburgh opposed on the grounds that it would give the former steel center a tremendous competitive advantage.

wanted sure Pressaying opposed on the grounds that it would give the former steel center a tremendous competitive advantage.

Acting upon the engineers' report, Congress authorized the construction of the waterway, but with the provision that it extend to Lake Erie and that the entire project first be approved by the engineers. Thereupon, the engineers set to work and made the

engineers. Thereupon, the engineers set to work and made the report which has revived the canal as a public issue.

Briefly, the engineers pronounce the project sound from an economic and engineering standpoint. They point out that 65,000,000 tons of coal are shipped to the lake each year, and that 32,000,000 tons of ore are shipped in return from the lake to furnaces in the upper Ohio Basin. They estimate that by using the Beaver and Mahoning Rivers to Struthers and the Grand River Valley to the lake a canal can be built at a cost of \$240,000,000, of which the Federal Government would have to pay \$225,000,000. The engineers estimate the prospective traffic of the canal as 27,746,000 tons and claim it would mean a savings in transportation charges of \$20,000,000 a year.

27,746,000 tons and claim it would mean a savings in transportation charges of \$20,000,000 a year.

However, the report recommends the construction of the canal to Youngstown first, and then proposes that a further study be made. If then found economically justified, it should be continued to the lake. It is this feature of the report that has particularly aroused Youngstown's enthusiasm for the project.

The decision as to whether the canal is to be built now is up to Congress. And Congress, on this project, will be guided largely by pressure from back home. If it feels that Pittsburgh and Youngstown want the canal, it will probably put up the necessary funds.

In many respects, therefore, the decision is in the hands of the two cities affected. Youngstown already is showing in no uncertain manner that it wants the canal. Pittsburgh still has to speak its collective mind.

What Pittsburgh's decision should be is not easy the claims of the rival groups are directly conflicting. Those favoring the canal feel that it will mean the economic renaissance of this district. Those opposing it think it will seriously damage local industries

After carefully weighing and studying the claims and counter-claims of both groups, we are inclined to agree with those who oppose the canal. For it seems to us that canal advocates, in their natural zeal to realize a dream of many years and link Pittsburgh and Lake Erie and thus complete the inland waterways system of the Mississippi and Ohio Basins, are forgetting some important fundamentals

They emphasize the need for cheaper transportation. There unquestionably is such a need. But does this answer it?

There we think the answer is definitely no. For this is not cheap transportation, it is subsidized transportation. The Government will spend \$240,000,000 to build a waterway and will spend large sums each year, in addition, to maintain it. The tax-payers will foot the bill and a handful of river shippers will be the direct beneficiaries.

It seems to us that on this issue alone the project cannot be justified economically. River interests for years have maintained that they offer the cheapest form of mass transportation, where speed is not an essential element. But that has never been proved. For river improvements are made with public funds and rivers are maintained from the same source. Naturally, river shippers can offer low transportation rates. So could the railroads if the Government built and maintained their right-of-way and they had

ornment built and maintained their right-of-way and they had nothing to provide except rolling stock.

There are other valid objections to the canal. Its uses are limited. It probably will be impassable during the severe winter months. Thus it is not an all-year-round medium of transportation which an industrial center such as Pittsburgh needs.

Nationally, it is vulnerable from the standpoint of its high cost. At the present time an effort is being made to curtail Government expenditures. Those who advocate this—and their ranks include most taxpayers—can hardly, in all consistency, insist that the Govmost taxpayers—can hardly, in all consistency, insist that the Government spend \$240,000,000 on a single project whose economic value is open to serious doubt. The excuse that if Pittsburgh doesn't get the money somebody else will is a filmsy argument at best; for, after all, this region is a heavy Federal-tax contributor and is only adding to its own tax burdens by taking such an attitude.

Locally the canal is subject to other criticisms. If, as the engineers say, it will handle 27,000,000 tons of transportation, it obviously will cut heavily into the railroads' revenue at a time when they are in none too sound an economic condition. Railroad men say it will cost 7,500 employees their jobs. And if the railroads suffer, so will the coal mines, for the railroads are the largest users of coal; and so will the steel mills who also regard the railroads are less than the coal mines, for the railroads are the largest users of coal; and so will the steel mills, who also regard the railroads as a major customer.

There unquestionably will be some economic benefits to offset these losses. But we doubt if they will be sufficiently compensating. For, despite what its proponents say, we do not believe this canal will open up any major fields of business for Pittsburgh's industries. Its primary use will be to carry ore and coal, not manufactured products. And that in itself limits its possible benefits.

If this canal were being built on a self-liquidating basis, that is, if tells were being charged that would never for the project in 20 to

if tolls were being charged that would pay for the project in 20 to 40 years, then most of the objections to its construction would be removed. For it would then be a Government investment; not a Government expenditure. And the railroads could offer no sound opposition to a project built on such a basis.

As it is now, they and the entire community can find plenty of valid objections. And so can the rest of the Nation, which is justified in asking whether the Federal Government has any right to continue its policy of subsidizing one form of transportation in competition with another.

We therefore hope that Congress, despite the report of the Army engineers, will refuse to appropriate the requested funds for this waterway. On its present basis it seems to be neither economically sound nor economically desirable.

Louisiana-Vicksburg Bridge Commission

EXTENSION OF REMARKS

HON. NEWT V. MILLS OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Monday, April 3, 1939

Mr. MILLS of Louisiana. Mr. Speaker, will the gentleman

I first desire to thank my distinguished friends and colleagues, Luther Patrick, of Alabama, Virgil Chapman, of Kentucky, as well as the entire membership of the Interstate and Foreign Commerce Committee, for having favorably reported H. R. 3224, a bill creating the Louisiana-Vicksburg Bridge Commission, which if adopted will eventually make the Louisiana-Vicksburg bridge at or near Delta Point, La., and Vicksburg, Miss., toll free.

The commission which this bill proposes to create will consist of three persons, two of whom shall be appointed by the Governor of Louisiana and the other by the Governor of Mississippi; however, each member of the commission shall give such bond as may be fixed by the Chief of the Bureau of Public Roads of the Department of Agriculture, conditioned upon the faithful performance of all duties acquired by this

act. I may say further this bill meets with all objections that | have previously been raised.

Mr. Speaker, I congratulate Hon. Dan McGehee, of Mississippi, Congressman from the congressional district adjoining this bridge, as agreeing to permit this bill to be passed over without prejudice at this time in that he could submit this bill to Mayor J. C. Hamilton, of Vicksburg, and all other interested parties for their opinion.

At this time I would like to call the House's attention to the fact that I introduced in the Seventy-fifth Congress a similar bill and that same was reported favorably by the Interstate and Foreign Commerce Committee, and said bill was reported out and came to the House on the Consent Calendar. However, at that time, my distinguished friend, Hon. Dan McGehee, objected in the light that certain interests in his district wanted to study the contents of this proposed legislation to which I had no objection, as I felt that all interested parties should iron out their differences. I believe, however, Mr. Speaker, we have ultimately found a medium of understanding whereby legislation can be adopted in this present session of Congress that will make it possible to eventually make this bridge in question toll free.

It is my understanding that an average of \$397,691.11 is paid in annually for toll or \$3,181,528.91 has been collected as toll for the past 8 years, and I say, Mr. Speaker, it is a shame that the public is forced to pay bridge toll on one of the main Federal highways of this country. Therefore, I trust by the next Consent Calendar day that my distinguished Mississippi friends will come to an agreement whereby we can secure the passage of the necessary legislation in this present session of Congress in that we can eventually make this bridge toll

It may be held by certain interests that they would be interested in the bridge being toll free earlier than my bill provides, which I well appreciate and I believe this can be made possible if we can persuade the highway commission of each of the States of Louisiana and Mississippi to contribute financial aid in this undertaking.

Borah Talks Sense

EXTENSION OF REMARKS

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, April 3, 1939

EDITORIAL FROM THE CHILTON (WIS.) TIMES-JOURNAL

Mr. KEEFE. Mr. Speaker, under leave to extend my remarks I am putting in the RECORD the following editorial written by Mr. William J. McHale, editor of the Chilton Times-Journal, of Chilton, Wis., entitled "Borah Talks Sense":

[From the Chilton (Wis.) Times Journal] BORAH TALKS SENSE

Senator Borah sounded a warning caution in the conduct of the foreign affairs of this Nation which will and should find widespread approval when he declared:

"For myself, I would adhere closely to the advice of Washington—

no entangling alliances, express or implied. I would regard the Monroe Doctrine as a part of our national defense and a cornerstone of our foreign policy. I would send no money to European war chests, no munitions to any nation engaged in war, and, above all, no American boy to be sacrificed to the machinations of European imperialism."

At the moment the two European dictators, Hitler and Mussolini, At the moment the two European dictators, Hitler and Mussolinl, are making themselves extremely disagreeable. Especially repugnant to our democratic sense of right and justice has been Hitler's seizure of the helpless little Republic of Czechoslovakia. It was just such an act of injustice as Hitler has accused other nations of committting against Germany and which he has made the pretext of justifying his sweeping disregard of treaties. The American people naturally condemn that sort of thing. In our attitude of disgust we become fertile subjects for those to work upon who make a pretext of defending democracy against nazi-ism and fascism. a pretext of defending democracy against nazi-ism and fascism. We lose sight of the fact that it is Communists and Communist sympathizers who are the leaders of the ballyhoo against the

European dictators.

Before getting unduly excited about the European situation we would do well to consider the causes which gave rise to it. First and would do well to consider the causes which gave rise to it. First and foremost of these causes was the rank injustice of the Versailles Treaty. This instrument was drawn not in the spirit of justice but in the spirit of revenge. It was intended to break the morale of the German people for decades to come. Germany was deprived of her colonies with the result that England and France had their empires extended. The consequent hopelessness and unrest which seized Germany brought about a condition of chaos. In the meantime Russia had gone Bolshevik and started out on its mission to make all the nations of the world the vassals of Moscow. Communism, we should remember, was the first of the international "isms." In chaotic Germany it quickly gained footbold, and millions of the people became sympathizers of the Moscow doctrine. Thus was laid the groundwork for the rise to power of a strong man in Germany.

Hitler made his bid for that role and won.

Se England, France, and Russia are primarily responsible for the conditions that started Hitler. Let them stop him. Not one of them would lift a hand today for democracy as such. They become concerned only when the threat is to their own imperial domains. They did nothing to prevent the seizure of Austria. At Munich they went so far as to "legalize" the first slicing up of Czechoslovakia. They gave Hitler his start in expanding his domain and their concern now is not to correct the wrongs he has done but to protect themselves against a loss of their own empires, much of which were acquired by

against a loss of their own empires, much of which were acquired by the methods Hitler is now using.

The cry goes up to defend the democracies—and Russia is on the side of the defenders of democracy. Russia, where the Communist Party, with a membership of less than 1 percent of the people, holds the other 99 percent in a state of terrified serfdom; where Bolshevik murderers, in the name of the Government, slaughtered over murderers, in the name of the Government, slaughtered over 20,000,000 Christians; where communism got its start and in turn gave rise to the opposing doctrines of fascism and nazi-ism—this undemocratic, godless dictator tyranny is now to be allied with the democracies in the movement to stop Hitler and save democracy. This country was propagandized into giving its blood and treasure in the World War "to make the world safe for democracy." We loaned billions to Britain and France to fight that war, and they broke their pledged word with regard to repayment of those billions just as arbitrarily as Hitler broke his word respecting the independence of Czechoslovakia.

And yet our Government chiefs seem to have forgotten all this

pendence of Czechoslovakia.

And yet our Government chiefs seem to have forgotten all this recent history and to remember only current events. They pass up no opportunity to strain the relationship between this country and the dictatorships. While we disapprove of the dictator banditry, it is obviously the height of folly for us wantonly to pick a fight with them. But that is what our Government has been doing. Senator Borah does a service in warning against our getting mixed up in the European mess. Let those who started Hitler find a way now to stop him. now to stop him.

The W. P. A. Revulsion

EXTENSION OF REMARKS

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Monday, April 3, 1939

ARTICLE BY MARK SULLIVAN

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mark Sullivan, which was printed in the Washington Post of April 1:

> [From the Washington Post of April 1, 1939] THE W. P. A. REVULSION—UNMISTAKABLE SIGNS

(By Mark Sullivan)

The greatest applause given to any speaker on any question in this session of Congress was given this week to a Member of the House who attacked W. P. A.—his attack was against foolish and extravagant projects. On another occasion, a motion to investigate W. P. A. was carried by 352 to 27. These and other evidences show that Congress and the country are turning against W. P. A. This is a sign of something deep-reaching and little understood. It is an instinctive national mood, not understood even by many who feel it.

W. P. A. was an agency for taking care of the residue of the residu

W. P. A. was an agency for taking care of the needy and deserving appeals to our human sympathy. Many who are on W. P. A. rolls are genuinely deserving. Many others are not. However small or large the number who deserve our sympathy, whatever the defects of W. P. A., we feel a little ashamed to withhold sympathy from an institution that certainly does take care of some persons who are worthy of the utmost sympathy and consideration. persons who are worthy of the utmost sympathy and consideration.

We observe, or read about, some example of undeserving beneficiaries of W. P. A., or some waste, or some sordid political use made of W. P. A.—and we are moved to indignation. But there occurs to us some case we personally know of, a fine and worthy person whose job on W. P. A. is his defense against intolerable distress. We think of the case within our own experience, we reflect that there must be many others—and we withhold our indignation. indignation.

indignation.

Nevertheless, the country is turning, as Congress has turned, against W. P. A. We are turning against it because of an instinct within us even more powerful than sympathy for unfortunate individuals. We are turning against W. P. A. because we sense, vaguely but strongly, that something within W. P. A. constitutes a threat to the very existence of the country. That this is so is sensed in a vague way by many who do not understand why.

To explain just why W. P. A. is a threat to the country is not easy. One way to achieve understanding is to imagine yourself in the position of a person who wishes to bring about the destruction of American society and the substitution of some form of government collectivism—communism, socialism, or a variation of

of American society and the substitution of some form of government collectivism—communism, socialism, or a variation of them. Such a person you can imagine reasoning as follows:

"We will take the lowest layer of the population. We will make this layer dependent on the government for its living. To this layer we will give a standard of living slightly higher than is enjoyed by the layer immediately above, which remains in private employment. The layer above, seeing the better standard of living enjoyed by those who get their living from the government, will be constantly tempted to feel discontent with their private jobs, constantly tempted to join the number dependent on government. Thus gradually we will increase the number dependent on government. In time we will increase the number dependent on government to where it amounts to some 30 percent of the total population. At that point the whole American system of society government to where it amounts to some 30 percent of the total population. At that point the whole American system of society will turn over. For the 70 percent remaining in private employment will not be able to support the 30 percent who get their living from government. We will have destroyed the system of privately owned industry. We will have achieved government collectivism. We will have done it quietly, without violence. We will have achieved peaceful revolution. We will have done it as if it were a natural process, impossible to resist or even to criticize justly."

Something much like this is made possible by W. P. A. The layer of population that is on W. P. A. gets an average pay of \$61 a month. That is slightly more than is received by many persons in private employment. Some on W. P. A. draw over \$150 a month. This is much more than many in private employment receive. In addition to larger earnings, other features of work on W. P. A. make it more attractive than many in private industry. Work

make it more attractive than many jobs in private industry. Work on W. P. A. is less onerous. Workers on W. P. A. receive, additional to their pay, free gifts of food, which, when bought by ordinary citizens, would cost anywhere from \$5 to \$15 a month or more. This is done by Secretary Wallace's Triple A under a system of buy-

This is done by Secretary Wallace's Triple A under a system of buying up surplus crops in order to help farmers, by keeping up prices of crops. While this helps farmers, it helps even more directly the W. P. A. workers to whom the food is given.

Not only by the things that make W. P. A. more attractive than many jobs in private industry is the system of private industry undermined, the tendency toward government collectivism furthered. Every policy and practice that makes private industry more difficult to operate tends to throw more and more of the people into the group that is tied into government as the source of their living. Everything that makes business recovery difficult works toward the same end—destruction of the system of private industry, the coming of government collectivism.

If there are persons who consciously wish to destroy private industry and bring about government collectivism, W. P. A. must be a fundamental part of their plan. Such persons would, in the words of Representative Wadsworth, make a "desperate endeavor to make W. P. A. permanent." They would, in Representative Woodrum's words, "instead of getting people off W. P. A., make it attractive for them to stay on."

But dismiss any charge of deliberate intent. Assume, if you

But dismiss any charge of deliberate intent. Assume, if you wish, that the motive of all is honest humanitarianism. The effect is the same. America must liquidate W. P. A.—or W. P. A. will liquidate America.

W. P. A. Appropriations

EXTENSION OF REMARKS

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Monday, April 3, 1939

LETTER CONCERNING W. P. A. APPROPRIATIONS

Mr. MILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me recently:

Representative William Miller,

Washington, D. C.

Dear Mr. Miller: Congratulations on your stand against the W. P. A. appropriation bill now before the House. An investigation in your own State will show gross negligence in the handling of relief funds; and if the situation here is any criterion, this is certainly the time to clamp down on any further needless spending. I am an employee of the W. P. A. and have been working on two W. P. A. projects. Being so completely disgusted with the needless waste and inefficiency, I have requested a transfer to a construction project at a wage reduction of \$32 each month, so that while I must work for W. P. A., I at least will earn what I receive (sic). From 6 months' employment with the W. P. A. I have learned to be lazy and incompetent and have seen more dehumanization among employees that the newspapers tell me are being rehabilitated.

A cut of the persons in Connection to the content of the persons in Connection o

A cut of the persons in Connecticut who could do very well without this employment would save at least \$20,000 every 6 months, and this amount could be used for the real needy ones who would be glad to work for \$60 per month.

Good luck, Mr. MILLER, and don't vote till you see the figures.

Sincerely yours,

The American People Do Not Want War

EXTENSION OF REMARKS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, April 3, 1939

ARTICLE FROM THE TABLET OF MARCH 18, 1939

Mr. THOMAS of New Jersey. Mr. Speaker, on March 18 there appeared in The Tablet, a Catholic weekly, published in New York City, an editorial, the title of which is "The American People Do Not Want War."

This editorial is timely, and will give to the membership of the Congress the attitude of our people relative to war.

Mr. Speaker, under leave granted by the House to extend my remarks, I have the pleasure to include the editorial above referred to.

> [From The Tablet of March 18, 1939] THE AMERICAN PEOPLE DO NOT WANT WAR

The latest ventures of Adolf Hitler will undoubtedly arouse the internationalists and interveners in the United States to have our country mix in the kaleidoscopic troubles of Europe. The money changers are fast seeing their fields of power and profit destroyed; the world savers, learning nothing and forgetting everything, will argue that the place of American youth is in the trenches of China or the fields of the Ukraine; the Communists and occult forces bitter at the decreasing chances of world revolution, seeking by dominating subversive movements to counteract the triumph of Dictator Hitler, will scream "To arms"; and those the triumph of Dictator Hitler, will scream "To arms"; and those who have been engaged in name calling, threats, and bombastic attacks will, in bitterness as they see their efforts were futile,

attacks will, in bitterness as they see their efforts were futile, make rash statements.

Thoughtful and fair Americans will not lose their balance over Hitler's recent exploits. They will continue to think solely of their own beloved land; they will continue to consider solely the welfare of the American people; they will continue to strive solely for peace; and they will not be moved by the war mongers, the hate dispensers, and the defeated internationalists who see their market dealining.

markets declining.

Czechoslovakia was a product of the World War. The Austro-Hungarian Empire was made up of Czechs and Germans in one end and Russians, Hungarians, Rumanians, and Poles in Carpatho-Ukraine. These nationalities with the Slovaks were lumped together at the insistence of France to make the artificial State of Czechoslovakia. Czechoslovakia. The old Austro-Hungarian Empire was an economic unit. The grouping of all these people in Czechoslovakia was performed by amateurs and opportunists. Differences in languages, customs, traditions, and philosophies were frequently disregarded; absurd boundary lines were set up; self-sustenance was disregarded; racial and religious factors were not sufficiently considered. The headling of the problem was united. sidered. The handling of the problem was unjust, stupid, and illogical. Central Europe previous to the World War was happier and self-sustaining. The after-war arrangement made for bitter-

and self-sustaining. The after-war arrangement made for bitterness, rivalry, antagonism, economic chaos.

The treaty of Versailles is again responsible for this week's news. It transformed large groups of peoples from units into rivals; it solidified the Germans who are determined to break the chains forged upon their nation and again to become a "have" and not a "have not" nation. The treaty together with the infiltration of communism has acted as a compelling force to undergo hardships

and loss of liberty for fear of receiving a worse evil to complete the picture.

not the lesson clear to the American people? Does it not Is not the lesson clear to the American people? Does it not now dawn on everybody that our entrance into the last war was a tragedy? Did we save the world for democracy? Did we assist world peace? Not at all. We did help "Kill the Kaiser"; yet we prepared the scenes for Adolf Hitler. Today Germany has more territory and more subjects than previous to the World War. Need any fair-minded person hesitate in saying we should never again send our boys and our dollars to Europe to fight a war in which everybody loses? Keep out of Europe, mind our own busiess is once more a great lesson to be drawn from all these recent ness, is once more a great lesson to be drawn from all these recent events.

There is another lesson. In every one of the countries seized by Hitler he has followed a devastating, if bloodless, program. The internal peace and unity of each people was destroyed by agents of confusion and propagandists of destruction. Then the army and officials were hamstrung by dividing and contradictory forces. Reduced to impotence, these peoples were literally seized. In the United States, even though on a small scale, the foreign propagandists of hate and confusion are active. They work through Government channels, the Army and Navy, in cities in the ranks of labor, with the press, radio, education, politics, and every other form of human activity. They frequently travel under assumed names. They shout for "peace and democracy," for the Constitution and against certain dictators, but their entire program is to indoctrinate foreign ideologies, to create confusion, to divide the American people, to make the Nation helpless so as to bring about warforeign, class, and finally revolutionary conflict.

Today the duty of Americans is again clear. Keep out of Europe. Insist upon peace. Seek to restore prosperity to our own American people. Ban the foreign ideologists, movements, and organizations who act as agents for distant dictators. Condemn all subversive movements alike. Strive for national unity.

America for Americans! Americans for America! There is another lesson. In every one of the countries seized

Republican River Valley, Nebr.

EXTENSION OF REMARKS

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1939

RESOLUTION OF THE LEGISLATURE OF NEBRASKA

Mr. CURTIS. Mr. Speaker, I arise to speak again in behalf of the Republican River Valley of Nebraska. It would be impossible to overemphasize the need for flood control and irrigation in that valley. About 4 years ago a devastating flood came down that valley and took the lives of 110 known persons. Governor Cochran, of Nebraska, who is an engineer, says that that valley is the most neglected spot in America.

The Legislature of Nebraska has passed some resolutions pertaining to the problems, and I trust that the Members of the House will give them their due consideration. It is as

follows:

Legislative Resolution 23 REPUBLICAN RIVER VALLEY FLOOD CONTROL

Whereas the Congress of the United States, by the adoption of Whereas the Congress of the United States, by the adoption of acts pertaining to flood control and reclamation, has recognized responsibility on the part of the Federal Government to control the destructive floodwaters of the basins of the Mississippi and Missouri Rivers, has declared this to be a national problem, and has heretofore authorized the expenditure of Federal funds in considerable amounts in the area for the improvement of conditions resulting from floods and drought; and

Whereas the Republican River Valley drainage area in Nebraska, settled by people who are and have been making every effort to better their condition in the face of adverse circumstances beyond their control, comprises many hundreds of thousands of acres of valuable land which has been greatly damaged by floods and drought; and

Whereas the Republican River Valley in Nebraska, a part of the great drainage area of the Missouri and the Mississippi Rivers, has thus far received but scant Federal recognition for conservation

and reclamation; and

Whereas as a result of the 1935 floods in that valley, over 100 persons lost their lives, the property loss was tremendous, and much of the fertile and valuable land in the valley has been imperiled and made subject to repeated damage from floodwaters, while on the other hand many thousands of acres in the area are in urgent need of the waste waters of the river for irrigation; and Whereas a constructive and comprehensive Federal program for the pretection of life and property from destructive floods and

the protection of life and property from destructive floods and

drought within the drainage area of the Republican River, including its tributaries, is admittedly a national problem, and is needed for the control, conservation, development, and beneficial use of the water and land resources of said area as affecting the well-being of the hundreds of thousands of its citizens: Be it

Resolved by the Unicameral Legislature of Nebraska, That the Congress of the United States be and it is hereby requested and urged to cause to be made full, complete, and comprehensive survey and investigation into the claims of the residents of the Republican River Valley in Nebraska for flood control and reclamation therein, including the storing, preservation, and distribution of the waste and flood waters of said river and its tributaries for beneficial use:

That the Congress be and it is urged to make early appropria-tion of Federal funds to insure the inauguration and carrying on of internal improvement projects within said valley, and that the proper Federal agencies be empowered and directed to give early

proper Federal agencies be empowered and directed to give early and careful consideration to the feasibility and advisability of constructing and maintaining dams in said area in Nebraska, including the various tributaries of the Republican River, for the Federal purpose of flood control, conservation, and other beneficial use of the water, including that of irrigation.

That a copy of this resolution be sent by the chief clerk of this unicameral legislature to each of the following: The President of the United States, the Honorable Franklin D. Roosevelt; United States Senator, the Honorable George W. Norris; United States Senator, the Honorable Edward R. Burke; to each of the five Congressmen from Nebraska, to wit, the Honorable Carl T. Curtis, the Honorable Karl Stefan, the Honorable Charles F. McLaughlin, the Honorable Harry Coffee, the Honorable George H. Heinke; the Vice President of the United States, the Honorable John N. Garner, as President of the Senate; the Speaker of the House of Representatives, the Honorable William B. Bankhead; the Secretary of the United States Department of Agriculture, the House of Representatives, the Honorable William B. Bankhead; the Secretary of the United States Department of Agriculture, the Honorable Henry A. Wallace; the Secretary of Commerce of the United States, the Honorable Harry Hopkins; the Secretary of War of the United States, the Honorable Harry H. Woodring; the Secretary of the Interior of the United States, the Honorable Harold L. Ickes; the Governor of Nebraska, the Honorable R. L. Cochran; the Chief of the Army Engineers, Maj. Gen. Julian L. Schley, Washington, D. C.; the Office of Army Engineers, Kansas City, Mo.; the Mississippi Valley Flood Control Association; the National Rivers and Harbors Congress; the National Reclamation Association; the chairman of each congressional committee in Congress which has to do with the appropriation of Federal funds for the conservation of national resources; the Governors, respectively, of Kansas and Colorado. tively, of Kansas and Colorado.

The Money Question

EXTENSION OF REMARKS

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Monday, April 3, 1939

CONGRESSIONAL BREAKFAST TALK, MARCH 28, 1939

Mr. BURDICK. Mr. Speaker, the greatest unsettled question now before this Congress is the money question. That question would soon be settled here if the people of the United States were in possession of the facts. I submit here the proceedings of the congressional breakfast talks conducted by Charles G. Binderup, as these proceedings are bristling with facts. The Members of Congress will remember the great work done on this question by Congressman Charles G. Binderup in the Seventy-fourth and Seventyfifth Congresses.

I want to preface this congressional breakfast broadcast by a letter I received the evening previous, calling attention to this radio program, because this letter includes some indisputable fundamental facts well stated.

JUST AS A CONSTITUENT WOULD LIKE TO SPEAK WITH HIS REPRESENTATIVE IN CONGRESS

WASHINGTON, D. C., March 27, 1939.

MY DEAR COLLEAGUE: May I respectfully remind. There is only one fountain from which all wealth flows. It is the fountain of labor combined with God's natural resources of the earth.

May I also bring to your mind—there is only one plan whereby the products of this fountain can flow freely, distributing from the producer to the consumer; it is money, our circulating medium of exchange of exchange.

With an abundance of labor and an abundance of God's natural resources there is no more justification for unemployment and suffering for lack of money to carry on than if a dealer in dry goods should close his doors because there was a shortage of vardsticks.

A perfect monetary system, the wheels of distribution, the life-A perfect monetary system, the wheels of distribution, the life-blood of trade and industry, must definitely provide two things, velocity (circulation) and volume (quantity). It is not possible to have a dollar with uniform purchasing and debt-paying power with either of these two factors lacking. Thus the necessity of constitutional money. Government monetary control. It is invariably the contraction of volume or the failure of vol-ume to expand in keeping with the demands of a growing nation that retards velocity of circulation.

So retarding the volume of money invariably retards velocity and retarding velocity in turn retards the efficiency of volume—in other

words, starts hoarding.

These matters are all explained in our congressional breakfast broadcasts every Tuesday morning over WOL at 8:15 o'clock.

Respectfully,

THE CONSTITUTIONAL MONEY LEAGUE OF AMERICA, C. G. BINDERUP, President.

CONGRESSIONAL BREAKFAST TALK, TUESDAY, MARCH 28, 1939

Announces. Once again we bring to you the Tuesday morning congressional breakfast talks conducted by Mr. Charles G. Bindformer Congressman from the State of Nebraska. Binderup.

Mr. Binderup. Thank you, Mr. Brown. I am pleased to introduce our guest speakers this morning, Senator Gillette, of Iowa, and Congressman Hunter, of Ohio.

Our subject this morning is the Quantitative Philosophy of Money, the subject that has been so liberally discussed here in Washington for the past week, or since that erroneous statement

Washington for the past week, or since that errolleous statement appeared in one of our Washington papers purporting to be made by the Governors of the Federal Reserve banks.

I am just in receipt of a letter with an attached clipping from this newspaper, sent in by a Member of Congress. He writes in the letter as follows: "It seems to me the Board of Governors of the Federal Reserve bank are trying to give you a real set-back, in this clipping from one of our Washington papers. You will notice they are claiming your philosophy, or quantitative monetary control level, is not workable."

Well, Is hot workande.

Well, I believe I'll just pass the buck and turn this matter over to our guest speakers this morning for reply to the Governors of the Federal Reserve banks. Mr. GILLETTE, what do you think about the quantitative philosophy of money, as a basis whereby to determine Government monetary control and provide constitutional money? I mean, the theory that money measures things and things measure money, each measures the other by and according to its own supply and demand as compared with the supply and the demand for the other. If you double the amount of money in circulation, you approximately double the price of everything and by doubling the price of everything you divide your debts, as it will then take

you approximately double the price of everything and by doubling the price of everything you divide your debts, as it will then take only half as much labor, or the products of labor, to pay the same debt. If you divide the amount of money in circulation, you will divide the price of everything; by dividing the price of everything, you double your debt, for it will then take twice as much labor or the commodities produced by labor to pay the same debt. Now that is what we mean by the quantitative theory or philosophy of money. Senator GILLETTE, give us your opinion.

SENATOR GILLETTE. Well, Mr. Binderup, I do not claim to know so much about what you call philosophies or theories. What knowledge I have along the monetary line has been acquired by facts and figures obtained from general experience and observation.

Now, if I understand rightly what you mean by the quantitative philosophy of money, I believe there is not the slightest doubt as to its accuracy. How could I help believing in this when I see it before my eyes and in business experience every day, I know when money is plentiful prices are high, wages are high, debts and taxes are easy to pay, labor is fully employed, and there are small relief rolls. And I notice when money is plentiful and the farmers are getting the cost of production plus a reasonable profit for their goods, they buy the products of industry, and the factories run night and day, and the laboring people in industries buy the farmers' products. Now, there is no theory or philosophy about this. It night and day, and the laboring people in industries buy the lariners products. Now, there is no theory or philosophy about this. It is common knowledge. And I also know when money is tight or scarce, prices go down excepting freight rates, interest, taxes, and similar fixed charges. But labor and the products of labor governed by the supply and demand that determine the purchasing and conby the supply and demand that determine the purchasing and con-suming power of the multitude go down—then mortgages are fore-closed. Farmers and laboring people lose their farms and homes. Merchants and manufacturers go broke. I am firmly convinced that it was scarcity of money in the twenties that helped break no less than 16,000 little banks, depriving millions of laboring people of their lifetime savings they had laid aside for their old age. And thus, money scarcity and its effects made out of some of the best citizens, roaming nomads, wanderers without homes, W. P. A. and relief workers by the millions. relief workers by the millions.

relief workers by the millions.

Now, I don't know, Mr. Binderup, whether this answers your question, but that is my opinion. I don't call it a philosophy, but I call it just common knowledge based on observation and experience.

Mr. Binderup. Thank you, Senator Gillette; that is a good statement. The newspaper clipping referred to is about 36 inches long dealing primarily with this issue. It is on the front page and in the first column. Just who do you think wielded the power and influence to place this misleading statement in this conspicuous place? I will venture to say, Congressman, that even though you are a

Member of the House, you could not get one word in this paper in this position refuting or disproving this statement. Senator Thomas tried it and they gave the Senator 3 inches on an inside page. But in those 3 inches he exploded a ton of dynamite when he said, "If the present board does not have confidence in its ability to regulate the value of the dollar then some other board which he said, it he present board does not have confidence in its ability to regulate the value of the dollar then some other board with more confidence in its ability should be appointed to supplant the present board." Well, that's the truth in a nutshell. In fact such a bill has already been introduced in the House. The number is H. R. 4931 known as the Binderup-Voorhis bill. What do you say, Congressman Hunter, in reference to the quantitative philosophy of money and the statement made by the Governors of the Federal Reserve banks that price control will not work?

Mr. Hunter, I think, Mr. Binderup, I should explain, in order that our radio audience may know. Price control does not mean to control the price of any individual article. Prices must fluctuate freely, according to supply and demand. Price control, as the Governors refer to it, in this article, refers to the dollar index of 1926. In other words, it means the average price of 784 leading commodities in the year 1926, which has been accepted generally as the zero mark. From this point, Congress can regulate the general price level by instructing its monetary authority to raise the price level, if and when necessary.

Mr. Binderup, I am pleased that you cleared up the exact mean-

the price level, if and when necessary.

Mr. BINDERUP. I am pleased that you cleared up the exact meaning of the term "price control," Congressman Hunter, and may I suggest an example to further explain. Suppose we find after establishing the price level, based on the average prices of 784 commodities in 1926, that this price level or dollar index figure for 1926 is insufficient to create full employment for all employable or that this price level or dollar index figure does not establish a parity between fixed charges such as interest, taxes, freight rates, and hundreds of other fixed charges that do not respond to lish a parity between fixed charges such as interest, taxes, freight rates, and hundreds of other fixed charges that do not respond to supply and demand, then in order to establish this parity and create full employment, the Congress can advise its agent, "the monetary authority," to raise the average price level for labor and commodities, say one or two or any number of points until this has been established. In other words it gives us a definite measurement whereby to scientifically control our price level and prevent booms and depressions. It does answer, as you say, the same as the zero mark on our thermometer from which we can measure up or down, but Congressman Hunter, the Governors of the Federal Reserve Board say Government monetary control will not work. not work.

not work.

Mr. Hunter. How do they know it won't work? They have always refused to try it regardless of the fact the world's greatest economists say definitely that there is no question but what it does work perfectly. And everybody knows, as the Governors themselves admit, that too much money will cause what we call inflation, and rob the rich or the creditors; and too little money will cause defiation and rob the debtors or the poor, and thus having long since established these fundamental facts, how strange that the Governors of the Federal Reserve banks should claim that it is not possible to find the right amount of money and keep prices on an average stabilized. Just why do they refuse to try it? It could not possibly be worse than no control at all. It could not possibly be worse than our present system that has collapsed no less than 27 times during the life of our Nation, or a money depression about every 5 or 6 years. And in fact our monetary plan never has worked even half way right. Certainly anything would be better than what we have. I would like to hear your opinion. hear your opinion.

Mr. BINDERUP. Oh, no; my turn will come later, you two gentlemen are handling it perfectly. Let us turn the "mike" over to Senator Gillette again.

Senator GILLETTE Well, since in this article referred to, the Governors of the Federal Reserve Board merely hold up their hands Governors of the Federal Reserve Board merely hold up their hands in defeat and surrender and don't even lend the least encouragement; this certainly doesn't agree with President Roosevelt's statement made, I think, in his last inaugural speech, when he said, "Let us refuse to leave the problem of our economic welfare to be solved by the winds of chance and the hurricane of disaster; let us not admit that we cannot find a way to master economic epidemics of disease." That was President Roosevelt's challenge to the Governors. Mr. Binderup. Well, Senator, that really puts the Board of Governors on the spot, doesn't it? That really means drive or get off the bus. Let me read the second paragraph, "The Board of Governors said they are in complete sympathy with the desire to prevent booms and depressions, but that prices cannot be controlled." Well, Congressman Hunter, that strikes right at the heart of your bill; what do you say?

Mr. Hunter. Well, as I said before, how do they know when they

Mr. HUNTER. Well, as I said before, how do they know when they have never tried it? They express their sympathy and desire to accomplish the objective for which we strive, but say it just simply

can't be done.

Mr. Binderup. Yes; and without the slightest suggestion why it won't work and without the slightest plan or remedy as to how we shall avoid these booms and depressions that are destroying our Nation.

Let me read the third paragraph of this outstanding confession of defeat by the Governors of the Board. "Prices cannot be controlled by the amount of money"; and the third paragraph, "The Board's control of money is not complete and cannot be made complete." Senator GILLETTE, while I think you did answer this question in your first statement, we would welcome your further comments.

Senator GILLETTE. Well, I was just thinking of my former remark when I said that this statement from the Governors of the Federal

Reserve Banking System must be discouraging for President Roosevelt to read. But it is also shocking to think that the founders of the Constitution (according to the word of these Governors) requires us to do something that is impossible because they did com-

quires us to do something that is impossible because they did command in the Constitution that Congress should coin the people's money and regulate its value. And now the Governors of the bank say, "Impossible; it can't be done."

Mr. Hunter. It can be done, but there is only one way to regulate the value of money, and that is by the quantitative philosophy. To regulate the volume of money after we have first achieved full velocity can be done simply by creating a safe monetary system, wherein our money supply cannot be taken out of circulation by some group or individual, thereby doubling the value or purchasing power of money that is hoarded to take advantage of falling prices.

Mr. BINDERUP. Do you mean to tell me, Honorable Guest Speakers, that the velocity or speed with which dollars travel in transactions

that the velocity or speed with which dollars travel in transactions can be accelerated to the limit or at least to the point where it would require very little attention by our monetary authority to maintain a dollar with the same debt paying and purchasing power,

as far as velocity is concerned?

as far as velocity is concerned?

Senator Gillette. Certainly, this can be done. Now, again, I don't know nor do I care whether you call these conclusions a theory or a philosophy, but I know from actual experience when the bankers hesitate to make new loans and become insistent in their demands for liquidation of old loans, it's time to look out, for there's certainly going to be a money stringency and a falling price level of all commodities. I have lived through four of these bankers' panics, and four such lessons ought to teach us something. So when good bankers find themselves unable or unwilling to serve the banking and credit needs of their respective communities: when when good bankers find themselves unable or unwilling to serve the banking and credit needs of their respective communities; when they start contracting loans, it is an incentive for me to sell all I can and hoard the money. The most profitable thing in business is hoarding dollars on a falling price level and then when things pick up a little and prices are starting back, to get busy as do millions of others. We all start buying and up go prices. Now, if there was a plan for Government monetary control, constitutional money, that would put money into circulation when we hoard, there would be no booms and depressions. It's a very simple and easy matter, if we do business through our own agencies instead of agencies of selfish control. Consequently, money would not become frightened into boxes and lockers but would continuously move at full speed. There is little question about this for in that case there speed. There is little question about this for in that case there

would be no profit in hoarding money that would take away the incentive to the hoarding or speculating in dollars.

Mr. Hunter. I would like to ask Mr. Binderup what would be the maximum speed of our dollars? Under a safe monetary system where we would know definitely that no one was tampering with

our money supply?

Mr. Binderup. We have never had a period of prosperity long enough to be able to definitely determine just how fast money would circulate when supported by a safe and honest money system, because under our present hazardous money and banking system, our banks have been everlastingly tinkering with our money supply. Minting and unminting our money from morning to night with a fountain pen creating entries on the ledger, credits, lending these figures on their ledgers as money—check-book money—or buying Government bonds and handing us another check book with the privilege of checking against our own bonds by paying them millions for this checking privilege as well as revited there a billion deleas a year interest and by the way, that by paying them millions for this checking privilege as well as paying them a billion dollars a year interest and, by the way, that is the system the Governors of the Federal Reserve banks have been approving for over 25 years and that is the principle they tell us in this newspaper clipping that we will have to continue. I would estimate, however, that it would be safe to say our dollars would create one business transaction a week or 52 transactions in a year, but the beautiful part of it is that it just doesn't make any difference whether this estimate is right or wrong as a maintained price level will always take care of this. The faster money moves, the more efficient it is and the less money will be required to attain and maintain our 1926 price level or whatever price level Congress determines shall be maintained from time to time to keep Congress determines shall be maintained from time to time to keep up full employment.

Mr. HUNTER. What I would like to know is why do the Governors of the Federal Reserve banks refuse to make the slightest effort to control our money system?

Mr. BINDERUP. Oh, but they do control perfectly for the benefit of the bankers, the international bankers and those mighty enough to speculate in dollars. The Federal Reserve banking system is merely and purely a bankers' trust—money monopoly to the fullest degree. Yes; even to the extent that the Governors of the Federal Reserve banks, that should be the peoples' representation and protection, receive their salaries from the bankers. That's why the

people don't stand any show in such a monetary system.

Announcer. It is now 8:30 o'clock. You have just listened to another one of our breakfast talks by Senator GILLETTE, of Iowa, and Congressman Hunter, of Ohio. Mr. Binderup, I understand you have a very interesting program planned for next Tuesday morning. Can you tell us something about it? Who are your speakers and what is your subject?

what is your subject?

Mr. Binderup. Yes; I am pleased to announce as our guest speakers for our congressional breakfast talk next Tuesday morning at 8:15 o'clock two westerners, Senator Edwin C. Johnson, of Colorado, and Congressman Usher L. Burdick, of North Dakota, continuing the subject of quantitative philosophy of money, or the effect of an abundance of money in raising the price level of labor and commcdities. I will assure you that it will be one of our most interesting broadcasts, for we have decided definitely to call a spade a spade. spade a spade.

The A B C of Radio, So That the Average Listener May Understand How It Works in America

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 22, 1939

ARTICLE PREPARED BY THE NATIONAL ASSOCIATION OF BROADCASTERS

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following article prepared for me by the National Association of Broadcasters, a splendid national group of broadcasters:

WITH THE SPEED OF LIGHT

Mount the platform and speak to the assembled multitude. Before the person in the last row hears the sound of your voice, radio will have carried your words 'round the world seven and one-half

strike up the band—even though you are listening in your home 600 miles away, you will hear the music one-half second before it is heard by the spectator listening just 600 feet from the bandstand. For radio travels with the speed of light, 186,000 miles per second. Sound waves, however, like the sound produced by your voice, travel at a much slower rate, barely more than 1,000 feet per second. "How, then, do you combine the sound wave with the radio wave," you naturally ask, "to bring me a radio talk?"

STRIKE A NOTE ON THE PIANO

Ring the bell.
Blow the whistle.
Strike a note on the piano keyboard.
You produce sound.

What is the nature of sound?
Strike the note middle C on the piano.
The note middle C—that tightly strung piece of wire in the piano—vibrates back and forth 256 times per second.
You have generated a sound wave by setting air in motion at this

frequency.
You do this when you open your mouth and speak; when you

draw a bow across a violin.

Each sound wave has its own frequency; that is the number of

Each sound wave has its own frequency; that is the number of vibrations set in motion per second.

This is why the piano tuner painstakingly strikes each note on the piano keyboard; to know that middle C, when struck, produces exactly 256 vibrations per second; that all the other notes produce exactly their required number of vibrations.

When this is done, the piano is "in tune." Evidence that every note, every sound, has its own frequency.

These air vibrations or sound waves must be converted into electrical impulses. This function is performed by the microphone. This is what makes possible the translation of sound waves into radio waves. radio waves.

THAT "THING," THE MICROPHONE

Everyone has seen a microphone, that "thing" in the studio into

which the singer sings and the speaker speaks.

It works something like the mouthpiece of your telephone. It vibrates when sound waves are set up before it.

Strike middle C again and the microphone will vibrate 256 times, too. This is because its face is so thin and sensitive that it responds to sound waves. But more than this—

Behind this sensitive surface flows electric current—alternating electric current—back and forth.

As the microphone responds to the frequency of 256 vibrations per second, so does the electric current.

And that current, conveyed by wires, goes out to the radio station's transmitter, whence it is "put on the air," released through space, and received by your radio in your own home.

In other words, the microphone responds to sound waves set up in the studio by voice or music or otherwise and converts them into electrical frequencies in exact accordance with the frequencies set up by the sound waves.

Because each sound has its own number of vibrations we are able to translate sound waves into electrical waves and, conversely, to translate electrical waves back into sound waves. The latter takes place when we tune in our radio at home.

WE TUNE IN

Two hundred and fifty-six vibrations per second from middle C have been set in motion as the planist strikes the note. The microphone vibrates 256 times accordingly. In turn, these 256 vibrations from a sound wave are translated into electrical energy of

These 256 vibrations of electrical energy will not travel well through space, but must be conducted by wires to the radio transmitter. Here a carrier wave is generated, the frequency of which

APPENDIX TO THE CONGRESSIONAL RECORD

corresponds exactly with the spot on the broadcast dial assigned to the station by the Federal Communications Commission. The 256 vibrations are "modulated" on the carrier wave.

We tune in.

Down from the antenna comes the carrier wave with the 256 vibrations on it. The radio receiver amplifies it, picks off the 256 vibrations from the carrier wave.

The electrical current of 256 vibrations flows through the loud speaker, which converts it into sound of 256 vibrations by moving

Our radio set has translated electrical frequencies back into sound

We are hearing the same note at practically the same time it was struck on the piano in the studio, though miles away. For, as at the sending end, the microphone translates all sound into electrical energy to convey it through the air, so at the receiving end the loudspeaker in our own radio translates electrical waves back again into sound waves so that the human ear can hear.

This is radio.

If each note struck did not have its exact number of vibrations, such would not be possible.

ACROSS THE DIAL

Two hearts that beat as one. Something exactly like this happens when you tune in your radio with the station you wish to hear.

What happens?

Look at the dial on your radio. From left to right it is numbered 550, 560, on through to 1600 kilocycles.

Now, what's a kilocycle?

It's a measurement of electrical frequency. Just as we found that each sound wave has its own frequency, or number of vibrations per second, so now we find that an electrical current also has its own frequency—its own number of electrical vibrations per second.

Kilo means 1,000; a kilocycle, of course, means 1,000 electrical

cycles per second.

Thus if you want to hear a radio station broadcasting at, say, Thus if you want to hear a radio station broadcasting at, say, 1,000 kilocycles you simply turn your dial to the 1,000 kilocycle mark. (Most set dials leave off the zero for convenience. One thousand kilocycles would be found at 100 on the dial.)

Then you are tuned in. Then two hearts beat as one.

For you have made the radio set respond at the same frequency at which the radio transmitter is vibrating and at no other frequency as it releases the radio waves through the air—1,000 kilocycles.

cycles.

This is why it is possible for you to tune in, to tune from one station to another over the dial.

For each station broadcasts on its assigned frequency. Each station has its own pathway through the air.

THE FEDERAL COMMUNICATIONS COMMISSION

The Federal Communications Commission tells each station over

which pathway it may send its program to your home.

It requires that each station owner be an American citizen; that he furnish satisfactory evidence as to his moral and financial responsibility to operate "in the public interest, convenience, and necessity."

It requires that high technical standards be kept. It specifies the number of hours per day the station may operate, and with what

power.

As a result any American listener knows the exact location on the dial of his favorite radio station. He knows that every time he tunes in to a certain station he can always locate it at the same place on his dial.

Things were not always so orderly on the American air lanes. Not so long ago anybody in the United States who so wished

could start a radio station.

He could select any frequency he desired and begin broadcasting. There was then no traffic cop of the air to tell him to move over to another radio traffic lane or to get off a one-way radio street. It made little difference whether somebody was already broadcasting on the frequency he chose or not. He could do as he pleased. The courts ruled that he could.

This was in 1926. At that time Herbert Hoover was Secretary of Commerce. He had been endeavoring to bring about some orderly use of the broadcast band.

Then someone challenged his authority, and the courts ruled that the Department of Commerce—in fact, that no department of the Government—had any jurisdiction over radio. Anybody could broadcast anywhere, anytime.

The result brought on utter chaos and pointed out the fundamental need of radio regulation.

mental need of radio regulation.

The air mushroomed with new stations who had passed no examination to their fitness to operate a radio station—technical, moral, financial, or otherwise. Head-on collisions of sound waves shook the ether and ear-splitting sounds crackled from radio sets all over the Nation. There was nothing to hear but noise, and finally the noise reached the ears of Congress.

The first Radio Act of 1927 resulted. It laid an orderly pathway for radio in the United States and gave us what has been called the American system of broadcasting.

the American system of broadcasting.

RADIO PATHWAYS IN THE UNITED STATES

Acting on the principle that every American citizen has the right to receive good radio service, the Government authorities have allocated the 100 channels to 727 radio stations.

They have endeavored to do this on the basis of population and through the use of discovered radio laws.

By limiting the power of some, they have found that two or more stations, located far enough apart, could broadcast on the same frequency without interfering with each other in their immediate

vicinity.

They have found that, inasmuch as radio waves travel farther at night than they do in the daytime, this deficiency could be overcome by permitting more stations to broadcast from sunrise to

sunset than are permitted after sunset.

They found that by raising the power of others greater distances could be covered to bring the radio signal within listening range

of wide regions and remote rural America.

No station is permitted to change its location on the dial without the authority of the Federal Communications Commission.

Thus, through regulation, order has been restored to the Ameri-

can radio pathways.

Each kind of station gives a program service calculated to be of interest to the kind of people it serves. For example, a local station in a metropolitan area gives a different kind of radio program than a regional or clear-channel station having a wide following of listeners in small towns and on the farm.

But this is a story unto itself—one that goes to the roots of the American system of broadcasting,

ROOTS OF THE AMERICAN SYSTEM OF BROADCASTING

ROOTS OF THE AMERICAN SYSTEM OF BROADCASTING

In the United States, Congress gives every authority to the Federal Communications Commission needed for the orderly technical regulation of radio frequencies; it gives it no authority to control what can or cannot be said over the air (other than the necessary restraint that no one may utter profane, obscene, or indecent language over the radio).

The Commission has been given no right to deny freedom of speech in radio. Candidates of recognized political parties must be granted equal facilities of expression by every radio station.

Thus, the American system of broadcasting is based upon the same democratic ideal which guarantees us freedom of the press.

same democratic ideal which guarantees us freedom of the press, freedom of religion, freedom of speech.

Writing on the subject "Radio by the American Plan" (Published by the Abingdon Press, New York, and released October 1938), former United States Senator Clarence C. Dill, and coauthor of the Radio

Act of 1927, declared:
"The legislative problems which radio presents in the United States are widely different from, and more difficult than, those of other countries. In nearly all other countries the government directly or indirectly manages and controls radio station and levies taxes or fees to provide for their operation. In the United States, Congress has refused to do either."

Though Congress provides that licenses may be granted for a 3-year period, the Commission has consistently issued them, but for a 6-month period.

This means that every 6 months representatives of a radio station must submit ample evidence in Washington that its program service has been "in the public interest, convenience, and necessity."

DOES AMERICA WANT TO LISTEN?

What is the value of a radio set?

Great streams of scientific research have been poured into its taking. The finest skilled workmanship of American labor has

been employed to produce it.

It is the new and handsome piece of furniture without which no American home is complete.

But the ultimate value of a radio set depends upon its ability to

receive radio programs that people want to hear.

When the head of an American family buys a radio set, he is taking a chance that the broadcasters will bring him and his family the sort of radio program they want to hear.

When he buys a radio set he is actually casting a vote of confi-

dence to the American system of broadcasting.

He wants to listen. How many American families want to listen?

Eighty-four percent of American families own a radio set. Twenty-seven million families own 40,000,000 radio sets (Joint Committee on Radio Research).

Forty million votes of confidence in the American broadcaster's

ability to serve and to please.

Of the total number of radios in the world, more than half are in use in the United States

And more than this: When the head of the American family buys a radio he is giving employment to some 345,000 Americans who in turn support nearly a million and a half people.

Most recent trade figures from figures compiled by McGraw-Hill Publishing Co., Inc., show that direct employment in radio totals 345,000 men and women in the United States. Of this number 91,000 work in about 500 factories making radio sets, tubes, and parts. About 25,000 are connected with wholesale establishments handling radio merchandise. Another 56,000 are engaged as radio retail merchants, while salesmen, repairmen, and others engaged in radio sales and service total 150,000.

To these must be added 23,000 people regularly on the pay rolls of the broadcasting stations and networks. And to these also must be added the great number of musicians, actors, actresses, and other radio artists who are employed on programs on a contract basis.

These figures do not take into account employment that radio creates for copper miners, refiners, metal workers, and lumbermen, or the electrical supply industry which benefits from radio. Nor

have we counted the thousands who work in businesses which have

been largely created or stimulated by radio.

All these men and women at work; all these millions of sets in American homes, because American broadcasters proved they could make people want to listen.

CONCLUSION

From three fields American listeners draw their radio entertainment and service—from locally produced radio productions, from network programs via local affiliates, and from radio transcriptions specially adapted to local tastes.

And with them all competition, as between local show and local

And with them at competition, as between local show and local show; competition as between network show and network show; competition as between transcription and transcription.

No other system of radio has been so competitively devised. That is why American radio is live, vibrant, improving—a mirror freely reflecting American tastes, ideals, and life.

This is the American system of broadcasting.

Conditions in Industry Under the New Deal

EXTENSION OF REMARKS

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, April 3, 1939

ARTICLE BY ROBERT P. VANDERPOEL

Mr. THOMAS F. FORD. Mr. Speaker, we Democrats have sat here in this House for several years and listened to our Republican friends prattle about lack of confidence.

Pinned down as to what they mean by confidence, we are told that industry lacks confidence because it is no longer able to make a profit.

That would be interesting and tragic also, if true.

No one, I am sure, will accuse the Hearst newspapers of being pro-New Deal. For this reason I feel that Robert P. Vanderpoel, financial editor of the Chicago Evening American, may be read with confidence as not being biased when commenting on conditions that exist in industry under the

The following article appearing under Mr. Vanderpoel's byline from the Chicago Evening American of March 8, 1939, tells an interesting story and completely refutes the unwarranted assertion that industry has not made profits under the New Deal:

> [From the Chicago American of March 8, 1939] THREE-YEAR INDUSTRIAL PROFITS BEST ON RECORD (Robert P. Vanderpoel, financial editor)

In 1938 industry suffered from the so-called New Deal depression. This was a depression characterized by some prone to exaggeration

as one of the worst on record.

There were those who insisted that the principal, if not the only, cause for the depression was the inability of industry to earn an adequate return. With this position we consistently disagreed. Moreover, we offered facts to substantiate cur views as contrasted with mere statements of opinion offered elsewhere.

More facts are becoming available. The studies of the National City Bank of New York, which we have so frequently quoted in this column, are once again pertinent. The bank finds that the first 940 industrial corporations to report 1938 earnings showed an average return on net worth of 4.4 percent during the year.

BELOW 1936

While this compares unfavorably with 10.5 percent in 1937 and 10.1 percent in 1936, it contrasts with deficits in 1932 and 1931 and a return of 1.54 percent in 1930.

In other words, so far as industry is concerned, the "depression" of 1938 was not nearly as severe as that of 1930 and was slight, indeed, compared with the 3 following years.

If we examine the record a bit further we find that for the 3 years 1936 to 1938, inclusive, industry in the United States earned an average return on its net worth of 8.3 percent.

This, it should be recalled, is after taxes, after depreciation, after all charges.

Further, it is an average return. It includes inefficiently managed enterprises as well as those with good managements. It includes sick industries, such as railroad equipment, as well as the

more prosperous lines of endeavor. It includes industries which suffered temporarily because of special conditions, such as meat

IS IT NOT OBVIOUS?

Is IT NOT OBVIOUS?

If all industry, or at least all big industry, as represented by the nearly 1,000 leading corporations of the Nation having a net worth in excess of \$15,000,000,000 earned a net return of 4.4 percent last year and an average of 8.3 percent in the last 3 years, must it not be obvious that whatever is wrong with our Nation today, whatever is responsible for idle capital, for "lack of confidence," it is not that profit has been taken out of industry, it is not that excessive taxes have made it impossible for capital to earn an adequate return, it is not that the profit system has been squeezed by governmental reform until it lacks vitality?

In the 3 years, 1927 to 1929, inclusive, regarded by many as representing the hey-day of prosperity, American industry earned an average return on net worth of 6.5 percent. Contrast this figure with the 8.3 percent earned during the last 3 years. Contrast these figures and then explain, the cries of business persecution that have been made by business leaders throughout the country, that have been heard in the Halls of Congress, that have poisoned the minds of people who have not had access to the facts and have become bewildered by a barrage of propaganda intended not as a help to the solutions of pressing problems but as deliberate poison for selfish reasons. ate poison for selfish reasons.

RESULT STARTLING

The net profit of industry (during the last 3 years) has averaged 8.3 percent on net worth. This startling result has been accomplished during a period when interest rates have been the lowest in all history, when the volume of idle capital has been the greatest in all history.

Never before, as far as records are available, have there been 3 successive years when the average profit of industry has been as high as the last 3 years and yet never before have the complaints of industry been as great.

of industry been as great.

It has been possible to borrow money at 2 or 3 or 4 percent, and it has been possible to earn money at an average rate of 8.3 percent.

Under such conditions, why has there not been the wildest scramble of all times to borrow and to make money?

We have our suspicions as to the most important factor involved but we should be glad to receive the views of readers, of businessmen, of politicians, of bankers, of economists, of all those who will give the matter some thought.

Embargo on Livestock From Argentina

EXTENSION OF REMARKS

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Monday, April 3, 1939

RESOLUTION BY THE LEGISLATURE OF KANSAS

Mr. CARLSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution recently adopted by the Legislature of the State of Kansas:

House Concurrent Resolution 16

Concurrent resolution memorializing the Congress of the United States to keep intact the embargo on livestock and its products from Argentina

Whereas the foot-and-mouth disease is prevalent among livestock in Argentina; and

Whereas the present embargo placed on Argentina livestock prevents the importation of livestock and its products from Argentina, thus preventing the spread of this disease among livestock in our country: Now, therefore, be it

Resolved by the House of Representatives of the State of Kansas

the senate concurring therein), That we request and urge the Congress of the United States to continue its vigilant guard against the importation of livestock and its products from Argentina and other countries infected with disease, encourage the Department of Agriculture to keep the embargo on Argentina livestock intact and discourage any trade agreements whereby the terms of said embargo will be circumvented; and be it further

livestock intact and discourage any trade agreements whereby the terms of said embargo will be circumvented; and be it further Resolved, That this resolution be engrossed by the chief clerk of the house of representatives and the secretary of the senate and that copies thereof be transmitted by the secretary of state to the Senate and House of Representatives of the United States and to several Members of said bodies representing this State therein, and to the President of the United States.

Cheese Under the Reciprocal-Trade Agreements

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1939

Mr. REED of New York. Mr. Speaker, contrary to the general business trend, the domestic cheese industry is one of the very few industries which expanded throughout the depression due to the development of types of cheese new to the American people and to an aggressive marketing policy on the part of the cheese manufacturers, made possible through the increased protection given this industry by the Republican administration in 1930 under the Hawley-Smoot Tariff Act. Between 1929 and 1935 per capita consumption of cheese increased by 13 percent, while at the same time

imports decreased by 35.9 percent.

Under the Reciprocal-Trade Agreements Act of 1934 the Roosevelt administration has made treaties granting concessions to four of the five countries which have been the principal importers of cheese to this country-Italy, Switzerland, Canada, France, and the Netherlands. In addition, further reductions in the tariff were made in the agreement with Finland. All of these agreements became effective in 1936 and imports increased materially in that year over 1935. In 1936, 37.1 percent of the cheese imports entered at agreement rates and 48.9 percent in 1937. If we had an agreement with Italy, quantities entering under the agreement rates would be much larger, for that country is the largest exporter of cheese to the United States and sells a special type of cheese on which no concession has been granted.

Imports in 1936 were 22.3 percent above 1935 and were slightly higher in 1937. They would have been much higher except for the decreased production of Cheddar cheese in the United Kingdom, causing a definite increase in Canadian exports to the United Kingdom and an accompanying decrease in Canadian exports to the United States. However, this condition is apt to be temporary as Britain is paying her dairy farmers a bonus for the increased production of milk, both as fluid milk and as a raw material to be used in the manufacture of dairy products. Since the principal cheese production of the United States, Canada, and the United Kingdom is Cheddar cheese, the Canadian imports very definitely affect the American cheese industry, although during recent years the domestic cheese industry has been developing new types of cheese for this country.

The cheese which has had the greatest relative increase has been the Emmenthaler, or Swiss variety. Domestic production of this type of cheese doubled between 1929 and 1934 and the quality of the domestic product was greatly improved, resulting in a drop of total imports of all cheeses from Switzerland from 18,839,000 pounds in 1929 to 5,870,-000 pounds in 1935. The Roosevelt administration made concessions on Emmenthaler in the Swiss agreement effective February 15, 1936, and further concessions in the Finnish agreement effective November 2, 1936. Due to these concessions, our total cheese imports from Switzerland rose to 6,929,000 pounds in 1937. However, total imports of emmenthaler increased from 6,259,000 pounds in 1935 to 10,332,-000 pounds in 1937. These concessions principally helped France whose imports of Emmenthaler, or Swiss cheese, increased from 23,000 pounds in 1935 to 1,399,000 pounds in 1937, and Denmark, whose imports of this type of cheese rose from 646,000 pounds in 1935 to 2,687,000 pounds in 1937. During this same period imports of Emmenthaler, or Swiss cheese, from Switzerland increased from 4,811,000 pounds in 1935 to 5,135,000 pounds in 1937, while imports of this cheese from Finland dropped from 520,000 pounds in 1935 to 121,-000 pounds in 1937. Thus, we find another example of how concessions made in trade agreements are more beneficial to countries other than the agreement countries as imports of Swiss or Emmenthaler from France increased 5,982.6 percent between 1935 and 1937, and from Denmark increased 315.9 percent, while from the agreement countries Switzerland's imports increased but 6.7 percent and Finland's decreased by 76.7 percent.

The concessions on Cheddar cheese made in the Canadian agreement, and of Emmenthaler, or Swiss cheese, in the Swiss and Finnish agreements, were the concessions which most directly affected domestic production. However, the concessions made in the Netherlands agreement on Edam and Gouda, and in the French agreement on Roquefort and Bluemold cheeses, also affected the domestic production. These statements are verified by the fact that the Department of Agriculture reports total apparent cheese consumption slightly higher in 1937 than in 1936, while domestic cheese production decreased from 663,600,000 pounds in 1936 to 624,500,000 pounds in 1937, or by 5.9 percent. Thus again we find concessions made at the expense of the American producer, farmer, and worker.

Stabilize America First

EXTENSION OF REMARKS OF

HON. WILLIAM I. SIROVICH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Friday, March 31, 1939

ADDRESS BY HON. WILLIAM I. SIROVICH, OF NEW YORK, IN THE HOUSE OF REPRESENTATIVES, JANUARY 4, 1932

Mr. SIROVICH. Mr. Speaker, under leave granted me to extend my remarks in the Congressional Record, I include the following speech which I delivered in the House of Representatives on January 4, 1932:

Mr. Arnold. Mr. Chairman, I yield 1 hour to the gentleman from New York [Mr. Sirovich].

Mr. Sirovich. Mr. Chairman, ladies, and gentlemen of the committee, on Monday, December 14, 1931, one of our distinguished colleagues from the great State of Pennsylvania and one of our most eminent constitutional lawyers of our Republic, the Honorable Impact M. Beak delivered a most brilliant address in defense of the

James M. Beck, delivered a most brilliant address in defense of the foreign policy of President Hoover. He said:
"It is all part of one problem, the national debts due us, the debts owed by business corporations and municipal subdivisions of those foreign nations to us, and all of it must be worked out in order that credit may be restored, and if credit is to be restored, it must be restored in Europe before it can ever be really restored here, because, whether we like it or not, we are a part of a situation world wide in extent and beyond the power of any one nation

to solve."

Succinctly put, Mr. Beck believes that Europe must be stabilized first before America can recover from its great economic depression. I shall endeavor to prove, in the light of European history, that the economic stabilization of Europe under the Versailles Treaty is impossible of realization. Therefore we should stabilize America first in order to bring happiness and prosperity to 8,000,000 men un-

first in order to bring happiness and prosperity to 8,000,000 men unemployed and 12,000,000 partially employed, whose dependents are the tragic victims of penury, hunger, and want in this land of plenty, this great Republic of ours. [Applause.]

In 1815, in the city of Vienna, an infamous treaty was adopted at a conference presided over by Prince Metternich, the adroit Prime Minister of Austria. In that conference were representatives of Russia, Prussia, Austria, and England, who shortly thereafter retired. This group constituted the league of nations of their day. It was called the Holy Alliance. The purpose of this alliance was to make the world safe for monarchy. Liberalism and progressionism, wherever they were found, were to be crushed and annihilated. Reactionaryism, autocracy, and conservatism sat in the saddle. Progress, liberalism, and reform, under the name of democracy, were driven into subterranean channels in order to survive.

Why did monarchy hate liberalism and try so desperately to suppress and destroy it? Because prior to the French Revolution liberalism gave birth to an intellectual, economic, political, and industrial revolution. The intellectual revolution began with Voltaire, who pilloried and exceriated the church as the custodian of hidebound tradition; Montesquieu, who preached the gcspel of parliamentary constitutional government for France the same as

was found in England; Rousseau, who in his treatise on the Social Contract enunciated the political concept that governments derived their just powers from the consent of the governed—that kings do not rule by the divine right of God but through the sovereign right of the people. The new school of political economy was founded by Turgot, of France, and by Adam Smith, whose Wealth of Na-tions was the bible of this new economic school in England. It disciples were men like Jeremy Bentham, David Ricardo, John Stuart Mill, and Thomas Robert Malthuse. Most of the writings

disciples were men like Jeremy Bentham, David Ricardo, John Stuart Mill, and Thomas Robert Malthuse. Most of the writings of some of these men were incorporated in an encyclopedia by the great French writer Diderot. This publication was given wide distribution and had a tremendous effect upon the people of France. About this time a bloodless revolution took place in England. It was called the Industrial Revolution. No speeches were made, no conventions held, no battles fought. It was a silent revolution that altered the life of millions of people. Through the perfection of science, machinery was invented that converted England from an agricultural to an industrial nation. Men began to work with machines instead of their hands. A new institution was founded. It was called the factory. People left their farms to go to the factory. That is why Oliver Goldsmith wrote the famous poem, The Deserted Village. With the factory came the evils and abuses incidental to that system—long hours, low wages, insanitary and unhealthful conditions; children working in the mills, mines, looms, and factories. These conditions reflected themselves upon the social and economic status of the people of England. Across the channel the French peasants were in misery. The financial condition of France was desperate. Thousands were unemployed. Families were starving. Taxes were imposed upon those least able to bear them just as in our Republic. That was the spark that caused the conflagration that soon thereafter not only engulfed France but encompassed the entire civilized world as well.

Prince Metternich and his associates, while sitting around the

the spark that caused the conflagration that soon thereafter not only engulfed France but encompassed the entire civilized world as well.

Prince Metternich and his associates, while sitting around the conference table in Vienna in 1815, ascribed the French Revolution to the growth of liberalism in western Europe. In order to prevent monarchy from ever again being challenged by democracy they determined not only to check liberalism in science, art, literature, philosophy, and statesmanship but even endeavored to bring back to Bourbon Spain its lost colonies in South and Central America.

The only nation that proudly bore the torch of democracy was the United States, which was then only in its infancy. James Monroe, who was then the President of the United States, realizing the true purport that inspired the Holy Alliance to extend monarchy in North and South America, then promulgated his famous Monroe Doctrine. This theory declared in no unmistakable terms to Metternich and to his associates in the Holy Alliance that the realization of their aims and objects in South America would be considered a threat against the sovereignty of the United States, yea, an overt act which would likely lead to war. This courageous act of President Monroe and his Secretary of State, John Quincy Adams, was the only effective barrier erected against the world domination of monarchy through the dictatorship of the Holy Alliance. The entire course of history would have been entirely different had not the struggling young Republic, the United States, through its President, thwarted the efforts of Metternich and his allies in making the Western Hemisphere as monarchical in its complexion as they had succeeded in making the Eastern. monarchical in its complexion as they had succeeded in making

While democratic ideas were very seriously eclipsed in the period following the termination of the Napoleonic Wars, they could not be permanently submerged. The dark era of liberalism was the decade immediately following the Battle of Waterloo and the creation of the Holy Alliance. The years from 1830 to 1848 saw the weakening of the reactionary strangle hold that absolute monarchy had upon the world, and represented the dawn of a new period of liberal thought. This was merely symptomatic of the change of philosophy which came over Europe about that time. The thinkers of western Europe came out of their underground passages again, and once more effectively challenged the onslaughts of monarchy.

slaughts of monarchy.

For many decades the Holy Alliance continued to suppress all liberal ideas by force and intervention. On other occasions they employed suppression through censorship and espionage. For a generation Metternich dictated these policies.

generation Metternich dictated these policies.

The tragedy of reaction, as the lessons of history clearly indicate, is that it brings in its wake not merely suppression of liberalism but the creation of extreme and dangerous doctrines of action and thought. The Holy Alliance sounded the death knell of democracy not wisely but too well. When its influence had waned there had grown in the place of the liberalism of Voltaire the socialism of Karl Marx. In place of the freedom of Montesquieu the anarchism of Bakhunin and Proudhon, and instead of the laissez faire doctrine of Bentham and Mill the communistic anarchy and "mutual aid" of Prince Kropotkin. of Prince Kropotkin.

We can pause more profitably at this juncture and contemplate the bitter lessons of history. If we do so, we learn that the tem-porary suppression of free thought ultimately leads to something infinitely worse. That it is far better for mankind to freely think and to speak, even if their thoughts prove ultimately wrong, for suppression leads to revolutionary acts and the cultivation of vio-

From 1815 to 1914 this bitter conflict between monarchy and autocracy on the one hand and liberalism and democracy on the other persisted. For 100 years every monarchical government in Europe vied with each other to enlarge its domain and its economic influences under the guise of nationalism.

Human blood flowed everywhere. Innocent people had to pay the penalty with their lives in order that monarchial Europe might enlarge its economic sphere and its geographical borders. So we find wars between Russia and Turkey, Germany and Austria, Austria and Hungary, Italy and Austria, Germany and Denmark, France and Prussia, England, Turkey, and Russia. War after war engulfed

Europe during the last 100 years.

To enlarge the influence of a nation large standing armies and navies were the rule. Billions of dollars were spent in maintaining formidable armaments. This money, instead of being utilized to promote education and social justice among its people, was employed to foster war and the glories and conquest that come therefrom. Again we find the disciples of democracy appealing to the conscience of the people to outlaw war, that human beings were not considered to be made forder for components. created to be made fodder for cannon. As the cries of those who toil in the quarries of labor kept incessantly increasing for peace, and as the armies of liberals and progressives kept multiplying decade after decade and refused to vote appropriations for war and for standing armies, the thrones of monarchies again began to feel insecure.

Kings trembled as they saw the specter of democracy looming on

Liberalism could not be crushed. It was still fighting the battle of the middle classes and the common people whose interests it was determined to preserve. [Applause.]

was determined to preserve. [Appliause.]

To divert attention from monarchy, to divide and scatter the forces of liberalism, to preserve the glory that comes from waging a successful war, monarchy united and threw the world into the maelstrom of war, hoping that the tides, eddies, currents, and whirlpools of this conflict would so enmesh liberalism and democratic that the property is for another hundred years.

maelstrom of war, hoping that the tides, eddies, currents, and whirlpools of this conflict would so enmesh liberalism and democracy as to destroy it for another hundred years.

Thus we behold, almost a century after the Treaty of Vienna, monarchy again trying to destroy democracy. Woodrow Wilson, the greatest philosopher of democracy that this Nation has ever produced since the days of Thomas Jefferson, recognized this fact and, to preserve democracy, carried the Monroe Doctrine over to Europe. The conscience of America, public opinion, and its physical and material resources followed him. Our President declared that "the world must be made safe for democracy." [Applause.] When the World War was concluded, monarchy succumbed. Democracy triumphed. The Hohenzollerns of Germany were eliminated. The Hapsburgs of Austria were destroyed. The Romanoffs of Russia collapsed. Just as Napoleon was banished to St. Helena, so the Kaiser was exiled to Doorn. In the ashes of these autocratic governments there rose triumphantly the Republics of Russia, Germany, Austria, Hungary, Poland, and Czechoslovakia. [Applause.]

Just as the Holy Alliance was formed in 1815 to protect the rights of monarchy, so was the League of Nations formed in 1919 to protect the rights of democracy. Just as the Treaty of Vienna in 1815 changed the geographical complexion of Europe, so the new Treaty of Versailles in 1919 changed the geographical complexions of Europe and the entire world. Just as the Treaty of Vienna was infamous and unfit and caused 100 years of conflict, so will this Treaty of Versailles go down in history as an iniquitous treaty that will bring havoc and injustice to millions of men and women throughout Europe. [Applause.]

In the Holy Alliance a century ago Russia, Prussia, and Austria sat in the saddle while France was the slave. So today, 100 years later, France sits in the saddle while Germany, Austria, and Hungary are its economic slaves.

France and England have not paid off the debts of the Napoleonic war after 100 years. I

France and England have not paid off the debts of the Napoleonic war after 100 years. It is my contention that it will take the combatants of the World War many more centuries to repay the debts incurred from the last war. Therefore, the distinguished gentleman from Pennsylvania, Mr. Beck, was right when he said:

"In my judgment, the man is not living in this Chamber who will be the said of the said of

"In my judgment, the man is not living in this Chamber who will see the ultimate end of economic crisis which the destructive World War has inflicted upon humanity."

Mr. Chairman, ladies and gentlemen, Mr. Beck contends that we must first stabilize Europe and place her upon a basis of economic prosperity before our country can ever recover. Mr. Chairman, Europe is today an armed camp, Amidst all the depression and panic that exists over there France is the richest nation of the world. She has subsidized, financed, and armed Belgium, Czechoslovakia, Yugoslavia, Rumania, and Poland with billions of dollars to maintain the largest standing armies ever known in the history of Europe. Seventy to eighty cents of every dollar collected history of Europe. Seventy to eighty cents of every dollar collected in taxes is being maintained for the great armaments in prepara-tion for the next war. She, has formed a military armed ring against Germany, Austria, and Hungary, three sister republics that we are pledged to preserve. Secret diplomacies and alliances are being formed all over Europe. The next war is already in the offing, and when it comes, as it inevitably must, woe betide the

offing, and when it comes, as it inevitably must, woe betide the white races of Europe.

Since the World War we have been united to continental Europe by a financial umbilical cord. The time has now arrived when the great obstetrician, Uncle Sam, must cut in twain that financial umbilical cord and allow American democracy to live, thrive, and develop free and untrammeled as an independent and useful organism. It must not be affected by the financial cancer of moribund Europe. America must remain American, true to its ideals and traditions as the preserver of democracy. [Applause.] That is why President Hoover and all his advisers are wrong when they are first trying to stabilize Europe, which is impossible of realization. For 20 centuries European governments have waged war against each other. Their soil is saturated with the innocent blood of its martyred citizens. The leopard cannot change its spots. The Ver-

sailles Treaty has created so much prejudice, rancor, hatred, bitterness, and sorrow among the nations of Europe that time cannot efface it. Europe cannot be stabilized. Revenge is in the air. Those whose rights have been trampled upon through the Versailles Treaty are looking for the day when might will make right. Let us save America first by stabilizing our own country. [Applause.] The founder of our Republic, George Washington, in his Farewell Address to the American people, warned us against entangling alliances with European countries. He was right then. Time proves he to right now.

he is right now.

I would be unworthy of the respect of the membership of this House if I were to give vent to thoughts that bore hatred and malice toward the peoples of Europe. One need not be internationally minded to view the conditions of all the nations of the world and their present sorrow and suffering with a degree of profound sympathy. I do not yield to the distinguished gentleman from Pennsylvania in his desire not merely for the stabilization of Europe but for the rehabilitation of all the struggling peoples of the world. My allusions to the history of Europe, particularly to the century or so that has elapsed since the Napoleonic era, show that because of nationalistic, geographic, racial, religious, linguistic, and economic problems permanent peace, which is the genuine object of any degree of stabilization, is impossible in continental Europe. Europe

Europe.

Mr. Beck. Will the gentleman yield?

Mr. Sirovich. With deference to the gentleman, I should like to continue the sequence of my thoughts.

Mr. Beck. I was only going to ask a simple question.

Mr. Sirovich. When the distinguished gentleman from Pennsylvania spoke he refused to yield to Congressman Sumners, the chairman of the Judiciary Committee, on the ground that the interruption would interfere with the orderly flow of his address. Upon the same basis I would most respectfully ask my distinguished colleague to desist until I have concluded my remarks, when I shall be pleased to answer any questions that any Member of the House might desire to propound.

Mr. Beck. Certainly.

Mr. Sirovich. Two forces have been loosened from the east that

Mr. SECK. Certainly.

Mr. Sirovich. Two forces have been loosened from the east that further threaten not only the equilibrium of the world, but the future of our civilization as well. Some 80 years ago, Commodore Perry gave the island of Japan its first glimpse of the industrial civilization that we have evolved in the west. Since then the progress that the Nipponese have made in adopting the processes of the industrial resolution and taking advantage of western progress that the Nipponese have made in adopting the processes of the industrial revolution, and taking advantage of western civilization and culture, veritably beggars description. Japan is today the industrial overlord of the Far East. It looks with longing eyes upon two enormous giants who are still sleeping under the spell of a medieval gloom, without stable political governments and with an economic system that savors of our feudal period. the slumbering 800,000,000 human beings of China and India living in the most unenlightened conditions in countries abounding in natural resources are anxiously viewed as fertile fields for exploitation by the pioneer industrial chieftains of Japan. If the next 80 years shall see an economic development in the mainland of Asia that would somewhat parallel the progress that Japan has

next 80 years shall see an economic development in the mainland of Asia that would somewhat parallel the progress that Japan has made since the days of Perry, a new and tremendous disruptive element would necessarily be introduced to threaten the stability, not only of Europe, but the entire world as well.

Mr. Beck has very aptly stated that the first great crisis in modern world history came with the fall of the Roman Empire in the year 476 of the Christian era. The Asiatic hordes of Ghengis Khan, Alaric, and Attila, which stormed and sacked Rome, and by slow infiltrations followed by actual conquests, shattered the flower of Alaric, and Attlia, which stormed and sacked Rome, and by slow in-filtrations followed by actual conquests, shattered the flower of ancient civilization, may find the counterpart in the menace of the modern oriental hordes led by Japan which will seek to overwhelm occidental culture. Rome, weakened and exhausted through its imperialistic attitude in conquests, battling in Hispania, Gaul, the modern Balkan States, Greece, Macedonia, Asia Minor, and Carthage, fell an easy prey to the barbaric hosts from Asia in the east, as well as the Teutonic races that came from the north. It took Rome 14

centuries to recover from that blow.

Are we to witness once again the destruction of an elaborately developed civilization weakened, devitalized, and enervated by conquest and vice as a result of the onslaught of brute forces of an

inferior peoples?

Inferior peoples?

At the crossroads between the Occident and the Orient there stands a new world power developed in a novel fashion in the last 14 years, and occupying one-sixth of the world's area. A new power that is still in its infancy, and may yet stand as the bulwark of western civilization against the onrushing forces of the Far East. Soviet Russia, at once creating a political state and an economic organism, makes a new departure from all theories of government that have heretofore prevailed in the world, and furnishes additional conflict to the forces that have already prevented the stabilization of Europe. To the problems of monarchy as opposed to democracy, and that of autocracy as contrasted with liberalism have now been added a racial challenge from the Far East and an have now been added a racial challenge from the Far East and an economic one from Soviet Russia. With the growth and aggravation of all these enormous conflicts, it would seem very clear to the human eye that the stabilization of Europe will become, as years go by, relatively more difficult. What then, therefore, should be the position of the American Government? A sympathetic attitude toward Europe, yes; but an active interest in European affairs, no.

Many media could be suggested for the possible stabilization of Europe. As an American observer looking over the high seas, one can view objectively the inadequacy of an economic system which

sets off innumerable tariff walls and trade-restriction barriers in a territory not much larger than that covered by the United States. One remedial solution comes immediately to mind; namely, that

an economic federation of Europe be organized. Retaining the autonomy of the various countries as natural sovereign powers, but autonomy of the various countries as natural sovereign powers, but breaking down the indescribably petty commercial rivalries which in past times made so much for discord in Europe. Just as we have 48 States in our Union enjoying equal economic relations, but with separate bodies of law, so Europe could be constituted into a vast economic union with no loss of individual dignity to its component parts. It would be a veritable United States of Europe. Such a union would clear away the maze of formidable tariff barriers which choke international trade and prevent European recovery.

As a second suggestion, I would seek to mollify the rigor of the Versailles Treaty by revising that pact in its entirety. I would declare to the nations of the world that the portions of it that were written in the spirit of anger, and at an hour when the roar of cannon on the battlefields of Europe had just ceased, should give way to the sober second thought of mankind. The passions of war have now somewhat subsided, and the statesmen of the world can

have now somewhat subsided, and the statesmen of the world can view international politics from saner heights. A condition precedent to any degree of stabilization in Europe would therefore be an amicable and friendly revision of the Versailles Treaty in all its manifold aspects. [Applause.]

Still another suggestion that an American can make to Europeans seeking betterment of their own conditions would look toward immediate and rigorous reductions in the armaments of toward immediate and rigorous reductions in the armaments of the various nationalities. Presumably any effort toward European stabilization would have, as the major premise, an indication of good faith on the part of leaders of European public opinion. Such good faith can best be expressed by the ceasing of the various countries of Europe to act as if they were preparing for another bloody conflict. An individual citizen seeking peaceful relations with his neighbor does not continually arm himself to the hilt; so nations, on the larger scale, must rid themselves of appearances that are obviously warlike and threaten the well being and safety of other countries. It is unbelievable that the lessons of the last of other countries. It is unbelievable that the lessons of the last war should be so completely lost on the statesmen of present-day Europe as to cause them to spend from 70 to 80 percent of all their taxable income on preparations for another war. An immediate universal agreement to radically slash the military and naval budgets of all countries would at least, to an American mind, indicate that Europe sincerely desired peace, and was earnest in its intention to exhibit a A rational and liberal revision of intention to achieve stability. A rational and liberal revision of the Versailles Treaty, accompanied by radical reductions in Euro-pean armaments, and followed by the creation of economic united states of Europe would unquestionably aid in the stabilization of

Europe. [Applause.]

However, Mr. Chairman, ladies, and gentlemen, although these ideals are Utopian in character, every lover of humanity would gladly pray to have them realized. When one views Europe through the telescope of its history, it can be easily understood, however, that they are incapable of practical realization. Let us leave Europe then and turn our eyes toward the American scene, where a vast degree of stabilization is most needful at the present time. Stabilization, like charity, should begin at home.

me. Stabilization, like charity, should begin at home. I shall propose a modern economic decalogue for American stabili-tion. They may serve as a present-day "Ten Commandments."

COMMANDMENT 1

Scrap the Hawley-Smoot tariff bill from top to bottom. Right the wrongs of injustices done therein. Then establish reciprocal relations and understanding with all the nations of the world for the mutual benefit of all concerned. [Applause.]

COMMANDMENT 2

Place agriculture on a parity with industry by passing a bill similar to the McNary-Haugen bill, introducing the principle of debenture or the equalization fee.

debenture or the equalization fee.

This will place agriculture upon a parity with industry and bring justice and happiness to 40,000,000 farmers who are the victims of a high protective tariff that compels them to purchase their goods and materials in the restricted markets of our country and sell the products of Nature's soil in the competitive markets of the world. Let us, therefore, stabilize the farming interests of our country by helping them in this the greatest hour of need so that there shall be no repetition of over a thousand banks failing in their midst. [Applause.] midst. [Applause.]

COMMANDMENT 3

Abolish child labor. Children under 16 belong to the schoolhouse, not in the mills, mines, looms, and factories. They should not compete with adult men and women for work that rightfully belongs to them. [Applause.]

COMMANDMENT 4

Establish a 5-day week and a 6-hour day in industry. Machinery has dislocated production. It has displaced men and women in every industry. We should frankly recognize that in our machine age mechanisms are superior to men, and the creation of a shorter working week with fewer working hours per day would better enable man to cooperate with the advance of machinery.

COMMANDMENT 5

Establish unemployment insurance and old-age pensions in every State of the Union so that in times of prosperity we may be able to prepare for days of adversity. Unemployment insurance and old-age pensions are neither new or radical ideas. The arch conservative, Bismarck, instituted them in Germany way back in 1883. The liberals, Asquith and Lloyd George, brought them about in England in 1909; and the Socialists, Briand and Clemenceau, introduced them in France in 1910. Twenty-eight other nations of Europe adopted them in one form or another. Why, then, should America, the most advanced country of the present age, lag behind? [Applause.]

COMMANDMENT 6

Institute employment agencies throughout the United States through the cooperation of the Federal and State Governments so that labor may easily be shifted from one part of the country to another in times of economic depression.

My distinguished colleague and associate from New York, Senator

ROBERT WAGNER, introduced the Wagner unemployment bills which, if signed in toto, would have been instrumental in relieving to a very great extent the burden of 8,000,000 people who are unemployed and seeking opportunity to work at anything to support their dependent children and their families. Herbert Hoover, President of the United States, vetoed that particular feature of the bill which is the heart and soul of the they are legislation. Mr. Chelir. dent of the United States, vetoed that particular feature of the bill which is the heart and soul of that humane legislation. Mr. Chairman, ladies, and gentlemen, if that militant Democrat, that liberal and humanitarian, our beloved Speaker, John Nance Garner, were the President of the United States, as a lover of his fellow man, deeply imbued with feeling and sympathy for the suffering and distressed, he would have signed that bill. [Applause.]

If the distinguished Governor of the State of New York, the Honorable Franklin D. Roosevelt, were President of the United States, he, too, as a progressive Democrat interested in the great masses of his fellow man, would have signed that bill. [Applause.]

of his fellow man, would have signed that bill. [Applause.]

If the idol of the democracy of New York City, a gentleman whose whole life has been dedicated to the interests of his fellow man, Al Smith, were the President of the United States, he, too, would have signed that bill. [Applause.]

COMMANDMENT 7

Guarantee bank deposits in every bank of the country through a national bank insurance fund, so that no depositor should ever be permitted to lose a single penny through the closure of any bank, whether due to frozen assets, incompetent or corrupt management, or economic depression. [Applause.]

COMMANDMENT 8

Put teeth into the Federal Trade Commission Act so that grossly unfair methods of competition should be prevented.

COMMANDMENT 9

Recognize Soviet Russia and so open up to American capital and labor the vast markets and resources of that enormous expansive territory containing 160,000,000 inhabitants, who are yearning for the friendship of Americans and who are begging to be permitted to buy from them and to do business with them. Millions of un-employed American men and women could be put to work tomorrow to supply the needs of Soviet Russia if we recognized that country immediately.

COMMANDMENT 10

Modify the Volstead Act to permit the sale of light wines and beer. [Applause.] This would at once deal a deathblow to rack-eteering and bootlegging in this country. At the same time it would turn billions of dollars into the Treasury of the United States relieving our citizens of the enormous burdens of taxation. [Ap-

plause.]
The effectual realization of these "ten commandments" would immediately restore prosperity to the United States. The rehabilitation of our own economic order cannot await the stabilization of

Congressman Beck says stabilize Europe first. I say stabilize America first. The moratorium will not save Europe. It is only a temporary palliative. However, for the momentary good it might accomplish I voted for it.

The only effective way to cure suffering Europe is to cancel all The only effective way to cure suffering Europe is to cancel all debts and obligations between the peoples of the world that have been bequeathed to us by the late war, which I would be in favor of doing, provided—mark you, I say provided—we could be guaranteed and assured of complete and universal disarmament that would outlaw and forever abolish war. Universal disarmament would save billions of dollars for all the nations of the world that could be used for culture, education, social justice, and all humanizing influences that would ennoble man. This, then, would be the greatest gift offered by the democracy of America upon the altar of universal peace, guaranteeing stability and order to all the governments of the world and happiness to all mankind. [Applause.] I yield now to anyone who desires to ask me any questions.

Mr. Seger. Mr. Chairman, will the gentleman yield?

Mr. Sirovich. Yes.

Mr. SIROVICH. Yes.

Mr. Seger. I assume that it would be highly improper to add another commandment to those mentioned, but would the gentleman accept an addition to his fifth commandment to abolish night work

for women?

Mr. Sirovich. That would naturally come under the principle of the 5-day week and the 6-hour day.

Mr. Blanton. Mr. Chairman, will the gentleman yield?
Mr. Sirovich. Oh, certainly. I don't think any speech would be complete unless my friend Blanton were in it.

Mr. Blanton. Does the distinguished scientist believe that idleness produces happiness? I am sure my friend wants the people to be happy. My experience is that people cannot work 5 days a week, 6 hours a day, and be happy. They cannot do it. They must be busy at work if they expect to be happy.

Mr. Knurson. You are right, Tom.

Mr. Skrovich. I see my distinguished friend wears the Masonic insignia on the lapel of his coat. Masonry, I am sure, has taught him that 5,000 years ago our fraternity divided the 24-hour day into three parts, 8 hours for labor, 8 hours for sleep, and 8 hours for refreshment.

Mr. Blanton. And I am in favor of that.

Mr. Strovich. But that was 5,000 years ago, before machinery was ever invented to take the place of the labor of man.

Mr. Blanton. And things have not changed much since. [Laughter.] Idleness is still the devil's workshop. I am still in favor of

8 hours for labor, 8 for sleep, and 8 for amusement.

Mr. Sirovich. That is because the gentleman lives in Texas,
[Laughter.] If the gentleman had lived in any other part of the
country he would think differently.

Mr. Johnson of Oklahoma. Mr. Chairman, will the gentleman

vield?

Mr. SIROVICH. Yes.

Mr. Johnson of Oklahoma. I was interested in the statement of my distinguished friend that he would favor the cancelation of all war debts to America provided the foreign governments would disarm.

Mr. Sirovich. I would demand universal and complete disarma-

Mr. Johnson of Oklahoma. Does the gentleman think for one moment that the foreign governments would comply with that proviso?

Mr. Sirovich. That is a very interesting question, and I am honest enough to confess as a practical idealist that to me it is Utopian. enough to comess as a practical idealist that to me it is Utoplan. They will never agree to it. A leopard does not change his spots, and since Europe refuses to disarm but continues piling up large armaments and great standing armies to wage war against the innocent people of other nations, I want them to pay back every dollar that rightfully belongs to the American people. [Applause.]

Mr. Erk. Mr. Chairman, will the gentleman yield?

Mr. SIROVICH. Yes.

Mr. Erk. Speaking of Russia, has the gentleman ever known an

individual or a nation to succeed that was godless?

individual or a nation to succeed that was godless?

Mr. Sirovich. In my humble opinion there has never been a nation in the world that tried to destroy religion but that in the end was not ultimately destroyed itself. During the French Revolution, under the dictatorship of the triumvirate of Robespierre, Marat, and Mirabeau, they placed the goddess of reason upon the pedestal of the Lord. As the years rolled by the goddess of reason toppled and crumbled and in its place freedom of worship of God according to a person's conscience was rightfully restored to its proper position. The population of Russia is 160,000,000. Three to four millions are avowed atheists. At the present time they control their government. That does not necessarily imply that all Russia is atheistic. When I visited Russia a few months ago and discussed religion with many of their leaders, I was told by them that Thomas Paine, Thomas Jefferson, and Benjamin Franklin were atheists during the period of our colonial revolution, but that did not necessarily imply that all of our American citizens were atheists.

during the period of our colonial revolution, but that did not necessarily imply that all of our American citizens were atheists.

The word "God" is not found in the Constitution of the United States or in the Declaration of Independence. In my humble opinion it was kept out of the Constitution because King George the Third, who persecuted our American forebears, ruled in the name of God and believed in the rulership of the kings through divine gift of God. So our colonial forebears refused to have the God of King George the Third in the Constitution of the United States. They claimed the voice of the people, that is the voice of God.

Mr. Chairman, will the gentleman yields

Mr. Simmons. Mr. Chairman, will the gentleman yield?

Mr. SIROVICH. Yes.

Mr. Simmons. The gentleman does not mean to say that the statement coming from a Russian is a correct statement of the men he named and of American history at that time?

Mr. Sirovich. I am simply repeating the statement given to me

in Russia. That was their view, not mine.

Mr. Simmons. Let us not have the gentleman stating it as a

correct statement of history.

Mr. Sirovich. Tom Paine, by many writers throughout the land,

for seven decades has been considered an atheist.

Mr. Simmons. I am suggesting that the gentleman has stated a series of situations that do not exist, either regarding the Constitution or the Declaration of Independence, nor regarding two of the three men named.

Mr. Sirovich. Thomas Jefferson and Benjamin Franklin in their day were accused of being atheists. I do not, however, share in that view. Either I do not understand the gentleman's question or my distinguished friend from Nebraska does not understand me.

Mr. Knurson. I have always understood that Tom Paine was an agnostic.

Mr. Sirovich. He has been considered an agnostic by some and an

atheist by others.

As a matter of fact, what is the difference between agnosticism As a matter of fact, what is the difference between agnosticism and atheism? An atheist is one who does not believe in any God. An agnostic is one who professes ignorance of the existence of God or who sits on the fence and says, "There may be a God and there may not be one." Having read most of the writings of Thomas Paine, I am convinced he was not an agnostic. I have taken him as an atheist.

Mr. Chairman, I wish to thank the membership of this House for the cordial and gracious manner in which they have listened to me and for their uniform kindness in receiving my remarks for the past hour.

All I tried to show in my address was that charity should begin at home. That we must stabilize America first. That the interests and happiness of 130,000,000 Americans are paramount to that of any peoples of the world. [Applause.]

Subsidized Water and Air Transport Unfair to Railroads

EXTENSION OF REMARKS

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1939

STATEMENT BY D. B. ROBERTSON, INTERNATIONAL PRESI-DENT OF THE BROTHERHOOD OF LOCOMOTIVE FIREMEN AND ENGINEMEN

Mr. SHAFER of Michigan. Mr. Speaker, approximately 39,000 railroad employees in the State of Michigan will be indirectly affected if this Congress takes favorable action on the proposed Beaver-Mahoning Canal in Ohio, legislation for which is now pending before the House Committee on Rivers and Harbors. I am certain each of these 39,000 railroad workers are opposed to this proposed project because they know it would mean certain injury to the employment and welfare of their fellow workers in Ohio.

The proposed canal would be nothing more than another agency of transportation to compete with railroads. The proposed canal would obviously obtain its required traffic from the existing transportation agencies and therefore would mean the destruction of jobs of men now employed by the railroads.

An analysis of the Beaver-Mahoning Canal project leads me to believe that it is just another subsidy brainstorm. Approximately \$300,000,000 of the taxpayers' money is involved in the proposition, and only a limited number of industries in a limited territory would be benefited. The only argument advanced in favor of the project is that the present railroad rates appear too high.

If this is true

One railroad man has observed-

it would seem that the rates could be adjusted down to a satisfactory level without the employment of vast sums of public money and without the destruction of existing transportation agencies, which, naturally, would entail the loss of thousands of jobs.

Mr. Speaker, I am convinced that the time has come for Congress to call a halt to the Government subsidization of industries of all types, whether it be in industries in transportation or otherwise. Railroad employees of the Nation are in accord with that belief. They know they have been made the victims of the unthinking use of public funds that have been used in vast amounts to create agencies of business that have resulted in injury to privately operated businesses and to the jobs of men employed by them.

At this point I ask unanimous consent to insert in the RECORD a statement by Mr. D. B. Robertson, international president of the Brotherhood of Locomotive Firemen and Enginemen. It contains facts relative to Government subsidies which I believe all Members of Congress should have in their possession. The statement follows:

SUBSIDIZED WATER AND AIR TRANSPORT UNFAIR TO RAILROADS (By D. B. Robertson, president)

Every citizen interested in the welfare of the country, every merchant, manufacturer, or dealer catering to the needs of the railroads or their employees, every investor interested, either directly or indirectly, in railroad prosperity, and every railroad worker interested in protecting his employment should unite in an effort to solve the problem presented by unfair competition, subsidization of certain forms of transportation, and lack of uniform regulation among all forms of transportation.

The history of the railroads and the important part they have

The history of the railroads and the important part they have played in the development and prosperity of this continent cannot be overestimated. Were it not for the railroads, most of this immense terrain would still be an uninhabited wilderness.

A continuation of the efficient operation and further improvement of the railroads is a vital and essential factor in national defense.

defense.

Exceeded only by agriculture the railroads as a group constitute one of America's chief employers, directly, and indirectly through purchases. They are as taxpayers one of the chief supports of government—municipal, county, State, and Federal. In many counties the railroads pay as much as 90 percent, and in some cases more, of the taxes paid for the support of public institutions and the maintenance of government.

Without the railroads to transport the raw materials to our mills and factories, we would have few, if any motor vehicles, ships, or airplanes. The cost would be too great.

A threat to the continued efficient operation of railroads, contributed to in some measure by State and Federal legislation, is subsidization of other forms of transportation—highway, waterway, and airway—competition which could not exist were it not for subsidies either tacitly allowed or resulting from legislative edict.

Before the coming of the railroads the inland rivers, largely the Mississippi and its principal tributaries, the Ohio and the Missouri, accommodated transportation by means of flatboats and vessels

accommodated transportation by means of flatboats and vessels not requiring deep water. The waterways could not prove self-supporting against the superior form of railroad transportation. Their traffic vanished therefore, and inland river shipping passed

Their traffic vanished therefore, and inland river shipping passed out of the transportation picture.

"The decline of transportation by water in the United States," says Dr. Moulton, of the Brookings Institution, a high and unprejudiced authority, "has been due to a large number of factors. In addition to the physical imperfection of the waterways and what have been defined as unfair competitive methods of the railroads, we have found that many other influences have been equally important in producing the decline of water tonnage that has taken place. * * It cannot fairly be said, therefore, that if the waterways of the country were improved and guaranteed protection from the railroads their successful future would be assured."

RIVERS NOT NATURAL WATERWAYS

In their natural condition, rivers are not adapted to constant and dependable transportation. In the Northern States ice interferes with their use for several months in the winter; floods, low water, and the shifting of channels offer substantial obstacles at other seasons. Instead of being natural means of transportation, they must be artificially prepared for transport purposes by the building of locks and dams and the deepening of channels, and this condition must be constantly maintained at great expense to the taxpaying public, whereas a similar expense for the building and maintaining of a railroad is paid for by that industry alone.

The 981-mile Ohio River lock and dam system, one of the best of the inland waterway projects, has cost the taxpayers nearly \$140,000,000 to prepare it for navigation, or about \$142,000 per mile; and, excluding interest on the investment, costs annually some \$4,000 per mile to maintain. A double-track railroad would have been a far superior facility, yet no one would advocate public building and maintenance of such a railroad for free use by the public.

public.

Regardless of the efficiency of the railroads in carrying the freight to the sea, it seems that an effort now is being made to try and

bring the sea to the freight.

No subject has been more fully discussed for the past decade than No subject has been more fully discussed for the past decade than the St. Lawrence canalization project. It calls for a 27-foot waterway for a distance of about 1,350 miles through the Great Lakes and the St. Lawrence River, including the widening and deepening of the St. Lawrence between Lake Ontario and Montreal, about 180 miles, and the development of water power in the St. Lawrence.

The cost of the project was estimated at \$543,000,000. Including items neglected—interest during construction, delays, difficulties, and contingencies—it is calculated by some experts that the cost would be over a billion dollars.

would be over a billion dollars

Doubtless the proponents of the seaway would expect the railroads to maintain sufficient facilities to care for their peak requirements during the winter months, notwithstanding that much of the equipment would necessarily remain idle during the period of the waterway operation.

The railroad physical plant cannot be contracted and expanded to adjust itself to the fluctuations of business. It must be maintained at a stage which will adequately provide for the movement

tained at a stage which will acequately provide for the movement of traffic at its peak.

Its operation would mean a loss to the taxpayers even though the St. Lawrence Waterway could be operated 12 months each year, but to demoralize land transport for part of the year and then to expect the railroads to give the same service at the same rates during the closed season of navigation seems most unfair and unreasonable.

Only on the rails is it possible to combine the convenience and flexibility of the individually loaded and empty freight car—which can go anywhere on this continent at any season of the year with the economy of mass transportation. For this simple and fundamental reason the present outlook is that the railroads will continue to be the basic mass-transportation industry of the country.

There is probably no question quite so complicated and quite so controversial as the extent that water, highway, and air transportation is being subsidized by the use of taxpayers' money.

RAILROADS SELF-SUPPORTING

The railroads are expected to be self-supporting, to meet all their own costs, and to pay taxes which do not go toward the upkeep of their right-of-way but are used to meet the general cost of local, State, and Federal governments. Rail rates on certain traffic are held down on the theory that the railroads are a monopoly, while on other traffic Government-fostered and Government-subsidized competition hammers down the rates. Railroad traffic volume—and the railroads operate a volume business—is reduced, and unit expenses increased by the diversion to these Government-subsi-dized agencies of transportation of tremendous tonnage which could be handled at a lower cost on the rails.

It is manifestly unjust to tax all the people to subsidize water-ways when only a small part of the population derives direct bene-

fit from these subsidies.

It is possible for the waterways to serve but a small percentage of the population; they have their natural limitations, but, like the motortrucks, they skim the cream of certain traffic. When we remember that five or six men can move several thousand tons of freight in a train while it would require several thousand trucks to carry the same tonnage, it should be clear that the cost of motor transport is prohibitive as compared to rail transportation when all costs are considered.

Almost every analysis of comparative costs leads to the conclusion that it is more expensive to move freight by inland waters

than by rail.

than by rail.

Since the World War nearly \$2,000,000,000 of the taxpayers' money has been spent by the Federal Government to develop water transportation in competition with the railroads. Bonds were issued to secure the money, and the interest payments alone amount to nearly \$60,000,000 per year.

This huge investment pays no taxes, and it costs more than \$100,000,000 per year to maintain the waterways, provide the extensive system of lighthouses, buoys, and radio beacons, and Coast Guard service, all of which are required to aid and protect water transportation.

transportation.

The annual expenses of the Federal Government for river and harbor improvements increased year by year from \$47,000,000 in 1920 to more than \$200,000,000 at the present time.

Federal, State, and local governments have built piers and wharves to provide terminal facilities for the water lines.

Altogether, the taxpayers are contributing more than \$200,000,000 each year to subsidize water transportation that competes with the railroads.

The two decades just concluded have been characterized by great activity in the matter of increasing water transportation. To a considerable extent the growth of water transport is due to the entry of the United States Government into this field through the operation of the Federal Barge Line on the Mississippi, Warrior, and Missouri Rivers.

rior, and Missouri Rivers.

In 1924, there was organized, under congressional authority, the Inland Waterways Corporation, charged with the duty of operating a barge line on the Mississippi and any of its tributaries other than the Ohio, as well as upon the Warrior River in Alabama and waterways connecting Birmingham with New Orleans. Subsequent amendments have increased the extent of the Federal Barge Line operations.

operations

The statute dealing with this barge line provides that it shall be continued in operation until certain developments are complete. Up to June 30, 1937, according to the Chief of Engineers, the Government expended in new work on the various rivers constituting this system, in all, the sum of \$683,365,000—a sum that would build more than 10,000 miles of average railroad.

Rail carriers are regulated and supervised by Enderel and State

Rail carriers are regulated and supervised by Federal and State Governments. Other transport agencies—even when they are subject to some measure of governmental regulation—operate relatively free of many restrictions which are imposed upon the railroads.

A STRIKING ILLUSTRATION

A striking illustration of unfair and uneconomic competition is A striking illustration of unfair and uneconomic competition is found in the New York State Barge Canal. Since 1903, more than \$316,000,000 of public funds have been poured into this artificial waterway. The barge canal is free to all users—except the railroads, which are not permitted to use it. During the past 10 years New York State taxpayers have contributed a subsidy of \$2.57 on every ton of freight moved over the canal. During this same 10-year period the railroads paid to the State of New York an aggregate of nearly \$263,000,000 in taxes.

Despite the tremendous efforts and all the money which has been

period the railroads paid to the State of New York an aggregate of nearly \$263,000,000 in taxes.

Despite the tremendous efforts and all the money which has been expended by Federal, State, and local Governments during the past 15 or 20 years to develop highway, water, and air transportation, the railroads continue to provide for the greater part of our transportation requirements. It seems certain that they will continue to do so for a long time to come.

While a part of the decrease in the volume of traffic handled by the railroads has been due to the low level of business during the depression, even more responsible has been the loss of traffic by the railroads to competing water, highway, and air transportation—competing transportation which exists only because it is subsidized by the taxpayers' money.

To the extent that the present low level of business is responsible, the financial condition of the railroads will improve as business improves and traffic and revenues increase.

The railroad problem will never be solved as long as water, highway, and air transportation, which competes with the railroads, is subsidized and is thereby enabled to take away traffic which belongs to the railroads—traffic which the railroads can handle more efficiently and more cheaply when all costs are considered.

These costs, of course, refer to ultimate costs, whether they be become by the chipper who expresses the services of the certain or here.

These costs, of course, refer to ultimate costs whether they be borne by the shipper who engages the services of the carrier or by the taxpayer, from whose contributions the Government has built the highways and improved the waterways. Doubtless the time

will come when the burden of taxation will be so heavy that there will be an irresistible demand that those who use a carrier shall pay the entire cost of the service rendered, a proportionate share of the cost of construction and maintenance properly assignable. Whether or not such a policy is adopted it is obvious that from the viewpoint both of sound economics and ordinary justice all costs should be taken into consideration.

Another illustration of competitive advantage may be found in the tragic hurricane and floods which swept over the New England area last September. Important sections of railway lines and public highways were washed away, and bridges destroyed. The cost of rehabilitation will total millions of dollars. Every dollar spent to rebuild the railway plant must come out of the treasuries of the New England railway plant must come out of the treasuries of the New England railroads, while every dollar spent to restore the facilities used by competitors of the railways will come from Federal, State, and municipal taxes, to which the railroads are among the heaviest contributors.

If the railroads were now handling the traffic which has been diverted to air, water, and highway transportation solely because the greater part of the actual cost of such transportation is being paid by the taxpayers, the traffic and revenues of the railroads would be so increased that we would have no railroad problem.

AIRWAY COMPETITION

The Federal Government maintains and operates the 19,500 The Federal Government maintains and operates the 19,500 miles of lighted and radio equipped airways in the United States. It provides the airplane inspection service and a special weather service for the air lines. It grants the air lines a mail subsidy which covers a very large portion of their cost of operation. The State and local governments provide and maintain the airports. Altogether, the subsidy of air transportation is costing the taxpayers approximately \$50,000,000 each year.

The public generally has been proceeding upon the theory that air transport would be limited to the movement of light commodities and to the handling of passengers willing to pay a high price for quick transportation. It has been assumed that airplanes are expensive to operate and are of such restricted carrying capacity expensive to operate and are of such restricted carrying capacity that they will not play a very conspicuous part in the transportation field, especially as concerns freight traffic. But no one can predict with certainty just what the next few years will bring forth. Very recently, a high official of the Federal Department of Commerce predicted that soon all our first-class mail will move by air; that there will be regular 10-hour flights from coast to coast; that in a few years 40,000,000 people will be using planes. He stated also that flying freight cars are in contemplation, using tri-motored equipment, powered with 1,200-horsepower engines and carrying 10 tons of freight at a speed of 150 miles per hour. It was predicted that soon we would be witnessing the use of airplanes in the movement of "perishables, silks, smaller machines, parts and accessories, dairy and poultry products."

Only insofar as they contribute to the national defense and flood control are the costs to the taxpayers of Government con-

flood control are the costs to the taxpayers of Government constructed and maintained water and air facilities justified. Otherwise their users, shippers, and transportation agencies should be required to pay their own way and be subjected to the same degree of regulation as may be imposed upon the railroads from time to

Excessive Spending in W. P. A.

EXTENSION OF REMARKS

HON. RAYMOND S. SPRINGER OF INDIANA

Monday, April 3, 1939

IN THE HOUSE OF REPRESENTATIVES

Mr. SPRINGER. Mr. Speaker, I desire to make some observations respecting the stupendous appropriations of money by the Congress for many and various departments of Government, which are in large part greatly detrimental to every class of our citizens. Our businessmen and our industrialists are pleading for help, and that assistance from their Government is imperative, which should consist in the decrease of taxes, the repeal of the undistributed-profits tax, the elimination of the pay-roll tax, and the restoration of confidence that a sound and stable program will be established and

Another group of our citizens, our farmers, are greatly disturbed because of the excessive spending program which has been inaugurated and continued by our Government, and they realize that the burden of paying the unprecedented national debt which has been created by this administration will fall quite heavily upon their shoulders, and that posterity will have a huge burden to assume. The taxes now imposed upon our farmers are all too heavy; they must have relief.

maintained respecting all business in our country.

Our laboring men and women are greatly agitated because of the many taxes, which include the hidden taxes, now levied and collected from them; these hidden taxes are collected from the people in the increased purchase price of every needed family commodity; these most repulsive taxes have been made necessary by the great spending program which has been adopted by the national administration and its agencies. At this time our laboring people have short-hour jobs, or uncertain jobs, or they are unemployed; yet these secret and hidden taxes are collected daily for the use and benefit of our Government. Each loaf of bread purchased for the family table contains its tax for the Government; likewise, each suit of clothes, hat, dress, hose, and every essential for family use is the subject of Government tax; the average man steadily employed earns approximately \$100 per month, and in expending that sum of money throughout the year he pays Government taxes aggregating the sum of \$231.72; and the man who earns the sum of \$150 per month pays the sum of \$363.60 in hidden taxes in expending that sum for the support of his family. This unprecedented spending program, which the majority in the House is now blindly following, makes necessary the creation of new and additional taxes with which to pay the obligations incurred. Unless this spending program is greatly limited it will continue to take a constantly greater share from the income of every American family. While the obligation to pay the taxes of every character has become greater and more burdensome to the people, the earning capacity of the American citizen has become less during the last few years. Industry in our country, to which we look for the employment of the unemployed, has been taxed and strangled by our Government; it is unable to proceed with its business operations because of the great burdens imposed and because of the uncertainty existing respecting business; when business and industry is unable to proceed and go forward, then labor is affected to the extent of their jobs.

The average American citizen is appalled when aware of the fact that our national debt is rapidly approaching the \$45,000,000,000 limitation. Quite recently the President indicated the necessity of increasing the amount of the fixed limitation of our debt; I desire to warn the Members of the House if this spending program is continued by the majority it will quite soon be absolutely necessary to further extend the power and limit to create debt by our Government. If and when that fatal day arrives, who will be responsible for it? The answer is apparent—the majority in this House, who now vote for practically every appropriation of money for many nonessential things will alone be responsible.

When we analyze the spending of the W. P. A. funds we are made conscious of the maladministration of the funds which have been allocated to that relief agency. I have waged the battle for the poor and the unemployed, and I will continue to render every aid and assistance necessary for the needy, the poor, and the unemployed; I will cast my vote for all funds needed for the sustenance of the needy and the unemployed. However, I am unalterably opposed to the waste, the extravagance, and the racketeering involved in this agency of our Government, because that philosophy of Government spending imposes a heavy burden upon the very people we seek to help. The hidden taxes imposed by our Government, which are made necessary by the unprecedented spending on the part of this administration are equally heavy upon the poor and the unemployed as well as the rich and the independent people of our Nation.

Under the Economy Relief Appropriation Act of 1938, approved June 21, 1938, the sum of \$1,425,000,000 was appropriated for the W. P. A., which staggering sum was to carry that relief agency until June 30, 1939. However, by reason of the great army of workers who were put upon the relief rolls before the general election in 1938, many of whom were not entitled to relief and could not qualify therefor, and by reason of large sums of money having been paid out to political manipulators, and by reason of the payment of vast sums of money for other nonessential things, such as the

operation of more than 1,000 plays produced by performing units of the Nation-wide Federal Theater Project, at a cost of approximately \$10,000,000 during the past year, which funds were paid out of the W. P. A. funds, and by the expenditure of the W. P. A. funds for the purpose of erecting and constructing a great show building upon the world's fair grounds at New York at a cost of approximately \$300,000 to exploit the W. P. A., and by the expenditure of approximately \$4,000,000 per month for personal services for the administration of that relief agency, and by retaining on the pay roll 1,902 administrative employees and a field-roll force of 32,670 people, and by reason of the expenditure for travel and subsistence amounting to approximately \$500,000 per month, and by the unexcusable payment from the W. P. A. funds of approximately \$150,000 per month for telephone, telegraph, and other communication purposes, all of which border upon the ridiculous, the W. P. A. funds were diminished and almost depleted, so that an additional appropriation was asked, and \$725,000,000 was granted by the Seventysixth Congress to care for this agency until June 30, 1939. The ink was hardly dry upon the appropriation bill when the President requested additional funds for relief without any real emergency for the same; the Congress had just granted \$725,000,000 for that specific purpose. The hearings which were held, at which evidence was introduced, show that \$55,000,000, the same being the approximate amount embraced in the Cox amendment, is all the money which would be reasonably required to carry the relief program to the end of the fiscal year June 30, 1939, with the reasonable and proper curtailment of spending such money for nonessential things.

The appropriations made for this relief agency aggregate more than \$500,000,000 in excess of the total amount used last year for this same purpose, and they amount to approximately \$300,000,000 in excess of the amount expended in the previous year for that purpose. Therefore, the relief appropriations during the present fiscal year are much greater than those in any immediate previous year for such purpose.

Therefore, I say that these staggering appropriations of money must be stopped. Every class of our people are suffering from the spending of money by this administration; labor has suffered, and is now suffering, because of the imposition of the secret taxes upon them and the laboring men and women have no real opportunity so long as industry and business cannot go forward. The American farmer has been controlled and regimented, his crops have been limited and curtailed, and his taxes have been increased until he stands upon the threshold of bankruptcy. Business and industry in this country have faced so many changes of policy by this administration they do not know "what the next day may bring forth," and the burden of taxation has become so heavy they operate, largely, without profit to themselves.

Just as long as this administration continues its present policy of spending money, and of permitting the utter waste of it, prosperity in this country will be deferred and obstructed. When prosperity is obstructed and prevented by our Government, every class of our people suffer. The people crave a sound and constructive policy of government which is permanent and which will, in the end, revivify and rejuvenate business and industry; agriculture, with the millstone removed from its neck, will go forward and labor, with a permanent purchasing power in its hands, will make progress as a great class of our people. Let us start on the highway of recovery by curtailing the policy of recklessly spending the taxpayers' money. Let us turn the administration of relief back to the local communities, and thereby stop the waste and squandering of the money which has been appropriated for the poor and the unemployed people in our country; let us adopt a policy that all relief funds shall be used for relief only. Let us adopt a policy which will be in the interest of the people of our Nation; let us inject a sound business policy into every department of government and go forward as Americans.

Court of Appeals for Administration

EXTENSION OF REMARKS

HON. M. M. LOGAN

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES Tuesday, April 4 (legislative day of Monday, April 3), 1939

ADDRESS BY J. E. SEBREE

Mr. LOGAN. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by J. E. Sebree, professor of administrative law in the National University, on "The Proposed Court of Appeals for Administra-tion." The address was delivered before a group of lawyers in Washington a few days ago.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I particularly appreciate the opportunity to talk to you this afternoon about the proposed court of appeals for administration. The proposal of such a court is of more than passing interest to a clinic of lawyers who practice in the field of taxation, and are not only intimately concerned with the adjudication of controversies arising out of the administration of the tax laws, but with the building of a sound jurisprudence within that field of public administration. administration.

administration.

I am asked to discuss some aspects of the proposed administrative court review of Board of Tax Appeals decisions.

While I assume that you are all somewhat familiar with the provisions of the bill S. 916 proposing this court, I think it would be helpful to examine, briefly, its background and purpose as well as the sections pertinent to this discussion.

I do not need to say to lawyers who are engaged in departmental practice that the country is becoming administratively conscious and is demanding certain administrative reforms; nor do I need to point out that the trend is toward efficiency in administration and a more definite control of administrative action through administrative adjudication.

I think it is generally recognized that, in matters of administra-

I think it is generally recognized that, in matters of administra adjudication, Uncle Sam has pretty much outgrown his nes. The problem is, Shall he get a new suit or have the old clothes. one repaired? Some lawyers believe that he ought to wear the old suit and from time to time add such gussets and sundry patches as necessity may require. They like the old familiar suit with its baggy knees and multicolored patches. They recognize it anywhere.

than the laggy ances and induceded packets. They recognize it anywhere.

Other equally thoughtful lawyers believe he ought to have a new suit, they point out that he acquired the old suit when he was a boy and has been patching it ever since; that he has outgrown it and should have a new suit tailored to fit. They believe that when they become accustomed to the new suit they will like it a lot better, but they realize it is a big order requiring very careful measurements.

In order to understand the problems that arise in any legislation looking to improvement in the adjudication of controversies arising out of administrative action and in order to evaluate the system as it now is, we must recognize that our administrative system has grown up with a tremendously expanding population and in recent years has developed all the complexities of government incident to modern social demands.

In order to provide for the constantly increasing demands upon

In order to provide for the constantly increasing demands upon government, Congress has from time to time created new agencies and tribunals for particular purposes, either with a prescribed procedure or with power to formulate their own rules of procedure. Thus the administrative branch of the Government has developed, as it were, by accretion in the form of new agencies charged with new activities and endowed with new powers. This development has been unitary without any real coordinating control.

Now Uncle Sam conducts the largest business in the world, and Now Uncle Sam conducts the largest business in the world, and in the establishment of a new agency in government, the pressing problem has been one of administration, and the adjudication of controversies arising out of administrative action has been largely confined to old methods. This has been particularly true in regulatory bodies. It is not surprising, therefore, that at this time there should be felt a need for the reorganization of our administrative system. Posticularly clong the lives of judicial control.

trative system, particularly along the lines of judicial control.

When we consider that administration is government in action and it is the function of the American Government to carry on the largest and most complex business enterprise in the world, it becomes evident that it must function smoothly and rapidly in

order to meet the demands that are made upon it.

The law of administration not only delimits the sphere of action of administrative officers but it indicates to the persons affected by administrative action their rights and their remedies. It is, therefore, of tremendous importance that the law should be clear and unambiguous-and that insofar as it is humanly possible the

adjudication of controversies arising out of administrative action should not result in conflicting decisions and confusing dicta which often make it difficult for both the bar and the adminis-trative tribunals to determine what the law is.

Due largely to our doctrine of the separation of powers as con-Due largely to our doctrine of the separation of powers as construed in relation to administration, the review of the decisions of administrative tribunals has been in the law courts in our Federal judicial system. This method of review has not only hindered the development of a body of public law to control public administration, but has made possible as many varying decisions on substantially the same questions as there are district and appellate courts in our judicial system. The points of view of the courts and the dicta of the judges are, to say the least, confusing and certainly encourage litigation. fusing and certainly encourage litigation.

But a sad thing about conflicts is that only the party last litigant benefits when the conflict is finally resolved by the Su-

litigant benefits when the conflict is finally resolved by the Supreme Court. The parties affected by the erroneous decisions in prior cases find their remedies exhausted and the taxpayers who have perhaps for many years followed the erroneous decision and paid the tax find the statute of limitations for refunds has run. With a view to improving administrative adjudication by eliminating the possibility of conflicts of decision in review of administrative controversies; to securing greater uniformity in decision, and in procedure and practice; to improving Federal administration by a more centralized judicial control, and with a view to reducing litigation by building up a more positive system of administrative jurisprudence, Senator Logan, at the meeting of the American Bar Association in Kansas City in 1937, in a prepared address to the Section on International and Comparative Law proposed the establishment of a single court of appeals for administration. So great an interest was manifested in the proposal by lawyers throughout the country and there were so many requests for copies of the address that it became necessary to have quests for copies of the address that it became necessary to have it printed to supply the demand. In the following session of Congress, and on March 17, 1938, Senator Logan introduced in the Senate a bill to establish such a court. Hearings were had on the bill from time to time throughout the remainder of the session. This bill, with some minor changes, was reintroduced by Senator

This bill, with some minor changes, was reintroduced by Senator Logan in the present session of the Seventy-sixth Congress on January 17, 1939.

The bill as introduced proposes to establish under article III of the Constitution a United States Court of Appeals for administration, to receive, decide, and expedite appeals from Federal commissions, administrative authorities, and tribunals in which the United States is a party or has an interest. The court and the justices thereof shall have all of the powers and duties of the appellate courts of the United States and the judges or justices thereof.

The bill does not propose to greate an administrative court. It

The bill does not propose to create an administrative court. It proposes to create a constitutional court that will be given the exclusive jurisdiction of appeals from orders and decisions of Federal administrative tribunals that are now reviewable by the United States courts of appeals. Its jurisdiction, therefore, is substantially different from that of an administrative court.

The bill proposes that the court shall be located in the District of Columbia, but whenever "the convenience of the public or of the parties may be promoted, or delay or expense prevented thereby, a division of the court may hold special sessions in any part of the United States."

The jurisdiction of the court extends to all the final orders and decisions now subject to review by the Federal courts of the administrative authorities and tribunals specifically enumerated in the bill. Included among these is the United States Board of Tax Appeals.

The bill does not in any manner affect the jurisdiction of the Board or any other agency or tribunal. The proposed court is purely an appellate body.

an appellate body.

Under the bill, the decisions of the Board would be reviewable only by the proposed court, instead of by the 10 circuit courts of appeals and the Court of Appeals of the District of Columbia, as under the present law. This would eliminate the possibility of conflicting decisions and would in all probability have the effect of encouraging settlements in tax cases, reducing the number of appeals from Board decisions, and expediting the decision of cases appealed.

appeared.

Since the proposed court is ambulatory, hearings of cases on appeal would be had at any place in the United States most convenient to the parties. There would, therefore, be no substantial difference in that respect between the present procedure and that under the proposed court.

Under the proposed court.

Under the bill an appeal from a decision of the Board may be begun by filing a "petition for review" with the clerk of the court, praying that the decision be modified, set aside, or reversed. Copies are forthwith served by the petitioner upon the Board and upon the respondent on review. The Board shall certify and file with the court a transcript of the record, which shall contain the petition, the pertinent pleadings, the relevant evidence, the findings of fact, and the decision appealed from, which shall be prepared and transmitted to the court in the manner which the court by its rules may mitted to the court in the manner which the court by its rules may prescribe. No objection, assignment of error, or question of law will be considered by the court unless it shall have been urged before the Board, except upon good cause shown the court otherwise

There is no material difference in the procedure on review from that under the present rules, except that under the present rules the petition is filed with the clerk of the Board, while under the bill it is filed with the court.

Section 7 of the bill is of particular interest. It provides that—"If on hearing of a petition for review either party shall apply to the court to adduce additional evidence and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence before the authority or tribunal, the court may order additional evidence to be taken before the administrative authority or tional evidence to be taken before the administrative authority or tribunal and the authority or tribunal may modify its findings as to facts by reason of the additional evidence, and it shall file such modified new findings which, if supported by substantial evidence, shall be conclusive, and it may file its recommendations for the modifying or setting aside of the original order or decision."

The bill provides that the review of the court shall be limited to questions of law, and the findings of fact of the Board, if supported by substantial evidence shall be conclusive.

supported by substantial evidence, shall be conclusive.

supported by substantial evidence, shall be conclusive.

Questions coming before the court may be certified to the Supreme Court, and its judgment shall be subject to review by the Supreme Court upon certiorari.

The bill provides that the court may be divided into divisions for the purpose of hearing and deciding appeals coming before it. It may also be divided by the chief justice into sections to permit the handling of related cases by justices who are expert and experienced in the subject matter thereof. The justices to constitute each section shall be designated with due regard for their experienced in the subject matter thereof. The justices to constitute each section shall be designated with due regard for their qualifications by way of learning, experience, and special training for the work of the section to which they are assigned. Under this provision there would undoubtedly be created a tax section of the court to hear appeals coming to the court from Board of Tax Appeals' decisions. This could only mean that appeals on tax cases would be heard and expedited by judges trained and experienced in the low. experienced in tax law.

Section 3 (d) provides that:
"The decision of any division shall be reduced to writing and a copy thereof distributed to the chief justice and to each associate justice of the court. It shall be reviewed by the court whenever, in the opinion of the chief justice, such review is necessary, or upon the written request of any associate justice. If no review is requested by an associate justice or deemed necessary by the chief justice, the decision of a division shall be deemed the decision of the court and shall be final; but, subject to the rules of the court, any party of record adversely affected by the judgment may file a petition for a review of such decision by the entire court.

may file a petition for a review of such decision by the entire court."

The proposed court is of particular interest to tax lawyers because a large majority of the cases that would be reviewed by it are tex cases. Based on the number of appeals going to the circuit courts of appeals and the Court of Appeals of the District of Columbia during the calendar year 1937 from the agencies included in the bill, a total of 359 cases would have been appealed to the proposed court during that year. Of these appeals, 243, or approximately five-sevenths, were appeals from the Board of Tax Appeals.

These appeals were distributed among the 11 circuit courts of appeals as follows:

First	13
Second	70
Third	37
Fifth	33
Sixth	35
Seventh	40
Ninth	47
Tenth	12
District of Columbia Court of Appeals	49

Based on 40 cases per year as the work of 1 judge, it is estimated that the review of these cases required the full time of 8 circuit judges, as follows:

Second
Third
Fifth
Sixth
Seventh
Ninth
District of Columbia Court of Appeals

Total_

For the first, fourth, eighth, and tenth circuits there should be

For the first, fourth, eighth, and tenth circuits there should be added one-third the time of one judge.

Based on this study, a court of appeals of 11 judges would seem to be fully adequate to handle the appeals coming before it. The idea of having 1 appellate court review of the Board's decisions instead of 11 is sound in principle and would tend to expedite the decision of cases on review. Certainly it should command the serious attention and merit the constructive criticism of this body. Not only is the idea of one court to review appeals arising from administrative controversies sound but it is becoming increasingly necessary in the building up of a uniform body of tax law. A striking example of the effect of a single tribunal on the body of the law is within the peculiar knowledge of every member of this clinic.

is within the peculiar knowledge of every member of this clinic. Prior to 1924 the adjudication of income- and estate-tax cases in the first instance was in the 85 United States district courts, and the decisions of those courts were merged with the great body of the law and largely lost in the reports. The Board of Tax Appeals was created in 1924 as a single tribunal to hear and decide controversies in income and estate taxes, and only jurisdiction over refunds was left with the district courts. The decisions of the Board were published and immediately became the basis for a real body of tax jurisprudence. Since 1924 the Board has published 37 volumes of decisions which are outstanding in the field of taxation;

the American Federal tax reports of Federal court decisions have reached 20 volumes; numerous digests, texts, treatises, and tax services have been published, and today there is a well-defined tax jurisprudence easily accessible to both the bar and the courts.

THE TRAYNOR PLAN

An interesting plan for administrative improvement is proposed by Professor Traynor, of the University of California School of Jurisprudence, in the Columbia Law Review of December 1928. The plan is indicative of the present trend toward efficiency in administration and a more centralized judicial control. The plan proposes (1) certain administrative changes with a view to facilitate the settlement of controversies administratively and thereby reduce the number of cases to be judicially determined by the Board of Tax Appeals and the courts; (2) a so-called decentralization of the Board of Tax Appeals; and (3) the establishment of a single court of tax appeals with certiorari to the Supreme

Court.

The proposed plan to expedite the administrative settlement of tax cases through a change of procedure which would not permit any facts or issues to be urged before the Board unless urged before the administrative authorities, while it might conceivably result in a more careful marshaling of facts before the administrative authorities, would not, in all probability, result in the taxpayer divulging any facts that he might think prejudicial to his interests. At the present time the issues raised and the facts presented at a conference between the Government authorities and the taxpayers are in most cases substantially the same as those presented at a hearing before the Board. Administrative as those presented at a hearing before the Board. Administrative changes in policy and procedure would no doubt be helpful in expediting settlements, but they would not necessarily affect the settlement of a greater number of cases because the present administrative methods are not the cause of the differences between

settlement of a greater number of cases because the present administrative methods are not the cause of the differences between the parties or the reason for failure to settle.

In most cases the reason for failure or delay in settlement is bottomed upon conflicts of court decisions, favorable dicta, the fact that the question has not been decided in the court of appeals to which the case would go if appealed, or the fact that the question involved has not been adjudicated. It is apparent that administrative improvement would lose most of its effect under our present system of appellate review. Its effectiveness, therefore, under the "Traynor plan" depends upon the establishment of a single court of appeals to review tax cases.

In our attempt to improve administrative efficiency and to facilitate the settlement of controversies by the Treasury Department, we cannot lose sight of the fact that in these controversies the controlling facts are peculiarly within the knowledge of the taxpayer and that circumstances are continually arising where officers charged with the administration of the tax laws find it necessary to refuse a compromise and submit the controversy to adjudication in order to protect the interests of the Government and provide for an equal distribution of the tax burden. On the whole the administrative departments of the Federal Government are doing a good job, and any plan of reorganization must recognize that while administrative machinery built up through years of experience may be improved it must not be destroyed. The theory that the dealings of government with its citizens should be fair and equitable is certainly sound, but it may not extend to a disregard of the duty of every citizen to bear his just proportion. be fair and equitable is certainly sound, but it may not extend to a disregard of the duty of every citizen to bear his just proportion of the burdens of government.

The proposal of the plan to decentralize the Board of Tax Appeals does not square with the general theory of the plan, which is to encourage settlement of controversies, discourage litigation, and aid adjudication, by obtaining uniformity of decision through the elimination of conflicts and conflicting dicta by adjudicaton

in a single court.

8

in a single court.

The "plan" proposes to create five boards of tax appeals with 3 members each in place of the present Board of 16 members. These five boards would be located in different parts of the country and each one would be ambulatory. They would be entirely independent of one another and each one would be in the nature of a circuit tribunal functioning within a prescribed geographical district. Appeals from these boards would be to a single court of appeals. Clearly such a change, while eliminating conflicts on review of Board decisions, would result in conflicting Board decisions and confusing dicta by the members of the various boards. Moreover, nothing would be gained by such a change, and the value of discussions within the Board as now constituted would be lost. Approximately 90 percent of cases coming before the Board are now tried in the field and the setting up of local boards would give no advantage to litigants in that respect.

A straight line is the shortest distance between two points and there is no logical reason why we should construct and travel around a triangle in administrative adjudication when we can proceed along a direct route. As at present constituted controversies in income, estate, and gift taxes go directly to one administrative tribunal, the Board of Tax Appeals. It remains to extend that line to a single court of appeals to review the decisions of the Board. This will make for simplicity in procedure, for uniformity in decision, and the more expeditious settlement of tax controversies by the administrative authorities. The author of the "plan" aptly describes the pattern of tax litigation today as:

"* * decision by Board of Tax Appeals decision by a circuit.

"* * decision by Board of Tax Appeals decision by a circuit.

"* * decision by Board of Tax Appeals decision by a circuit. The "plan" proposes to create five boards of tax appeals with

aptly describes the pattern of tax litigation today as:

"* * decision by Board of Tax Appeals, decision by a circuit court of appeals, denial of certiorari by the Supreme Court, extensive litigation to produce a conflict, granting of certiorari, and final settlement of the issue. Under the proposed system, as an issue could reach the Supreme Court only through the court of

tax appeals, both the Commissioner and all taxpayers would be forced to acquiesce in a decision of the court of tax appeals if certiorari were denied, so that denial of certiorari would settle a question instead of being an invitation to litigation. The consequent reduction in the number of decisions, and hence of precedents, should do much to strengthen the uniformity achieved by consolidation of original jurisdiction in the Board. As Board decisions would no longer be jeopardized by the prospect of running the gantlet of 11 tribunals, the disruptive factor of legal uncertainty in the administrative stage would largely disappear, and controversies between taxpayer and Commissioner would be fewer in number and more readily settled."

He further observes that the "concentration of appellate review of Board decisions in a single court would remedy most of the difficulties inherent in the present system" of judicial review and the creation of such a court "would make it possible effectively to coordinate the Board of Tax Appeals with the judicial system."

With this suggestion we heartily agree.

Indian New Deal

EXTENSION OF REMARKS

HON. DENNIS CHAVEZ

OF NEW MEXICO

EDITORIAL FROM THE SATURDAY EVENING POST, APRIL 1,

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Saturday Evening Post of April 1, 1939, entitled "Indian New Deal."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

> [From the Saturday Evening Post of April 1, 1939] INDIAN NEW DEAL

For 3 years the Post, aware of what is going on on the Indian reservations, has sought to find an objective article on John Collier's Indian New Deal. Several writers have tried and failed.

Indian New Deal. Several writers have tried and falled.

Mrs. Seymour's article on the opposite page is not the objective article we have been seeking. She feels too strongly for that. We agree with her verdict, while wishing that she had managed a reportorial detachment. No one, however, may challenge her qualifications to speak. She was in the Indian Service from 1909 until her marriage in 1915. Later she was the first woman member and long the only woman member of the Federal Board of Indian Commissioners, an unpaid, nonpolitical body. She is the author of 10 books, all of which have dealt with Indian or frontier history.

"If you think I feel too strongly," she wrote us, "you should glance over the open letter which so serious and restrained a body as the Indian Rights' Association wrote to President Roosevelt last sum-

over the open letter which so serious and restrained a body as the Indian Rights' Association wrote to President Roosevelt last summer. My indictment is very pale beside that."

From 1923 to 1933, as secretary of the Indian Defense Association, Commissioner Collier denounced the Indian Office as the Indian Rights' Association now denounces his administration. There are parallels in Indian history for such doctrinaires as he in office.

Nathan Cook Meeker was a country storekeeper in Ohio and Illinois, a Fourier Socialist and a poet who became, first, war correspondent with Grant's army for Horace Greeley's New York Tribune, then farm editor of the Tribune. In New York he organized, with Greeley's blessing, a cooperative colony to settle on unbroken land in eastern Colorado, one of the first of the irrigation projects. Seventy thousand acres were bought from the Den unbroken land in eastern Colorado, one of the first of the Irriga-tion projects. Seventy thousand acres were bought from the Den-ver Pacific Railroad and the town of Greeley founded in 1870. After bitter vicissitudes, Greeley survived and flourished, but by 1878 Meeker had lost his all, \$15,000, and Grant made him Government agent at the White River Indian Agency.

Meeker attacked the Indian problem with undiminished idealistic fervor. He felt that if the Indian could be induced to lead an industrial and expirally and expiral life, all his difficulties would be solved.

fervor. He felt that if the Indian could be induced to lead an industrial and agricultural life, all his difficulties would be solved. That the Indian did not want to lead an industrial and agricultural life was irrelevant. When they resisted, he asked for troops. One hundred and sixty cavalrymen from Fort Steele, under Maj. Thomas T. Thornburg, were sent. The Indians ambushed them in September 1879 in Milk Canyon, killed Thornburg and 12 of his troopers, wounded 42. At the same time another party of Indians sacked the agency, murdered and terribly mutilated Meeker, killed all the other men, and took the women captive. Gen. Wesley Merritt, who arrived the third day with a force from Cheyenne, is said to have "wept like a child" at the scene at the agency.

The desire of the Indian to lead his own life is as unchanging as the determination of the reformer to lead the lives of others.

the determination of the reformer to lead the lives of others.

Work Relief and Relief

EXTENSION OF REMARKS

HON. THEODORE F. GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES Tuesday, April 4 (legislative day of Monday, April 3), 1939

for the delay.

Tonight, I shall discuss the unemployment-relief problem, as it demands the attention of the city government of Providence. It is a nonpartisan problem which cannot be solved with a political

Figures supplied me by the city auditor and by the city treasurer, show that Providence expended the enormous sum of \$3,386,424 for all forms of relief during the last fiscal year which ended Spetember 30. Since it is generally estimated that \$1 in the tax rate yields over \$500,000, it can be readily seen that \$6 of the present \$24 tax rate, or about 25 percent of the tax rate, is imposed for the purpose of financing relief.

When we are confronted with these facts, we should all hope for a speedy recovery of private employment to take the load from the overburdened backs of the cities and towns. Governor Vanderbilt has had the legislature approve a resolution authorizing him to appoint an industrial rehabilitation commission, and it remains for us to hope that this commission will be able to induce new industries to locate in Rhode Island without extending them special favors, which would be a disadvantage to existing industries in the State.

in the State.

Of the total of \$3,386,000 expended for relief during the past year, \$1,951,000, or almost \$2,000,000, was expended as the city's share in supporting W. P. A. projects. In cooperating with the Federal Government by taking advantage of the W. P. A. program the city has launched many worth-while projects, among them being the realty survey. As you are well aware, this project has not been completed. I have been cooperating with the W. P. A. authorities to guarantee a proper and fitting conclusion to this work, so that the city can benefit with a healthy, honest, complete, and up-to-date appraisal of all the land and realty property in the city. The city wants these findings placed on cards for each piece of property, so that the figures can be of tremendous value in establishing a scientific valuation and tax base.

This is only one type of W. P. A. project. While the city of

scientific valuation and tax base. This is only one type of W. P. A. project. While the city of Providence expended almost \$2,000,000 in financing materials and other costs for the W. P. A. projects, it must be remembered that the Federal Government paid all the wages of the hundreds upon hundreds of men and women who benefited from these projects. We cannot be blind to the fact that without the aid of the Federal Government, especially in the matter of W. P. A. assistance, the city of Providence, not to mention the State of Rhode Island, would have feed a serious problem which could not have been solved with have faced a serious problem which could not have been solved with existing revenues. The sources of revenue have already been strained to the breaking point.

Just think what it would have meant to the merchants of Providence if W. P. A. wages had not been pumped into the State! Just think of what the condition of the State would be today, after the hurricane, if the Federal Government had not stepped in to take over the principal work of rehabilitation! The city of Providence alone expended \$1,400,000 for hurricane rehabilitation work,

while the total intended expenditures of the State for such purposes was going to be only \$2,000,000. And even this \$2,000,000 will not be spent, because the voters turned it down.

I think it is important to observe the fact that unemployment relief expenditures of the city of Providence for W. P. A. purposes alone were \$400,000 more than the total State expenditures for relief. In other words, while the city of Providence was expending

nearly \$2,000,000 for one form of relief, the State expended only \$1,600,000 for the same purpose. This gives a vivid illustration of the major problems which confront the city of Providence in the matter of relief.

Is it any wonder, then, that the city of Providence has telegraphed its support to Washington of the additional \$150,000,000 which President Roosevelt is asking Congress to appropriate to sustain W. P. A. rolls? We all know there has been a reduction of these relief rolls in Rhode Island, and this means that the problem of financing relief in Providence becomes more acute.

It may be of interest to you to know that there has been a significant increase in the relief rolls during the past 3 months in the city of Providence. The increase for all forms of relief is over

30 percent.

Figures supplied me show that the number of persons on State unemployment relief, which means projects for which the State will contribute less than half the cost, was 2,032 for the week ending January 5. The number on these same projects for the week ending March 9 was 2,696, or an increase of 664. The number given aid in the form of family work relief was 1928 in January; it is 2,568 now. The number given home relief in January was 961; now it is 1,164. And the number given home and work relief in January was 305; now it is 398.

In other words, the number receiving relief, to which the city of Providence contributes, was 5,226 in January, and it was 6,826 at the beginning of this month. And last week there were 321 new

applications.

It is all right for organs of propaganda to protest sustaining W. P. A. appropriations; it is all right for them to claim that reductions in the Federal relief rolls are a sign of economy. Somebody has got to finance the costs of relief. If the false-economy bloc can shift the burden back to the State, and the State does not change its relief law, then the burden will be borne almost wholly by the cities and towns. Without W. P. A. assistance, I dare say the costs of relief in Providence would soar as high as \$6,000,000 annually.

Almost \$2,000,000 was expended on the W. P. A. projects last year, and the sum of \$870,000 was contributed by the city for emergency unemployment relief, which is financed in part by the State. The city also appropriated over \$200,000 for aid to dependent children, and over \$350,000 for direct support of the poor, who were not eligible for other forms of relief assistance.

The monthly average of expenditures for relief during the past

The monthly average of expenditures for relief during the past fiscal year, as far as the city of Providence is concerned, was \$282,000. Figures supplied me by officials of the city government show that for the first 5 months of the present fiscal year, which began October 1 last, the city has expended \$1,250,000 for all forms of relief. This figure includes \$685,000 for W. P. A. projects; \$350,000 for emergency relief projects financed in part by the State; nearly \$100,000 for aid to dependent children; and \$116,000 for support of the poor. Even if these averages are not increased for the remaining 7 months of the year, the relief expenditures for the year will be \$3,000,000—and \$3,000,000 represents nearly \$6 in your tax rate.

The mayors of the several cities of the State and the presidents of the town councils have held conferences on the subject of relief and what should be done to solve the problem. The Governor attended our first conference and he promised to cooperate. We are hoping the proposed survey into relief, which the Governor announced he would have made, when he delivered his inaugural

message, will yield some very definite conclusions to coordinate more closely the administration of relief.

As I have already said, the city of Providence is grateful for the tremendous amount of assistance given by the Federal Government in aiding the city to care for its unemployed. Those who ridicule W. P. A. appropriations know little about the current problems of government. That's why I was pleased to have the Providence city government, through its officials, go on record in support of the full W. P. A. appropriation requested by the President. Otherwise, it means a continual rise in our relief costs, which means that real estate will have to bear the major cost. When the Federal Government uses its tax power for relief funds, it does not levy assessments on the overburdened home owners. It seeks to get the funds from those best able to pay. Maybe that As I have already said, the city of Providence is grateful for It seeks to get the funds from those best able to pay. Maybe that is one reason why we read so much propaganda about ending Federal aid and shifting it back to the States and to the cities and

Just as soon as the Governor directs the study of relief, on behalf of the State, I intend to have created a commission representing the city of Providence, which can cooperate with the group making the city of Providence, which can cooperate with the group making the State study. There are officials in the present city government who know first hand the needs of the city in the matter of relief. There are those in the religious, social, and charitable agencies who can contribute their experience and ideas to such a survey. It must be done so that a more effective pattern for the administration of relief can be woven in the State and in the city, with due regard for the rights of the unemployed and of the taypayers. We cannot for the rights of the unemployed and of the taxpayers. We cannot be so inhuman as to turn our backs on the needs of charitable agencies, the needs of public agencies, and the needs of the unemployed.

Before concluding this radio address I want to commend the office of city solicitor, Daniel E. Geary, and his assistant, John T. Walsh, in preparing the brief on the issue of proportional representation, which was requested of me and of the city solicitor's office by the Supreme Court. I believe the law department has completed a fine exposition of the issues, and I concurred in the brief as it has gone to the Supreme Court.

You will recall I originally raised doubts over the constitutionality of proportional representation in radio talks last January. The matter is before our Supreme Court, and I, for one, intend

to refrain from comment on the issue.

In the meantime I suggest you keep acquainted with the real happenings in the Providence city government, in the fight of your mayor for proper and effective administrative and budgetary control, in the fight of your officials for adequate relief appropriations, and in the determination of your mayor to give the people of Providence what they deserve—an honest administration with privileges to none.

Thank you, and good evening.

Entrance Fees for Great Smoky National Park

EXTENSION OF REMARKS

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES Tuesday, April 4 (legislative day of Monday, April 3), 1939

RADIO ADDRESS BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA, AND STATEMENT BY DEPARTMENT OF THE INTERIOR

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a brief address which I delivered last Saturday night in my home town of Asheville, N. C., on the occasion of the celebration of the twelfth anniversary of the establishment of radio station WWNC, at which time I took occasion to express the hope that the Secretary of the Interior would not find it necessary to impose entrance fees upon the Great Smoky National Park, a portion of which is in North Carolina and a portion of which is in my sister State of Tennessee.

In connection therewith, Mr. President, I ask unanimous consent that there be printed a statement by the Department of the Interior relative to the proposed fees for parks, which fees I am opposing, and which I feel confident the able Senator from Tennessee will likewise oppose, particularly in view of the fact that during the past year we had about 800,000 visitors, and we hope to have a million the coming year. I ask that the statement of the Department of the Interior be followed by a protest issued by Thomas P. Henry. the president of the American Automobile Association, in reference to the same subject.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

RADIO ADDRESS BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA

It is a great pleasure for me to come home and participate in this

are program. It marks the dedication of radio station WWNC as a new and important link in the great Columbia Broadcasting System. It also marks the twelfth anniversary of this "Voice of Western North Carolina"—a radio station in which I am particularly interested.

Over a period of years I have watched this station grow and expand its scope of public service and entertainment. I recall the advent of radio in Asheville in the form of a tiny and crude transmitter in the office of the Asheville Citizen. From this beginning has come the great radio institution to which we nay tribute to has come the great radio institution to which we pay tribute to-night. I am also interested because station WWNC offered me my first radio experience and because it serves my home city—a com-

first radio experience and because it serves my home city—a community which has given me much and to which I shall always be linked by the strongest bonds of gratitude.

When the Columbia Broadcasting System proclaims to the world the addition of this newest outlet for its constructive and refreshing programs, it can also testify to the great public service and high purpose of WWNC. This is true because its owners and the members of its staff are civic-minded and are always alert to community needs and community demands.

Sometimes I feel that radio has grown so rapidly that too many people accept it as commonplace. They fail to realize the influence it exercises on our people, our ideals, and our institutions. Too few consider that only a small part of radio programs are revenue producing and that the balance are offered not for the profit of radio stations but to meet the responsibilities of broadcasting for the ducing and that the balance are offered not for the profit of radio stations but to meet the responsibilities of broadcasting for the public good and to inform and entertain our people. In my opinion, WWNC measures up to every phase of its responsibility to Asheville and western North Carolina.

For the benefit of listeners beyond the normal range of this "Voice of Western North Carolina," let me say that in this great section there will soon be another important dedication. It is the dedication of the Great Smoky Mountain National Park. Radio

station WWNC will undoubtedly broadcast those momentous ceremonies to the world. It will also be the radio outlet for the millions who now, and will in increasing numbers, enjoy the challenging scenery, inspiring climate, and breath-taking beauty of this newest national park.

lenging scenery, inspiring climate, and breath-taking beauty of this newest national park.

Recent developments in Washington indicate that fees will be imposed by the National Park Service in line with the extension of park fees elsewhere. I am vigorously opposed to this vicious practice. The national parks were created by the people for the use and enjoyment of the people. I hope that the facilities of WWNC will be used in any and all efforts to keep toll gates and ticket windows out of the Great Smokies.

In the words of Thomas P. Henry, president of the American Automobile Association, which guides millions of motorists on their vacation treks, fees to enter the national parks and historic shrines are "an unjustifiable and unnecessary tax on the health and recreation of the American people." He adds that our parks are a part of the "larger life" promised our people and there should be no "nickel and dime" taxes on those who enjoy it. Surely we have not come to the point where there should be a tax on fresh air, scenery, and history.

In conclusion, let me again congratulate WWNC on its splendid facilities and great community service. May I express the hope that the linking of this station with the Columbia Broadcasting System will mean a new and greater outlet for informing people everywhere of the matchless beauty and climate of western North Carolina. I thank you.

Carolina. I thank you.

STATEMENT RY THE DEPARTMENT OF THE INTERIOR

A revision of national-park existing fees, together with the estab-

Ishment of new fees of a more uniform nature to put the Nation's parks more nearly on a "pay-as-you-use" basis, was announced today by Secretary of the Interior Harold L. Ickes.

Under congressional mandate which authorized the collection of such fees to make the parks as near self-supporting as possible without violating the policies laid down by Congress in establishing the parks the Secretary set forth a number of charges which will the parks, the Secretary set forth a number of charges which will be made for services rendered in the parks.

Secretary Ickes said:
"The national parks do their share to reduce the cost of gov-

"Although few of them can be self-supporting, and it was not the purpose of Congress that they be so, the collection of automobile permit fees, together with a percentage of the profits made by public operators, has assisted in bearing the administrative cost that makes these national playgrounds possible.

"In making appropriations for the national parks Congress had in view the development of a system of fees which would help to support their cost. Also it is believed that those who actually visit the national parks and monuments should make small contributions to their upkeep for the services those visitors receive which tions to their upkeep for the services those visitors receive which are not received by other citizens who do not visit the parks that are available to them, but who contribute to the support of these parks. Such services include public camping grounds with wood, water, and comfort stations, guide and lecture service, excellent roads and parking areas, and a variety of other services such as are normally subject to detailed charges in many areas."

Among the national parks affected are Rocky Mountain in Colorado, Shenandoah in Virginia, and Grand Teton in Wyoming. In these areas a permit fee of \$1 per year will be collected for each automobile. The motorcycle fee in Rocky Mountain and Shenandoah National Parks is \$1 and in the Grand Teton National Parks

doah National Parks is \$1 and in the Grand Teton National Park it is 50 cents. The license will entitle the owner or driver of the motor vehicle to enter or reenter the particular park as many times as he desires during a calendar year. A special provision is made in regard to Shenandoah, where entrance for a single day will be permitted upon payment of a 25-cent fee.

permitted upon payment of a 25-cent fee.

Under the new ruling, fees are also established in certain national monuments and other areas. In some cases nominal charges will be made for guide service and elevator operation.

In six of the national monuments where, in the past, no charge has been made, a motor vehicle license costing 50 cents will be required. These include Colorado National Monument in the State of Colorado, Craters of the Moon National Monument in Idaho, Devils Tower National Monument in Wyoming, Petrified Forest National Monument in Arizona, and Lava Beds and Pinnacles National Monuments in California.

For the first time an additional fee of \$1 will be charged for

For the first time an additional fee of \$1 will be charged for a house trailer in those national parks where motor-vehicle licenses a nouse trailer in those national parks where motor-vehicle licenses are required. In national monuments where motor-vehicle fees are collected the trailer permit will cost 50 cents additional. Charges for trailers are in addition to the required motor-vehicle fees. In Shenandoah where a special 1-day automobile license may be obtained for 25 cents, a similar 1-day fee will be applicable to trailers.

The automobile license fees for Ties and Ties.

cable to trailers.

The automobile-license fees for Zion and Bryce Canyon National Parks have been combined in one fee of \$1 which will admit motor vehicles to both parks. The long-established \$3 fee for Yellowstone will entitle the holder to use of roads in Grand Teton. However, if entry is first made by way of Grand Teton, a motor-vehicle fee and trailer fee of \$1 each will be charged. These licenses may be presented at face value to apply upon the Yellowstone license charge.

One reduction in formerly established fees is made in the Secretary's new ruling. Former elevator charges of 50 cents for adults and 25 cents for children at Carlsbad Caverns National Park in New Mexico are reduced to 25 cents and 15 cents, respectively.

An elevator fee of 10 cents will be charged at the Statue of Liberty in New York Harbor. This fee will apply to all visitors, with the exception of children under 16 years of age who are

A fee of 25 cents is established for the use of the elevator in the Perry's Victory and International Peace Memorial at Put-in-Bay, Lake Erie, in the State of Ohio. This fee will apply to adults. Reduced rates for children and members of organized groups are as follows: Children between 10 and 15 years, 15 cents; members of organized educational, club, or other associated groups, 10 cents; children under 10 years, no charge.

10 cents; children under 10 years, no charge.
Guide service will be charged for on the basis of 25 cents per person, children excepted, at the following national monuments: Aztec ruins, Bandelier, Chaco Canyon, and El Morro—all in New Mexico—and Casa Grande and Tumacacori in Arizona.

Admission fees varying from 10 to 25 cents per person, with exceptions for children, will be collected at certain other national monuments, including George Washington birthplace in Virginia, Montezuma Castle in Arizona, and White Sands in New Mexico.

Montezuma Castle in Arizona, and White Sands in New Mexico.

Admission fees of 10 cents per person are set up for such miscellaneous places as the inner fort at Fort McHenry National Park, Baltimore, Md.; the Ford mansion and museum at Morristown National Historical Park, N. J.; the Lincoln Museum and the house where Lincoln died, Washington, D. C.; the Lee mansion in Arlington National Cemetery, across the Potomac from Washington, D. C.; the museums at Fredericksburg and Spotsylvania County and Petersburg National Military Parks in Virginia; Vicksburg National Military Park, Miss.; and the museum at Scotts Bluff National Monument in Nebraska. Admission fees of 25 cents are set up for the Derby House at Salem Maritime National Historic Site, Mass., and for a combined visit to the Moore House, Yorktown Historical Museum, and Jamestown Island Museum in the Colonial National Historical Park in Virginia.

A registration fee of \$1 per person will be charged mountain

A registration fee of \$1 per person will be charged mountain climbers in Mount Rainier National Park, in the State of Washington, before they ascend the mountain.

License forms to be issued at all the areas where motor-vehicle fee systems will apply are in the process of printing and will be sent to these different locations within a short time. House trailer permits in the form of adhesive stamps are being prepared by the United States Bureau of Engraving and Printing. These will be affixed to the automobile licenses upon purchase at entrance stations.

[From the American Automobile Association News Service]

PROPOSAL OF DEPARTMENT OF INTERIOR TO EXTEND FEES FOR NATIONAL PARKS AND MONUMENTS BRANDED BY A. A. A. AS UNJUSTIFIABLE AND UNNECESSARY TAX ON HEALTH AND RECREATION OF AMERICAN

Washington, D. C.—The proposal of the Department of Interior to extend fees for the national parks and monuments was today branded by the American Automobile Association as an unjustifiable and unnecessary tax on the health and recreation of the American people.

The statement by the national motoring body was in accord with its long-standing policy of opposition to any and all fees for entrance to the national parks and historic shrines under Fed-

eral jurisdiction in all parts of the country.

"From the very inception of the national parks and Govern-ment protection for forts and monuments of historic importance," ment protection for forts and monuments of instoric importance, said Thomas P. Henry, president of the American Automobile Association, "it was proposed to preserve these outdoor areas and shrines as public domain. Now, when these great travel objectives are drawing many millions of motorists annually and on the even are drawing many millions of motorists annually and on the eve of one of the greatest travel years on record, it is proposed to erect more toll gates and ticket windows in virtually every section. It is indirect taxation in its most vicious form. Taxpayers are already paying for these attractions.

"If the Congress permits such a policy, it will be a flagrant breach of faith with taxpayers. It will undoubtedly discourage the use of these public playgrounds which have contributed much to the recreation and happiness of a great cross section of Amer-

the use of these public playgrounds which have contributed much to the recreation and happiness of a great cross section of Americans at a time when they are most needed. Certainly any such fee system should be definitely established by the Congress which created the parks rather than by a Federal department temporarily vested with authority."

Pointing out that the new schedule of fees would range from

10 cents to view the place where Lincoln died and Fort McHenry, which inspired The Star-Spangled Banner, to \$1 for the right to climb the majestic peaks in Mount Rainier National Park, the American Automobile Association said that the whole idea seems to be to give a carnival tinge to American history and place a premium on the inspiration of the great outdoors. The statement continues:

"Nearly a quarter of a century ago automobiles were banned from some of the great national parks. In 1915 the American Automobile Association concluded a successful campaign to per-mit motorists to drive into the parks. Since that time the tide of travel to these outdoor areas has steadily increased as more and more people found recreation in these playgrounds. More recently it has been the policy of the Federal Government to increase the number of national parks, open up new areas of play, and further protect forts and monuments associated with history. It was undertaken as a part of the 'larger life' promised to all "Now it is proposed to put a tax on the 'larger life' in the form of a new schedule of fees, which would 'nickel-and-dime' to death the great interest now being shown by many millions of motorists in visting national parks and shrines in all sections of the country."

Export Subsidy on Cotton

EXTENSION OF REMARKS

HON. WALTER F. GEORGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 4 (legislative day of Monday, April 3), 1939

EDITORIALS FROM THE NEW YORK TIMES, THE BALTIMORE SUN, AND THE MEMPHIS COMMERCIAL APPEAL

Mr. GEORGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record three editorials, one from the New York Times, one from the Baltimore Sun, and one from the Memphis Commercial Appeal, all opposing the export subsidy on cotton.

There being no objection, the editorials were ordered to be printed in the Record, as follows:

[From the New York Times of March 30, 1939] COLLAPSE OF A PROGRAM

Nothing could better emphasize the bankruptcy of the administration's agricultural program than the President's proposal for subsidizing the export of cotton.

The President's statement itself reveals the pass to which our previous cotton policy has now brought us. While it ought to have been our effort to sell cotton in world markets, while some foreign consumers have even been pleading for American cotton, we have held our cotton off the markets of the world in the vain hope of higher prices. Under the ill-conceived loan system, the Government now has in storage about 11,300,000 bales of cotton, equal to an entire year's crop, while the exports of American cotton are at the lowest level in more than 50 years. The Government has about \$600,000,000 tied up in these loans, and it is costing it \$45,000,000 a year even to carry the cotton. Last year, after 5 years of the Government's agricultural program, cotton sold at the lowest level in history in terms of the old gold dollar. It is still near those levels, even though sustained now by the Government loan figure.

even though sustained now by the Government loan figure.

The President, by implication, attributes the present plight of cotton to the Supreme Court decision of more than 3 years ago invalidating A. A. A. No support for this theory can be found in the facts. It is Government control, not lack of control, that has brought about the present situation. The crop-restriction theory, even if it had been free from other defects, was based on the false assumption that America had a virtual monopoly of the world's cotton growing and that the world price could be boosted simply by reducing our own supply. The result of our restriction policy was not to reduce the world supply but to encourage an enormously greater foreign yield to make up the shortage.

The Government loan policy was also based on the false as-

The Government loan policy was also based on the false assumption that by withholding American cotton from the world's markets we could boost the world price. The same result followed. Foreign cotton flowed into the foreign markets that we deliberately abandoned. The statistics tell the story. World consumption of cotton in the last crop year was actually 652,000 bales higher even than in the prosperity year 1929. But world consumption of American cotton taken alone was 4,296,000 bales less than in 1929. This is simply another way of saying that world consumption of foreign-grown cotton in the last crop year was 5,000,000 bales higher than in 1929. The same result has followed in the first half of the current crop year—that is, from August to the end of January.

August to the end of January.

What the President now proposes is a complete reversal of the export policy the administration has been following in recent years. Having artificially, and at great Government expense, held American cotton out of the world market, he suggests that we now artificially, and at further Government expense, force American cotton onto the world market. He would do this by a still further subsidy, paying cotton growers \$1.25 a bale to release their loan cotton to the market. It is estimated that his program would cost around \$15,000,000 between now and August 1 and would entail between \$60,000,000 and \$90,000,000 in additional Federal expenditure during the next full year.

All export subsidies, even when they do not bring retaliation, are unsound. They subsidize the foreign consumer at the expense of the home consumer and the home taxpayer. It has been costing the American taxpayer approximately 25 cents a bushel so that foreigners can get our wheat cheaper. But an export subsidy on cotton is doubly unsound, because cotton is a raw material that goes into manufactures. What we would be doing, in that case, would be to give foreigners cheaper raw cotton to compete

against our own manufacturers in our own markets and in world markets. The President is aware of this, and therefore recommends that we establish import quotas for foreign cotton textiles in our market and subsidize our cotton textile manufacturers. In other words, one subsidy would force us to pay another subsidy and involve us in a hopeless maze of red tape and further Government regulation, when it is Government regulation that has got us into the very dilemma we are trying to escape from.

It is in vain for the President to declare that this export subsidy recovers.

It is in vain for the President to declare that this export subsidy program "is in no sense a repudiation of the reciprocal-trade programs." It is a repudiation of the whole spirit of those programs. It is only a few days ago that we announced the imposition of 25 percent additional duties on German goods on the ground that the export of these goods was subsidized by the German Government. In other words, we officially penalize this as unfair and demoralizing competition. And now we propose to resort to the same practice ourselves. Last fall, in a speech at Fort Worth, Secretary Wallace declared that a cotton export subsidy would amount to international war and that the end would be self-defeat. That was true when he said it and it remains true now.

[From the Baltimore Sun of March 30, 1939]

For some months it has been clear that the administration's cotton program had completely bogged down. The failure of the program had been indicated from the very beginning, for all signs pointed unmistakably to the conclusion that the effort to restrict production and raise prices was undermining our export trade. Foreign consumers who formerly looked exclusively to this country as a source of cotton were turning more and more toward other producing areas, and, as a result, our share of the world cotton trade has steadily diminished. Where we were supplying about half of all the cotton consumed in the world 10 years ago we have been supplying only about 40 percent in the past few years.

all the cotton consumed in the world 10 years ago we have been supplying only about 40 percent in the past few years.

It was not until a few months ago, however, that the complete break-down of the cotton program became apparent. Thanks to the mistaken policy of trying to hold cotton off the markets by advancing growers the market price in the form of loans, the Federal Government has accumulated in the past 2 years a surplus of some 11,000,000 bales. The loan program has kept prices for our cotton well above the world levels, and it has reduced offerings of American cotton to such an extent that foreigners who wish to buy our fiber often cannot obtain enough to satisfy their requirements. As a result our exports have fallen to the lowest point in 50 years, and the whole enterprise of hoarding is about to collapse, to the injury of our growers and to the financial disadvantage of the Government, which has \$550,000,000 invested in cotton leans.

our growers and to the financial disadvantage of the Government, which has \$560,000,000 invested in cotton loans.

The administration's answer to this unhappy development is not a frank confession of error and a proposal to retrace the mistaken steps which have got us into difficulty. Instead, after months of anxious cogitation, the President comes forward with a plan to advance further into the morass of arbitrary interferences with trade in which we are already deeply mired. He proposes, first of all, an export subsidy—a strangely inconsistent suggestion to come from an administration which only 10 days ago moved to penalize German imports because Germany subsidizes exports to us, and which for 6 years has sedulously cultivated the idea that export subsidies are of a piece with the high-tariff barriers and quota systems which Secretary Hull has been trying to scale down by means of reciprocal-trade treaties.

Nor is the export subsidy the only inconsistent device which the

Nor is the export subsidy the only inconsistent device which the President proposes to use. He suggests that it may be necessary to provide import quotas for manufactured cotton goods in order to protect ourselves against cheap cotton goods manufactured abroad out of the cotton we propose to sell foreign mills by the aid of a subsidy. And finally, it is even suggested that we may find it necessary to pay export bounties on manufactured cotton goods in order that our own mills may not be handicapped in the world markets by having to buy their raw material at prices lifted above world prices by the various features of the cotton program already described. In brief, it would seem that, having made one error after another for 6 years, the administration now finds it necessary to make three additional errors in order to get out of the unhappy mess into which it has worked itself.

For those who look on from afar this procedure may seem to be a comedy of errors, for a more ridiculous struggle to escape from the consequences of a Government's own misdeeds would be hard to imagine. But for the people of the Southern States, whose chief industry is being gradually undermined by these misadventures, the whole business threatens to become a tragedy of errors. The chief difficulty under which the South labors, as the President himself admits, is that "foreign cotton is underselling our cotton in world markets." But instead of trying to remedy this situation by the reopening of a free market, which would inevitably correct the present difficulty in a year or two, the administration proposes to adhere to, and even to intensify, a policy which prevents any fundamental correction whatever.

[From the Memphis (Tenn.) Commercial Appeal of April 2, 1939]

When Agriculture Secretary Wallace told a Texas audience he favored a processing tax on cotton goods to raise money for parity payments to cotton producers, he at least had the good grace to qualify it by admitting the necessity for a similar tax on cotton's competitors.

President Roosevelt some time later publicly rejected the proc-

But what has he now in his ill-considered export-subsidy plan?
The President's program contemplates maintaining a domestic price at not under 8.3 by means of the loan. He proposes to subsidize export cotton by at least 2 cents.

So the mills of the other nations would get our cotton at a price

lower than our own mills, and what would we be paying unless it is a processing tax in the disguise of the difference in price

it is a processing tax in the disguise of the difference in price between our cotton goods and the low prices made available to foreign manufacturers by our own Government?

And after we get into this, what would prevent other countries from following a similar plan? Egypt already is planning.

It was the loan that built up the 11,000,000-bale pall that hangs over the market; yet the President makes no effort to eliminate Government loans on cotton. There is no protection for the cotton producer. As a matter of fact, we wonder where the President found enough recommendation for it even to complement his decided views. decided views.

decided views.

Washington reports indicate that now the President has had his request for additional relief funds gratified to the extent of \$100,000,000 he may lend support to the plan to get two hundred and fifty millions for cotton producers' parity payments.

We sincerely hope the Congress and President get together on this legislation and that the export subsidy plan is lost in the shuffle.

The Foreign Debts

EXTENSION OF REMARKS

HON. JOHN A. DANAHER

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES Tuesday, April 4 (legislative day of Monday, April 3), 1939

EDITORIAL FROM THE BOSTON POST OF APRIL 1, 1939

Mr. DANAHER. Mr. President, I ask unanimous consent that there be printed in the RECORD an editorial which appeared in the Boston Post on April 1, 1939, with respect to the debts owed this Government by foreign countries.

There being no objection, the editorial was ordered to be

printed in the RECORD, as follows:

[From the Boston Post of April 1, 1939] CHARACTER AND HONESTY

A question which constantly nettles the average citizen in this day of sweeping international policy is the issue of the war debts. Some surprising data were revealed in the heat of a furious debate in the Senate on the appropriation of \$100,000,000 for strategic and necessary war materials.

The Army wants these materials, which cannot be obtained in this country, for storage against the day that this country may be involved in a war.

Senator Longe came to the fore with an amendment to give the President power to obtain these materials from our debtors and have the amounts charged up to what they owe us.

It certainly is reasonable to suppose that a nation which is honest about the debts would want to pay them in materials at hand, if

about the debts would want to pay them in materials at hand, if the money is not available.

But administration forces moved strongly to crush the amend-ment, and so frantic was the effort that a strong suspicion that some arrangement has been made about debts by the State Department was revealed.

For example, Senator Borah, who is generally on the inside of international questions, made the statement that foreign powers already have agreements with the United States for paying off the debts and that nothing should be done to make further negotiations difficult at the present time.

difficult at the present time.

Senator Norris, a sage opponent of any measure to involve us in war, stood for the amendment. He pointed out that it would direct the attention of the country again to the outrageous swindling that we received in the last war and would probably stand as a reminder of the danger we now face.

Senator Lodge's own words on the subject were able and eloquent, and they find a familiar echo in the feelings of the rank and file American.

and file American.

His speech included the statement: "There are countries today His speech included the statement: "There are countries today that eagerly desire the friendship and support of the United States, and that situation might possibly color their views toward a proposition of this kind. We have the example of Finland, which did pay its debt, and we have the example of Ireland, which even further and assumed a debt which, according to a strict legal construction, she did not have to assume, and paid that debt. I mention these instances of character and honesty among nations as something that is refreshing to think about at this time."

Those words, "character and honesty," are big ones in the view of the average citizen in present-day affairs.

They did not mean enough to have the United States Senate act favorably on the amendment, but they brought out that we can only judge the future by the past.

If there was no character and honesty in past relations, shall

there be such in future relations?

America must go slowly today. Slower to follow chimerical ideals and foreign lures.

The Farm Problem

EXTENSION OF REMARKS

HON. RALPH O. BREWSTER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1939

ADDRESS BY HON. RALPH O. BREWSTER, OF MAINE, MARCH 30, 1939

Mr. BREWSTER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address I delivered at the annual observance of Farm and Home Week at the University of Maine, Orono, Maine, on Thursday, March 30, 1939:

As a member of the Committee on Agriculture of the House of Representatives I have been listening for the past month to a disrepresentatives I have been insteming for the past month to a discussion of the farm problem by experts from all sections of the United States, including the Secretary of Agriculture, Henry A. Wallace. Every phase of the situation from the Atlantic to the Pacific and from the Great Lakes to the Gulf, together with much evidence regarding agricultural conditions in our island possessions and in other countries, has been thoroughly threshed out before the committee.

NO FARM PROBLEM

The conclusion seems irresistible that there is no farm problem. There is a cotton problem. This affects not merely 2,000,000 share-croppers in the South, with an 11,000,000-bale surplus suspended like a sword of Damocles over their heads, but it also seems to result in their 6,000,000 dependents hanging like an old man of the sea about the recovery efforts of the United States. Our foreign markets seem to be gone. Lately stimulated production in Egypt, Russia, and India, as a result of increased cost of cotton in the United States and newly developed cotton-raising areas in Brazil and now in China, mean apparently that America will no longer be able to market one-half of its cotton crop abroad.

able to market one-half of its cotton crop abroad.

This means disaster not only to the South but to the rest of America as well, as the cotton problem of the South is dumped in

America as well, as the cotton problem of the South is dumped in the lap of the United States.

There is very evidently a wheat problem, as the United States Government has been paying a subsidy of between 17 and 18 cents per bushel for the past year for all United States wheat sold abroad. Sixty-seven million three hundred sixty thousand bushels have been thus disposed of. This gives a rather hypocritical and hollow sound to the denunciation by our State Department of Germany and the imposition of discriminatory rates because Germany is subsidizing its exports. America may well examine the reasons that lead Great Britain to refuse to take such a step.

DAIRY PROBLEM

So one might go on to point out that there is a corn problem, a tobacco problem, a rice problem. Dairy farmers know full well there is a dairy problem, with millions of gallons of surplus milk seeking an outlet in America while at the same time Secretary Hull is lowering tariff barriers to let in dairy products from other lands and the South turns to dairying with displaced cotton acreage.

POTATO PROBLEM

Certainly the State of Maine knows full well that there is a potato problem with an estimated production this year of 367,000,000 bushels of potatoes in the United States leaving millions of bushels of surplus potatoes within the United States. Certainly the potato problem of America is not assisted by lowering tariff barriers to admit potatoes from other countries which simply serve to accentuate the glut. A perishable vegetable such as potatoes which enters the export market only to a negligible extent serves as a perfect illustration of the wisdom of the philosophy of protecting the American producer in the American market. So long as the American consumer can secure an ample supply of excellent potatoes at a reasonable price there would seem absolutely no justification of any character for permitting the import of potatoes from other countries. other countries.

Yet the State Department with certainly negligible knowledge

of potatoes (not the Agricultural Department) has recently fixed 350,000,000 bushels as a normal supply for the United States and has provided that any deficiency under this figure may be imported from foreign countries at reduced tariff rates.

The potato farmer of Maine knows full well from long and bitter experience that he must rely upon 1 good year of rather limited

production in other sections to permit him to recoup his losses in the 3 or 4 years of generous supply. Yet the State Department now steps in to destroy the possibility of his recovering his losses. The records will indicate rather clearly that the farmer will probably not receive his cost of production in any year when the supply of potatoes is above 350,000,000 bushels. Yet that figure is now fixed as normalcy and our foreign friends are invited to pour potatoes into our markets whenever our production on September 1 of any years is estimated to be less than 350,000,000 bushels. It is to be noted that our actual production—as distinct from the estimate on September 1—may be far in excess of 350,000,000 bushels yet the estimate of September 1 is to determine the amounts of imports that are permitted.

This arrangement is a clear case of "heads you win; tails I lose." The existence of a problem in these various crops is best demonstrated by a price comparison showing the price of the several crops in the year 1933 and for the year 1938 and also the figure which is considered parity.

Weighted average seasonal annual prices for the various commodities and the parity prices are as follows:

[In cents per bushel]

IIn cents per bushell

	1933	1938	Parity price
Cotton	10. 2	8. 6	15.7
	52. 2	50. 3	81.5
	74. 4	55. 2	112.3
	82. 1	56. 9	86.5

These figures show that the prices of these major farm products today are in every instance below their price in 1933.

This would seem conclusive evidence that there is a very real

problem in connection with these various crops.

CROP SUBSIDIES

For 6 years now the administration has confidently assured us that these problems would soon be solved. Yet the records plainly indicate that they continue to go from bad to worse with the result that the Congress is now considering the appropriation not only of \$500,000,000 for soil-conservation payments to go to those who shall cooperate in the soil-conservation program throughout the United States but is also considering a special subsidy of \$250,-Onited States but is also considering a special subsidy of \$200,000,000 to the producers of cotton, corn, wheat, rice, and tobacco. Three out of five of these products are peculiar to the South and two of the three are of negligible importance when compared with dairy products or potatoes either from the standpoint of their contribution to feeding America or from the standpoint of their

contribution to feeding America or from the standpoint of their financial value.

This proposed special subsidy for these five crops represents an obvious attempt to form a coalition of southern Representatives with Representatives of the corn and wheat States in the West that shall have sufficient power to logroll the appropriation to passage. The leaders in the movement really desire \$500,000,000 for this special subsidy and are only deterred in attempting to secure \$500,000,000 by their fear that they might then lose the whole sum. One of their leaders stated on the floor of the House that \$1,000,000,000 was really required.

During the past week upon the floor of Congress there has been a perfectly bare-faced attempt to form a coalition of the Members

a perfectly bare-faced attempt to form a coalition of the Members from the South and West with the Representatives from the industrial centers interested in larger W. P. A. appropriations in order to form a logrolling bloc that should be invincible. Certainly along this path lies destruction and disaster.

POTATOES

When the Triple A program was first proposed potatoes were not included among the major agricultural crops in spite of the fact that potatoes constitute the fourth food crop in value in the United States. Potato farmers soon discovered that constantly increasing areas of farm lands displaced from other crops under the control programs then operating were being planted to potatoes. As a result of this utterly unfair competition from other croplands stimulated by the Government, potatoes were selling in the State of Maine in 1935 for 10 cents a barrel, and more than 2,000,000 barrels were dumped upon the ground to rot.

Potato farmers then demanded that potatoes be put on a parity with other crops and recognized as a major agricultural product, and this recognition was finally achieved in the Warren Potato Act of that year.

of that year.

The present price schedule of the major crops indicates clearly, however, that control programs incident to the soil-conservation program have not solved the problem.

COST OF PRODUCTION

The hearings before the Committee on Agriculture this winter have revealed a considerable volume of opinion favoring what is called cost of production, by which the United States Government would guarantee to all producers the cost of production of their commodity and would then dump the surplus abroad that was not required for domestic consumption and charge back to the pro-

ducer the cost of this operation.

Proponents of this legislation estimate the cost of production of potatoes at \$1.36 per bushel. If such a price were assured for all the potatoes produced in the United States, the surplus problem would unquestionably be serious.

While such a program undoubtedly has a most persuasive appeal, and the theory simply stated seems fair and right, it is yet to be recognized that tremendously serious problems of administration would be involved and its economic consequences are difficult to

PARITY PAYMENTS

Meanwhile, either \$250,000,000 or \$500,000,000 is being asked for what is termed parity payments with very responsible backing in both Houses of Congress. The pending proposition contemplates payment of the difference between the current market price for the five specially favored farm products and 75 percent of what is termed parity.

PARITY FOR THE SOUTH AND WEST

Only cotton, corn, wheat, rice, and tobacco are included in this subsidy. For potatoes the parity price is figured at 86.5 cents a bushel, but no parity payments are provided in pending legislation nor is there any provision for all the other farm products outside the five favored few. Dairy products are, of course, most seriously discriminated against, as they are the major farm crop and are suffering as seriously as any other farm product from the problems of oversupply and difficulty in marketing, but they are definitely excluded from parity payments. excluded from parity payments.

SPECIAL TAXES

The President has thus far taken the position that no such payments should be provided for unless the taxes to support the payments are provided, and no such provision is contained in the pending bill. Presumably the President and his advisers know very well that the Supreme Court has declared definitely that especial taxes for special groups are prohibited by the Constitution. This was the clear decision of the Supreme Court in eliminating the original Triple A program.

WHAT OF THE NEW DEAL?

But Maine is more interested in the future than in the past. past simply serves to illuminate our footsteps. A Representative in Congress is responsible for estimating as well as possible what may be in the wind and what may be expected affecting the interests of the State of Maine.

of the State of Maine.

It seems evident that the New Deal is rapidly disintegrating. It is impossible to exaggerate the disintegration of administration control as a result of the increasing and bitter conflict between old-fashioned Democrats and new dealers. The consequences of this situation it is difficult to estimate. The President and his advisers more and more represent the left-wing point of view while the leaders in Congress more and more trend to the right. A virtual impasse for the next 2 years must be the inevitable result. No new left-wing economic or social legislation is likely. Amendments of existing farm and industrial legislation may be possible by compromise and this will lean toward the right.

SLUICE GATES

Appropriations are another story and the question of whether the flood gates will be loosed and all regard for financial control and a balanced Budget thrown to the wind as a result of the

and a balanced Budget thrown to the wind as a result of the open invitation of the President in his annual address to Congress to spend and spend and spend remains to be determined.

Republicans are united as they have not been for many years and under the competent, able, and liberal leadership of Representative Joseph W. Martin, Jr., of Massachusetts, they are writing a record that will represent a considerable measure of consistency and one on which the Republican Party may well enter the campaign this next year with great and growing confidence.

COMMON SACRIFICES

In the final analysis the American people must decide whether

In the final analysis the American people must decide whether they are still capable of the common sacrifices that are necessary to bring us out of this depression. The country faces a challenge fully as serious as any we have known before in time of war.

Whether the spirit of 1776, of 1861, and of 1918 still survives within our sinews is the question to be determined. Great sacrifices will be required. No one will escape unscathed. The multiplication table cannot be repealed or amended. What we sow, that the latter that the latter of the same and the continuation of unbeloned Budgets will shall we also reap. A continuation of unbalanced Budgets will lead inevitably to an inflationary disaster that will wipe out private property and institute an era of collectivism. A return to financial sanity may yet equitably adjust the burden of taxation and restore America to a self-governing democracy with liberty and justice for all

What does this mean in terms of the State of Maine? All the evidence in Washington before the Committee on Agriculture and all the experience of the country indicates that we do not have a farm problem but a crop problem.

INDEPENDENCE OF FARMER

Any farmer who lives upon his farm is invincible. There has rarely if ever been a year when the value of his cash crop would not rarely if ever been a year when the value of his cash crop would not suffice to pay the taxes and probably the interest on the mortgage. One may well ask, What about the comforts of life? These are fully as much a matter of speculation as the hazard of the industrial worker with his job. With 10,000,000 unemployed and 25,000,000 million dependent upon these jobs for their daily bread and shelter, it is evident that a very substantial portion of America faces a steadily declining living level.

Until the present period of economic and social revolution

Until the present period of economic and social revolution throughout the world is passed everyone will be wise to seek the nearest bombproof shelter where he may economically survive. Unless we have lost the intelligence and stamina of our ancestors, it

should be possible to eke out a livelihood in New England as our |

ancestors have for 10 generations upon these shores.

How much of our present luxuries or comforts it will be necessary to surrender is dependent in substantial measure upon how quickly sanity and common sense take control of the situation.

FUTURE OF NEW ENGLAND

Apparently New England as a whole and New England agriculture in particular have come through these 10 terrible years of depression in better shape than any other section of the country because New England farmers are more nearly self-sufficient than farmers anywhere else in the United States. The record of tenant farming and farm mortgages clearly indicate the reward of New England thrift and New England industry and willingness to sacrifice.

EXPORT SUBSIDIES

Export subsidies guarantee inevitable involvement with our neighbors overseas. Export subsidies here are dumping over there and vice versa. What we resent Germany's doing to us and what is prohibited under our tariff legislation is exactly what we are doing to other countries under the existing wheat program which it is now proposed to extend to cotton.

Control programs and subsidies bump up against the inexorable laws of Nature. Limitations by acreage turn farmers to fertilizers, Limitations by marketing quotas revive the bootlegger and the

reward of his illegal traffic.

AN AMERICAN SOLUTION

America gradually approaches the point of decision whether it will strike off restrictions and control either by Government or by private monopoly and keep individuals more nearly free to work out their salvation in a free economy. Government may simply guarantee that every man shall have a chance to win or lose and reserve something of profit and advantage to the wise and to the diligent. By this method America has progressed in 3 centuries to a position of preeminence among the nations of the earth. The program may not be lightly discarded.

Free enterprise for all men in the full vigor of manhood has always attracted the venturesome spirit of America and many signs indicate that America is getting ready to give this program another try.

another try.

This does not mean that Americans are going to be left to starve, and children without an education, but it does mean that fairly soon America will restore American principles to control the situation and brush aside much of the theory that would supersede the initiative of a free America.

The aged will be properly cared for in accordance with the expanding resources of America.

If younger people choose to cling to grandma's skirts rather than to make a living for themselves, they will simply classify their position in society. This lacks the terrible urge of the poorhouse, but the poorhouse is to be discarded in the America that is to be.

The National Grange has grappled with the problem in its insistence that primary consideration should be given to the farmer and not to the speculator. Farming has been the foundation of every successful civilization. Farming has always meant one who lives

Every development in Washington points to the wisdom of the New England farmer who has continued to think in terms of the

farm as the better way of life.

Subsidies have simply tended to undermine his independence and weaken his capacity to survive.

No one believes the Treasury can continue to pay constantly expanding subsidies to crop producers running into hundreds of millions of dollars.

The deluge is near at hand when the whole subsidy system is likely to disappear. On that day the New England farmer will be far better off than any of his fellows in the South or in the

Meanwhile in Maine we may continue to carry on, adapting ourselves as best we can to our environment, as we have for 300 years. We may wisely do our best to cooperate so far as practicable with the program that may be at any time in vogue. We may welcome such aid as we may receive to tide over an emergency, but we shall always keep in view that there is no magic road to wealth by Government subsidy and that the wealth of the soil may continue to feed our children if we continue to deserve its bounty.

Refugee Children

EXTENSION OF REMARKS

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Tuesday, April 4 (legislative day of Monday, April 3), 1939

VARIOUS NEWSPAPER EDITORIALS AND LETTERS

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix to the Record a proposed plan for the admission and care of German refugee children pursuant to the joint resolution (S. J. Res. 64) which I introduced and which is pending before the Committee on Immigration.

The plan was prepared cooperatively by a group of leading child-welfare experts of the country and submitted to Clarence E. Pickett, of the American Friends Service Committee, who is now serving as acting executive director of the Nonsectarian Committee for German Refugee Children.

I also ask unanimous consent to have printed in the Appendix various editorials and letters supporting the proposed legislation.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

New York, March 20, 1939.

Mr. CLARENCE E. PICKETT,

Acting Executive Chairman, Non-Sectarian Committee for German Refugee Children

New York City. Dear Mr. Pickett: I am writing in order to submit to you a preliminary plan for the care of refugee German children in the United States prepared by a group of American child-welfare workers of all faiths acting as individuals. Our deep concern for the children of Germany subjected to exclusion from school, separation from their parents, exile from their country, and even death by starvation moved us to join together months ago to contribute whatever we could to ameliorate the tragedies of these children. children.

The clarion call of the religious leaders of America of all faiths

The clarion call of the religious leaders of America of all faiths that urged Congress to give sanctuary to some of these children laid a new responsibility on us. Now that the Wagner-Rogers bill has been introduced to make possible the entrance of 10,000 refugee children in 1939 and 1940, and your committee has been announced, we wish to offer our full services to you.

No one more than we, could appreciate the needs of American children. But the emergent and desperate needs of the German refugee children demand special effort and we do not believe that in saving 20,000 of them we will deprive American children of any aid they would otherwise receive. We believe rather that out of our efforts to meet this German obligation we shall gain new strength to meet the needs of American children.

For these reasons we have worked out a plan by which children admitted under the Wagner-Rogers bill, can be received in this country and placed in homes of their own faiths distributed throughout the country in accordance with the best thought of childwelfare experts. In addition to drawing upon our own experience, we have consulted with members of the staff of the Children's Bureau of the United States Department of Labor.

Bureau of the United States Department of Labor.

We submit the first draft of this program to you, in the hope that it will serve as the basis for the procedures to implement the Wagner-Rogers bill. We wish to assure you that our services will continue to be at your disposal in the great humanitarian task you have undertaken.

Sincerely yours,

MARION E. KENWORTHY, M. D.

PLAN FOR THE CARE OF GERMAN REFUGEE CHILDREN IN THE UNITED STATES

The remoteness of our country and the quota laws have prevented the admission of a single child refugee from Germany outside the the admission of a single child refugee from Germany outside the quota. Since November 10, 1938, some thousands of children have escaped to neighboring countries, which have somehow managed to give them refuge through emergency measures necessitated by the lack of preparation for their care. Since the admission of any substantial number of these children to America must be preceded by special legislation, we have the unique opportunity to prepare for their coming in such a way that they can be placed throughout the country in homes of their own faiths, without creating an emergency situation in any community. As the first step toward such preparation, an outline of the major problems to be met, together with recommendations for their solution, is submitted.

SELECTION OF CHILDREN ABROAD

"Should children be taken from their families?" This is a question frequently asked. There is no intent in plan or action to break up families. On the contrary, every effort will be made through the machinery set up to preserve family ties and to keep the children in touch with their parents, when possible, through correspondence. Owing to the chaotic conditions of immigration from Germany, many families have already been broken up, and many parents are pleading that their children be taken abroad, if the sacrifice will assure their physical safety.

Children will be selected only after skillful inquiry and consultation with parents, where available, in order to determine that place-

tion with parents, where available, in order to determine that placement abroad is essential to their present safety and future welfare. The alm will be to organize trained service for selection sensitive to the dangers involved in the child's temporary or permanent separation from its parents. The possibility of later contacts with the parents will always be kept in mind.

The American Friends Service Committee has for many years served those who needed help, regardless of race, color, nationality, or creed. Their service to German children after the Great War has made it possible for them to serve the children of oppressed minorities in Germany today. They have taken a leading part in organizing the refugee work in Germany, Austria, Holland, Belgium, and England. and England.

Since the American Friends Service Committee has the confidence of all people here and abroad and has entry into Germany, we recommend that this committee act as the central agency for the selection of children abroad. To do this it will be necessary for the American Friends Service Committee to add to its staff abroad social workers well acquainted with the children's field in the United States and such other technical staff as may be needed. The International Migration Service, which has branches and corre-

The International Migration Service, which has branches and correspondents in European countries and has had 15 years of experience in the international treatment of family problems, may also be of real assistance in aiding in the selection of children.

Selection of the children will at all times be subject to the statutory requirements of the immigration law and the rules and regulations imposed by the State and Labor Departments. Among such requirements is one of prime importance, that every immigrant must be of sound body and mind. The selection of children will be done in close cooperation with the Non-Sectarian Committee for German Refugee Children, so that the work of bringing the children to this country and the work of placing them in satisfacchildren to this country and the work of placing them in satisfactory homes under adequate supervision by accredited social agencies will be coordinated.

A PROGRAM FOR CHILDREN OF ALL FAITHS

The child refugees from Germany will be children of all faiths-The child refugees from Germany will be children of all faths—Protestant, Catholic, and Jewish. The Nonsectarian Committee is therefore an agency appropriate to assume responsibility as the central organization in this country. It is recommended that this committee appoint to its board, outstanding experts in the field of child welfare. Working through such subcommittees as may be needed and in cooperation with the child-welfare agencies throughout the country, the Nonsectarian Committee will be in a position to allocate children to the agencies able and willing to accept them for placement and supervision. them for placement and supervision.

RECEPTION OF THE CHILDREN

Children admitted to this country under the provisions of the Wagner-Rogers bill will be admitted on visas for permanent resi-Wagner-Rogers bill will be admitted on visas for permanent residence. Their papers must satisfy the governmental requirements and they must pass the physical and mental examinations required before entry. The admission procedure for immigrants arriving on crowded steamers is complicated and the experience is especially hard for children burdened by separation from their parents, oppressed by the experiences that forced exile from their native lands, and to whom all hope lies in acceptance by this country. It is, therefore, essential that the agency receiving these children shall be prepared to stand in the place of their parents, and guide them through their first contact with America. This can be accomplished by assigning staff members of accredited agencies to the task of handling the reception of these children.

Temporary shelter in the ports of entry will be necessary because

Temporary shelter in the ports of entry will be necessary because of the unpredictable time of arrival of steamers and the unavoidof the imprenetable time of arrival of sceamers and the unavoidable delays in the official procedure for admission. The proper allocation of the children to the various agencies throughout the country that have signified their willingness to accept them, will take place during the shelter stay. This period should also be used to provide the children with days of rest and relaxation and an opportunity for some reorientation prior to their departure for the

areas to which they have been allocated for care.

Since the children are to be placed on the basis of their religious affiliations, every effort must be made to secure accurate information as to the religious affiliations of their parents and their wishes as to the religious training of their children, and where that is not possible, the preference of the child. Such information must determine the choice of agency, foster home, or institution.

GEOGRAPHICAL DISTRIBUTION

Thousands of families in more than 40 States have offered to open their homes to these children. The investigation of these homes prior to the arrival of the children would enable the committee to expedite their distribution throughout the country, so that they would never be concentrated in large numbers at the ports of entry.

In order to perform this task and ensure sound placement and adequate supervision, it will be necessary to enlist and coordinate the facilities of accredited child-welfare agencies throughout the country. When needed, these existing facilities should be expanded through the allocation of funds by the nonsectarian committee for additional personnel rather than by the creation of new agencies.

PLACEMENT PROCEDURE

The first general principle for the treatment of children, now considered as a fundamental right, is the provision of normal home life. Proclaimed by the White House Conference of 1909, this principle has been reaffirmed by every subsequent White House conference, and is the first of the standards set by the Children's Bureau for such care.

This standard should be met wherever possible in regard to This standard should be met wherever possible in regard to refugee children who, in every instance, have been forced to leave their own homes and country. Its application must not be rigid or mechanical. Where careful observation reveals that certain children are in need of the special benefits that can best be secured through group life special schools or institutions should be available. In every case the decision as to the placement must be based on case-work findings during the period of temporary shelter. Modification of the original decision as to placement will rest with the agencies to which the children have been allocated.

The selection of qualified responsible agencies by the non-sectarian committee will guarantee proper standards of care and

obviate the necessity for working out a special schedule of standards. Certain essential requirements must be met by every cooperating agency:

(1) A competent case-work staff and adequate supervisory staffs, that will ensure the careful study and selection of foster homes; a skillful placement procedure, and supervision after placement in accordance with accepted case-work practices.

(2) Provision of thorough medical examinations and continuing

(a) Provision of norough medical examinations and continuing medical care in accordance with accepted standards.

(3) Provision of psychological and psychiatric services either through their own staffs or through cooperating agencies in the community when the need for such service is indicated.

(4) Supervision of school placement and attendance in accordance with least large.

(5) Responsibility for keeping individual case records including:

(d) Petalled report on supervision including dates of all visits.

(d) Detailed report on supervision, including dates of all visits to foster homes, and comments by visitor.
(e) Reports on child's progress including complete medical rec-

ord, psychological and psychiatric examinations, reports on adjustment in foster homes and school.

(f) Facts pertaining to child's own family received after allocation of child.

(g) Record of replacements.

FINANCIAL RESPONSIBILITY

The Non-Sectarian Committee has assumed the financial responsibility for the care of these children. It will, therefore, provide the guaranties required by the United States Government. It will also serve as the central organization for the allocation of funds to lead organization.

funds to local agencies that require assistance in order to provide adequate care and supervision for the children entrusted to them. The total cost of the care for these children cannot be exactly determined at this time. Some of the children will undoubtedly be placed in free foster homes. Others at some future date may rejoin their own parents in other countries.

In order to safeguard the rights of parents and children the non-sectarian committee must maintain a central index so that at any time accurate information is available as to what agency is responsible for the care of each child. This central index should contain at least a minimum of identifying information, such as the names and addresses of living relatives, the child's residence at time of immigration, his religion, and such social data as is available.

SUMMARY

By requiring the careful selection of children abroad, maximum By requiring the careful selection of children abroad, maximum assurance can be secured that only potentially good citizens are brought to this country. By the supervision of their passage and reception in this country the hardship of separation from parents can be lessened, and the children prepared for their new homes. The careful selection and classification of homes together with adequate follow-up care will contribute much to the adjustment of the children. And the maintenance of proper records and a central index will make it possible for parents to locate their children and keep in touch with them.

Although this plan seeks to meet a unique emergency to it is best

Although this plan seeks to meet a unique emergency, it is based on American experience in the child-welfare field and seeks to apply American standards.

Among those who have cooperated in drawing up this plan are the following:

Paul T. Beisser, president, Child Welfare League of America.

Mary Boretz, executive director, home bureau, Hebrew Sheltering Guardian Society.

C. C. Carstens, executive director, Child Welfare League of

America.

Jessie P. Condit, executive secretary, Children's Aid Society,

Newark, N. J.
Gertrude M. Dubinsky, executive director, Juvenile Aid Society, Philadelphia.

Sybil Foster, field secretary, Child Welfare League of America. Mary Godley, executive director, Catholic Home Bureau, New

Katherine E. Griffith, director, Diocesan Bureau of Social Service, Hartford, Conn

Byron T. Hacker, executive director, Children's Center, New Ha-

ven, Conn.
Dr. Stephanie Herz, Committee for Catholic Refugees from Ger-

Sidney Hollander, Maryland Board of State Aid and Charities. Dr. Marion E. Kenworthy, director, Department of Mental Hygiene, New York School of Social Work.

Jacob Kepecs, superintendent, Jewish Children's Bureau, Chi-

cago. Dr. Hertha Krauss, American Friends Service Committee, Phila-

Edith L. Lauer, executive director, Jewish Family and Children's Bureau, Baltimore.
Harry Lurie, Council of Jewish Federations and Welfare Funds.

Lotte Marcuse, director of placements, German Jewish Children's Ruth Taylor, commissioner of public welfare, Westchester

County, N. Y.
Sophie Van S. Theis, assistant secretary, State Charities Aid
Association, New York.

Whitman executive secretary, Children's Aid Associa-

Alfred F. Whitman, executive secretary, Children's Aid Association, Boston.

[From the Yonkers Herald Statesman, March 18, 1939] FOR HELPLESS, HOMELESS, HOPELESS CHILDREN

Today, on the eve of "Refugee Sunday," which will be observed in all Catholic churches of the city, it is timely to consider the plight of those millions who are being driven about, homeless and helpless, without hope of refuge.

The civilized world is in tears for these unfortunate victims of

renascent barbarism—for the doddering aged, the stricken middle-aged, the bewildered young people, and especially the innocent children, too young to realize the horror of it all.

But tears are of no avail against the monstrosities of fascism in full stride. Never in history, perhaps, has there been such a grave need and so great an opportunity to extend a helping hand

in full stride. Never in history, pernaps, has there been such a grave need and so great an opportunity to extend a helping hand as at present.

That is what lends powerful significance and importance to the Wagner-Rogers bill, now before Congress, which would permit 10,000 children under 14 to be brought into this country from Germany in 1939, and another 10,000 in 1940. The children would come here under the protection of the Nonsectarian Committee for German Refugees. About half would be taken from German families practicing the Jewish faith and half of Catholic and Protestant faiths. All would be placed in American families of their own faith, distributed throughout the country.

Great Britain already has made strides in this direction and it is interesting to note a pronouncement by Sir Samuel Hoare, Home Secretary in that Government, that among German and Austrian refugees who sought asylum in England some time ago, 11,000 are prospering and have, so far, provided employment for 15,000 Britons. Far from being a handicap to British industrial recovery, they are furthering it, he said.

The joint resolution before Congress expresses similar confidence that "the admission into the United States of a limited number of these children can be accomplished without any danger of their becoming public charges, or dislocating American industry, or displacing American labor."

It is heart-warming that America is alert to her opportunity and her duty in an hour when humanity cries out for action.

and her duty in an hour when humanity cries out for action.

[From the Charleston (W. Va.) Daily Mail of March 22, 1939] FOR YOUNG REFUGEES

To alleviate one of the more tragic of the appalling problems of oppressed humanity in so-called greater Germany a joint resolution has been introduced in Congress to modify the immigration laws as they apply to children of the age of 14 or younger. The proposal would permit an additional 10,000 children of those ages to enter the United States during each of the calendar years of 1939 and 1940.

1939 and 1940.

The resolution states that children who have since January 1, 1933, resided "in any territory now incorporated in Germany" and for whom "satisfactory assurances are given that [they] will be supported and properly cared for through the action of responsible citizens or responsible private organizations * * * and * * * will not become public charges" will be eligible. Those provisions are designed to preclude any unfortunate experience with refugee children such as England suffered when thousands were removed from war territories in Spain.

are designed to preclude any unfortunate experience with rerugee children such as England suffered when thousands were removed from war territories in Spain.

To assist in carrying out the terms of the joint resolution, the resettlement division of the National Coordinating Committee, composed of leading members of all churches (Protestant, Catholic, and Hebrew) and professions, has begun to operate.

The committee informs us that there will be no dislocation of the employment of American citizens, a restriction that will remove a serious possible criticism. The C. I. O. and the A. F. of L. have placed their enthusiastic approval upon the provisions of the joint resolution and the committee's work. Every possible precaution will be taken to prevent refugees from depriving Americans of their employment.

The provisions in the resolution concerning eligibility of refugee children should insure the elimination of any undesirables or those who would become public charges. Some of the most loyal and patriotic citizens we have today in this country are of foreign birth who escaped to this country from oppressive governments and who therefore more fully appreciate what our form of government means to humanity.

The local organization of the resettlement division already has started to work, and first reports indicate that splendid accomplishments have been made. To support the joint resolution and the work of the National Coordinating Committee is to give concrete evidence of America's determination to keep alive the principles of civilization and enlightened humanity.

ciples of civilization and enlightened humanity.

[From the Boston Globe of March 23, 1939] LET THEM IN

The saddest sight in this disordered world is the child seeking refuge from totalitarian tyranny. Appreciating the plight of these helpless little ones Senator Wagner has introduced a bill to make it possible for 10,000 refugee minors to be received outside the quota limits in each of the next 2 years.

There is nothing sectarian about this proposal. These boys and girls, all below the age of 14, would be Catholics, Protestants, and Jews. They would be distributed to families or individuals who would care for them and bring them up, guaranteeing that they would not become public charges.

Recently Mrs. Calvin Coolidge joined with a group of women in Northampton who agreed to be responsible for 25 of the young refugees. Great Britain has offered homes for 7,800. Crowded little Holland has accepted 1,700 and is receiving more. What Senator Wagner asks Congress to permit is trifling in comparison. There should be no disposition to do less and the action should be prompt.

The Louisiana Purchase and One of Its First Explorers, Zebulon Montgomery Pike

EXTENSION OF REMARKS

HON. LAWRENCE LEWIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Twesday, April 4, 1939

ADDRESS BY THE LATE HONORABLE ALVA ADAMS, OF PUEBLO, COLO., BEFORE THE STUDENTS AND FACULTY OF COLORADO COLLEGE, COLORADO SPRINGS, COLO.

Mr. LEWIS of Colorado. Mr. Speaker, nearly everyone in America has heard of Pike's Peak and tens of millions have seen it, but comparatively few know much of the man whose name it bears or of the inspiring story of the expedition in the course of which a young officer of the United States Army "discovered" this majestic mountain which dominates the middle of the "front range" of the Continental Divide in

Lt. Zebulon Montgomery Pike (1779-1813), of New Jersey, commanded two exploring expeditions into the Louisiana Purchase shortly after its acquisition from Napoleon in 1803. The first (August 9, 1805, to April 30, 1806) was north from St. Louis, up the Mississippi River to what Pike mistakenly believed to be its source, and back again by the same route. The second and more important expedition (July 15, 1806, to July 1, 1807) was westward from St. Louis, across what is now Missouri, Kansas, eastern Colorado, New Mexico, northern Mexico, and Texas, ending, after many hardships and adventures, at Natchitoches, on the Red River which then marked the boundary between the territory of Spain and that of the United States.

The celebrated Lewis and Clark expedition (May 14, 1804, to September 23, 1806) up the Missouri to its source, across the Continental Divide and down the Columbia to the Pacific Ocean and back again to St. Louis, had been undertaken under personal orders of President Thomas Jefferson, who, long before, had planned an exploration to find a land route to the Pacific and active preparations for which, under the President's personal supervision, were in progress even before the acquisition of the Louisiana Purchase.

Pike's two expeditions were undertaken under orders of Brig. Gen. James Wilkinson, Civil Governor of Louisiana Territory and commander of the military forces in that region. Although doubtless Pike's expeditions were reported to the War Department and known to the Commander in Chief soon after they were under way, there is nothing to indicate that they were initiated or planned by President Jefferson.

Pike's journal of his second or western expedition, written day by day in a soldier's matter-of-fact style, without literary embellishment, tells an inspiring story of indomitable will, of self-reliance, of iron discipline, of solicitude for the men under his command-all of whose hardships he shared equally with them-of calm fortitude in the face of every conceivable privation and danger, and of dauntless courage. It is a story with which every American should become familiar so that he might more fully realize how dearly was won the heritage of which many of us are now the unappreciative or indifferent, if not the querulously complaining, heirs.

One of the most interesting popular summaries of Pike's western expedition is the following address, delivered, a number of years ago, before the faculty and students of Colorado

College in Colorado Springs, by the late Honorable Alva Adams, three times elected Governor of Colorado—the father of the present senior United States Senator from Colorado. It is a fitting tribute by a distinguished citizen and Governor of our State to a really great national hero, whose name is so closely identified with Colorado.

The address is as follows:

At the opening of the nineteenth century Europe was one vast military camp. Upon the crimson crest of revolution Napoleon had ridden into power. The destinies of France were placed in his hands, and he led the devoted nation where he willed. The ambitious Corsican aimed not alone to control the nations of the Old World, but he dreamed as well of empire in the new land that lay beyond the western sea.

The gateway to the interior of the American Continent was

guarded by a French city. Over two centuries before, French explorers had driven the prows of their adventurous ships upon the coast of Louisiana and in her soil planted a mighty cross and to it nailed the arms of France. Until 1762 the lilies of France guided the infant destinies of the forest empire. In that year, defeated by England in their rivalry for dominion in America, France, with the art of a tricky bankrupt, sought out a preferred creditor, and by secret treaty ceded Louisiana to Spain. For 38 years the new land languished under the blight of Spanish rule. Then, in return for Tuscany, Spain gave back to France the title deeds of Louisiana.

THE LOUISIANA PURCHASE

The Louisiana Purchase

Three years later, when preparing for war with England, need of money and the danger of Louisiana's falling a prize to the naval supremacy of England forced Napoleon to give up his dream of a great Mississippi colony, and Louisiana was sold to Jefferson. No one, not even Jefferson, realized as fully as did the French Emperor the value of that which he sold. The price was sixteen millions, twelve millions cash and four millions to pay claims of American citizens for French spollation. It was, as Napoleon said, "a magnificent bargain; an empire for a trifle." He also said: "A day may come when the cession of Louisiana to the United States shall render the Americans too powerful for the continent of Europe."

"I have given to England a rival that will humble her pride."

How different the voice of American statesmanship. Seldom has the tongue of an American been touched with the spirit of prophecy when casting the horoscope of the west. Napoleon could better read the stars that told the destiny of western greatness.

Jefferson realized that the nation that held the mouth of the Mississippi must be the enemy of the United States. He wanted freedom of the great river; but the empire to which his purchase led cast no rays upon his horizon. After the treaty was made, Jefferson said of Louisiana that "it was a barren sand; individuals will not buy; we gain nothing but peace."

JEFFERSON DENOUNCED BY PARTISAN OPPONENTS FOR LOUSIANA PURCHASE

JEFFERSON DENOUNCED BY PARTISAN OPPONENTS FOR LOUSIANA PURCHASE

The Federalists denounced the purchase as corrupt and unconstitutional, and voted against the ratification of the treaty. New England denounced it as an illegal interference with the future balance of power of New England. When a Tennessee Member of Congress proposed a survey of some portions of the new purchase, a Member from New England made it the text for the following bitter assault: "No act of Jefferson's administration presents such a variety of disgraceful features as this shameful purchase of a colony of Frenchmen. In its origin it was corrupt; in its principles hostile to Constitution and republican habits. It has swallowed up millions aside from the vast sums required to explore its unknown frontier. The origin of this monstrous purchase, the effect of which will be felt to our latest posterity, was to give free navigation of the Mississippi to the backwoodsmen of the Western States." The Federalists denounced the purchase as corrupt and uncon-

This spirit did not die. When, on January 15, 1811, the bill for the admission of Louisiana as a State was being considered, Josiah Quincy, who 2 years later left Congress to become president of Harvard College, opposed the admission of the new State in these picturesque sentiments:

"The illeral purphese of Voylding Louisian and the sentiments."

picturesque sentiments:

"The illegal purchase of Louisiana had unsettled the foundations of the Government, and no State formed from illegal territory could enter the Union or become equal with the original States. I am compelled to declare it as my deliberate opinion that if this bill admitting Louisiana as a State passes, the bonds of the Union are virtually dissolved; and that, as it will be the right of all, so it will be the duty of some to prepare definitely for a separation—amicably if they can; violently if they must. We have no right to throw the rights, liberties, and property of original States into hotchpot with wild men of Missouri, nor with the mixed though more respectable race of Anglo-Spanish Americans. It was not for these men our fathers fought; it was not for them this Constitution was adopted."

From these quotations we can see that South Carolina was not the first State to preach the gospel of secession.

Years later, when the Oregon question was before the people, William Sturgiss, in a lecture before the Mercantile Library Asso-

¹The United States paid 60,000,000 francs (\$11,250,000) outright and assumed the claims of her citizens against France to the extent of 20,000,000 francs (\$3,750,000) additional; the interest payments incidental to the final settlement raising the total eventually to \$27,267,622, or about 4 cents an acre (Encyclopedia Britannica, vol. 14,0,432). 14, p. 432).

ciation of Boston, said: "Better the Pacific extend to the Rocky Mountains than to have the Oregon country converted into new States."

In the light of the present, these assaults upon and evil predictions concerning the West are as full of humor as the fight of Cervantes' hero with the windmills. They show the pessimist of our day that angelic wings were as short and rare on the shoulders of our noble ancestors as with the statesmen of today. Our Nation has grown in breadth and power, but human nature has changed has grown in breadth and power, but human nature has changed but little. Distance has wreathed the past with all the charms of its enchantment, so that to our gaze every actor on the early stage of our history bears the character and proportions of a demigod and a hero, and their deeds in the political arena stampling their times as the golden age of statesmanship. Yet, in truth, men were as bitter, partisan, selfish, and narrow then as now. Time and tombstones are ever kind.

In the history of American progress there are but one or two events as important as the purchase of Louisiana. In the annals of mankind there have been few triumphs of warrior or statesman that have been so pregnant with the seeds of a great and a beneficent destiny. Yet was it attained with no stain of blood or crash of battle.

At midday in New Orleans, on December 20, 1803, the French and American flags passed each other, as the one was lowered and the other raised. There was no other ceremony to mark the great event. No cheering multitude. No cannon awoke the echoes of the surrounding solitude. No orator indulged in patriotic prophecy. There was no comment, no music, no emotion. Thus simply an empire passed from the dominion of France and became a part of the glory and grandeur of the American Republic.

By this transfer the public domain was widely extended—almost beyond known limits.

PIKE'S TWO EXPLORING EXPEDITIONS

In order to learn more of the new land, Lt. Zebulon Montgomery In order to learn more of the new land, Lt. Zebulon Montgomery Pike was placed in charge of an exploring party to explore the headwaters of the Mississippi River. So satisfactorily did Pike perform this service that upon his return from the north he was selected by General Wilkinson to command a party that should explore the Arkansas and Red Rivers—the intent being to ascend the Arkansas to its source, and then pass over to the Red River and return home by that stream. It is with this last expedition that we will travel that we will travel.

PIKE'S WESTWARD EXPEDITION

On July 15, 1806, Lieutenant Pike started from Belle Fontaine, a On July 15, 1806, Lieutenant Pike started from Belle Fontaine, a village a few miles above St. Louis. The expedition comprised 23 men, officers and soldiers. Their equipment consisted of the ordinary effects of a company of infantry. General Wilkinson issued \$600 in value of merchandise, which was to be an expense and trading fund for this company of explorers. Pike was admonished to be careful in spending his supplies, as he would be held to a strict accountability for every farthing expended. Wilkinson evidently expected Pike to have the financial wisdom and business qualities of a Methodist histon scide from his attainments as soldier. qualities of a Methodist bishop aside from his attainments as soldier and explorer. The contrast between Government supplies then and now is vivid. Today when a committee from Congress is sent out on a visit of friendly inspection to some western agency or post the liquors, cigars, and luxuries that are loaded on their Pullman car cost more than the entire expense of this band of explorers, who were to travel an indefinite time in an unknown and savage wilderness. The effects of the company were loaded into two crude boats, When ready to start, 51 Osage Indians were placed in Pike's charge. These he was to escort to their homes on the headwaters of the Osage River. The Indians walked along the banks of the river, as These he was to escort to their homes on the headwards of the river, as Osage River. The Indians walked along the banks of the river, as did some of the men, hunting as they went to supply food for the party. The party passed up the Missouri and Osage Rivers, and in due time arrived at the Indian village where they delivered the Indians to their friends. After trading for horses, supplies, and arranging for guides, they left the boats and crossed the country to the Arkansas

Pike kept a daily record, noting the country, weather, and all incidents he considered valuable or interesting. As a literary work, Pike's diary may not rank very high; but as the narration of a sincere and patriotic soldier it will ever hold a place in the esteem of those who admire the straightforward story of a simple and brave man.

As the record of Colorado's discoverer, the journal of the man who built the first house and raised the first American flag upon the domain of our present State, I commend the perusal of his book to every citizen that loves his State.

PIKE TREATS WITH THE INDIANS

Aside from his duty as explorer, Pike was instructed to visit the Pawnee and other Indian tribes and to make treaties of peace and alliance with them. This was not always easy to accomplish. Not long before a splendid troop of Spanish cavalry, coming from Santa Fe, had passed through this same region upon a similar errand. In anticipation of boundary disputes arising between Spain and the United States, the Spaniards made an effort to form friendly alliances with the Indians. This troop was a magnificent body of men, 500 strong. Every soldier was mounted on a milk-white steed, while the commander and his two aides rode jet-black stallions. This cavalcade of Spaniards had been lavish in presents to the chiefs. They left medals and flags of the Spanish King. The Indians had been much impressed with the superb uniforms, with the glitter and the boast of the Spanish officers. They were, indeed, in strange contrast with the sorry

equipments and number of the American soldiers. It required much diplomacy to induce them to surrender the Spanish emblem and receive the Stars and Stripes. Often the small troop was in imminent danger, but the wonderful coolness, courage, and decision of their leader saved them. With the Indians Pike was exacting, but just. As he wrote, "His experience had taught him that if you have justice on your side and do not enforce it, the Indians will universally despise you."

the Indians will universally despise you."

The Pawnees he found very reluctant to accept his tenders of peace and protection. They had been fascinated and flattered with the attention and magnificence of the Spaniards, and they sought no alliance with any power less splendid. Like most primitive people, the Indians judged the king by his ambassador; the sender of a message by the display of the messenger that brought it. They looked with contempt upon this American captain, who wore the dress of a hunter; who carried packs and pioneered the trail. Like the Jews of old, they were disappointed in appearances and scoffed at Pike as being the representative of a mighty power, whose ambassador he claimed to be. Proud of their many hundred warriors, these Pawnees refused to treat or their many hundred warriors, these Pawnees refused to treat or smoke. They gathered their warriors in battle array and threatened to sweep the little band of whites from the earth. But when they saw no fear or signs of retreat, but instead the most cool and determined preparations to meet their assaults, they changed their minds, and, under a flag of truce, offered the calumet. In writing of this event Pike writes as though he was a little disapwriting of this event, Pike writes as though he was a little disappointed that the Pawnees did not carry out their intention to fight, "as he had arranged his small troop so as to kill at least 100 of the Indians before they could have been exterminated."

UP THE ARKANSAS RIVER, ACROSS THE GREAT PLAINS

Day by day they press up the Arkansas. At first on either hand great rolling prairies, and then the oceanlike plains. He is amazed at the vast herds of buffalo, deer, elk, and other game. A single hunter could supply a small army with food; but as a matter of humanity he forbids the killing of more game than required. Were it not that some of our living citizens have seen on the same plains herds of buffalo that were limited only by the horizon's line, and had felt the earth shake beneath their myriad tread, we might question the estimate Pike gives of the game he saw.

As Pike enters the buffalo country, he comments freely upon the barrenness and desolation. He forgets that game could not be so plentiful if the land were so desolate. So impressed was he with the worthlessness of the plains, that when, reviewing his travels across them, he said: "The plains may in time become equally celebrated with the deserts of Africa. From these immense prairies may arise one great advantage to the United States by the restricting of our population to some certain limits, and thereby insuring a continuation of the Union. Our citizens through necessity will be constrained to limit their extent on the west to the Mississippi and Missouri, leaving the prairies—incapable of cultivation—to the and Missouri, leaving the prairies-incapable of cultivation-to the

uncivilized aborigines."

Pike. Quincy, Webster, and other of our famed ancestors were great explorers and statesmen, but as prophets they were failures. FIRST VIEW OF THE ROCKIES, WHICH PIKE REFERRED TO AS "THE MEXICAN

MOUNTAINS"

After many days the mountains burst upon the vision of the explorers. To the left a pair of twin peaks cut the horizon; to the right a mighty single mountain stood like a sentinel upon the boundary of plain and mountain.

From the first sight of the grand peak it became the pole star—the compass of the explorer. During all his wanderings over plain and mountain he was seldom out of sight of the great mountain which he called his friend and guide, and a grateful people have made it his monument—one that will carry the name of Pike down the stream of time. Seldom have peaks been so royally named; seldom have heroes been worthy of so lofty a commemoration.

PIKE TRIES BUT FAILS TO CLIMB "THE GRAND PEAK"

When Pike reached the mouth of the Fountaine, and where Pueblo now stands, he established camp, built a rude temporary stockade, and over it raised the first American flag that had ever been kissed by the radiant sun and floated upon the crystal air of been kissed by the radiant sun and floated upon the crystal air of the Rocky Mountains. Considering it his duty as an explorer to ascend a peak that was such a prominent feature of the landscape, Pike, with several soldiers, took an early start one morning from his Pueblo camp, so that he might reach and climb the peak and return to camp in reasonable time. To their infinite surprise, the second day had well near passed before they came to the south end of Cheyenne Mountain. In this incident you will find the germ of that ancient story that is told to and about every tenderfoot that has visited this region since the days of Pike. It was near the first of December, and a winter of deep snow and intense cold. that has visited this region since the days of Pike. It was near the first of December, and a winter of deep snow and intense cold. They had no blankets and little food, but they determined to attempt the ascent. After the best part of 2 days' struggling through the snow they found themselves upon the top of the great ridge which, west of Cheyenne, leads up to the peak. They were in snow to their waists, and the mercury below zero.² Still the peak, in its soaring grandeur, seemed as distant as ever. This led Pike to say that it seemed impossible that human foot could ever press its summit. To him it was as though the Almighty had marked "no thoroughfare" upon its rugged heights and eternal snows. As his men were without food, and dressed only in Army overalls, shoes without stockings, no blankets or overcoats, he decided it folly to go further, and ordered a return. Two days later

they were in camp at Pueblo.

This was the first attempt to scale Pike's Peak, and that was as near as Pike ever came to its summit. Sixteen years later, Dr. James and others of Long's exploring party ascended the Peak in midsummer. It is a different task climbing Colorado mountains in

August than in December.

August than in December.

In honor of this first ascent Long gave the name of James to the peak, and that is the name it bears in early Government maps and reports. Pike gave it no specific name, and just when the name of James was dropped and it was christened Pike is one of the historical mysteries. I question whether it was ever legally baptized Pike. Trappers, traders, and early voyagers across the plains resented the apparent slight to Pike and persisted in speaking of the mountain as Pike's Peak, in defiance of Government reports and the envy of rival explorers. The name of Pike's Peak begins to appear in the literature of the prairies and mountains about the middle of the century, but it was not irrevocably christened until the Pike's Peak gold excitement, when the name was fixed to remain as long as men love to listen to stories of valor; as long as history is written. valor; as long as history is written.

UP THE ARKANSAS TO THE GRAND CANYON, OR ROYAL GORGE, AND INTO SOUTH PARK

From Pueblo, Pike passed up to the soda springs at Canon. The walls of the Grand Canyon prevented his following the course of the Arkansas. From here he drifted over the divide into South Park and upon the waters of the Platte. He recognized the streams Park and upon the waters of the Platte. He recognized the streams as tributary to the Platte. He came into the Arkansas Valley again near Buena Vista. He wandered west over routes we cannot identify until he must have found the Tomichi, a tributary of the Gunnison, and the only time Pike touched Pacific waters. He near Buena Vista. He wandered west over routes we cannot identify until he must have found the Tomichi, a tributary of the Gunnison, and the only time Pike touched Pacific waters. He recognized that this stream running west could not be the Red he sought, and turned east and south. After a month of incredible exposure, hardship, and suffering, he came back to his camp at Canon. His horses had been killed or disabled; his men were worn and frozen, weak and faint from exposure and starvation; his supplies exhausted; guns injured and broken. During this terrible month of wandering in the wintry mountains the Christmas holidays and Pike's twenty-eighth birthday were passed. Christmas they spent in the heart of the mountains. They were almost starving and in a strange and wintry land. Yet this heroic man writes in his journal on that Christmas Day "that food and diet were beneath the serious consideration of men who explore new countries." So often were their rations scant that "his men thought themselves fortunate with having plenty of buffalo meat without salt or any other thing whatever." As he was in camp celebrating this holiday he writes of the condition of his men: "Not one person was properly clothed for winter; many without blankets, having been obliged to cut them up for socks and other articles; laying down at night upon the snow or wet ground, one side burning, the other pierced with the wind, the men making a miserable substitute for shoes and other covering out of raw buffalo hide." buffalo hide."

HORSES WORN OUT AND ABANDONED

At Canon camp they remained 5 days to recruit the strength of their men, and to make other necessary preparations for an assault against the mountains to the west, which was the barrier that they supposed hid the river they sought. When leaving Canon, the party was on foot, the horses living being in no condition to travel. The luggage was divided, giving 70 pounds to each man.

FOUR DAYS WITHOUT SLEEP OR FOOD

FOUR DAYS WITHOUT SLEEP OR FOOD

From Canon they started up Grape Creek. After 2 or 3 days they entered Wet Mountain Valley. Snow fell, covering the country to a depth of 2 to 3 feet. Most of the game had been driven out of the mountains, and the party was soon in a desperate condition, frost and hunger making sad havoc. On January 17 nine of the men had their feet frozen, among them the hunters. They had been 2 days without food, so a camp was made, and Pike and Dr. Robinson—his friend and companion—went out to hunt. The first day they killed nothing. Night came on and they thought it useless to go to camp and add to the general gloom, so took shelter under some rocks, where they remained all night, hungry and without cover or rest, as the cold was too intense to permit sleep. Next day they got eight shots at a buffalo, but failed to kill. Here, for the first time in his career, Pike weakened in courage. They had been 4 days without food, and the helpless men depending upon them. All these 4 days without sleep and tramping the ing upon them. All these 4 days without sleep and tramping the deep snow, they were weak and faint, and it looked as though fate had decreed that the expedition should end in tragedy. They sought a small grove, determined to remain absent and die by themselves rather than return to camp and witness the misery of their companions. Just as they had made this resolution of depart that discovered at a distance several buffels. Here at once spair, they discovered at a distance several buffalo. Hope at once took command, and with great exertion they crept through the snow and succeeded in killing a buffalo. At midnight they returned to camp with the food that saved the lives of the men and the exploration from tragic failure.

CROSSING THE SANGRE DE CRISTO MOUNTAINS IN JANUARY

On January 21 two men-Thomas Dougherty and John Sparkswere so badly frozen that they could not travel. A cruel alternative was forced upon the leader. For all to remain with the poor cripples was almost equivalent to deciding that all must perish. The two were left. They gathered wood and left what meat remained with the poor men. After bidding them show their fortitude and

 $^{^24^\}circ$ below zero, according to the Reaumur thermometer which Pike carried, or 23° above zero Fahrenheit.

bear up until help could be sent back, the party pushed on. A day or so later another man—Menaugh—became helpless, and he was left alone—not even the consolation of a comrade.

In all the danger and risk of exploration, be it in mountain land

In all the danger and risk of exploration, be it in mountain land or polar ice, I know of nothing more terrible and desperate than the condition of these poor men left to fight the awful perils of a severe winter in the unknown mountain land. They were helpless; they could not hunt or fight; they could not retreat or go on. Their agony and suspense cannot be measured by words. I know of no parallel, unless it be in the solitary leper camps in the wintry solitude of the Siberian forests.

DAYS WITHOUT FOOD, FLOUNDERING THROUGH 3 FEET OF SNOW, EACH MAN CARRYING 70 POUNDS OF BAGGAGE

On January 24 the condition of the party again became desperate—no food, and heavy snow through which they beat their slow and painful march. On this day Pike heard the first complaint that had ever fallen from the lips of his men. To illustrate the man as a soldier and a disciplinarian, I will give this incident. Floundering through the snow, famished from want of food, Private Brown scolded and said, "that it was more than human nature could bear to march 3 days without food through snows 3 feet deep and carry burdens only fit for horses."

PIKE'S REPRIMAND FOR THE ONLY MUTINOUS REMARK ON THE EXPEDITION

Pike passed over the sedition at the moment, but that evening, after the company had broken their long fast and eaten their fill of game the doctor had been so fortunate as to kill, Pike called

Brown and addressed him as follows:

Brown and addressed him as follows:

"Brown, you this day presumed to make use of language that was seditious and mutinous. I then passed it over, pitying your condition and attributing your conduct to your distress. Had I reserved provisions for ourselves, whilst you were starving; had we been marching along light and at our ease, whilst you were weighed down with your burden, then you would have some pretext for your observations. But when we were equally hungry, weary, emaciated, and charged with burdens which, I believe, my natural strength is less able to bear than any man's in the party; when we are always foremost in breaking the road, reconnoitering, and enduring the fatigues of the chase, it was the height of ingratitude for you to indicate discontent. Your ready compliance and firm perserverance I had reason to expect, as the leader of men who are my companions in misery and danger. But your duty as a soldier called on your obedience to your officer and a prohibition of such language, which, for this time, I will pardon; but assure you, should it ever be repeated, by instant death I will revenge your ingratitude and punish your disobedience."

PIKE REACHES THE CONEJOS, A TRIBUTARY OF THE RIO GRANDE, AND

PIKE REACHES THE CONEJOS, A TRIBUTARY OF THE RIO GRANDE, AND BUILDS A SMALL FORT

Two days later Pike stood upon the summit of Medano or Music Pass and looked out upon the San Luis Valley. After his experience it is no marvel that it seemed to him to be "a terrestrial paradise shut in from the sight of man." They hastened down the pass, dise shut in from the sight of man." They hastened down the pass, skirted the range of sand hills, crossed the valley, arriving at the Rio Grande near where Alamosa stands, passed down the river a few miles to the mouth of the Conejos, up which stream they went a short distance to the warm springs, near where Judge McIntire now has his ranch and home. Here Pike determined to establish a camp and build a fort. As soon as his camp was located he sent a corporal and men to bring in the frozen men that had been cached in the mountains. in the mountains.

In the mountains.

In due time they returned, bringing in Menaugh, the man left alone on January 27. Dougherty and Sparks were still unable to travel and could not be brought. As the corporal was leaving them they gave him a handful of bones (taken from their frozen feet) to be delivered to Pike as silent messages of appeal that he would not force to a shouldon them.

forget or abandon them.

Pike explored the surrounding valley and kept his men busy building the stockade.

On February 16 two Spanish scouts appeared. They went direct to Santa Fe to report the presence of American soldiers on Spanish

ONE HUNDRED SPANISH TROOPS "INVITE" PIKE AND HIS PARTY TO "VISIT"
THE GOVERNOR AT SANTA FE

Ten days later 100 Spanish or Mexican soldiers presented their remainments to the American captain. They bore an invitation to visit Governor Alencaster at Santa Fe. Pike was reluctant, but they were persistent in their offer of hospitality, offering money, horses, supplies, everything, but insisting upon Pike visiting the Governor, giving as an excuse for insisting the clumsy fable that they had learned of the intention of the Utah Indians to surprise and capture. Pike and that they could not permit a provention of the unit of the could not permit a provention of the unit of the could not permit a provention of the unit of the unit of the unit permit a provention of the unit of the unit permit are provention. ture Pike, and that they could not permit a representative of the United States to submit himself to so great danger.

PIKE SURPRISED TO LEARN HE WAS IN SPANISH TERRITORY

In discussing the matter, the Spanish captain informed Pike that he was upon the Rio Grande and not upon the Red. Pike then pulled down his flag and realized that he was a prisoner, no matter how they might cushion the fact with offers of friendly hospitality. Pike said he would visit the Governor, but that he must wait until he could bring in his invalid men. This was adjusted by leaving 50 of the Spanish soldiers to wait, while the balance of the troop escorted Pike to Santa Fe.

LIEUTENANT PIKE BEFORE GOVERNOR ALENCASTER IN SANTA FE

He was entertained by Governor Alencaster and maintained himself with becoming dignity. In fact, he never forgot that he represented the United States, and always insisted that the Spanish officials recognize in him the power of his Government. When presented at the little court at Santa Fe, Pike was much chagrined at the appearance of himself and men. As he described their clothes, Pike was dressed in a pair of blue trousers, moccasins, coat made out of a blanket, and a red cap made of scarlet cloth and lined with fox skins; the men in raw buffalo moccasins and leggings, breech cloths, leather coats, and not a hat in the party. A native, looking upon their motley raiment, asked if the people in the United States did not wear hats and regular clothes. Under such conditions it would take a keen eye to see the hero.

people in the United States did not wear hats and regular clothes. Under such conditions it would take a keen eye to see the hero. After entertaining the American, the Governor said Pike must go into the interior until he could receive instructions from higher authorities. The leader and men were allowed their arms and, though carefully guarded, they were treated with consideration. Pike seemed rather pleased at the new orders, as it gave him an opportunity to see the Spanish territory. In case he was ill-treated, he had determined to drive off the guards and then go into the Apache country and defy the Spaniards.

UNDER MILITARY ESCORT TO CHIHUAHUA AND BACK TO THE AMERICAN

FRONTIER ON THE RED RIVER

They passed through Albuquerque and El Paso and across the Rio Grande into Old Mexico to Chihuahua, south along the great table land, until May 21, when, under new instructions, they turned east and north, crossed the country to Monterey, Laredo, and to San Antonio, the capital of the Spanish Province of Texas. Here Pike was entertained in the most friendly manner by two courtly Spanish Governors. An escort was provided, which accom-panied him across Texas and delivered him to the American frontier on the Red River.

Here ended the memorable expedition of Pike to the Rocky Mountains.

Connected with this exploration were several incidents that are not free from mystery, and may well serve as hooks upon which the ambitious historian may hang his romantic theories.

PIKE CERTAINLY NOT IMPLICATED IN THE BURR CONSPIRACY

About the time this expedition was organized the Burr conspiracy was in the minds of the people. There was much feeling between the settlers west of the Allegheny Mountains and the States east. Nearly all of the prominent men of the West were under suspicion. General Wilkinson, then in command of the western army, has been proven by recently discovered documents to have been a "rascal through and through." He was in sympathy and perhaps in the confidence of Burr. Wearing the uniform and sword of an American officer, he was in the pay of Spain, and conspired to create out of the Colonies west of the mountains a Spanish empire. It was Wilkinson who sent Pike west; but no matter how guilty may have been his superior in command. Pike certainly had no knowledge of his schemes. Pike About the time this expedition was organized the Burr con-

west; but no matter how guilty may have been his superior in command, Pike certainly had no knowledge of his schemes. Pike was innocent of any stain. He was a patriot as pure and sincere as Wilkinson was a traitor base and ungrateful.

When Pike returned to his country, the Burr conspiracy had exploded, and its leader was on trial for his life at Richmond. The relations between the United States and Spain were very much strained. Our Nation was a growing power; Spain in its decadence. Any accident that might lead to a conflict that would drive Spain from the continent would not have been regarded by Americans as an unmixed evil.

Americans as an unmixed evil.

Americans as an unmixed evil.

Some careful students of American history entertain the theory that Pike had secret instructions to spy out the land and not to be too particular in recognizing the territorial claims of Spain. It is not entirely clear that Pike was as innocent as he professed of his whereabouts when captured in the San Luis Valley. Some believe that he knew he was upon the Rio Grande and not upon the Red, as he pretended to believe. But had it been the Red instead of the Rio Grande, what right had he to be on the south side of the river, his rude fort being several miles south of the stream and under an abeyance treaty upon forbidden ground? The Spaniards believed that Pike carried secret orders to intrude upon their territory. However, they could not trick him into any admissions, and though they secretly searched his baggage and clothing, they found nothing. Certainly his conduct was well poised for an accidental invader. When building his fort he was apparently as much expecting the Spaniards as surprised when apparently as much expecting the Spaniards as surprised when they did come. He was a very willing prisoner, and his attitude was always that of a man who was sure of the endorsement of his country. If the Spaniards were right and Pike did have secret instructions, they came from Washington, and the secret is buried with the authority that gave them and the faithful soldier that received them. The Spaniards could get no hint, though they led Pike a prisoner-guest through their country, and finally delivered him upon his own frontier without apology or explanation. nation.

PIKE A GREAT PATRIOT AND SOLDIER

The Government never had a more discreet or patriotic representative—a man of indomitable will and of rare personal courage. In nearly every man there is a strain of barbarism, a lingering hint of a bygone ancestry, that sometimes, when remote from civilization, will assert itself. Pike was ever proof against the charms of savagery. He was ever a soldier, whether in camp, in wilderness or city. No El Dorado, no Spring of Youth, no dream of wealth, led him into the unknown. He had no idol but his country. Patriotic duty was the polar star that guided his career. Amid our surroundings, touched upon every side with comfort and luxury, it is not possible to paint a true picture of this region as it was when these brave men came to explore and

With the courage, strength, and endurance weakened-if suffer. With the courage, strength, and endurance weakened—if not civilized and cultured out of the present generation—we cannot realize how men could willingly face the hazard of an expedition so far from settlement or help. There was no certainty but of hardship and danger; no reward, but the miserable pittance of a soldier's pay; no hope of glory or fame—800 miles from outposts of their country, and that distance peopled with all the danger that could assail the fears, comfort, and life. Their numbers few, equipments scanty, commissary their own skill as hunters; no refuge from savage assaults; no friends in reach; no help in danger; no shelter in storm; no medicine in illness; never men more dependent upon themselves; never men more competent to care for themselves. suffer. care for themselves.

Poetry and romance never wove a more pathetic and pitiable story of exposure and misery, of hunger and frozen limbs, than the sufferings of Pike and his little band in the Rocky Mountains. It

is a rare lesson of courage and patriotic sacrifice.

The biography of our hero remains unwritten. The biography of our hero remains unwritten. A land is rich in heroism that can afford to let such lives go unmarked. Edward Everett Hale has half promised that he will weave the life and deeds of Pike into one of his brilliant books. The subject is worthy even of Dr. Hale's genius. Pike was not one of those characters designated by Irving as "Sinbads of the wilderness," but a man of high purpose and exalted character. Courage so undaunted, a patriotism so lofty, adventures so wild and strange need no color of romance. of romance.

PIKE KILLED WHILE LEADING THE SUCCESSFUL ATTACK UPON YORK, NOW TORONTO, CANADA

His years were few but full of achievement. He died a brigadier eneral at 34. He was killed while in command at the siege of York—now Toronto—April 27, 1813. As he fell mortally wounded, the enemy sounded a retreat. Their flag was captured and brought to the dying general. He grasped the captured banner, placed it beneath his head, and, like Wolfe, died the death of a soldier. The last sound that broke upon his fading senses was the song of

When he fell upon the Canadian battlefield his notebook was When he fell upon the Canadian battlefield his notebook was crimsoned with his life blood. That book contained his inheritance to his young son. It was not wealth, it was not title deeds to vast estates, but it was more precious than either. It was two rules for the guidance of his son's life. They were, first, "Preserve your honor from blemish"; second, "To be ready at all times to die for your country." Typical were they of the life of the father—a worthy inheritance to every American youth.

May each of you, as morning and evening you look upon the magnificent mountain that guards your beautiful city and crowns our land not only drink in the scenic beauty and grandeur, but

our land, not only drink in the scenic beauty and grandeur, but think as well of the brave soldier, pure patriot, and noble man whose name it bears, remembering that—

"His life was his country's; His deeds were all his own."

Old-Age Security

EXTENSION OF REMARKS

HON. GERALD W. LANDIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 4, 1939

Mr. LANDIS. Mr. Speaker, I love the old people, every last one of them, and I shall always stand for liberal old-age pensions. I believe that when a man or woman has lived 60 years in our good old United States, the richest country in the world in natural resources, that the least the Government can do to repay them for being good citizens, good taxpayers, and good parents, is to see that they have peace, security, and the necessities of life during their remaining years.

The old-age pension is here to stay. Public opinion has decreed that. Under our old-age assistance system there are too many clerks, case work supervisors, junior and senior visitors. Let us give the old people, all of them, a uniform, liberal pension without any strings to it, at no more cost to the taxpayer. Let us do away with the hundreds of thousands of dollars we are spending for useless help and give that money to the old folks instead. The old people want security and peace. They do not want to be upset every 6 months by a Government reinvestigation to see whether or not they have gotten rich off their allowance during the last 6 months.

Let us stop the Government from going any further into the real-estate business.

Everyone in America is entitled to life, liberty, and the pursuit of happiness. How can our people have happiness when we have 11,000,000 unemployed and one-third of our population is undernourished, ill-clad, and ill-housed in a land of plenty?

Under our present system, with our crop control with millions hungry, surplus cotton and millions in rags, American markets are still flooded with cheap foreign-made goods, prison-made goods, and cheap agricultural products.

I believe in a pay-as-you-go plan for old-age security. A 2-percent transaction tax given to our old people over 60 years of age will increase and distribute buying power which will employ our idle millions. These people must be American citizens; they must spend their money every 30 days; they must spend it for American-made products; and they must retire from their jobs.

I do not contend this is a \$200 per month pension. It may only bring \$50 to \$75 per month at first. I know it will

increase, because our buying power will increase.

The 1-percent gross income tax in Indiana provides \$700 per teacher in salaries of nearly 20,000 teachers. It permits the State of Indiana to match the county units of Government dollar for dollar on welfare costs. It has reduced the property tax one-third in the State of Indiana. The gross income tax in Indiana is not passed on to the consumer.

It is my sincere belief that a transaction tax would be willingly borne by the American people because every American is for a decent old-age pension for our old folks. The recent Gallup poll in connection with old-age pensions conclusively proved this fact.

We can see the need for a program of plenty. Certainly in a country abounding in unlimited natural resources, and with an efficient production system, there must be some sensible way to solve our problem. We must find a balance between production and consumption and enable every individual who is willing to work to have an opportunity to earn a decent living. We have the customers. There are millions of them, but they lack buying power. We can retire the old people and put the young people to work at real jobs.

We owe a duty to our old folks, and I believe we can perform this duty by enacting the Townsend plan into law. This plan will establish better markets for our farmers: eliminate a large percent of the crime in our Nation; abolish poorhouses; strengthen religious organizations; do away with much unemployment; and will give to our youth a brighter future to which to look forward.

The Deportation of Communist Aliens

EXTENSION OF REMARKS

HON. J. PARNELL THOMAS OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, April 3, 1939

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over the red network of the National Broadcasting Co., from Washington, D. C., Wednesday, March 29:

As early as 1903 the Congress of the United States provided for the exclusion from admission into the United States of "anarchists." In 1920 the Congress provided for the deportation of aliens who are anarchists.

The purpose of these enactments is to protect the citizens of our country from contaminating influences and to insure the perpetuity of our form of government against the revolutionary and destructive philosophies of aliens indoctrinated with anarchistic ideas. The law clearly provides that all such aliens shall be deported but in the enforcement it grants to the Secretary of Labor tremendous discretionary power. The immigration laws have granted such unlimited discretionary powers to the Secretary of Labor, and Frances Perkins, our present Secretary of Labor, has abused these powers to such an extent as to create not only an economic burden upon our people, but also a dangerous menace to our national

To understand the conduct of our Secretary of Labor, it is neces-To understand the conduct of our Secretary of Labor, it is necessary to go back to a memorandum which was submitted on January 3, 1934, and published on page 24 of the appropriation bill, Department of Labor, 1939 (hearings of House subcommittee), wherein Charles E. Wyzanski, Jr., then Solicitor of the Department of Labor, said: "At this particular time, when the Government is giving to workers the right to organize and bargain collectively through representatives of their own choosing, regardless of the radical character of the representatives, when it is encouraging left-wing labor leaders to present their radical views before deputy administrators charged with the formulation of codes of fair competition, it is only consistent for the Department of Labor to leave unmolested members of a left-wing labor union * * *."

Following this memorandum it was decided by the Commissioner

Following this memorandum it was decided by the Commissioner of Immigration and Naturalization, and by Turner W. Battle, Assistant to the Secretary of Labor, and obviously with the consent of Frances Ferkins, that, "in view of the definite assurances that the Trade Union Unity League has severed any affiliation it may have had with the "red" international labor union, I hereby direct that hereafter no grant for the deportation of any ellien shell be

have had with the "red" international labor union, I hereby direct that hereafter no warrant for the deportation of any alien shall be issued or executed if the sole ground for the warrant is his membership in any of the following organizations." The organizations referred to were allied to the "red" international labor union.

In other words, Frances Perkins accepts as true the statement of an organization which admittedly was connected with the "red" international labor union, and from thenceforth governs her decisions as Secretary of Labor upon the word of that organization; and, obviously, if the word given by this union was false, upon that falsehood refuses to enforce the immigration laws of the United States against the membership of all of its allied organizations. With this background. I offer the following condensed facts relat-

With this background, I offer the following condensed facts relating to the deportation case of Harry Bridges, for many years symbol of thousands of radical aliens illegally within our borders:

Alfred Renton Bryant Bridges, alias Harry Renton Bridges, alias Harry Dorgan, alias Canfield, alias Rossi, is an alien, a native of Australia, and a British subject. He was admitted to the United States at the port of San Francisco, Calif., on April 12, 1920.

In 1934 he became an active radical agitator on the west coast

of the United States. At that time he believed in, advised, advo-cated, and taught the overthrow by force or violence of the Gov-ernment of the United States, and the unlawful damage, injury, and destruction of property, and sabotage.

In 1934 complaints were made against him with the Department of Labor, but nothing was done toward deporting him.

In 1937 additional complaints were filed with the Department of Labor showing that he not only personally believed in these un-American principles but that he was affiliated with and a member of the Communist Party. Thereafter the Department of Labor investigated these charges and amassed several files full of testimony showing that Bridges was deportable under the law.

showing that Bridges was deportable under the law.

On September 22, 1937, R. J. Norene, divisional director, and R. P. Bonham, district director of the Immigration and Naturalization Service of Seattle, Wash., made an application for a warrant of arrest of Harry Bridges. Under date of September 23, 1937, in the covering letter sent by Bonham to his superior in Washington, was this sentence, "submitted herewith please find application for warrant of arrest, with most unusual supporting evidence in the matter of Harry Renton Bridges." Yet on October 18, 1937, Harry Bridges was purposely examined by the Labor Department in the absence of R. P. Bonham, the agent who had followed the case from its inception and who was more familiar with it than any one other man in the Federal Government. In my opinion, it was no mere coincidence that Bonham, a veteran of 30 years' service, was overlooked. was overlooked.

Thereafter no definite action was taken against Bridges until February 1938, when the Solicitor of the Department of Labor requested Mr. Bonham to forward to him the Seattle copy of the application for a warrant. In other words, after several months had transpired, still no warrant had been issued against Harry Bridges, and in the meantime the application for the original warrant had been mislaid or stolen from the files of the Department of Lebor.

On March 5, 1938, Harry Bridges was on the east coast and a warrant of arrest was served upon him at Baltimore. On the face of this warrant were instructions that Bridges was to be permitted to be released on his own recognizance, that is, without any bond—an extraordinary procedure, for ordinarily a bond is required by the agent making the arrest, but in Bridges' case the central office at Washington ordered that Bridges be released without bond.

In the application for the arrest of Bridges a warrant was requested for his deportation on nine grounds, including as the ninth ground that Harry Bridges believed in and advocated the overthrow of the Government of the United States by force or violence. When the warrant was issued on March 5, 1938, it was issued on only four grounds, and it omitted the charge that Bridges, personally, believed in and advocated the overthrow of

the Government of the United States. It omitted the most

important charge.

As the date of the Bridges hearing approached, a decision was made in the Circuit Court of Appeals for the Fifth Circuit, at New Orleans, in what is known as the Strecker case, wherein Judge Hutcheson held that the Government had failed to show Judge Hutcheson held that the Government had failed to show that the Communist Party, in 1932, still believed in the overthrow of the Government of the United States by force and violence, and that mere membership in the Communist Party, standing alone, without proof that the Communist Party did believe in the overthrow of the Government by force and violence, was insufficient to justify the deportation of the alien Strecker. In the Strecker case the Government had failed to offer the usual "stock" exhibits, showing what the Communist Party actually believed in. The court ordered that the Strecker case should be "stock" exhibits, showing what the Communist Party actually believed in. The court ordered that the Strecker case should be remanded for a new trial. Frances Perkins, Secretary of Labor, immediately seized upon the situation to postpone the deportation hearing of Harry Bridges and other Communist aliens on the ground that the opinion of Judge Hutcheson of the fifth circuit was at variance with the opinion of other circuit judges throughout the United States. the United States.

out the United States.

When R. P. Bonham, the veteran in the Immigration and Naturalization Service of the Department of Labor, heard of this, he immediately wired James L. Houghteling, Commissioner at Washington, D. C., that the Strecker case was weak and devoid of proper

ington, D. C., that the Strecker case was weak and devoid of proper proof. In confirmation of this telegram, he further stated in a letter to Mr. Houghteling that the Strecker case was very weak and that an appeal will not cure the situation but complicate it. These were the words used by the Department of Labor's trusted district director, yet in the face of them Frances Perkins appealed the Strecker case to the Supreme Court of the United States and thereby indefinitely postponed all deportation of Communist aliens. Further it is a well-known fact that the opinion in the fifth circuit was not controlling in the Bridges case. in the fifth circuit was not controlling in the Bridges case.

Who is this alien who has risen to such preeminence that he receives such unusual favors from the Department of Labor?

The records of the Labor Department show that ever since 1934 Harry Bridges has successfully preached class hatred and industrial warfare until he has become the most powerful radical agitator on the west coast

The records of the Labor Department show that in 1934 and since Harry Bridges has been a member of and affiliated with the Com-Harry Bridges has been a member of and amilated with the Communist Party, and collaborated with the Communist leaders in carrying on lawless enterprises, such as the effort to discredit the State's attorney who prosecuted and convicted of murder the Communist Earl King and his associates.

This is the alien whose influence with Frances Perkins and the New Deal administration is more powerful than that of the American Legion, the Veterans of Foreign Wars, and other patriotic prescriptions.

organizations.

Why, may I ask? Could it be the \$500,000 received by the New Deal Party in 1936 from a certain labor organization? Did they then become 500,000 reasons why the laws of the United States should not be enforced against Harry Bridges, the western chief of the organization which contributed the \$500,000? I leave that

question to be answered by you.

In addition to the widely publicized Bridges case there are many others equally bad but not as well known. The Labor Department has time after time either falled to take appropriate action or has permitted radical aliens to escape after action had been started. In some instances the most radical of agitators have been admitted within our borders. Further, aliens of all classes admitted under the statutes of 1934 have increased from 163,904 in the year ending. June 1934 to 231,884 in the year ending June 1937. On the other hand, deportation of alien criminals and undesirables has decreased from 19,865 in the year ending June 1933 to 8,829 in the year end-

from 19,865 in the year ending June 1933 to 8,829 in the year enging June 1937.

It was because of these and many other facts and circumstances that I introduced a resolution in the House of Representatives of the United States calling for the impeachment of Frances Perkins and certain of her subordinate officials for falling, neglecting, and refusing to enforce the immigration laws of the United States, and for conspiring together to violate said laws and for defrauding the United States by coddling and protecting from deportation certain aliens illegally within our country. My resolution also called for a complete investigation of the Department of Labor.

For 2 months the Judiciary Committee of the House of Representatives considered the resolution and finally, when the committee reported its findings, then 10 members submitted minority

sentatives considered the resolution and finally, when the committee reported its findings, then 10 members submitted minority views of censure, which are, and I quote: "It is apparent that the Secretary of Labor, the Commissioner of Immigration and Naturalization Service, and the Solicitor of the Labor Department have been lenient and indulgent to Harry Bridges in the conduct of his deportation case to an unprecedented extent.

"The record before us lacks proof of any kind as to the motion

"The record before us lacks proof of any kind as to the motive actuating such lenience and indulgence. It cannot escape our severe condemnation and censure. Bridges' record as a sympasevere condemnation and censure. Bridges' record as a sympathizer with radical and communistic movements, if not his active participation therein, is an open book. He should have been dealt with firmly and his case should have been disposed of with all possible speed. The confidence of the people in the proper administration of the laws governing the deportation of allens, particularly those associated with extreme radical and communistic elements by the present Secretary of Labor and her subordinates, has been profoundly shaken by the failure promptly, vigorously, and impartially to proceed to a final determination of his case. "This course of conduct which we condemn does not justify impeachment, but it does call for the official and public disapproval of this committee."

This strong censure was made by a large number of the members of the Judiciary Committee of the House of Representatives and by this censure the official acts of the Secretary of Labor and

her associates have at least been officially condemned.

It is regrettable that the Secretary of Labor should have appealed the Strecker case, for if the Supreme Court's opinion should be unfavorable, it will necessitate the further indefinite postponement of deportation proceedings against all Communist aliens. Such an unfavorable opinion might completely nullify the mandates of Congress relating to the deportation of undesirable anarchistic aliens.

Irrespective of the outcome of the Strecker case it is hoped that the Department of Labor will, in the future, more fully understand the will of the people in the United States in the matter of immi-gration and deportation. It is my bellef that the Department of Labor has been far too lenient in immigration and deportation matters. Further, I am firmly of the opinion that the Secretary of Labor is endeavoring to replace our immigration statutes with some sort of idealistic philosophy peculiar to the Secretary of Labor

Labor.

In conclusion, I urge my listeners tonight to aid in safeguarding our American institutions by taking a more active interest in the problems of immigration and deportation. I urge you to insist that our immigration laws be more stringently enforced. I urge you to demand that a thorough and impartial investigation be made of both the Department of Labor and of the reasons for the large increase in immigration and for the sharp decrease in deportations. I thank you.

Live Turkeys and the Reciprocal-Trade Agreements

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 4, 1939

Mr. REED of New York. Mr. Speaker, until recent years the production of turkeys has been a small part of the regular farm enterprise, but as the value of turkeys in adding to the general farm income became apparent, production expanded with such increasing rapidity that turkeys are now referred to as a \$50,000,000 industry. In 1929, 16,794,000 birds were raised and there was a steady increase from this figure to a high of more than 20,000,000 birds in 1936. Thus it can be seen that it was absolutely necessary to keep the demestic market intact until the thousands of turkey raisers in the country could solve the marketing problem. The Republican Party realized this and in 1930 the duty was raised from 3 cents a pound to 8 cents a pound, with the result that the volume of imports declined 86 percent from 1932 to 1935.

Under the present administration the wisdom of this policy was disregarded. In the trade agreement signed with Canada, the duty on live turkeys was reduced from 8 cents to 4 cents a pound, effective on January 1, 1936. An immediate effect on imports was noticeable. Canadian exports were a little over four times greater in 1936, the first year the new rate went into effect, over 1935, and seven times greater in 1937 than in 1935. However, the total imports were almost five times greater in 1936 than in 1935 and approximately nine and a half times greater in 1937 over 1935. This is due to our most-favored-nation policy, which extends the new reduced rate to every country in the world except Germany. This has resulted in our imports from all other countries rising to a figure 40 times greater in 1936 than in 1935, and 138 times greater in 1937 than in 1935.

The administration has shown that it is more anxious to open our markets to other countries than to aid our domestic producers. There is every reason to believe that, given an intact market, the turkey raisers could have solved their marketing problem as adequately as they did the production problem; but by the reciprocal trade agreement policy of the present administration this problem has been accentuated rather than aided.

Development of Natural Resources of Idaho

EXTENSION OF REMARKS

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 4, 1939

LETTER FROM E. T. TAYLOR, MASTER OF IDAHO ST...E GRANGE, AND REPLY THERETO

Mr. DWORSHAK. Mr. Speaker, during the past few years huge sums have been appropriated by the Federal Government for the development of water and power resources of the great West. Naturally, the people of Idaho have been greatly interested in these projects because our State possesses almost unlimited natural resources, and we recognize that such development is essential to promote the growth of the State. Because of this interest, widespread inquiry has been made by various groups and individuals as to what part Idaho is to play in this development. Being typical of such expressions, I desire to insert in the RECORD a letter which I have received from E. T. Taylor, master of the Idaho State Grange, and my reply thereto, and under leave to extend my remarks I submit the following:

IDAHO STATE GRANGE, COEUR D'ALENE, IDAHO,

March 16, 1939.

Hon. HENRY C. DWORSHAK, M. C.,

Washington, D. C.
DEAR MR. DWORSHAK: Recent news dispatches from Washington DEAR MR. DWORSHAK: Recent news dispatches from Washington have carried the stories that irrigation projects in Idaho that have been set up, with electricity as a part of the project, are not going ahead because they conflict with Bonneville or Grand Coulee power-expansion plans. In other words, the Idaho plans are stalled because a market has not yet been found for all of the power to be produced by Bonneville or Grand Coulee.

Two projects specifically are the Twin Springs project on the Boise River and the Rathdrum Prairie project to be watered from Cabinet Gorge in Bonner County.

Boise River and the Rathdrum Prairie project to be watered from Cabinet Gorge in Bonner County.

Noting that you are on the Irrigation and Reclamation Committee, and in close contact with the situation, I would like to ask just what the status of Idaho is under the present set-up.

Take Twin Springs. As I understand the situation, the cost for the project will be about \$9,900,000 of which \$5,400,000 is a charge to power and \$4,500,000 a charge to supplemental water for lands under the Boise project.

If the whole charge of \$9,900,000 must be charged up to the settlers for water, the cost is prohibitive, and they will never get the added needed water supplies. That they urgently need the water is beyond question.

water is beyond question.

If the power end of the development is to be cut out from the fact that Bonneville must be given a chance to supply all of Idaho's power needs before Idaho develops its own resources, then

Idaho must wait a long time.

The same situation applies to Rathdrum Prairie. The press The same situation applies to Rathdrum Prairie. The press dispatches carry the story that irrigation for that project must await Grand Coulee finding a market for all of its power before we can expect water. In north Idaho we have a number of irrigation districts now operating without sufficient water, namely, Hayden Lake, Avondale, Dalton Gardens, Post Falls, and East Greenacres projects. They were to be given supplemental water from the same development that waters Rathdrum Prairie. The present water supply for these projects is wholly inadequate. By a set-up of power and irrigation on the Clark Fork River at Cabinet, the charge for water will be at a cost the lands can bear. If no power is to be developed as an adjunct to the irrigation development, then the cost will be prohibitive and Idaho will again have to stand back and suffer. have to stand back and suffer.

The question that is uppermost in the minds of Idaho citizens is, Must Idaho develop or must it stagnate?

As I understand it, Idaho has power possibilities sufficient within its own borders to supply all of its power needs for all time. Idaho lands need all the water that is possible to obtain to bring

these lands to fruitful use.

We have the water. We have the power. Yet if the press dispatches are correct, we will not get the water and the power will

run to waste.

Idaho should and must be given a chance to make itself a real State. If these big power developments are to lock up our lands for years to come, it is a great injustice to Idaho. Would appreciate hearing from you as to just where Idaho is at, and what can be done to avert the danger of shutting off the development of integration to Idaho.

development of irrigation in Idaho. Very sincerely yours,

E. T. TAYLOR, Master, Idaho State Grange. CONGRESS OF THE UNITED STATES, House of Representatives, Washington, D. C., March 21, 1939.

Mr. E. T. TAYLOR, Master, Idaho State Grange,

Master, Idano State Grange,
Coeur d'Alene, Idaho.

Dear Mr. Taylor: I am grateful for your letter of March 16, in which you refer to the development of the water and power resources of the Northwestern States and make inquiry as to the consideration Idaho is receiving as an integral part of this vast

In attempting to answer your inquiry, I want particularly to stress the fact that we must disregard partisanship and analyze the facts which can be adduced from the vast sums which have been appropriated and expended during the past 6 years on power and reclamation.

and reclamation.

You specifically inquire whether Idaho must be compelled to rely upon the development of Bonneville and Grand Coulee projects and wait until such time as their output of power is consumed. You also refer to the fact that various proposed projects in Idaho, designed to utilize and conserve water resources, have been deferred, and that it will be almost impossible to plan the utilization of Idaho's water resources unless we are able to develop power as a part of these projects.

a part of these projects.

a part of these projects.

Since arriving at the National Capital in December, I have given considerable study to the problems you have outlined. I conferred with the late J. D. Ross, administrator of Bonneville project, in January, and requested that Idaho be given some consideration in the development of the so-called Columbia Basin Authority. He was unable to give me any definite information, and simply suggested that Idaho take advantage of any power which might be transmitted from Bonneville and Grand Coulee, and that later it is possible that some power development would take place in our State.

state.

As you probably know, the Idaho State Planning Commission, during the past 2 years, has attempted to formulate a program of water and power development which could be integrated with the Bonneville and Grand Coulee developments. However, there has been little inclination on the part of certain administration officials to cooperate in any way with the representatives of Idaho agricultural and mining industries.

I direct your attention to what has taken place in the West during the past 6 years. A total of \$28,500,000 already has been provided for the construction of the all-American canal in connection with the Boulder Canyon project.

Under the Central Valley project in California it is proposed to provide a supplemental water supply for approximately 800,000 acres of land, the cost of which is estimated at \$170,000,000. A total of \$43,600,000 already has been provided for this project.

Since 1933 a total of \$53,188,800 has been expended by the Federal Government on the construction of Bonneville Dam in western Oregon. While this was originally constructed as a navigation project, it is proposed to generate 504,000 kilowatts of power, and at the present time a total of \$27,250,000 has been provided for the construction of power transmission lines from Bonneville through eastern Oregon. eastern Oregon.

eastern Oregon.

The Grand Coulee Dam project in the State of Washington was authorized on June 30, 1935, and a total of \$93,805,000 already has been appropriated for this project. It is reported that approximately 1,500,000 kilowatts of power will be generated at Grand Coulee, and 1,200,000 acres of new land irrigated by its stored water. During the coming fiscal year there will be available a total of \$23,000,000 for the continuation of work at Grand Coulee

Various other projects have been initiated in Colorado, Utah, Wyoming, and Montana, and huge sums are being appropriated by the Federal Government to develop the water and power resources

of the various Western States.

During the current fiscal year a total of \$40,544,600 was appropriated for the use of the Reclamation Service, and the Interior Department bill, approved this week by the lower House, appropriates \$50,622,600 for the various reclamation projects in the West.

priates \$50,622,600 for the various reclamation projects in the West. If you will carefully scrutinize this program you will find that Idaho is receiving very little; in fact, the Twin Springs project in the Boise Valley was given an appropriation of \$750,000 this year, which has not yet been utilized. Small sums also have been made available for the Black Canyon project.

Authorities admit that Idaho today has the greatest undeveloped potential water power of any State in the Union, and accurate reports indicate that during each of the past few years more than a million acre-feet of water has wasted down the Snake River without being used for any beneficial purpose. Surveys have been under way for several years to determine the feasibility of providing additional reservoir storage on the Snake River, but it seems extremely difficult to get official approval for any of these projects.

projects.

projects.

In your letter you ask whether Idaho shall be given a chance to develop or whether the State's vast water and power resources are to be "locked up" for years to come. I must agree with you that if we are to judge by the developments of the past few years, Idaho is facing a crisis insofar as its own future is concerned. As you point out, it is almost economically impossible to build storage reservoirs in our State to provide supplemental water without also developing power to absorb part of the original construction costs. If our State is forced to consume power generated at Bonneville and Grand Coulee, there will be little necessity for the generation of power in Idaho. Consequently, it will be

almost prohibitive to consider new reclamation projects, and I

believe your inquiry is most timely.

During the past 6 years extensive development has taken place in the West, and, according to those close to the administration, plans are being made now for the early initiation of the Columbia Basin Authority. It is pointed out that Idaho will become an Basin Authority. It is pointed out that Idaho will become an important link in this Authority; but I am inclined to agree with you that there are few advantages available for Idaho through the vast development of a proposed Columbia Basin Authority so long as millions of dollars of Federal funds are allocated to the various power and reclamation projects while an infinitesimal amount is being appropriated for the development of the resources of the great Gem State. Must an area of 83,500 square miles be doomed to isolation, although its water and power resources are comparable to those of any other State in the Union?

Very truly yours,

HENRY C. DWORSHAK, M. C.

HENRY C. DWORSHAK, M. C.

Use of Copper on Government Projects

EXTENSION OF REMARKS

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 4, 1939

STATEMENT BY GREAT FALLS (MONT.) MILL AND SMELTER-MEN'S UNION, NO. 16

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following compilation and statement by John Clark, secretary-treasurer of the Great Falls Mill and Smeltermen's Union, of Great Falls. Mont., advocating the use of copper, a 100-percent American product, on Government projects, and particularly on Rural Electrification Administration projects:

How many American citizens pause and think about the rural-How many American citizens pause and think about the rural-electrification program that the administration has launched, its benefits to the farmer and other industries that can use this much-needed and cheap source of energy. It was inaugurated as part of the great move to stimulate the decline in business, to put the unemployed back to work, in their own words to prime the pump. We believe the main thought in this program was to use domestic materials and labor. Is this being done in the R. E. A. program?

All copper consumed in this country is mined, refined, and fabricated into wire and cable here. What this means to American labor is as follows, based on the 1937 production:

ican labor is as follows, based on the 1937 production:
For every ton of copper produced in America (United States of America) \$96.50 goes into wages, \$79.57 in supplies purchased from other industries, \$8.29 in Federal taxes, \$10.39 in State and local taxes, \$27.99 in freight to railroads (approximately \$37.79 in indirect labor to produce materials in the cycle of production of copper)—(and \$12.32 in indirect railroad labor, based on the railroads' estimate that 44 percent of income goes to labor). A total of \$222.74 spent directly and indirectly among American people in the production of one ton of copper, labor receiving \$148.61 for their share in this production.

In man-days of labor for every ton of copper produced, basing the average wage at \$5 per day, requires 29.7 man-days. For the total consumption of the 1937 production it required 25,031,754 man-days of labor to produce and transport, equivalent of 100,000 men working a full year. (Total consumption of copper declined

men working a full year. (Total consumption of copper declined in the first quarter of 1938 against the first quarter of 1937, 56,008 tons—a loss to labor of 1,663,438 man-days.)

Taking all the Government agencies building transmission lines, such as T. V. A., R. E. A., etc., their requirements should run to 100,000,000 pounds of conductor. The mining, refining, and transportation of this metal alone would mean 1,485,000 man-days of labor. This is not including fabricating it into the finished conductor. ductor. From a true American standpoint, and from what we be-lieve is the real intent of the R. E. A., to use American material and labor, the above is the benefits that domestic labor and industry should be receiving from this program. Instead what is happening? Aluminum has entered this field as a competitor—a metal that is over 50 percent foreign produced, an alien product depriving American citizens of their jobs.

Aluminum is manufactured from bauxite ores of which 54.8 per-Aluminum is manufactured from bauxite ores of which 54.8 percent in the year 1937 was imported from British Guiana and Surinam (507,423 long tons). The value of this ore at the point of entry was \$3,609,063, or \$0.003175 per pound. It takes 4 pounds of bauxite to make 1 pound of aluminum. The cost of this imported ore in 1 pound of aluminum would be \$0.0127 per pound, 0.446 mill import tax included in this figure. Exploitation of coolie labor in these foreign bauxite mines, to whom a few cents a day is their wages, is the reason for this cheap ore entering this country. This

842, 820

exploitation of cheap coolie labor is displacing American workmen in the bauxite fields of Arkansas and Tennessee, to say nothing of the unfair competition against the American copper miner.

Imports of foreign bauxite ore have increased from 3,653 tons in 1918 to 507,423 tons in 1937, because of the high standard of living in our own United States of America bauxite cannot be mined for 0.3175 cent per pound, therefore the aluminum monopoly through this exploitation of foreign labor is not only able to underbid American industry but also able to keep American bauxite and copper miners out of work. Added to the above figures on imported ore is miners out of work. Added to the above figures on imported ore is the fact that importations of aluminum in various forms in 1937 totaled 47,901,633 pounds, or totaled with the imported bauxite ores approximately 166,000 short tons. There are three points to consider in this, without the imports of bauxite and aluminum the bauxite mines in this country would have to operate in order to take care of the domestic consumption. Or copper would have to be solely used on these Government projects, for undoubtedly the domestic-produced aluminum is freed for Government use by the use of foreign metal in domestic consumption. And finally if domestic materials are supposed to be used on the R. E. A. projects, then basically aluminum should not be used, for it is more foreign

then basically aluminum should not be used, for it is more foreign than domestic.

We find in the bids for these R. E. A. projects that aluminum is invariably the lowest; the answer to this can only be one, monopoly. For instance, even if copper is sold from 5 to 15 cents per pound, the price of aluminum conductor is adjusted to be lower than copper conductor. To accomplish this aluminum conductor has been sold at less than the quoted price of the aluminum from this monopoly and sell the finished conductor at a lower price. It is not monopoly and sell the finished conductor at a lower price. It is not feasible for any industry to sell a fabricated article for a less price

than the raw material.

The spread between the copper-wire bar and the finished cable The spread between the copper-wire bar and the finished cable has been consistent over a table of years, giving what we believe the competitive fabricators a fair margin for his cost and profit. The copper firms in this competitive field cannot buy aluminum ingot, manufacture it into conductor, and place it on the market against the competition of this monopoly. Thus the copper-wire and cable industry reaches a point in which it is unable to manufacture American-mined copper and bid in the same field as aluminum. Following are charts showing the relative spread between the copper-wire bar and the finished conductor and the aluminum ingot and the finished product. the finished product

and the finished product.

The use of copper conductor should be demanded. Its cycle from the mines to fabrication employs more men, buys more goods from other American industries, has more freight costs to the American railroads, and is a 100-percent American product, and the little extra cost between the two materials goes into the pockets of American workmen.

Take a glance at the States producing and fabricating copper and the men employed and the pay roll directly connected with it:

Arizona	
ALLOHO	284, 250
Utah	205, 770
Montana	143, 765
Nevada	76, 885
Michigan	46, 800
New Mexico	31, 280
Alaska	23, 485
Colorado	10,835
California	5, 240
Idaho	2, 150
Other States	12,360

(From the U.S. Bureau of Mines.)

Arizona	11,917	\$20, 780, 446. 81
Connecticut	19,040	26, 145, 606, 68
Maryland	2, 576	3, 810, 280. 29
Montana	11,909	22, 789, 278. 23
Michigan		8, 802, 173. 88
New Jersey	7,312	11, 307, 907. 81
Nevada		4, 834, 856. 68
Utah	5, 220	10, 021, 231. 97
Washington	1,330	2, 900, 918. 80

Note.—The total pay roll in the mining, smelting, and fabricating in all the States, including Alaska, in 1937 was \$149,063,612.70. Taxes paid by the copper industry are as follows:

State and local

E

Mining, smelting, and refining	\$8, 759, 984, 50
Fabricating	3, 897, 801, 51
Total	12, 657, 786. 01

Federal:	A. C.
Mining, smelting, and refining	6, 990, 432, 39
Fabricating	3, 423, 192.30

Total . 10 413 624 69

Note.—Freight costs for mining, smelting, and fabricating total \$33,691,909.27.

Material and supplies used in the cycle of mining, smelting, refining, and fabricating (gas, oil, lumber, etc.), \$118,100,039.30.

Miscellaneous items in production and fabrication, \$36,606,255.89.
The total expenditures of 80 percent or more of the producers and fabricators of copper for the year 1937 were approximately \$360,633,fabricators of copper for the year 1937 were approximately \$360,633,-127.86. This was spent among American workmen and the American public. Every organization, in fact, every citizen, should advocate the use of copper on all Government projects. We have no fight with domestic aluminum produced by American workers, but are definitely in the field to support American products and are asking all organizations, both labor and civic, especially where the copper industry predominates, to help us out in this program. A united appeal to the Rural Electrification Administration will bring results. Copper has many advantages over eluminum both in consequent results. Copper has many advantages over aluminum both in conductivity and maintenance. This organization has received communications from rural boards all over the United States in which munications from rural boards all over the United States in which they show a preference and recommend that copper be specified on their particular project. In many cases this is granted even with the difference in price of the two conductors. In other cases the local boards are notified that they must take the lowest bid. If a stand is made for copper, the project is delayed. Boards have sent men to Washington to confer with the Administrator at their own expense. This procedure we believe is unnecessary, for the people subscribing to these projects must ultimately pay the bill, and certainly should have the say as to the material used in these projects, especially if they feel that a certain metal is better suited to their needs, and with the knowledge that the possibilities in the maintenance costs in the upkeep of their transmission lines will be brought down to a minimum.

nance costs in the upkeep of their transmission lines will be brought down to a minimum.

If you are subscribing to an R. E. A. project or contemplating building one or have knowledge of one being planned in your vicinity, make a request that copper be used, look into the amount of produce shipped into the mining and smelting centers to be consumed by the people dependent on this industry. The materials that you produce in your State that are used by the producer and fabricator—this use and consumption is not possible unless the mines, mills, and smelters are operating. By helping to keep them in operation you are selling your own produce and goods. Buy American goods produced by American workmen. Demand of John M. Carmody, the R. E. A. Administrator in Washington, that copper be specified when the local boards request it on all R. E. A. projects.

Wonders of Science—Great Inventions and Progress in the Twentieth Century-Economic and Social Changes-Employment

EXTENSION OF REMARKS

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 4, 1939

RADIO ADDRESS BY HON. MARTIN F. SMITH, OF WASHINGTON, APRIL 3, 1939

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the following radio speech which I delivered over the national network of the Mutual Broadcasting System from station WOL, Washington, D. C., on Monday evening, April 3, 1939:

Friends of the radio audience, I am again indebted to the Mutual network for making it possible for me to address you this evening. This is my second radio discussion in relation to mechanical in-This is my second radio discussion in relation to mechanical invention, scientific discovery, and resultant present and prospective economic and social changes in this country. This is a subject of added interest due to the fact that it is being strongly emphasized by the World's Fair in New York which will present the world of tomorrow and exhibit many of the inventions and scientific discoveries which I am discussing. I desire to refer further to the comprehensive report on technological trends and their social implications presented by the Nettonal Possures Committee of the implications prepared by the National Resources Committee of the United States Government. This report states that there are 50,000 patents a year, and some of them of far-reaching influence. The significance of this fact is more fully appreciated when we consider the unparalleled technological development of the past 39 years and since the beginning of the twentieth century.

There were only a million telephones in use in 1900 and today it is the third largest public utility in the United States with an investment of nearly \$5,000,000,000 and employing hundreds of thousands of citizens. The automobile was just coming into use in 1900 and today there is one automobile to every five persons in the United States. There were no movies in 1900 but today the motionpicture theaters draw every 10 days patrons equivalent to the entire population of the United States. The airplane was not taken seriously in 1900 and today it is becoming a frequent mode of transportation and is a vital factor in warfare. Rayon is a comparatively recent chemical product which has wrought an industrial revolutional control of the co recent chemical product which has wrought an industrial revolution in the cotton and textile industries. The development of the radio, unheraided in 1900, has been equally miraculous. These six major industries—the telephone, automobile, airplane, motion picture, rayon, and the radio—represent vast investments of capital and furnish employment to millions and are responsible for incalculable social influences. The question occurs, Will the second third of the twentieth century witness the development of such great industries based on new inventions as was seen in the first third? The expert evidence available strongly indicates that there will be equally significant inventions during the next phase of our national progress. progress

All scientists are agreed that one such invention is the electron tube, declared to be the greatest invention of the twentieth century. Its most brilliant form is the photoelectric cell, popularly known as the electric eye. This eye sees everything that the human eye can see and more. It is even said to be able to detect certain types of counterfeit money. It will distinguish colors better than human counterfeit money. It will distinguish colors better than human beings can do. When it is joined with another form of the electron tube, the vacuum tube, it becomes able to act on what it sees. Thus it sees a waitress approaching a door with trays in both hands and at once swings the door open for her to pass. Unlike a human being, it does not suffer from fatigue. For instance, in a factory it can watch the tin cans go by on a belt, pick out the defective ones, letting only the good ones go by. This monotonous work can be done without strain for as long hours as the manager wishes. That it will cause unemployment is obvious, but it will also lighten the it will cause unemployment is obvious, but it will also lighten the tasks of the workmen. Indeed, it brings the automatic factory and the automatic man one step closer. It may be used to regulate automobile traffic, to measure the density of smoke, to time horse racing, to read, to perform mathematical calculations. Hardly a month passes without some new use of the photoelectric cell being reported. Indeed, it will require decades to learn the many things this versatile instrument can do.

Will teletypesetters be used to set up the type for an indefinite number of newspapers?

Will the cotton-picking machines be put to practical use?
Will synthetic rubber be placed on the market?
Will sugar be made from sawdust and newsprint from cornstalks?

Will clocks and watches be kept accurate by radio waves? Will wool be made from cellulose (wood pulp) and gasoline from

coal or alcohol?

How many uses will be found for the X-ray, originally designed only for purposes of diagnosis in medicine and dentistry, and since used in therapy, as in the treatment of endocrine glands? It is already being used in industry to detect minute flaws in the interior of steel castings or other solid objects. It is estimated that there are 60 possible uses for the X-ray, most of them as yet manufied.

How about the radio? Radio waves are already used in guiding ships to port, as danger signals when a navigator is in distress, in flying airplanes, in program broadcasting, in point-to-point telephoning, in medicine, and in exterminating parasites. Indeed, it is estimated that the radio possesses 150 different possible uses, its uses being practically unlimited.

An instrument has been perfected which will record a telephone message whether the ring is answered or not; the teletype is another device already in use in some offices. Facsimile transmission can print news bulletins, stock-market quotations, and weather reports; and they may also be had by radio broadcast. The possibilities of television, now about to appear on the market, are unlimited.

Will oil be made from coal?

Will plastics take the place of wood? Will alcohol be used as a motor fuel?

Will more foodstuffs be produced chemically?
What are the social implications and the likely economic influences of these prospective technological and chemical develop-

ments?

How far reaching will be the effects of the mechanical cotton picker? Will the surplus labor of the South flood the northern and western cities? Will the Government plan and act in time once the spread of this invention is certain? The influence on Negroes may be catastrophic. Farm tenancy will be affected. The political system of the Southern States may be greatly altered.

In another field science has gone far on the road to producing patificial climate in all its cenerty which was been effect on the

artificial climate in all its aspects, which may have effects on the distribution of population, upon health, upon production, and upon the transformation of the night into day.

Then again television may become widely distributed, placing theaters into millions of homes and increasing even more the already astounding possibilities of propaganda to be imposed on a none too, critical human race. none too critical human race.

Talking books may come as a boon to the blind, but with revo-lutionary effects upon libraries and which, together with the talk-ing picture and television, may affect radically schools and the educational process.

The variety of alloys gives to metal amazing adaptabilities to

The variety of alloys gives to heral amazing adaptabilities to the purposes of man.

The use of chemistry in the production of new objects in contrast to the use of mechanical fabrication on the basis of power continues to develop with remarkable rapidity, in the production of oil, of woolen-like fibers, of plywood and of substitutes for ordinary wood, and of agencies of destruction.

It is the opinion of these who are familiar with the situation that

of oil, of woolen-like fibers, of plywood and of substitutes for ordinary wood, and of agencies of destruction.

It is the opinion of those who are familiar with the situation that our present industrial structure is inadequate to benefit from recent scientific and mechanical advancement, indeed, that the structure is outmoded and should be largely scrapped. Alfred P. Sloan, Jr., chairman of the board of General Motors, made the statement last December in testifying before a Senate committee that the Nation's "production plant is obsolete" and that the old machinery should be scrapped. He also pointed out that because of greater efficiency of up-to-date machinery, a substantial and general increase in productivity of the entire economic system would inevitably result from plant modernization.

In 1934 the trade journal Power made a study of 454 "better than average" industrial power plants constituting nearly 10 percent of industrial prime mover capacity and found 62 percent of the equipment was over 10 years old, while 25 percent was over 20 years. Some of the older equipment was presumably used as standby plant for emergencies, but the bulk of the older equipment was regarded as obsolete to such an extent that, by replacing it by facilities of the most advanced design, 50 cents could be saved, on the average, out of each dollar spent in the older plants for industrial power. In 1935 the American Machinist made a study of the obsolescence of metal-working equipment, concluding that, because of the rapid improvement in machine design, metal-working equipment was as a rule obsolete if not produced within the last 10 years. It took an inventory of the age of such machinery and found that 65 percent of all the metal-working equipment in the country was over 10 years old and presumably obsolete. The Interstate Commerce Commission records indicate that 61 percent of the steam locomotives in the country were built over 20 years ago. These figures suggest the magnitude of capital obsolescence.

Further light on the ma

Further light on the magnitude of capital obsolescence is thrown on the estimates of the potential machinery requirements of all industry made in 1935 by the Machinery and Allied Products Instindustry made in 1935 by the Machinery and Allied Products Institute. This institute made an extensive survey, sampling the requirements of industries covering over 85 percent of all industry, and on the basis of this survey, estimated that the potential machinery requirements of all industry amounted to over \$18,000,000,000 worth. Of this amount over ten billion consisted of new equipment to replace old equipment which was for the most part obsolete.

Who can begin to evaluate and measure the appring in the

Who can begin to evaluate and measure the upswing in the

Who can begin to evaluate and measure the upswing in the lagging heavy and durable goods industries which would result, and how many millions of men would be employed, directly and indirectly, to carry out the program required to bring our industrial plants up to date?

This leads me to repeat the statement made in concluding my previous radio address, which I will elaborate further in future broadcasts, that the new frontiers provided by science and invention will furnish illimitable opportunities for the employment, prosperity, and happiness of our people. Thank you and good night.

Accomplishments of Works Progress Administration on 200,000 Projects

EXTENSION OF REMARKS

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 4, 1939

Mr. CANNON of Missouri. Mr. Speaker, in view of pending legislation providing for the support of the W. P. A., and the general interest in its program just at this time. I am including as a part of my remarks a summary of physical accomplishments of the W. P. A. just released by the Works Progress Administration.

The report covers work completed from the start of the program in July 1935 through June 30, 1938. According to the report, W. P. A. built or improved highways, roads, and streets equal in aggregate length to 100 separate roads, each reaching across the continent from sea to sea. The new buildings constructed by W. P. A. workers would provide approximately six buildings for each of the 3,000 counties of the United States. The educational buildings repaired or improved would supply practically all of the 25,000 school districts in the Nation with at least one of these improved educational facilities; and yet, out of all these thousands of

miles of roads and thousands of buildings and improvements, which could not have been secured without W. P. A. aid, the recent debate on the work-relief bill could find only one build-

ing to criticize.

Of course, this summary does not include benefits incident to the employment of millions of workers for whom private employment was not to be had; the maintenance of families for whom food, clothing, and shelter could not otherwise have been provided; the preservation of national order and stability which otherwise might have been seriously impaired. It includes only the additions to the permanent wealth of the Nation which will contribute to the economic, educational, and spiritual progress of our people for years to come.

Outstanding among W. P. A.'s contributions to the wealth

of the Nation in these 3 years were:

Seventeen thousand six hundred new public buildings for cities, counties, and States; repairs and improvements to 46,300 and additions to 1,700.

Two hundred and eighty thousand miles of highways, roads, and streets constructed or repaired; 29,100 new bridges and 23,500 repaired or improved.

Twenty-six thousand seven hundred new dams for conservation purposes; 4,100 new storage dams.

Six thousand one hundred miles of new water mains, aqueducts, and distribution lines; 8,900 miles of new storm and sanitary sewers.

One thousand eight hundred new athletic fields, 1,500 improved; 1,100 new parks, 4,200 improved or enlarged; 1,600

new playgrounds, 5,000 improved.

Eight thousand seven hundred miles of new and 5,000 miles of improved ditches for mosquito control; 11,500 miles of other types of ditches excavated or improved, exclusive of roadside drainage in connection with road projects.

Col. C. F. Harrington, Works Progress Administrator, in commenting on the report, said:

For full appraisal of the program it is necessary to consider not only the permanent contributions to communities in the form of physical assets but also the health, educational, cultural, and service programs conducted through W. P. A. nonconstruction projects.

It is just as important in evaluating the program to consider the benefits afforded workers who have come to W. P. A. as heads of destitute families. They have been helped, as only a constructive job could help them, to retain the morale of independent citizens and the work habits necessary for obtaining reemployment in private industry.

Construction projects have made up the bulk of the W. P. A. program from the start and at the present account for more than 80 percent of W. P. A. employment. The largest part of construction has been in highway, road, and street building and repair. Forty-five percent of all W. P. A. workers are engaged on this type

of work.

The work of W. P. A. employees has helped to keep our roads and streets abreast of automobile traffic requirements, to bring rural areas in closer touch with markets, schools, and other vital services, as well as to make necessary improvements in public property of all types which otherwise could not have been provided.

Of the total mileage of highways, roads, and streets constructed or repaired during the 3-year period, about 30,500 miles, or 11 percent, were within the limits of cities and villages, and 23,600 miles, or more than 8 percent of the total. were paved with concrete, brick, block, or bituminous surface.

The bulk of the road work was in rural areas, where stability and draining unpaved roads for year-around use has contributed directly to the evolution of the public-school system by facilitating the consolidation of schools and the closing of hundreds of one-teacher schools each year. The bulk of W. P. A.'s school construction, moreover, has been of buildings with two or more rooms, and much of the school modernization program has made existing buildings of greater community service in the increasingly motorized rural areas.

The public building construction program, second largest in point of employment, accounted for the building of 2,300 new schools, 5,500 recreational buildings, 800 courthouses, city halls, and other administrative buildings, 100 hospitals, and a large number of other types of buildings, including 800 warehouses, 150 firehouses, and 100 airplane hangars.

W. P. A. activities in the interest of public health fell in both construction and service categories. Besides the thousands of miles of sewers and water lines laid or improved, there were constructed 400 pumping stations, 300 sewagetreatment plants, 80 water-purification plants, and 35 garbage incinerators. In rural areas no fewer than 1,144,000 sanitary toilets were erected in the Government's campaign against disease. More than 1,640,000 acres of lowlands and swamp were drained by the excavation of 8,730 miles of mosquito-control ditches, a large percentage of them to destroy the breeding places of malaria-bearing mosquitoes.

Drainage work along roads involved, in addition to bridges, 313,000 new culverts, 22,250 miles of new ditches, 44,250 miles of improved ditches, and more than 1,400 miles of drainage

W. P. A. nonconstruction projects devoted to production of goods for distribution to needy families provided more than 180,000,000 garments and household articles and repairs to 1,300,000 pairs of worn shoes. Services of medical, dental, nursing, and household-assistance nature accounted for 15,000,000 examinations, immunizations, and treatments in families who might otherwise have been denied them, and 7,000,000 visits to 1,000,000 families in need of household assistance.

Community health and welfare has further been advanced by the construction of thousands of recreational facilities ranging from athletic fields and swimming pools to tennis and badminton courts.

Under the extensive W. P. A. conservation activities, thousands of acres of watersheds have been protected for future utility by tree-planting and erosion-control projects. Hundreds of abandoned mines were sealed to prevent stream pollution. Underground fires were isolated to preserve valuable natural resources. Flood-control propects have protected thousands of miles of stream valleys. In addition, W. P. A. recreation and education projects have reached millions of persons.

Projects operated by other Federal agencies and financed by funds transferred from W. P. A., taking their workers from relief rolls, account for additional physical accomplishments not included in this inventory. Still other contributions to the public assets and welfare were made prior to W. P. A. by the Civil Works Administration and the Federal Emergency Relief Administration.

The detailed summary of physical accomplishments is as follows:

Accomplishments of the C. C. C .- Need for Its Continuance

EXTENSION OF REMARKS

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 4, 1939

RADIO ADDRESS BY COL. ROBERT FECHNER

Mr. LEAVY. Mr. Speaker, last night Col. Robert Fechner, Director of the Civilian Conservation Corps, delivered a radio address to the Nation relative to the C. C. C., its history, its accomplishments, its cost, and the need for continuing its activities through future years.

This address of Colonel Fechner is one of the most complete and concise factual statements concerning this great governmental activity, that has won almost the universal applause of Americans everywhere, that I have ever heard. I feel it a privilege to make it available to the membership of Congress and to the general public through the medium of the Congressional Record.

The address follows:

So much of a general nature has been said and written about the Civilian Conservation Corps that I shall limit myself largely to telling in rather definite terms what it is, what it is trying to do, and how it operates. In just 2 more days the Civilian Conservation Corps will celebrate its sixth anniversary.

The present organization exists through authority of an act of Congress approved June 28, 1937. This act was a modification of a precision act approved in 1922.

Congress approved June 28, 1937. This act was a modification of a previous act approved in 1933.

Right now there are 1,500 C. C. C. camps in operation throughout all the States of the Nation and the District of Columbia. Each of these camps, at peak strength, has 200 enrolled men, plus the necessary administrative and technical personnel. This makes a total of 300,000 enrolled men. About 90 percent of these are young men between the ages of 17 and 23, unmarried, citizens of the United States. The other 10 percent are war veterans. All enrollees must be unemployed and in need of employment before they can be selected for service in the corps. selected for service in the corps.

selected for service in the corps.

An enrollee makes a contract with the Government to serve for a period of 6 months. Junior enrollees may serve a total of not to exceed 2 years—through reenrollment. As its part of the contract, the Government agrees to do certain things for the enrollees. Among the things the Government does is to pay a basic cash allowance of \$30 to every enrollee. About 9 percent of these boys are paid a cash allowance of \$36 per month as assistant leaders and about 5½ percent are paid \$45 per month as leaders. Every man with dependents must allot \$22 per month to those dependents. Men who are without dependents must deposit \$22 per month, which will be paid to them upon completion of their terms of enrollment. enrollment.

In addition to the cash allowance, the Government furnishes the enrollees with food, shelter, clothing, transportation, medical care,

and recreational facilities.

and recreational facilities.

To fulfill his part of the contract the enrollee is expected to furnish hard work. These enrollees may be sent to a considerable variety of camps. Among the camps are those engaged on work in the national forests, State forests, private forests, soil-conservation projects, national parks, State parks, reclamation areas, grazing areas, wild-game and wild-fowl refuges, and one or two others. In these camps the boys carry on more than 150 major types of jobs, ranging all the way from the construction of works designed to protect our forests from fire to the building of great dams calculated to avert flood damage. There is a popular misconception that the work of the corps is rather largely confined to the planting of trees. It is true that the enrollees have planted perhaps the greatest number of trees ever planted in this country

during a similar length of time, namely, more than 1,500,000,000; but this is, after all, simply one of the many jobs carried on.

The whole work program of the Civilian Conservation Corps is an attempt to restore and preserve the natural resources of the United States. Of course, this is not the first attempt that has been made to deal with this great problem, but I think the work of the corps has constituted the most successful development in protecting and reclaiming our natural wealth from carelessness and wasteful use. The great majority of the enrollees are, as I have stated, between 17 and 23. Most of this group is aged 21, and younger, and C. C. C. enrollees are from families which are economically the least fortunate.

and younger, and C. C. C. enrollees are from families which are economically the least fortunate.

By and large, these boys who come into the C. C. are young men who have tried to get jobs and failed because employers demand work experience before hiring them. A very high percentage of all enrollees entering the C. C. C. have never had any regular jobs prior to their enrollment in the corps. Through hard work on a great variety of projects all over the Nation the C. C. C. gives these boys work experience. They learn by doing, and, in my opinion, there is no more practical way of learning anything than by constantly doing it.

Some of the special skills which will be developed on the part of these young men will include motor mechanics, bridge construction, masonry work, road building, forestry, soil-conservation practices, clerical work, drafting, surveying—in fact, hundreds of skills that are needed in the workaday world.

Our whole thought in operating the C. C. C. is to take men who need jobs badly, give them the jobs, teach them how to work, receive an adequate return from that work on the part of the Federal Government, and return these boys to private life better qualified to make a living than they were when they entered the corps.

I think the C. C. C. is unique in one of its methods of operating in that it is a vast cooperative organization. The office of the diin that it is a vast cooperative organization. The office of the director functions as a coordinating and policy-making office and has the very close cooperation and fine administrative and technical assistance of the Departments of War, Interior, Agriculture, Labor, and the Veterans' Administration. Each of these cooperating agencies extends many skilled services which contribute very materially to the successful operation of the corps.

I could give you instance after instance of work which has been done by all of these agencies and by the enrollees, but I believe it would be very much more graphic and impressive for you to see for yourself just what the C. C. C. is doing.

Between April 5 and April 12 the camps all over the country are holding open house and every citizen is cordially invited to get in

Between April 5 and April 12 the camps all over the country are holding open house and every citizen is cordially invited to get in touch with a nearby C. C. camp and find out the exact date the camp is holding its open house. You will be welcome at the camp and you will be given the opportunity to see how these boys work, how they play, how they live, and how they learn.

Since the beginning of the corps in April 1933 nearly 2,200,000 enrollees have served in the camps for varying periods of time. I think this has had and will continue to have a very considerable effect upon our national life. For the most part, these enrollees came to the corps discouraged, without skill, often undernourished and in many cases without hope. Life in the C. C. C. is conducive to a radical change, in these thought patterns and in correcting physical shortcomings. The men in the camps follow a regular living schedule. In general, they will arise between 6:30 and 7, have breakfast a half to three-quarters of an hour later, go to work at about 8 o'clock in the morning, and return from work at 4. When they return from work there is often a little personal or camp When they return from work there is often a little personal or camp clean-up work to be done. Then there is free time for sports, reading, or just simple loafing. At about 5:30 or 6 supper is served and when supper is over about 90 percent of the boys participate in the after-hours educational program which is offered in every

camp.

The courses vary all the way from the elimination of illiteracy to technical and academic courses of college difficulty. In these classes young men can make up educational deficiencies if they so desire and they can obtain technical instruction on subjects related to the jobs they are doing and related to the jobs they hope to do. During the past 6 years more than 60,000 young men have been taught to read and write in these after-working hours classes. Classes will generally stop about 9 o'clock and lights will be turned off between 10 and 11.

In addition to the regular hours, which in themselves tend to

off between 10 and 11.

In addition to the regular hours, which in themselves tend to produce healthier men, the enrollees are given good, wholesome food, and plenty of it. I think it is interesting to note that the gross weight of the ration for one man for 1 day is about 5 pounds. Nearly all of the enrollees gain between 10 and 20 pounds during their periods of enrollment. It is, of course, most important that these boys have strong healthy bodies. Equally important, or perhaps more important, is the changed outlook on life which most of these young men acquire. When they get out of the corps they have confidence in themselves because they have learned how to work. They have proved it to themselves, to their superiors, and they know that they can prove it to private employers. Hundreds of thousands of enrollees have done exactly that. The jobs they have obtained vary all the way from filling-station attendant to of thousands of enrollees have done exactly that. The jobs they have obtained vary all the way from filling-station attendant to highly paid technical and professional men in almost every line of human endeavor. I have received many communications from both large and small employers expressing their preference for young men who have served in the C. C. C. because these employers have a reasonable assurance that former C. C. C. enrollees have been taught how to work, how to take care of themselves, how to accept orders, and how to give orders. Right here I may add parenthetically to employers who have not yet hired any former C. C. C. men that, in justice to themselves, they give a job to a former C. C. C. enrollee when the next vacancy exists. As I have said, letters have come to me from all sections of the country, from all types of businesses, both large and small, indicating the desirability of C. C. enrolless as employees. of C. C. c. enrollees as employees.

of C. C. C. enrollees as employees.

As time passes we can do even a better job than we are doing today to assist young men to become self-supporting. I am not, nor have I ever been, a believer in coddling youngsters, and so long as I am director of this organization I intend to do everything I can to help young men to develop self-reliance and pride in their ability to make their own way in the world. I shall insist that C. C. c. enrollees be given every possible educational and training opportunity that can be given without sacrifice to the work program. I do not think it is practical to shorten the workweek of 40 hours to provide additional time for school or any other activity, as I believe young men obtaining their first work experience must learn believe young men obtaining their first work experience must learn at the beginning that they must do an honest day's work and do it every day when they are employed if they are to be worth their salt.

There is no doubt but that the five cooperating departments and agencies—War. Interior, Agriculture, Labor, and the Veterans' Administration—have done a splendid job. The Labor Department, with little expense, selects enrollees through State financed selection organizations. The Veterans' Administration selects the warveteran enrollees. State selection officials have put forth remarkable efforts to choose men who will get the most out of the corps and who will put the most into it. The War Department is justly proud in the record it has made in the administration of the camps. The Department of the Interior and the Department of Agriculture The Department of the Interior and the Department of Agriculture deserve great credit for the fine technical direction that they have given to the vast number of work projects. The C. C. C. offers en-rollees leadership and technical direction of high quality. Experi-enced Reserve officers—men of fine character—are in charge of the camps to provide good leadership for the enrollees, better camp morale, better standards, and better living conditions. Carefully trained and experienced work superintendents, technicians, and foremen are employed to supervise worth-while and carefully planned work programs and to insure a reasonable work output and the better job training of enrollees.

Seasoned and able camp educational advisers are employed to insure that camp educational programs are practical in addition to being well organized. We have been fortunate in attracting good

camp officials, but we want and shall continually seek better ones.

The Civilian Conservation Corps has also felt a great responsibility for the bodily and spiritual needs of the enrollees. A physician is in attendance at every camp every day. As one example of public-health work I may state that the venereal-disease rate in the C. C. C. is about one-half the rate experienced by the Regular Army—and the Army rate has been dropping rapidly during the past few years. Improved immunization or treatments for spotted fever, meningitis, pneumonia, and malaria have also been especially worked out for initial use with the C. C. C. Some of these developments appear to hold great promise.

I think that one very important, though difficult to measure, aspect of the C. C. C. has been the stress we have regularly placed on religious guidance. We have employed full-time chaplains of all denominations to furnish this guidance—hundreds of others have been given part-time employment, and thousands of priests, ministers, and rabbis have donated their fine services to make available adequate religious training for the young men in the control

able adequate religious training for the young men in the camps. I say in all reverence that only the Almighty can measure the effect of the splendid work which these spiritual leaders have been able to accomplish with young men whose need for practical spiritual aid has been very great.

The beginning of the Civilian Conservation Corps marked the first time this Nation ever really got around to doing something practical and successful about its complex conservation problems. Prior to the Civilian Conservation Corps, many men had struggled to make us aware that we could not long continue to break Nature's laws without paying a penalty.

Early conservationists were generally regarded as a species of rather harmless cranks. As time went along there was more and more talk about conservation and citizens began to realize that there were some pretty definite limits to our natural resources. But, prior to the inauguration of the Civilian Conservation Corps, conservation of resources was allied with the weather, in that there was plenty of talk about both and not much done about either.

Over a long period of years a large, but unknown, number of men had thoughtlessly and wastefully ripped our forests from the face of the earth and had denuded vast areas of protective vegetation, only to move on and repeat the cycle of destruction. Such actions over a long period of years needed more than just talk and more than just good plans to repair the damage. Manpower, enthusiastic manpower, and plenty of it, was needed—and that is what the Civilian Conservation Corps furnished.

Civilian Conservation Corps furnished.

If a disaster can ever be said to produce a blessing, I think the Civilian Conservation Corps may qualify as such a blessing because this organization, born of a depression, took men who needed jobs desperately and put them to work at jobs which desperately needed doing. During the past 6 years an average of approximately 300,000 men—largely young men—who were unwanted elsewhere have launched this Nation on a program of good resources management which pays immediate and future dividends to every citizen through the labors of these young men. A good start has been made toward correcting gigantic losses which have been going on for 150 years.

I say now—as I have said before—and as I will say again—that the Civilian Conservation Corps should be a permanent part of our American Government. Never, prior to the Civilian Conservation Corps, did we give real attention to the preservation and increase of our natural resources.

The hegipping of the Civilian Conservation Company of the Civilian Conservation and increase of our natural resources.

The beginning of the Civilian Conservation Corps changed this picture and many valuable jobs began to be done which were calculated to restore and preserve resources. However, it might well happen that if the Civilian Conservation Corps were discontinued we would again lapse into a partial coma with regard to these

resources.

That we cannot afford to do, because the prime, basic wealth of this Nation is in great part represented by the very resources the Civilian Conservation Corps is conserving and increasing. Our treasures of forests, agricultural lands, grazing areas, minerals, waters, and recreation areas are the foundations upon which our national and international life and well-being exist. The past 6 years of experience have proved conclusively that these resources are conclusively and effectively concerned through the efforts of the are carefully and effectively conserved through the efforts of the

Civilian Conservation Corps.

Yet I acknowledge frankly that only a worth-while beginning has been made. The job is a continuing one. In fact, it is never-ending. We must always be alert to guard and increase the re-sources upon which our very existence depends. I think it entirely fitting and proper that the organization which began the first mass attack against heedless destruction of resources should carry on the battle. While much has been done of which we are proud, there are many ways in which the Civilian Conservation Corps can become a more useful agency to the Nation-and we are steadily acquiring new skills and improving methods in order to do a better job. God willing, the Civilian Conservation Corps will never be content to admit that it has done or is doing a perfect job.

content to admit that it has done or is doing a perfect job.

Those who have cooperated in this vast conservation program have been unanimous in saying that a good craftsmanlike job has been done, and they are all in agreement that the Civilian Conservation Corps method is a tried and thoroughly practical method to use in attacking the great natural-resources problems which lie before us. Therefore, I again express the hope that Congress will see fit to make the corps a permanent agency of the Federal Government.

Let me tell briefly of jobs already completed, as an indication of the usefulness with which the corps has operated and also as an indication of the tremendous amount of work remaining to be done in the future. I have already mentioned the 1500 000 trees

indication of the tremendous amount of work remaining to be done
in the future. I have already mentioned the 1,500,000,000 trees
planted. Forest stands have been improved on more than 3,100,000
acres. Protection has been afforded to our forest reserves by campaigns against tree and insect diseases over an area embracing
17,200,000 acres. Forest-fire protection systems have been greatly
strengthened by the construction of over 98,000 miles of truck trails
and miles reads the huilding of 86,000 miles of telephone lines. and minor roads, the building of 66,000 miles of telephone lines, the eradication of fire hazards along 66,000 miles of roads and trails, the erection of 3,500 fire and lookout houses and towers, and the construction of 41,000 bridges.

A vast but undetermined amount of damage has been averted by

enrollees living in the camps in forest areas because these enrollees could quickly get to and fight forest fires. During the past 6 years more than 8,000,000 man-days have been spent on forest-fire fight-

more than 8,000,000 man-days have been spent on forest-life lighting duty and on fire-prevention and presuppression work.

We have constructed well over 4,100,000 check dams to control the ravages of erosion and planted close to 200,000,000 quick-growing types of trees on agricultural lands to reduce erosion.

Recreation opportunities in parks over the country have been greatly improved and expanded.

For the first time in a great number of years our valuable wild-

For the first time in a great number of years our valuable wild-life resources seem to be showing an increase instead of a decrease

life resources seem to be showing an increase instead of a decrease due to the efforts of the C. C. C.

At the present time work lies before the C. C. C. which, very conservatively estimated, will take 35 to 50 years in the doing with a group of men as large as the present organization. Specifically the tasks involved are as follows:

Protective, cultural, and improvement work on more than 176,000,000 acres of national forest land, 11,000,000 acres of State forest land, and 300,000,000 acres of private forest land. In the erosion-control program about 350,000,000 acres require some type of conservation treatment to prevent our rich, productive soil from being destroyed forever. About 84,000,000 acres of our best agricultural land are in need of drainage rehabilitation and there are nine and one-half million acres in 238 wild-fowl and game refuges upon which work must be done. On various parks, reclamation districts, which work must be done. On various parks, reclamation districts, grazing districts, Indian lands, and certain other special types of lands an additional 222,000,000 acres of land are in need of some sort of conservation treatment.

This makes a total of close to 1,152,500,000 acres on which there

is very real need for conservation work of the types heretofore successfully prosecuted by the C. C. C.

Although I have said 35 to 50 years of work lie ahead, a considerable group of the best informed conservation men in the country say that this estimate is very conservative and emphasize the important fact that conservation is a never-ending process.

The total cost of the civilian Conservation conservation dura-

The total cost of the Civilian Conservation Corps operation during the past 6 years has been \$2,180,000,000. Entirely aside from any social accomplishments which this large expenditure has produced, I believe that the increased value of our resources due to Civilian Conservation Corps labors will more than offset the cost of the operation. of the operation.

Then there is another dollars-and-cents consideration which

should be mentioned. Nearly anyone will admit the social desirability of turning out men who are better equipped to take care of

themselves and their dependents. This worth-while objective is accomplished by the Civilian Conservation Corps. From a very cold accomplished by the Civilian Conservation Corps. From a very cold dollars-and-cents standpoint such an accomplishment would seem to be a good investment. This follows because the Civilian Conservation Corps enrollee who goes into private industry and supports himself (and contributes to the support of others) automatically becomes a source from which national wealth is created rather than an object upon which tax dollars are expended. If the Civilian Conservation Corps has been able to increase the employability of its enrollees even slightly, which will give to them a foundation for slightly increased earnings in private industry, it may well be that the increased national wealth to be derived from this over a period of years will far more than offset the entire cost of running the corps.

of years will far more than onset the entire cost of raining corps.

So it is that the C. C. C. attacks a dual problem existing in this Nation today: First, the problem of unemployment, particularly among younger men; and, second, the problem of conserving our natural resources. Both problems are of great importance, but I think that it is not only my own, but also a typically American attitude, to regard the training of 2,000,000 young men as of even greater importance than the material benefits to our resources. And these young men, while helping themselves and earning their own living, have contributed close to \$500,000,000 of their earnings to assist in supporting their dependent families.

to assist in supporting their dependent families.

Regarding the C. C. from another angle, I feel that it is a Regarding the C. C. C. from another angle, I feel that it is a splendid democratic institution which teaches our young men practical and workable lessons in democracy. In view of world political developments during the past few years, I feel that an organization of the type of the C. C. C. which does demonstrate the usefulness of our democratic processes as opposed to those found in the dictator countries is an extremely valuable institution for this country to preserve and make permanent.

National Labor Relations Act

EXTENSION OF REMARKS OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 4, 1939

EDITORIAL FROM COLLIER'S OF APRIL 1, 1939

Mr. ANDERSON of Missouri. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD and include therein an editorial from Collier's magazine pertaining to the National Labor Relations Act.

The editorial is as follows:

[From Collier's of April 1, 1939] LOPSIDED LAW

Everybody except John L. Lewis and his C. I. O. enthusiasts seem to have become anxious some time ago to amend the Wagner Labor Relations Act.

The procapital amendments have been offered to Congress by Senator Burke, of Nebraska; the A. F. L. amendments by Senator Walsh, of Massachusetts. By the time this appears in print the expected middle-of-the-road amendments may have been offered by

Senator Wagner, of New York, himself, author of the original act.

So the question naturally comes up like a boil: Why the reluctance on the part of John L. Lewis and his C. I. O. cohorts to see so

much as a jot or a tittle in the Wagner Act changed?
We think the future of the country, for better or for worse, is pretty intimately bound up with the future of the Wagner Act.
We believe we have an answer to that question about the hostility of Mr. Lewis and his friends to any change in the act.

The Wagner Act itself gags employers to this extent: They may not express an opinion to their employees, even if asked, on the merits or otherwise of any labor organization their employees may be thinking of joining. That seems to us a plain denial of the constitutional guaranty of free speech.

The National Labor Relations Board, created by the Wagner Act, has interpreted the act to hold that when two or more labor organirations are trying to unionize the workers in one shop, the employer may not ask the N. L. R. B. to hold an election to settle the dispute. Only the workers can ask for such an election—or the labor leaders trying to unionize the workers. Senator Wagner thought his law granted equal rights to both sides to ask for these elections, but the N. L. R. B. in its wisdom thinks otherwise, and the N. L. R. B. administers the act.

These two aspects of the Wagner Act would seem to reveal why Mr. Lewis and the more eager hot shots in his C. I. O. are so fond of the Wagner Act as is and have fought any proposed changes in it.

Simply the dice are loaded in their favor.

The gag on free speech for employers enables labor organizers to agitate anywhere in the country, with employers forbidden to open their traps to state their side of the case. The provision re-

garding elections, as interpreted by the N. L. R. B., throws the door open to jurisdictional strikes and at the same time ties the employer's hands.

A new militant organization such as the C. I. O. naturally finds

its best fishing in troubled waters.

The Wagner Act as now written and interpreted lets the C. I. O. stir up previously calm waters anywhere it pleases and keep them troubled practically as long as it wants to fish in them.

That is fine for Mr. Lewis and his friends. They are smart to try to fend off any changes in this set-up.

But it is not so fine for several other groups of people, all of whom are supposed to have some rights too, namely, the employers, the heavy non-C. I. O. majority of working people, and the general public that consumes the products of labor and capital.

These groups have been taking it on the chin, nose, breadbasket,

and elsewhere ever since the Wagner Act took effect. There have been waves of sit-down strikes and jurisdictional strikes. Now there seems to be starting a wave of split-ups and split-offs inside single labor organizations, as in the C. I. O.'s United Auto Workers of America

These things cut down production and boost costs, thereby cut-ting into consumption of what is produced, thereby in turn cutting down the number of jobs available—the well-known downward

spiral.

The whole trouble goes back, we believe, to the fact that the Wagner Act is or has been made the hammer and anvil for the C. I. O.'s exclusive use in forging its destiny. The Wagner Act should be a law under which bosses and workers, with the friendly which posses and workers, with the Iriendily help of the Government as umpire, could iron out their differences with the least possible friction, cost, loss of time, loss of temper, and loss to the consuming public.

We believe that was the kind of law Senator Wagner thought he was putting together. Its basic principle—legal recognition and assurance of labor's right to collective bargaining—is in tune with these times, and should on no account, we believe he amended or

these times, and should on no account, we believe, be amended or

But we think that experience has now shown that the Wagner Act needs to be restored to what it started out to be. And one job for this Congress seems to us to be to rip out that overzealous ban on freedom of speech for the employer, and to clear up all doubt about the employers' as well as the workers' or organizers' right to ask the N. L. R. B. for a plant election in case of a battle to sign up the boys and girls with this union or that.

The American people have an ancient way of smacking down special groups that get too grabby and spoil babyish. That can happen to labor groups, too. It already has happened in Oregon, whose new strait-jacket State labor law was recently described in

Collier's.

Looked at calmly, the Oregon law is a bad one; it goes too far. For all that, a plurality of Oregon's voters, annoyed by the super-dizzy didos of various Pacific Northwest labor leaders and labor units, batted that law onto Oregon's statute books. Which ought to be a warning, you would think, to laborites who are trying to make a fetish of the Wagner Act as now written. The fetish may turn on them some day, surprise-surprise, and kick their teeth down their throats.

Aged Relief

EXTENSION OF REMARKS

HON. WILLIAM M. COLMER OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 5, 1939

STATEMENT BY HON. WILLIAM M. COLMER, OF MISSISSIPPI, BEFORE THE WAYS AND MEANS COMMITTEE

Mr. COLMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith a statement which I made a few days ago before the Ways and Means Committee of the House of Representatives. The Committee on Ways and Means is considering the question of amending the Social Security Act, and, Mr. Speaker, I know of no more just amendment that could be enacted than that of granting the full \$15 by the Federal Government, which the Government is now authorized to pay to all needy aged who qualify, without the necessity of the States matching it dollar for

In the event that the Ways and Means Committee does not see fit to recognize this principle and to recommend to the House the principle of the legislation embodied in my bill-H. R. 1814—it is my purpose to offer an amendment to that effect on the floor of the House at the first opportunity when the bill is considered on the floor.

My statement follows:

Mr. Chairman and gentlemen of the committee, I am grateful to you for this opportunity to appear before you in behalf of my bill, H. R. 1814, which seeks to amend the present Social Security Act so as to recognize the problem of pensions for the needy aged as a national one, at least to the extent of a pension of \$15. The purpose of the bill is simply to authorize the Federal payment of the full \$15 as now provided by existing statutes to those needy aged who come within the purview of the present act without the necessity of State contribution.

I hope that I may be pardoned if I refer to the fact that I have been advocating this proposition from the very inception of this legislation. In fact, Mr. Chairman, I made a statement to this committee on the 8th of February 1935, when the committee was considering the original legislation, requesting that this principle

be recognized.

I called the attention of this committee to the fact that the less wealthy States, such as my own State of Mississippi, could not match dollar for dollar the money which was to be appropriated by the Federal Government for the needy aged. At that time I pointed out that the total revenue of receipts for the general fund in Mississippi for the year 1934 was only \$14,000,000, and that assuming that 75 percent of the aged over 65 years to become eligible for such a pension and Mississippi were to attempt to match the \$15 contributed by the Federal Government it would cost the State \$15 contributed by the Federal Government it would cost the State \$10,500,000 per annum. I endeavored to impress most earnestly upon the committee my views to the effect that the care for the needy aged and the crippled children should be recognized as a

needy aged and the crippied children should be recognized as a national problem.

After this distinguished committee, in its wisdom, had seen fit not to incorporate such an amendment as I offered for consideration into the legislation, I offered an amendment to the bill when it was under consideration in the House which would have at least

partly met the situation.

After the committee had not seen fit to adopt this policy, which I advocated, I offered an amendment on the floor of the House which would have provided for an 80-20 division. In other words, the State would put up \$1 for every \$4 that the Federal Government appropriated. Under this plan, for every dollar the State was able to put up, the Federal Government would match it with \$4 up to the \$15 maximum provided in the bill.

the \$15 maximum provided in the bill.

Having failed to incorporate this policy in the legislation on the floor, at the next session of Congress I introduced a bill on the 1st day of February 1937—H. R. 4068—which was referred to your committee, and which undertook to amend the law for the same purpose, namely, of granting the full \$15 per month, regardless of State contribution. Not having gotten any action on this legislation, I am before your body today in the interest of H. R. 1814, which I introduced at the beginning of the Seventy-sixth Congress. Having failed in obtaining approval of this legislation, I arranged

Having failed in obtaining approval of this legislation, I arranged a conference with the President sometime ago and sought his approval of this legislation, pointing out to him the justice and

That our position was well taken with respect to these less wealthy States has been demonstrated in the 3 years that the Social Security Act has been in operation. While some of the more wealthy States have been able to match the Federal contribution, the less wealthy States have not. For instance, the average pension per recipient paid to the aged in California for the fiscal year 1937–38 was \$31.46; Connecticut, \$26.41; Massachusetts, \$27.07; New York, \$22.16; while, on the other hand, Georgia paid \$11.30; South Carolina paid \$10.94; Arkansas paid \$9.08; South Dakota paid \$9.26; and Mississippi paid

These figures, of course, represent the total of the State and Federal contribution. This means that for the aged in California the Federal Government is contributing \$15 per month, while for the same class of aged the Federal Government is contributing \$4.54 in Arkansas. In other words, an aged person of 65 years under the present law who lives in Arkansas receives only \$4.54 at the hands of the Federal Government, while that citizen, if he moves to California, would receive \$15 from the Federal Government, plus whatever the State contributed.

I realize Mr. Chairman, that there is an element to be considered.

ment, plus whatever the State contributed.

I realize, Mr. Chairman, that there is an element to be considered of the difference in the cost of living, generally speaking. However, I am sure that the gentlemen on the committee from California would not be willing to admit that there was any such difference in the cost of living as compared with Arkansas. In fact, I am not so sure that, exclusive of the larger cities, the cost of living in California is not as cheap as it is in Arkansas.

I may say to the committee in passing that I realize the stupendous task with which it is confronted in working out a program that would be satisfactory to the entire country. I am

pendous task with which it is confronted in working out a program that would be satisfactory to the entire country. I am also not unfamiliar with the many schemes and propositions, some of them fanciful in their aspects, which are being urged upon the committee. But I am appearing before you in the interest of a plan which I think is not only practical but one that is just and fair. Like most Members who are advocating plans for old-age assistance, I am desirous of seeing the needy aged cared for to the full, practical limit of the Government. I should like very much to see a pension of \$60 per month paid to these defor to the full, practical limit of the Government. I should like very much to see a pension of \$60 per month paid to these deserving old people, but I realize, as does this committee, that the question of pensions for the aged is a comparatively new field of legislative endeavor, and I realize also that it must, of necessity, progress more slowly than many of us would like to see it progress. I realize that there are limitations upon the extent to which we can go in this very highly desirous and coveted field. And realizing as I do that there is no chance of any such utopian legislation being enacted into law, I am appearing before you for something that is within reason and that is practical and

attainable

Moreover, Mr. Chairman, I might call the attention of the committee to the fact that the Senate Committee on Unemployment and Relief recognized the justice of the cause which I am advocating in its report, No. 2, part 1, submitted by Senator Byrensa on January 14, 1939. In there it is pointed out, after commenting upon the disparity in the pensions granted in the various States

"In certain of the States the grant is so inadequate as to be of little value.

And, again:
"It is recommended that the contribution of the United States for public assistance to the aged, the blind, and dependent children be 50 percent of the amount paid, but that in those States where the average per capita income is less than the average per capita income of the United States, the Federal contribution be increased income of the United States, the Federal contribution be increased in proportion to such differences, and that a provision of the grant should be the guaranty of certain minimum payments, as follows: To the aged, \$15; to the blind, \$15; to the dependent children, \$20." Again may I call your attention to the fact that on January 16, 1939, the President of the United States, the pioneer in this most humane legislation, recognized the principle which I am now advocating. In commenting upon this question in his message, he said:

"One way is to begin the payment of monthly old-age insurance benefits sooner, and to liberalize the benefits to be paid in the early years. The other way is to make proportionately larger Federal grants-in-aid to those States with limited fiscal capacities, so that they may provide more adequate assistance to those in need."

The Social Security Board, in its report to the President on December 30, 1938, which report was made a part of the President's message to which I have just referred, also recognized the justice of this principle which we are advocating when it said to the

President:

"The Board believes that it is essential to change the system of uniform percentage grants to a system whereby the per-centage of the total cost in each State met through a Federal grant

would vary in accordance with the relative economic capacity of the State."

Mr. Chairman and members of the committee, there is no more pressing problem or live issue in the United States today than the pressing problem or live issue in the United States today than the question of old-age pensions, in my opinion. I realize that there are numerous difficulties to this problem. I realize the impossibility of ever attaining some of the fanciful schemes which have been suggested as a monthly pension to the aged. I am also not oblivious of the fact that there are those in this country who are inhuman enough to prey upon these old people in a most inhumane way in an effort to lead them to believe that there is a pot of gold in reality at the end of the ethereal rainbow, at the same time preying upon them like wolves of old them like wolves of old.

I am genuinely and sincerely interested in seeing the needy aged of my section receive something like an adequate old-age pension. I wish that your time would permit my dwelling upon it more at length, but I most earnestly and conscientiously urge this practical, if partial, solution of the problem insofar as the aged needy of the less wealthy States are concerned. Certainly, Mr. Chairman, I realize that if I cannot obtain for them at the hands of this Concress this practical legislation. I cannot obtain an impreciated gress this practical legislation, I cannot obtain an impractical

amount.

Let me say in conclusion that I hope that you will see fit, in your wisdom, to amend the present law by adopting H. R. 1814, which is an amendment to the existing statute. However, I have no pride of opinion about this. If the committee

cannot see fit to recommend this, then I wish that you would include in the bill the other provision of an 80-20 contribution, 80 percent to be contributed by the Federal Government up to \$15, to be matched by 20 percent by State contribution. If I can see something like this written into the law I believe that the aged of my section of the country, as well as in sections similarly affected, will be largely benefited and deeply grateful.

I thank you, Mr. Chairman.

Mr. Reed. I didn't get the sentence just before your last one.
Mr. Reed. I didn't get the sentence just before your last one.
Mr. Colmer. We are asking, first, that you incorporate our latest bill on this subject, H. R. 1814, into whatever legislation is reported.
That, of course, provides for the full \$15 contribution, regardless of the State's ability to match dollar for dollar. Failing in that, we ask that you meet us on the 80-20 proposition.
Mr. Reed. Will you just explain that?
Mr. Colmer. That is the whole thing in a nutshell, what we are driving at here. We are asking that the Federal Government con-

driving at here. We are asking that the Federal Government contribute the full \$15 regardless of the ability of the States to

Mr. Reed. That was Dr. Epstein's position also.
Mr. Colmer. I am not sure about that.
Mr. Cooper. As I recall, Dr. Epstein's suggestion was that the average of the last 3 months be taken as their proportionate share.
Mr. Reed. That is right, and that the Government be committed to \$15.

Mr. Colmer. What we want to accomplish by this resolution is to have the Federal Government go to the full extent of paying

\$15, regardless of where the aged needy reside and regardless of State contribution. Failing in that, we ask that you make it more easy than it is now for these States to meet it by putting it on an 80-20 basis. In other words, if the State would put up \$1, the Government would put up \$4—up to the limit of the \$15 Federal contribution

I think there is justice in this cause, Mr. Chairman and members of the committee, and I ask your earnest consideration of it; and

I thank the committee.

I thank the committee.

Mr. DISNEY. You wouldn't have it go so far, Congressman, as to require the Federal Government in every State to contribute \$15 without a State contribution of any kind?

Mr. COLMER. Yes, sir; the bill provides for that.

Mr. DISNEY. In other words, a State might accept the \$15 and not do anything on her own account?

Mr. COLMER. Quite so. Of course, it would be to the interest of the States to match as much of it as they could. If in Mississippi, for instance, the Federal Government contributed the full \$15 to match the State's \$3, the recipient, who was entitled to it under the provisions of the legislation, would get \$18.

Mr. DISNEY. You will agree the State ought to accept some responsibility?

sibility?
Mr. Colmer. I agree that the State should accept responsibility

Mr. Colmer. I agree that the State should accept responsibility up to its ability to do so.

Mr. Disney. But a good many States are claiming that they can't do a thing these days, and they want the Federal Government to do it all. That is getting to be too much of a habit, it seems to me.

Mr. Colmer. I think we are going a long way along those lines; yes. But you have propositions here, Mr. Disney, where they are asking for \$200, and \$60, and \$100. I am asking for a small consideration compared to that.

Mr. Disney. I am directing my inquiry to the responsibility that the States should accept.

Mr. Colmer. I think the States should accept responsibility up to their economic ability to do so, and I think that most of them are doing that under the pressure that is being brought upon them. But may I point out to my friend that the State of Mississippi, using that each as an illustrative collaboration. using that again as an illustration, only had \$14,000,000 collected in 1937 for general revenue purposes; that if the State of Mississippi were to match dollar for dollar up to \$15, it would cost the State something like half that amount to match it, and they couldn't

What we want here is some relief, and we want it as far as it will go. If we can get the full \$15, we would like to have it; if we can't get that, we would like to have an 80-20 proposition.

Mr. CROWTHER. In other words, you would have this act administered as if there were not 48 States but just one big State?

Mr. COLMER. No, sir; under this bill that would not apply, Doctor. The States would have to come under the provisions of this legislation. lation.

Mr. Crowther. I realize that, but the general policy advocated by you, of the Government putting up \$15 anyway, no matter what proportion a State could afford to put up, would be just like treating the whole United States as one body, with no demarcation as to State lines.

Mr. Colmer. Yes; I think that is a fair statement as to these

pensions.

Mr. Crowther. Do you think the Federal Government ought to be very liberal with those States that have limited economic resources—less-wealthy States, you have described them?

Mr. Colmer. Yes, sir; I certainly do on the question of pensions.

Mr. Crowther. Don't you think the Government has been pretty liberal to Mississippi Appears and some of the other States?

liberal to Mississippi, Arkansas, and some of the other States?

Mr. Colmer. Yes, sir; but I would say not as liberal as it has been to some of the more wealthy States.

Mr. CROWTHER. I mean in proportion to the revenue derived from the States.

Mr. Colmer. Well, that is a question of accounting, sir. I doubt if that is true.

Mr. CROWTHER. When I started out to study this social-security legislation, when we first had a bill, I thought the States would have to match Federal contributions. That is the way I would like to see it. I think a lot of us had that idea for some considerable time. That is not the modus operandi, but I would like to see, if the Government supplies \$15, the States compelled to match it.

Mr. COLMER. So would I, sir, if the State were capable of matching it.

Mr. CROWTHER. It has been suggested that the Federal contribu-Mr. CROWTHER. It has been suggested that the rederal contribution be raised from \$15 to \$20 or \$25, and the idea has been generally disseminated, among the people who do not study it, that that would allow a pension of \$50. Well, it wouldn't. Apparently only one State—California—is using the \$15. I think that is the only State in the Union that is using the \$15 now.

Mr. COLMER. I think that is true.

Mr. CROWTHER. So that to raise the Federal contribution will be a mere gesture.

Mr. Colmer. I am in accord with the gentleman's views on that. Mr. McCormack. We thank you for your appearance and statement to the committee, Mr. Colmer.

Mr. College. Thank you, Mr. Chairman and members of the committee, for your most courteous hearing.

Department of Public Works

EXTENSION OF REMARKS

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1939

LETTER FROM A CONSTITUENT

Mr. SHANLEY. Mr. Speaker and my colleagues, there has been such marked interest and intelligent opposition to S. 1265 that I am taking the liberty of including a very splendid letter from one of my constituents, who is director of the Catholic Social Service Bureau of New Haven, Conn., and one of the foremost authorities on underprivileged aid and assistance. The letter goes to the heart of the danger of the Byrnes bill and presents in a few words the most intelligent dissection of the bill that I have received. The letter is as follows:

March 25, 1939.

Hon. James A. Shanley,

House of Representatives, Washington, D. C.

Dear Mr. Shanley: I beg to call to your attention a feeling that is quite general among many of us who have to do with youth—that Senate bill 1265, introduced by Senator Byrnes, establishing a Department of Public Works, and including in said department the National Youth Administration, does not make for the welfare

the National Youth Administration, does not make for the welfare of our young people.

Furthermore the elimination of the aid our schools and colleges are receiving through the program at the present time would work a great handicap on all youth taking advantage of the same.

Under present conditions the current type of work program which the N. Y. A. has been making available emphasizes jobs that offer training facilities; and, relating the same to future work, has been able to secure the collaboration of the unions, as well as employers, and seems to be the best answer for this group at this time.

As far as our own State is concerned, you know that Senate bill 1265, for the distribution of funds within the States, would not be

Our people believe that we have a sound and constructive program in the current N. Y. A. We are anxious to see it continued, and we urge you to give careful consideration to the implications of Senate bill 1265 if you would assist our adolescents.

Sincerely yours,

WILLIAM J. DALY, Director.

The Air Mail—Canada and the British Empire

EXTENSION OF REMARKS

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1939

Mr. PLUMLEY. Mr. Speaker, on last Saturday, April 1, I flew from Newark, N. J., with Mayor LaGuardia, to Burlington. Vt., on the occasion of the inauguration of air service between Vermont's Queen City and the world's largest metropolis, when the Canadian Colonial Airways passenger and air mail plane made its first regularly scheduled stop at Burlington's municipal airport en route from New York to Montreal.

To me the occasion was most significant. I took occasion to say:

In the fact that the representative of the mayor of the Dominion of Canada's greatest city, the largest inland port on this continent, is here, as is also the mayor of the metropolis of the world, representatives of their two countries, to celebrate this occasion, is found the suggestion that in the expedition of communication, in the enlargement of transportation facilities, and in the increased co-operation between the people of these two countries lies the guar-

LXXXIV-App-

anty of the safety, security, and perpetuity of free government and of civilization itself on this hemisphere. The warning of the President this morning should put us all on notice that this Government is fearful that Hitler will not stop with Europe but will carry his program of national aggrandizement to other continents the Far East, Near East, Africa, and the Americas—extending his depredations and undertaking to attain world domination and to bring under his heel and into Germany's realm many subject races.

Whether we like it or not, and whether we shall have to bear the burden or not, it is inescapably true that in one way or another the totalitarian states of Europe and the East will continue to undertake to impose their form and system of government on us, directly or indirectly, and on the countries of Central and South America.

When it comes to a show-down, I know that there will be but one voice heard from this continent, if not from choice, then from necessity, for self-preservation is the first law of nature. We shall unite to defend our mutual borders. Beyond the dead line which

necessity, for self-preservation is the first law of nature. We shall unite to defend our mutual borders. Beyond the dead line which marks the boundary of our continental domains they shall not pass. To love liberty passively is not enough. Even to safeguard it zealously from encroachment is not enough. Men will keep it only so long as they have the courage and the capacity to accept the responsibilities of self-government, to solve their problems as free men through voluntary cooperation for the common good. The old slogan is still and will continue to be true, "United we stand; divided we fall."

I have referred to the foregoing in order to call your attention to the fact that while we were meeting at Burlington the Montreal Daily Herald was being distributed in Montreal containing the following editorial:

CANADA AND THE BRITISH EMPIRE

This has been a week of definitive announcements.
Yesterday in the British House of Commons Prime Minister
Chamberlain outlined definitely, without hedging or leaving a way
for convenient withdrawal, the things Britain would fight for and told how she would fight.

He said Britain would fight for Poland, not for the Polish Corridor, but for the main body of Poland as it stands. He said that in either case Britain would send armed aid and that France would do like-

A day before in the Canadian House of Commons Prime Minister King outlined very clearly and definitely what Canada would do in a similar emergency.

He said clearly and definitely that Canada under his regime would

not conscript men for service overseas, that Canada would not declare war without the consent of Parliament; that Canada would not blindly and in advance commit herself to any hard and fast stand on international affairs. He said also:

"The idea that every 20 years this country should automatically and as a matter of course take part in a war overseas for democracy or self-determination of other small nations, that a country which has all it can do to run itself should feel called upon to save, periodically, a continent that cannot run itself, and to these ends risk the lives of its people, risk bankruptcy and political disunion, seems to many a nightmare and sheer madness."

So there we have two statements very opposite in tone. Contrasting statements, you might say, but we prefer to regard them as complementary.

as complementary.

Consider the very different positions of the two Prime Ministers. Great Britain is no longer an island, has not been since war took wings. She has a part, and a very large and necessary part, to play in the affairs of the European Continent. She has a watching brief for some 40,000,000 people who are shareholders in the future of that continent, and she has definite commitments to France and other powers.

Obviously, it is to her interest, and to her very urgent and vital interest, to keep Europe from complete anarchy whether that anarchy calls itself Fascist imperialism or takes some other form.

If Britain fails to keep the peace or to win her battles for order, the obvious alternative, already recognized and advocated by many distinguished public men in the old country, is the reorientation of the British Empire, with a gradual or even a swift transfer of the mass of British interests, institutions, and men to this Dominion of Canada.

This is not a mere dream. It is something which may have to be done, and the very fact of it imposes a certain responsibility and duty on Canadians.

That duty is not to send troops rushing overseas at the drop of a hat or the beat of a drum, not to make threatening gestures to other powers, but to keep Canada intact, to protect it from broad or subtle attacks on its institutions and its freedom, from attacks from within and without.

In other words, if Canada is some day to be the center of empire

we must keep it clean and get it ready.

That is our largest duty. By our peace and order, by our good relations with our neighbor (which could swallow us overnight, but won't), and by our great transport systems which were planned for military purposes and are themselves the greatest single contribution to empire defense any dominion has made, we are doing that duty. We are on the job. Flexing our muscles, shaking our fists at European powers, and invoking the might of our tiny defense forces is not part of our present duty.

And before the youth of this country is shipped abroad again to the great weakening of the next few generations, we shall want to have good and sufficient reason.

Mr. King has said so as Prime Minister. Dr. Manion, as leader of the opposition, has agreed with him in principle.

We cannot see how any Canadian statesman who understands Canada's feelings or Canada's place in world affairs can think otherwise.

It does not mean that we would ever let Britain down or consort with her enemies

It does not mean that we should remain even nominally neutral

if Britain were at war tomorrow.

It merely means that Canada knows she has a first duty and at last realizes what that first duty is.

The fact is that the informed public of both countries appears to realize that it is our bounden duty and our great privilege to maintain not only the cordial and cooperative relations coexistent, but that it is our responsibility to defend the Americas for our mutual protection.

Hon. T. Alan Goldsborough, Member of Congress, of Maryland, Who Resigned to Become United States District Judge for the District of Columbia

EXTENSION OF REMARKS

HON. BRENT SPENCE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1939

Mr. SPENCE. Mr. Speaker, today the distinguished legislative career of the gentleman from Maryland, T. Alan GOLDSBOROUGH, will close. For more than 18 years he has served his constituents and his country in the National House of Representatives. For 10 successive terms he has been elected. He has served with great distinction. He has demonstrated not only a high order of intellect but a passionate regard for the welfare of the people of his district and of the entire Nation. Men attain their position in the Congress of the United States after long service, not by reason of superficial qualities, but by a force as unvarying as that which causes water to seek its level, because of their intrinsic worth, their ability, their sincerity, and sound judgment.

The position of influence and respect the gentleman from Maryland has attained in this body is due to his moral courage, his splendid ability, his unswerving loyalty. To these qualities may also be added his companionable nature and his good fellowship, which have endeared him to his colleagues. He resigns to take his place as judge of the District Court of the United States for the District of Columbia.

Here another career of great usefulness and distinction awaits him. The same qualities which made a great and useful legislator will make an able, upright, and just judge. While Alan Goldsborough is a man of strong convictions and impulsive nature, he has a passion for truth and justice which will assure "the cold neutrality of an impartial judge" in the discharge of the important duties of his new position.

I know I speak for all the members of the Banking and Currency Committee of the House when I say that we feel a profound regret that we will no longer have the sound advice, the broad knowledge, and the delightful companionship of the gentleman from Maryland. We know that those qualities which produced the friendship and the respect of his colleagues in the House will endear him to his colleagues on the bench who will labor with him and will bring him the affectionate regard of the members of the bar of his court.

National Labor Relations Act

EXTENSION OF REMARKS OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 5, 1939

LETTER WRITTEN BY WILLIAM GREEN, PRESIDENT OF THE AMERICAN FEDERATION OF LABOR

Mr. ANDERSON of Missouri. Mr. Speaker, I ask unanimous consent to revise and extend my remarks on the National Labor Relations Act and to include therein a letter written by William Green, president of the American Federation of Labor.

The following is the text of Mr. Green's letter:

To the Officers of National and International Unions, State Federations of Labor, City Central Labor Unions, and Directly Affiliated Local Trade and Federal Labor Unions.

DEAR SIRS AND BROTHERS: The Fifty-eighth Annual Convention of the American Federation of Labor, which was held at Houston, Tex., last October, unanimously instructed the officers of the American Federation of Labor to prepare and submit to Congress certain amendments to the National Labor Relations Act. This action was taken because the National Labor Relations Roard had shown was taken because the National Labor Relations Board had shown itself to be pro-C. I. O. and anti-American Federation of Labor in the administration of the law.

CARRYING OUT MANDATE OF 1938 CONVENTION

Mark you, each and every delegate in attendance at the Houston convention, representing national and international unions, State federations of labor, city central bodies, and affiliated local unions voted to instruct the officers of the American Federation of Labor to prevail upon Congress to adopt amendments to the National Labor Relations Act. This action was taken by the highest authority within the American Federation of Labor.

to prevail upon Congress to adopt amendments to the National Labor Relations Act. This action was taken by the highest authority within the American Federation of Labor.

Now it becomes the solemn duty of the officers of the American Federation of Labor to carry out the instructions given them by this convention. All affiliated organizations and all members of the American Federation of Labor are under obligation to give support to the officers of the American Federation of Labor in carrying out these instructions.

Unfortunately some local unions and individual members of the American Federation of Labor have become confused because of missepresentation and false propaganda which has been circulated by representatives of the C. I. O. They have been told that the American Federation of Labor is trying to destroy the National Labor Relations Act. This is false and without any basis what-

FRIEND OF LABOR ACT

The American Federation of Labor is the friend of the National Labor Relations Act. We sponsored it in the beginning; we helped dator Relations Act. We sponsored it in the beginning; we helped draft it; we contributed largely toward its enactment into law. It was really an American Federation of Labor measure, a primary part of our legislative program. Therefore it is we, the friends of the Labor Act, who are trying to amend it, to perfect it, to preserve it, and to make it a better law.

We have found from experience that such action is necessary in order to preserve and protect the national and international unions affiliated with the American Federation of Labor and the local

unions chartered by said international unions.

BOARD FAVORS C. I. O., OPPOSES A. F. OF L.

Can the American Federation of Labor remain passive and inactive Can the American Federation of Labor remain passive and inactive when the Labor Board, through decisions clearly in favor of the C. I. O. and against the American Federation of Labor; is working out the destruction of the American Federation of Labor? Would local unions and members of the American Federation of Labor have us remain inactive while they themselves were being destroyed through the maladministration of the Labor Act?

Naturally the C. I. O. is violently opposed to any change; its opposition is based upon the fact that it has been favored, while the Board has struck blow after blow at the American Federation of Labor. We do not ask the Board to favor the American Federation of Labor in any decisions rendered; all we have asked is that the fair and just in its administration of the act and that it

it be fair and just in its administration of the act and that it apply the act in a judicious way.

BARGAINING RIGHTS OF CRAFT UNIONS MUST BE PROTECTED

The American Federation of Labor is seeking to amend the act so that craft unions may select themselves as collective-bargaining

Under the existing law the Board exercises discretion as to whether craft unions may elect to be their own collective-bargaining agents. In many instances the Labor Relations Board has merged the craft unions with production workers and thus wiped

out the craft unions as collective-bargaining agencies.

Do the craft unions of the Nation desire that such administration of the law shall continue? Would you have the law remain as it is, and the administration of the act by the existing Board continue, and thus permit the wiping out of craft unions; or would you have the law amended so that the power to destroy craft unions by decisions on the part of the Board would be taken

A number of decisions of the Board show that craft unions were struck a vital blow in that they were denied the right to collectively bargain for themselves. The machinists' unions, electrical workers, and other metal trades, and miscellaneous organizations, have suffered very greatly through the biased decisions of the Board in fewer of industrial priority and the CLE. favor of industrial unionism and the C. I. O.

BOARD'S INVALIDATION OF A. F. OF L. CONTRACTS ATTACKED

In addition, the Houston convention directed that amendments be prepared so as to prevent the Board from destroying and abrogating contracts entered into between bona fide American Federa-

tion of Labor unions and employers.

No one ever dreamed that the National Labor Relations Board was vested with authority to invalidate contracts negotiated by independent, democratic, American Federation of Labor unions. The Board, however, did so when it invalidated contracts made by a local electrical workers' union with the Consolidated Edison Co., by another electrical workers' union with the National Electrical Products Co. at Ambridge, Pa. In the Copper Hill (Tenn.) Mining Co. case it invalidated an election won by the American Federation of Labor on the same basis. cf Labor on the same basis.

The Supreme Court saved the American Federation of Labor in

the Consolidated Edison Co. case; it cost the electrical workers and the American Federation of Labor many thousands of dollars in order to save the contract which had been entered into by the electrical workers' union with the management of the Consolidated

Edison Co.

We hold that a contract lawfully negotiated between an American Federation of Labor union and the employers is a valid, sacred contract. No board has a right to invalidate such a contract. It is

contract. No board has a right to invalidate such a contract. It is significant and most striking that American Federation of Labor contracts were invalidated by the National Labor Relations Board.

Would you prefer that the Board shall continue to exercise its power to invalidate contracts lawfully made by American Federation of Labor unions with employers through collective bargaining, or do you favor protecting American Federation of Labor unions by making it impossible for the National Labor Relations Board to invalidate outpersonates proceedings through collecting bearening with date our contracts negotiated through collective bargaining with employers?

CLASSIFYING A. F. OF L. AFFILIATES AS COMPANY UNIONS CONDEMNED

Furthermore, the Houston convention instructed us to secure amendments to the Labor Relations Act which would prevent the National Labor Relations Board from classifying an American Fed-eration of Labor union as a company union. In order to accomplish this purpose we have defined a company union and have made it clear in the act that the existence of the company union is an unfair labor practice. We have made it clear that a contract negotiated by any employer with a company union is invalid and cannot be sustained. We have, however, endeavored to prevent the Board from classifying, either directly or by implication, a bona fide independent American Federation of Labor union as a company union.

American Federation of Labor union as a company union.

And supplementary to all this, we have, in accordance with the instructions of the Houston convention, prepared amendments to the act which would simplify procedure. This will all be to the interests of labor and particularly American Federation of Labor unions. This has to do with the issuance of subpenas, the securing of records in cases where appeals are taken, so that the cost to our American Federation of Labor unions will not be prohibitive.

A pamphlet giving each and all of you a detailed explanation of the amendments ordered by the Houston convention and prepared

the amendments ordered by the Houston convention and prepared by the officers of the American Federation of Labor will be forwarded to you within the near future.

SEEKS FAIR ADMINISTRATION OF LABOR ACT

We are determined to protect and preserve the National Labor Relations Act. We shall stand opposed to any attempt to change its fundamentals or its principles. We are seeking only as the real friends of the act to require the Board to administer the law in accordance with its original purpose, its spirit, and its letter.

We are seeking to make it impossible for this Board or for any other Board to interpret the law or to administer it in favor of one organization as against the other. Instead, we are determined that all organizations shall be dealt with on a basis of equality, fairness, and justice by any Board appointed to administer the Labor Relations Act. Labor Relations Act.

COOPERATION OF UNIONS ASKED

It is one thing for the supreme authority within the American Federation of Labor to instruct its officers to secure amendments to the National Labor Relations Act; it is another thing for the officers to carry out the instructions. They cannot do so unless

they have the support of the membership of the American Federation of Labor. They are entitled to that support, because the membership, through their own chosen representatives, instructed the officers of the American Federation of Labor to prevail upon Con-

gress to amend the labor relations law.

Now we, the officers of the American Federation of Labor, are engaged in carrying out the instructions of the Houston convention. We accepted these instructions in good faith. We are willing to carry out the orders given us, but we must appeal to the member-ship of the American Federation of Labor to help us, to stand with

us, and to support us.

WARNS AGAINST FALSE PROPAGANDA

Do not be deceived by false propaganda; have faith in the officers and members of the American Federation of Labor; stand by the delegates who attended the Houston convention and give them your wholehearted support. Let the Members of Congress know you are standing with the American Federation of Labor; that you are supporting your officers, who are endeavoring to carry out orders and instructions.

Please be assured that it is the fixed and determined purpose of the officers of the American Federation of Labor to protect and preserve the Wagner Labor Relations Act; to stand unalterably opposed to any attempts to weaken it or destroy it. Instead, we shall endeavor to make it a better law and to so amend it as to require the National Labor Relations Board to administer it impartially, fairly, and in conformity with both the letter and spirit of the act.

Fraternally yours,

WM. GREEN President, American Federation of Labor.

Claims Against Cotton Producers

EXTENSION OF REMARKS

HON. BUTLER B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 5, 1939

ADDRESS BY J. ROY JONES

Mr. HARE. Mr. Speaker under leave to extend my remarks in the RECORD, I include the following address by J. Roy Jones, commissioner of agriculture, before Carolinas Cotton Warehouse Association, March 30, 1939, Columbia, S. C.:

Mr. President, members of the Carolinas Association, and distinguished guests, I appreciate very much your giving me an opportunity to talk to your association for a few minutes, and I expect to confine my remarks to the claims that are now being filed against the producers, due to the fact that one of the classing offices of the Bureau of Agricultural Economics has reclassed some of the cotton pledged in 1937-38, and it is my understanding that they will eventually reclass all cotton that was pledged to the Government during 1937-38. Up to the present time approximately 21,000 bales have been reclassed by one of the classing offices of the Bureau of Agricultural Economics, and over 90 percent of the cotton pledged and stored in these warehouses have had claims filed against the producers and werehousemen.

and stored in these warehouses have had claims filed against the producers and warehousemen.

In order that the warehousemen may understand their responsibility, I would like to read to you the warehouseman's certificate and waiver, which reads, in part, as follows:

"All cotton listed in the above or attached schedule is guaranteed to be of the grade and staple eligible for a loan of the amount per pound set forth in the above or attached schedule, determined in accordance with the provisions of paragraph 3 of the printed instructions (1937–38 CCC Cotton Form 1).

"In consideration of the benefits accruing from the storage of said cotton, the undersigned warehouseman hereby agrees, in the event said cotton is subsequently determined by the Bureau of Agricultural Economics, United States Department of Agriculture, to be below the grade and staple eligible for a loan of the amount per pound stated in the above or attached schedule, to reimburse Commodity Credit Corporation for any loss on account of said loan to the extent of the difference per pound between the value of the to the extent of the difference per pound between the value of the lowest grade eligible for the loan made, as set forth in the above or attached schedule, and the actual value of said cotton determined by said Bureau of Agricultural Economics."

You will see from this that the warehouseman is equally responsible for having the proper class put on the receipt, as well as the producer, but it is the policy of the Commodity Credit Corporation to file claim against the producer and at the same time

they file claim against the warehouseman. It is my understanding that they will collect from the producer, if he will pay it; in event he doesn't pay it, they will take it out of his subsidy check; and in event he hasn't a subsidy check, the warehouseman will have to pay it, if the producer fails to pay it.

In South Carolina there are two warehouse systems—the Federal and State. Although the State warehouse system pays the licensed elegence pays of finds collected from the State warehouse care decrease.

classers out of funds collected from the State warehouses, our department cooperates with the Federal warehouses and serves them whenever possible, and has classed several thousand bales for them. In several investigations held during the past few years it has been brought out that classing cotton is not an exact science, and

also brought out that there would be slight variations; but taking it as a whole, the "ups will take care of the downs." It was also brought out during these investigations that different samples were drawn at different times from the same bales that showed slight variations

The Commodity Credit Corporation has adopted a policy where if 1 bale out of a lot of cotton pledged on a loan should fall one-half grade below the grade as placed on the receipt, that they would file a claim against the entire lot; in other words, gentlemen.

would file a claim against the entire lot; in other words, gentlemen, if a lot of 26 bales was reclassed by the Bureau of Agricultural Economics and they raised the class on a good many bales, yet lowered the class one-half grade on only 1 bale, a claim would be filed, and the entire lot of cotton would be sold.

Frankly, I don't believe there is a man within the sound of my voice that believes this method to be a fair method to the producer. When I found out the policy that the Commodity Credit Corporation was going to use in handling these claims I immediately went to Washington and conferred with Senator SMITH and Senator BANKHEAD, and they assured me that they would have the Commodity Credit Corporation change its policy or they would introduce legislation to protect the producer and the warehouseman. I would like for this association to go on record recommending to Congress that where there is any question about the class which was placed on the receipt by the warehouseman for the producer

was placed on the receipt by the warehouseman for the producer that the producer be allowed to repossess his note in the same way that the Commodity Credit Corporation has allowed the producer to repossess his note in the past. For example, the producer be allowed to repossess his note at 25 points under the 10 designation. nated spot markets, and in event the producer falls to repossess his cotton, the Commodity Credit Corporation can then sell the cotton in question and bill the producer for its losses.

I would like to call your special attention to the following

points:

First. That the cotton placed in the State warehouse system was sampled; the samples were sent to Columbia and classed by a Federal licensed classer, who classed this cotton under the supervision of the Bureau of Agricultural Economics, then a year later new samples were drawn and sent to the Bureau of Agricultural new samples were drawn and sent to the Bureau of Agricultural Economics classing office in Charleston. Since that time samples have been drawn and our Federal licensed classers in the Department of Agriculture have reclassed this cotton, and we find that in practically every instance the cotton is better than the class placed on the receipt. Not being satisfied with this, I had these samples forwarded to the Memphis office of the Bureau of Agricultural Economics (which is the head office of the Bureau of Agricultural Economics in the Cotton Belt), and they have upheld our classers, and in some instances have raised their class.

our classers, and in some instances have raised their class.

Now, in order that you might get a clear picture of the entire matter, I am going to have handed to you exhibits covering all cotton that we have had an opportunity to check up to the

present time.

First, I am going to take up with you exhibit No. 1, which is a lot of 26 bales, pledged by J. V. Herlong, State warehouse No. 2180, Trenton, S. C. This cotton was first classed by Mr. J. D. Mathis, Trenton, S. C. This cotton was first classed by Mr. J. D. Mathis, Jr., who held a Federal license and who at that time was employed by the American Cotton Cooperative Association. When the Commodity Credit Corporation notified Mr. Herlong that his cotton was to be sold, Mr. Mathis requested of the Palmetto Compress Co. samples from this lot of cotton and brought them to our classing department. Mr. Gist, Federal cotton classer, classed this cotton in the presence of Mr. B. W. Walker, Mr. J. D. Mathis, Jr., and myself, and these samples were then wrapped and sealed and sent to the Memphis office of the Bureau of Agricultural Economics (which is the head office at Memphis), and who sustained the original class as placed on the receipt in every instance, exthe original class as placed on the receipt in every instance, except where they raised the class on several bales.

Now, gentlemen, this cotton has been classed three times, twice by men under the supervision of the Bureau of Agricultural Economics, once by the head office of the Bureau of Agricultural Economics, and in these three classes all of the cotton was eligible for the loan and was also classed by the classing office in Charleston, and they found one bale ineligible, or one grade below what the receipt called for

receipt called for.

I am sure you will agree with me that it is unfair and unjust for the Commodity Credit Corporation to sell the producers' cotton when three separate licensed classers, under the supervision of the Bureau of Agricultural Economics, say that the cotton is eligible and one branch of the Bureau of Agricultural Economics shows that the

In conclusion, gentlemen, I feel that the various loans which have been placed on cotton by the Government has been done for the purpose of assisting the farmer, and I agree with President Roosevelt that the farming problem of the South is the Nation's No. 1 economic problem, and I feel that it is the duty of everyone, and especially the warehousemen, who have benefited by the various loans, to do everything within their power to assist the farmer in seeing that he gets a square deal. I would appreciate it very much if this association would go on record as endorsing some form of legislation that will be helpful to the farmer in the handling of his claims.

Tax Problem in Counties Where the United States Forest Service Acquires Lands Privately Owned

EXTENSION OF REMARKS

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1939

Mr. PITTENGER. Mr. Speaker, in connection with the policy of the United States Forest Service of acquiring lands in the various States in order to enlarge the national forests, the question of taxation is becoming more and more important. At the present time the United States Forest Service purchases additional lands from private owners, and those lands are removed from the tax rolls in the various counties where the forests are located. This means, of course, that the revenue of these municipal subdivisions is substantially decreased and the tax rate for property that remains subject to taxation is correspondingly increased. Further the counties, school districts, and so forth, that are affected by this program, even with the practice of all possible economy, still have to carry on their municipal functions. They have to build and maintain roads, schools, and so forth, and unless Congress takes notice of the serious situation that has been created, continued hardship will come to these communities. In the district I represent we find the Superior National Forest which lies wholly within the district. The Chippewa National Forest lies partly within the district.

It is true that by existing law the municipal subdivisions are supposed to obtain certain revenue from the sales of timber located in the national forests within the various counties. Up to date this revenue has been inconsequential and in no way at all takes care of the obligations of the Government of the United States to these localities.

In my opinion, it will only be fair in every case where the Government acquires a tract of land for United States forest purposes for the Government to make contributions to the counties and municipalities in an amount equal to the tax revenue which the counties would lose by taking such a tract of land off the tax rolls. I am glad to note that the United States Forest Service recognizes certain obligations along these lines, or at least that the United States Government should do its share in the building of roads and in the building of schools and in meeting the expenses of government in those counties where United States forests are located. Several bills are now pending in Congress which have for their purpose the correction of this problem of taxation.

My attention has been directed to H. R. 4883, introduced by the gentleman from Mississippi [Mr. Colmer], which has for its purpose contributions to the localities, roughly in an amount equal to 3 percent each year of the value of the lands acquired. This bill is of interest to every locality where the United States Government maintains and operates national forests. Practically every county in the Eighth Minnesota Congressional District is interested in proposed legislation of this type. There are other bills pending before Congress which have for their purpose to reimburse counties for loss of tax receipts on account of land acquired by the United States Government. I do not here discuss all of those bills, but I do urge upon Congress the serious situation which is developing and which requires legislation along the lines indicated.

I am very glad to submit herewith some figures which illustrate very clearly the problem so far as it affects the district I represent.

I have before me a resolution from the Board of County Commissioners of Cook County, Minn., wherein they set forth the facts regarding Federal land within the county, its acquisition, and the results. They state that:

Steady removal from the acreage taxable confronts the county commissioners in the year 1939 with a situation wherein a decline in total taxable acreage in the county from the original area within its boundaries of 1,158,263.47 to 243,350 acres taxed in 1939, and a decrease in taxable valuation from \$1,908,158 in 1920 to \$492,388 in the taxable year 1938; a current tax collection declining from \$186,325 in 1925 to \$61,121 current collections from the taxable year 1937 vear 1937.

I also have before me figures submitted by Lake County, Minn., showing that the decrease in assessed valuation of property in Lake County dropped from \$3,928,212 in 1926 to \$1,765,919 in 1938. On some other occasion I expect to submit figures showing that this serious financial condition has been due in large part to acquisition of lands by the United States Forest Service from private individuals and that taking these lands from tax rolls has resulted in this constantly decreasing revenue for the county. I also plan to submit figures from other counties showing the need for legislation to correct the discrimination which the Government is now carrying on against its own citizens.

I trust, Mr. Speaker, that the committees will be able to have hearings on these various legislative proposals and that legislation may be enacted at this session of Congress for the relief of counties throughout the country where the tax problem has become a difficult one. The problems in Cook County, Minn., as I have indicated above, exist in other counties, although probably not to the same degree.

Army Day, 1939

EXTENSION OF REMARKS

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 5, 1939

PROCLAMATION BY THE PRESIDENT

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following proclamation declaring April 6, 1939, as Army Day:

ARMY DAY-1939

By the President of the United States of America A PROCLAMATION

Whereas Senate Concurrent Resolution 5, Seventy-fifth Congress, first session (50 Stat. 1108), provides:
"That April 6 of each year be recognized by the Senate and House

of Representatives of the United States of America as Army Day, and that the President of the United States be requested, as Commander in Chief, to order military units throughout the United

mander in Chief, to order military units throughout the United States to assist civic bodies in appropriate celebration to such extent as he may deem advisable; to issue a proclamation each year declaring April 6 as Army Day, and in such proclamations to invite the Governors of the various States to issue Army Day proclamations: Provided, That in the event April 6 falls on Sunday, the following Monday shall be recognized as Army Day."

Now, therefore, I, Franklin D. Roosevelt, President of the United States of America, pursuant to the aforesaid concurrent resolution, do hereby declare April 6, 1939, as Army Day, and I hereby invite the Governors of the several States to issue Army Day proclamations; and, acting under the authority vested in me as Commander in Chief, I hereby order military units throughout the United States, its Territories and possessions, to assist civic bodies in the appropriate observance of that day.

In witness whereof I have hereunto set my hand and caused the

In witness whereof I have hereunto set my hand and caused the

seal of the United States of America to be affixed.

Done at the city of Washington this 15th day of March A. D. 1939, and of the independence of the United States of America the one hundred and sixty-third.

[SEAL]
By the President:
SUMNER WELLES,
Acting Secretary of State. FRANKLIN D. ROOSEVELT.

National Youth Administration

EXTENSION OF REMARKS

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 5, 1939

LETTER FROM RT. REV. MSGR. THOMAS J. O'DWYER

Mr. THOMAS F. FORD. Mr. Speaker, the following letter from the Right Reverend Monsignor Thomas J. O'Dwyer, general director of the Catholic Welfare Bureau of the Archdiocese of Los Angeles, Inc., vividly portrays the splendid work being done by the National Youth Administration. The Right Reverend Monsignor O'Dwyer is one of the outstanding welfare workers in California, and I am sure that his views on this vital activity are worth insertion in the CONGRESSIONAL RECORD.

> THE CATHOLIC WELFARE BUREAU OF THE ARCHDIOCESE OF LOS ANGELES, INC. Los Angeles, Calif., March 30, 1939.

Hon. Thomas J. Ford,

House of Representatives, Washington, D. C.

Dear Mr. Ford: I am writing to call your attention to Senate bill No. 1265, which provides for bringing together into one department the present Works Progress Administration, the Federal Emergency Administration of Public Works, the National Youth Administration, and the Civilian Conservation Corps.

I would like to call to your attention particularly the difficulty of having the N. Y. A. function effectively under the provisions of the proposed bill.

the proposed bill.

The N. Y. A. has developed its program in the light of nearly 4 years of experience. I would like to summarize its objectives for

you very briefly.

The Student Aid Division of the N. Y. A. of California is enabling approximately 16,000 students to continue their education. If it were not for this assistance, these students would be forced to drop their education and seek employment, thus glutting the already overcrowded labor market.

There are applications on file with schools and colleges in Los Angeles County for additional assistance approximately equivalent in numbers to those receiving aid from the N. Y. A. This would

definitely indicate the advisability of an increased appropriation to this division of the N. Y. A.

The work program of the N. Y. A. gives youths the opportunity of securing work experience and knowledge in many fields of endeavor, allowing them at the same time to earn sufficient money to assist in their own maintenance at home, and to permit them to assist in their own maintenance at nome, and to permit them to take additional related education. The work program in Calfornia is serving approximately 6,300 youths. Here, again, we have a large waiting list anxious to obtain this type of training to the end that they may be rapidly equipped to secure employment in private industry.

In Los Angeles County alone during the past year there were placed in the neighborhood of 3,700 youths from the N. Y. A. work program directly into private employment. The advantage of such a program cannot be minimized. It may be safely stated that if it had not been for the training and assistance of the N. Y. A. most of these youths would still be dependent upon the State or local relief agencies, and still unequipped to secure positions in private employment.

For the following reasons I feel that it would be a great handicap to the N. Y. A. to be placed in a general work program designed to

care for unemployed adult workers.

The needs of the two classes of workers are entirely different. The youths need (1) additional education, (2) careful counseling and guidance, and (3) especially designed projects that will permit of a maximum of training and most careful supervision. This is now being accomplished through the cooperation of all the public and private properties agencies not only throughout this area but and private nonprofit agencies not only throughout this area but throughout the entire State, who have made available to the N. Y. A. their facilities, their trained employees, and have given an oppor-tunity of training that could not be secured on a typical construc-tion or work program designed for adult workers.

In my opinion, if the N. Y. A. were completely tied into an adult work and construction program, with limitations as proposed for such a program, 90 percent of the value of the present training program would be lost.

With kindest regards. Sincerely yours,

Rt. Rev. THOMAS J. O'DWYER. General Director. Electrical Machinery and Equipment and the Reciprocal-Trade Agreements

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1939

Mr. REED of New York. Mr. Speaker, any legislation which affects the electrical machinery and equipment industry affects a large group of the wage earners of the country. This industry ranks seventh among all the industries in the country in the number of wage earners, and third in value added by manufacture. The New England States, particularly Massachusetts and Connecticut, New York, New Jersey, Pennsylvania, Ohio, Illinois, Indiana, Minnesota, Wisconsin, and Missouri, all number electrical machinery and equipment among the first 10 industries in the State.

Under the Reciprocal Trade Agreement Act of 1934, which empowered President Roosevelt and Secretary of State Hull to enter into agreements with the other countries of the world for the purpose of a mutual exchange of benefits in foreign trade, 16 agreements were concluded and became effective before January 1, 1938. In 14 of the 16 agreements the United States received concessions on electrical machinery and equipment.

In spite of these concessions, in 1937 our exports to agreement countries which gave this country concessions were 25.3 percent below the 1929 level, while exports to the two agreement countries which made no concessions and to nonagreement countries were 9.1 percent above the 1929 level.

This is another bit of evidence that the New Deal agreement negotiators are more interested in lowering our tariffs than in getting trade concessions of value to American agriculture and industry.

Save Democracy at Home

EXTENSION OF REMARKS

HON. GERALD P. NYE OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES Thursday, April 6, 1939

RADIO ADDRESS BY HON. HENRIK SHIPSTEAD, OF MINNE-SOTA, ON APRIL 2, 1939

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address on the subject Save the Democracy at Home, delivered by the senior Senator from Minnesota [Mr. Shipstead] on Sunday, April 2, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good afternoon, folks, I appreciate the privilege of speaking to you this afternoon and I am grateful to station WCCO for invit-ing me to do so. The subject that seems to be most discussed in the news, on the radio, and the press for some time has been conditions of foreign countries and the press for some time has been we hear a good deal about our own responsibility. The democracies, it is said, are ready to fight for democracy, and dictatorships are ready to defend their rights to be under a dictator.

In my opinion the form of government is not what their quarrel is about. The quarrels of Europe here to do with land of falls.

In my opinion the form of government is not what their quarrel is about. The quarrels of Europe have to do with land, oil fields, food, and trade. Those who have large and rich territorial possessions want to keep them, and those who have not want to obtain more than they have. That is what I see in the picture. The real reason for a nation going to war is seldom ever told to the people who have to do the fighting. Usually some very high, altruistic reason is given, and as a rule, people do not find out what the real reason for a war is until long after the war is over.

After the last World War was over we found out what the fight was about. We were told that we entered the war for democracy

and that we wanted a peace without victory. Instead, we got victory without peace. Instead of making a world safe for democracy we made it highly unsafe. Instead of making the world a better place to live in, we assisted in lowering the standard of living everywhere—our own country included. Instead of protecting minorities by self-determination or otherwise, we seem to have made some footballs for dictators.

In other words, the whole Wilsonian program was frustrated, and when he came to Versailles to help make a treaty of peace, he discovered that the Allied Governments had had many secret treaties dividing the rest of the world up among themselves.

Only a year or two ago we learned that these secret treaties had been brought to Washington before we entered this war and given to our Secretary of State by Mr. Balfour. But when

and given to our Secretary of State by Mr. Balfour. But when Wilson came to Paris he claimed that he did not know anything about them.

When the Versailles Treaty and the other treaties subsequent thereto that ended the World War were signed, not a vestige was left of international morality and sanity and the law of nations. It was a case of "woe to the vanquished and to the victor belongs the spoils." The law of the "tooth and the claw" was

shown to be supreme.

This, despite the fact that the solemn covenant of the armistice under which the Central Powers laid down their arms, promised them an entirely different peace. In signing that treaty all nations, the Allies as well as Germany and Austria, agreed to disarm. Neither one kept that agreement. While the war ceased on the battlefield, it has continued ever since along the trade and economic lines. The conquered nations were stripped of territory of home and abroad and impossible reportations imposed. ritory at home and abroad and impossible reparations imposed. Three empires were dismantled and the fragments fed to the wolves. When the several treaties that ended the World War had wolves. When the several treaties that ended the World War had been signed, the world had been divided amongst the victors and they arranged for a league of nations to keep the world in a strait jacket. This cannot be done. The law of change is a fundamental law of life and that law statesmen cannot repeal. There is nothing in the record to show that if the Central Powers had won the war that the world would have been in any better condition. The treaty that was made with Russia at Brest-Litovsk would indicate they would have been as ruthless as were the nations who won the war.

The most dangerous treaties in the world are so-called "peace treaties." They are usually written by the conquering nation and the conquered nation signs under coercion and duress. Any contract signed in municipal law under coercion and duress is ipso facto held to be null and void.

facto held to be null and void.

facto held to be null and void.

In international law, however, he who has the power to take, and has the power to keep, has the right to keep. Any nation that signs a so-called peace treaty under coercion and duress will keep that agreement only until it has the power to break it. There is nothing sanctified about treaties of this character. They have no standing in municipal law, morals, or in equity. They are only legal in international law, and international law has nothing sanctified or sacred about it. It is the law of the "wolf pack" and the law of the jungle. Pious resolutions and treaties are made such as renouncing war as a national policy. These proclamations and treaties mean very little, if anything at all. There are few nations in Europe who are signatories to the peace treaty on either side who have not engaged in international banditry since the treaty was signed.

So when good people would try to divide nations, we do not have to go back far in history to show the fallacy of the contentions that you can divide nations into good and bad. But statesmen failed to realize that life is just one continual change. It

men failed to realize that life is just one continual change. It would be well for statesmen to learn that fact as well as the people for whom they speak, and who have the responsibility of

people for whom they speak, and who have the responsibility of conducting government.

Last fall I had the privilege of visiting several countries in Europe, as a matter of fact six. I did not find people excited about war. I did not find anyone in any responsible position who thought there was going to be war at the time in Europe. They all said that their troubles over territory were due to the Treaty of Versailles. They said they realized now that the Treaty of Versailles was a mistake. They said that adjustment would have to be made. They said that you cannot keep the world in a strait jacket. They said that adjustments and revisions may cost something. If it is done peacefully, they said it may cost something and be worth it, but it won't cost anything near so much as war will cost in destruction of property and human misery. miserv.

We must not overlook the fact that the present conditions in Europe and much of the world elsewhere, are distinctly the product of the war and peace treaties, so-called, that ended the World War. The conditions in Germany to which so many object were conceived at the Treaty of Versailles and were finally developed in the hard treatment given the prematurely born Weimar

Republic.

Republic.

Had common sense ruled at Versailles, all mankind would have been spared much trouble. Billions spent for armament after a war that was to end war, would have been put to better use. This world indeed would have been a better place in which to live. Democracies instead of being now beset by many powerful enemies would have gained in the German Republic, a fine pillar of support. The hateful persecution of minorities now going on in Europe is undoubtedly the fruit of the seeds of hate planted by the majority at Versailles and spread in the fertile soil of the oppressed minority by the administration of the treaty.

These cruel persecutions we now abhor in others and rightly so. We do abhor these things as emphatically as the American people

and their representatives in the Senate abhored and repudiated an effort to make us a party to a treaty of oppression that would threaten western civilization and jeopardize the sovereignty of the United States. We abhor no less the present dictators in control of government that make these purges and persecutions possible and are determined that such ideas shall not find root on American

The question forced upon us is how shall we keep these ideas of government from finding root in American soil? Many people in this country, speaking over the radio and through the press, would have us believe that the way to save democracy is to go to war again to save democracy. The propaganda to get us into the next war, if and when it comes, has been carefully prepared and as war again to save democracy. The propaganda to get us into the next war, if and when it comes, has been carefully prepared and as ably executed in the last few years as it was during the period of 1915, 1916, and 1917. I cannot see how our going into that war saved democracy. There is less democracy in the world now than before the war. It is true we got rid of the Kaiser, who was supposed to be an autocrat, and in getting rid of the Kaiser we had the help of the Russian Czar and the Emperor of Japan. We were told they were fighting for democracy, too. The dictators we got in place of the Czar of Russia and Kaiser Wilhelm II, I do not think are an improvement over those we got rid of.

In my opinion another world war would destroy whatever democracy there is left in the world. I found that to be the opinion of many statesmen in Europe, and therefore they are trying to solve some of their problems by peaceful means. In so doing injustice will be done. Persecution of minorities will occur. But a world war will multiply these by a million times more.

Many good people say we must do something to stop dictators. Very well; but how are we going to do it without going to war? We ask these people what they will have when the war is over? Will everything then be peaceful and serene?

In my opinion we will then have more dictators than now, and a thousand times more debt than now. Millions of young men dead, and more persecution of minorities than now. The present troubles of the world are due to the last war. The problems following the next war will be much more difficult and human suffering far worse.

Of course these people tell you they don't want war. They say

Of course these people tell you they don't want war. they want peace but they are so anxious for peace they want war to prevent a future war. That is the kind of war we had last time. That is the kind of a war they would get us into now. Every day on the radio we have these peace people stirring up emotions of the people preparing them to accept the theory of necessity of war—in order to have peace.

Europe has its own peculiar problems that only Europe can solve. We hope they can solve these problems without war.

We, too, have our own peculiar problems. We do not ask Europeans to come over here and settle our troubles. We must do this ourselves. We have plenty to do here. We have ten or eleven million people out of work. In the neighborhood of 20,000,000, received and directly or indirectly or relief. million people out of work. In the heighborhood of 20,000,000 young and old, directly, or indirectly, on relief. Our debts are increasing by the billions. Farmers are, generally speaking, going bankrupt. Business houses are being supported by customers on relief rolls. This has all to be paid for, so taxes are eating like a cancer on the body politic.

Haven't we enough to think about and do here? I think we have.

Nevertheless, the war propaganda persists. Our own troubles are no longer regarded as of first importance. Our first duty is said to be to save democracy in Europe. To do this they say we must

go to war.

I believe the best way to save democracy abroad is to save it first at home. That the best way to discourage the dictators is to make our own democracy secure by solving our own problems—to show the world how well democracy can be made to work. And so by force of example, as well as by the power a sound prosperity builds, to discourage dictators by demonstrating a better way of life to the unfortunate people who suffer under tyranny. And, to some of us, it seems further that unless we do this and do it without waste of time, we can be of but little service to democracy or civil and religious liberty. I believe that by putting our own house in order we can best discharge our responsibility and duty to ourselves, to democracy and to world peace.

Let Those Who Challenge Take the Responsibility

EXTENSION OF REMARKS

HON. ERNEST LUNDEEN

OF MINNESOTA IN THE SENATE OF THE UNITED STATES

Thursday, April 6, 1939

RADIO ADDRESS BY HON. GERALD P. NYE, OF NORTH DAKOTA, ON APRIL 4, 1939

Mr. LUNDEEN. Mr. President, I ask unanimous consent to insert in the RECORD an able address delivered on the 4th of the present month by the junior Senator from North Dakota

[Mr. NyE] on the subject Let Those Who Challenge Take the Responsibility.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

On day after tomorrow, Thursday of this week, occurs an anniversary which has had a profound effect on the United States—an effect which no one of us has been able to escape. On Thursday, effect which no one of us has been able to escape. On Thursday, 22 years ago, the United States entered the World War. It was a sorry day for the entire Nation, and it will be noted that the Nation does not celebrate the day, as it does the day which saw the war ended. There is no reason now to mark its anniversary, except to keep before our eyes and minds the great mistake we made. If we fully realize the mistaken policies from 1914 to 1917, which landed us in the World War, we may avoid the devastating cost and anguish of again being involved in a foreign conflict.

There is no need tonight to recall to you what this Nation has suffered as a result of its participation in the World War. You know that only too well. You have not forgotten those American boys who left these shores never to return. You have not forgotten those who came home maimed, blinded, or with their minds impaired. All about us today is evidence of the havoc wrought on our economic life by our participation in that conflict. The plight of American agriculture, industry, and labor today is directly traceable back to our experience then.

able back to our experience then.

of American agriculture, industry, and labor today is directly traceable back to our experience then.

Nor is it necessary, as we approach the twenty-second anniversary of our entry into that war, to call on you to be resolute and determined that this country never again shall participate in one of Europe's wars. That is and has been your resolution now for 2 decades. There is no doubt that the American people do not want war. They never have. But now, with the scourge of the last World War on them, they are more firmly resolved than ever that the United States keep out of war.

But such resolution and determination will avail us nothing unless we guard against and oppose the taking of those steps, perhaps well-intentioned in themselves in the beginning, which inevitably lead to war. From 1914 to 1917 we, for the most part unconsciously, took those steps down the road which led us into war. But with the experience of those fateful years before us we are, or at least we should be, a wiser people. At least we are now aware of the dangers inherent in sentimental policies predicated on contentions that Europe's troubles are our troubles.

Losing sight of the lessons taught us from 1914 to 1918, many of our people today have come to the conclusion that if there is a

Losing sight of the lessons taught us from 1914 to 1918, many of our people today have come to the conclusion that if there is a general war in Europe this country inevitably would be drawn into it. I do not believe it. I say that is a counsel of despair. It is an argument advanced by those who would frighten us into support of fanciful schemes and undertakings to keep the peace of Europe, but which, if they fail, would surely involve us in that conflict. If this country insists on taking sides in the quarrels of Europe; if we, forgetting the protection which a kindly Providence has given to us through our geographic situation, meddle in foreign affairs of no direct concern to us; if, in brief, we make ourselves participants in Europe's controversies, then our involvement in another world war is inevitable. There can be no denying that fact.

pants in Europe's controversies, then our involvement in another world war is inevitable. There can be no denying that fact.
But we can keep out of war by keeping aloof from the hatreds, greed, and ambitions now rocking Europe. We can isolate ourselves from war, not by burying our heads in the sand but by pursuing a course based solely on what is for the best interests of America and spurning pleas to become the moral policeman of the world and to save democracy in other lands. The job of saving democracy in this country is task enough for this generation of Americans. It is a task which we now should be about instead of using the situation abroad as a red herring to cover the trail of major failures in domestic policies. in domestic policies.

We can keep out of war if we realistically acknowledge

frontier and our first line of defense to be the boundaries of this Nation instead of talking about a frontier in France. We can keep out of war if we take those steps which calm, reasonable men and women would take to isolate themselves from a street brawl or fight in their own neighborhood.

This thought causes me to call your attention to the fact that this year's anniversary of our entry into the World War is doubly significant, for tomorrow the Senate Foreign Affairs Committee commences hearings on legislation dealing directly with the ques-

tion of America's neutrality in the event of war abroad. These hearings will afford a large airing on the question of what shall be America's relationship to the European and Asiatic seats of trouble. There appears to be frightful misconception on the part of many people concerning the issues and proposals which are pending before this hearing. I should like to take just a moment to clarify the picture.

For nearly 2 years we have entertained what is commonly referred to as the neutrality law, which might more properly be called the law to help keep America out of other people's wars. This law was written as a result of the revelation of the selfish steps that led us into the World War, when we declared high purposes and discovered too late that we had won no purpose for thick we fourth even though we won the were

poses and discovered too late that we had won no purpose for which we fought, even though we won the war.

In a word, the neutrality law provided that when a state of war was found to exist in the world the President should so proclaim and then automatically invoke the steps of law therein written. Those steps provided that nations at war should be denied access to American money or credit or to American supplies of what are defined as being munitions or instruments of war. The law also forbids Americans to sail upon the vessels of belligerent nations, as Americans once sailed upon the Lusitania,

provided for a munitions control board with powers, determined the extent to which American ports might not be used by belliger-ent nations, and generally undertook to write the rules which would be pursued by our country when other nations were at war.

A leading provision of the law was what is referred to as the "cash-and-carry" section. This section recognized that there was much commerce that would not be forbidden under the arms-embargo commerce that would not be forbidden under the arms-embarge section of the law and undertook to prevent such commercial rela-tionship from dragging us into war. The cash-and-carry provi-sion of the law mcrely required nations at war that wanted such nonarmament supplies to come pay for it, and carry it away in their own ships and at their own risk. The effect of this would be to keep own ships and at their own risk. The effect of this would be to keep american ships and traders from getting the country into trouble by engaging in this risky business in time of war. The weakness of this section lies in the fact that the law left with the President the power to determine when the section should be made effective and what commodities were to be covered by the cash-and-carry provisions. This was at once a power to the President to play favorites, invoke the provision only at such time and upon such commodities as would be helpful to one side and injurious to the other side, which would definitely not be a step of neutrality. In brief, side, which would definitely not be a step of neutrality. In brief, I have stated the provisions of the neutrality law.

Since its enactment 2 years ago there has been criticism of it. But that criticism never took on serious proportions until last fall and winter when the administration began to chafe under this harness of neutrality law. There came announced desire to have our country operate in a way that would punish the alleged aggressor in war, to invoke quarantines and sanctions upon the alleged aggressor. These wardlike steps could not be leavilly token by the Presisors. These warlike steps could not be lawfully taken by the President with the neutrality law upon the statute books. Then came the proposals to change the law, amend it, and repeal it. It is these proposals that are now pending before the committee, starting

Two bills, one by Senator Lewis and one by Senator King, propose outright repeal of the Neutrality Act. One bill, that by Senator Thomas of Utah, proposes to amend the act in such way as would give the President and Congress power to invoke the act only against nations at war which are found to have violated treaties in going to war. But the proposal that is in the forefront for consideration of the committee and the Congress is that offered by Senator PITTMAN and known as S. J. 97. This is comoffered by Senator Pittman and known as S. J. 97. This is commonly referred to as the cash-and-carry proposal, but it should be carefully noted that it is in no wise the kind of cash-and-carry plan about which people have been talking all these years. Nor is it the kind of cash-and-carry plan that is now the law.

The Pittman proposal is that all commodities, including arms, ammunition, and implements of war which are now barred to export in time of war under the existing law, shall be placed on

a cash-and-carry basis. It is easy to see the result of success for that proposal. That plan in law would open our doors to any nation at war that wanted to buy anything from us.

What is the purpose of this Pittman proposal? I do not want to ascribe any unfair motives to its sponsors, but the truth remains that it is generally conceded that the proposal has in mind American help for England and France especially. They, it is felt, are the only European countries which, in time of war, could hope to be able to pay for what they wanted and carry it away in their own ships. However true that may be, the fact remains that it would in no sense be a neutral act.

The great hue and cry by those who criticize the existing neutrality law is that the law has been proven a failure. When pressed for a demonstration of its failure, the critics invariably like to point to how the law has not worked in the case of the

like to point to how the law has not worked in the case of the conflict in China. Japan is helped by our law, they say.

I agree that the United States has been of large help to Japan in its conquest of China. But it hasn't been because of the Neutrality Act. Rather it has been because the President has denied that a state of war exists in China. If he were to acknowledge it, then the neutrality law would of necessity have to be invoked by him. If it were invoked, it would have crippled Japan seriously, perhaps have made impossible Japan's tremendous progress in China. Why hasn't the President invoked the law? His Secretary of Commerce once declared that to invoke it would cost the United States much foreign trade. In other words, in order to keep the profits available from the conflict in Asia the President would simply ignore that there was a war. So we see profits from war once again playing the same part that they played 22 years ago in wearing down our resolution to stay out of other people's wars.

The neutrality law is not proven a failure because of the ex-

The neutrality law is not proven a fallure because of the experience in Japan and China. It hasn't been used there. If there perience in Japan and China. It hasn't been used there. If there is any failure of ours to which Japan's success is traceable, that failure is the President's failure to do what the law tells him to do. And incidentally, if it be said that the neutrality law is a failure and ought to be amended, how would the Pittman cash-and-carry plan afford the remedy? Under the Pittman plan, in the event of war between Japan and China, obviously Japan would be the only one able to come and pay for what they wanted and furnish the ships in which to carry their supplies away. So let no one look upon the Pittman proposal as one that would in any way improve American relationship toward China. The truth is that under the Pittman bill, the Chinese would be in far more desperate position than they are today, without the neutrality law invoked, or far worse off than they would be if the Neutrality Act in its present form were invoked. form were invoked.

The neutrality law is a failure! So they say. Why is it a failure? Wherein has it failed? The truth is that it has not failed. It cannot have failed until its great and primary purpose has been lost. What is that purpose? To keep the United States out of other people's wars. Can anyone point to where that purpose has been lost? Will someone please explain how existence of the neutrality

lost? Will someone please explain how existence of the neutrality law is going to get us into war?

The truth of the whole controversy is that the Neutrality Act, even with its present shortcomings, is the only bulwark which the American people have been able to build and maintain that helps them fortify their resolve to stay out of other people's wars. And they had better be waking up to what is being undertaken at this hour or they will less that

hour or they will lose that.

I have spoken of shortcomings in the present law. Some of us I have spoken of shortcomings in the present law. Some of us pointed to them when they were written into the law. They can be corrected by congressional amendment, and Senators Clark of Missouri, Bone, and myself have proposed the amendments. They are incorporated in Senate Joint Resolution 106, which is pending before the Foreign Affairs Committee along with the other proposals to which I have referred. This resolution would not leave it to the President alone to find when a state of war exists, but provides that Congress may find by resolution a state of war to exist, whereupon the President would have to obey and administer the provisions of the Neutrality Act. Our resolution provides also for the abandonment of the discretion which is left with the President to determine when to invoke the cash-and-carry section of the law. Under our proposed amendment he would have to President to determine when to invoke the cash-and-carry section of the law. Under our proposed amendment he would have to invoke the cash-and-carry provision at the same time he invoked the arms embargo, and he would have to make the cash-and-carry provision cover all commodities not covered by the section forbidding any arms to nations at war. One or two other elements of Presidential discretion are removed by our amendment. On the whole, it is the purpose and wish of Senator Clark of Missouri, Senator Bone, and myself, through our amendment, to tighten the neutrality laws—to improve upon the provisions which are to help keep our country out of other people's wars.

Let there be no mistaking the present challenge and the issue involved in that challenge. The line is clearly drawn. The decision must be for a policy of law that will fortify America against being drawn into other people's wars, or for abandonment of such fortifying steps as have been taken and their replacement by a policy that leaves the Executive free to pursue a course of seeing how near he can get to the fires and hates of Europe without burning his fingers and because of the burn, inviting an insult to all the people of America that would take us to war.

burning his fingers and because of the burn, inviting an insult to all the people of America that would take us to war.

Let us not close our eyes to a fateful disastrous experience which found us in 1914, 1915, and 1916 determined to stay out of Europe's war. Let us not forget that that European war, even while we were neutral, paid tremendous profits to some Americans and that every time, without one exception, when those profits came in conflict with American desire to remain neutral, that desire for neutrality was set aside to make room for further profits. Our appetite for those profits got us into constantly deeper water until we came to that inevitable day that Ambassador Page best described when he said in a cablegram to President Wilson: "The pressure of this approaching crisis has gone beyond the ability pressure of this approaching crisis has gone beyond the ability of the Morgan financial agency, for the British and French Governments. * * * Perhaps our going to war is the only way in which our present preeminent trade position can be maintained and a panic averted."

and a panic averted."

If we are really going to succeed in staying out of other people's wars, we are going to have to divorce ourselves from the profits available from other people's wars. A cash-and-carry basis on all commodities in time of war is not going to help us materially, and it certainly cheapens America to put herself on a basis of cash and carry in the name of peace. If we are going to stay out of other people's wars, we are going to have to learn to mind our own business and to keep minding our own business however much the President or anyone else may want to meddle in foreign affairs or lead the hosts in splendid sounding causes.

Surely I would like to see a world peace accomplished and made

foreign affairs or lead the hosts in splendid sounding causes. Surely I would like to see a world peace accomplished and made permanent. But by what right do we Americans today assume that those we are choosing as allies, England and France, for example, are wanting the same thing when we know full well that nothing would please them more than to see Russia and Germany, for example, at each other's throat?

Assuredly, like millions of other Americans, I should like to see democracy safeguarded. But wouldn't it be well to know what kind of democracy our allies would like to help save? Wouldn't it be well for we, ourselves, to know what kind of democracy we wanted to save? Whether it was the Chinese kind, the Ethiopian kind, the sort that Austria had, the kind that Czechoslovakia entertained, the Polish kind, the Rumanian kind, or the Jersey City kind. City kind.

Heaven forbid that day when America finds herself entangled with other foreign nations in war until we can have two definite assurances:

First, that we are not simply fighting to maintain a status that was afforded by the terribly unjust treaty that grew out of the last war to make the world safe for democracy; second, that we have some reasonable assurance that another time when we go to the defense of great causes, we are going to win the causes as

well as the war.

Until we can have that kind of assurance, until we can know clearly and definitely what we are doing, let us with determination.

maintain the strictest kind of law which will help us to avoid the pitfalls that took us into the war in spite of our resolve, and let us be more largely devoting ourselves to the saving of our real democracy by proving that we are capable of solving the problems which are so threatening to our own people. Mind our own business is splendid policy right now, and there ought to be readiness in acknowledging that we've got a large degree of it to tend to if we care about our own future.

While I think I know the mind of the American people as one

While I think I know the mind of the American people as one determined to stay out of other people's wars, I cannot too energetically warn them tonight that if they would best save their purpose, they will make their determination known to those who represent them in Washington, and they will protest against the wrecking of the Nation's neutrality law which, I repeat, would more properly be called the law to help America stay out of other receivable week.

people's wars.

people's wars.

There are those who will be inclined to attack anyone who criticizes the direction which his country pursues in foreign relations in critical times like these. They will follow by saying that to oppose the administration effort now to amend the neutrality law is to lend aid and comfort to European dictators. I hesitate, law is to lend aid and comfort to European dictators. I hesitate, and others hesitate, to do and say those things that might lend such comfort. But if men choose now to destroy the American fortification against being drawn into other people's wars, there is no alternative left than that of standing up and fighting back whether or no it gives comfort to dictators. And if it does give such comfort, let it be definitely asserted here and now that the responsibility for it rests with those who would tinker with, weaken, and change the neutrality law.

Freight Rates

EXTENSION OF REMARKS

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES Thursday, April 6, 1939

RADIO ADDRESS BY HON. TOM STEWART, OF TENNESSEE, ON APRIL 4, 1939

Mr. HILL. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD the very able address on the subject of Freight Rates delivered by the distinguished junior Senator from Tennessee [Mr. Stewart] last Tuesday over the Columbia Broadcasting System.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There are many things about which I might talk during the few minutes given to me on this radio hook-up-things of interest

few minutes given to me on this radio hook-up—things of interest to me here in Washington and things that I believe might be of interest to those who happen to be listening in. However, I have chosen but one subject—a subject which is somewhat controversial and which is of especial concern to the South and much of the West; that is freight rates, charges that are made for shipping commodities throughout our country.

It is a fact that has not always been generally known among laymen that freight carrying charges are not uniform throughout the United States. I mean that we do not have a national freight-rate structure, but regional structures, which are the outgrowth of an indifference in the beginning and later a helplessness on the part of those who a few years ago began the fight seeking a correction, to accomplish anything because a too powerful influence had grown up and alined itself against a change.

By regional freight structures, I mean that the United States

By regional freight structures, I mean that the United States was divided into major zones or territories and that freight hauling charges are different in the different zones. We have the eastern zone, the southern zone, the southwestern zone, the western trunkline zone, and the mountain Pacific zone as the five major zones, and in some cases we find the major zone itself divided into sub-

zones.

The rate in one zone or territory does not always match that of another zone or territory, even on the same commodity for the same mileage haul. It is my belief that this situation which pre-vents the free flow of commerce within our United States hampers vents the free flow of commerce within our United States hampers the development of the Nation as a whole, and that a uniform principle of rate making should be adopted and an equality of rates established to the end that all sections of our Nation might develop commercially. There no longer seems to be any real reason why freight rates should be different in any section of the United States; nor does the erection of such rates seem to have followed any predetermined and orderly plan. Like Topsy, they "just grew up," and really existed before the people knew much about it.

We do find that in the last few years there is more harmony in the rates than once existed, but the situation is still incomprehensible to the man who pays the freight. I want to give you some illustrations or comparative figures which will actually show to you the absolute unfairness of these man-made barriers—for to you the absolute unfairness of these man-made barriers—for instance, a shipment of first-class freight from Chattanooga, Tenn. (in the southern territory or zone), to Chicago, Ill. (in the eastern territory or zone), a distance of 592 miles, bears a rate of \$1.70 per 100 pounds—while a shipment from Philadelphia, Pa., to Toledo, Ohio (both cities within the eastern territory or zone), bears a rate of \$1.23 per 100 pounds and the distance is only 3 miles more than from Chattanooga to Chicago, or 595 miles. The Chattanooga shipment costs 47 cents more on each 100 pounds of freight. The same general figures and differences apply throughout the southern territory. Take these figures—a shipment of firstfreight. The same general figures and differences apply throughout the southern territory. Take these figures—a shipment of first-class freight from Austin, Tex., to Cincinnati, Ohio, bears a rate of \$2.70 per 100 pounds, while from Cincinnati, Ohio, to Bangor, Maine, it costs only \$1.67 per 100 pounds—actually a difference of \$1.03 per 100, while the distances are almost the same. That is to say Austin to Cincinnati is 1,097 miles, while Cincinnati to Bangor is 1,098 miles. Look at the figures of a first-class shipment of freight from Wichita, Kans., to Youngstown, Ohio, a distance of 914 miles—the rate is \$2.20 per 100 pounds. Yet Dayton, Ohio, can ship to Portland, Maine, 911 miles at \$1.49 per 100 pounds, a difference of 71 cents per 100 against Kansas. A shipment from Fargo, N. Dak., to Indianapolis, Ind., costs 51 cents more than it costs to ship from Indianapolis to Providence, R. I. Again tell me why it is that Cheyenne, Wyo., and Denver, Colo., must pay nearly \$1 more on the 100 pounds of first-class freight going to Chicago, than Chicago pays moving the same freight an equal distance eastward? eastward?

I wonder what the people of Minnesota, Iowa, Arkansas, Nebraska, Missouri, Louisiana, and other Midwestern and Southern States think about these unfair and oppressive rates? I wonder why they have this long tolerated such unfair discriminations?

It is the purpose of a group of Members of the United States Senate to bring about a correction of this situation if such is possible, at this session of the Congress, but we are being met

by a powerful resistance, as might be expected.

It so happens that I come from a Southern State, a State in that section recently referred to as the "Nation's economic problem No. 1." Like certain other sections of the Nation, we have paid freight tributes for many years—our growth has been hampered and actually we have become a "No. 1" problem. We of the South do not want a preference over other sections and we do not want to see any section have unfair advantage over another section—this is a national problem and should be dealt with as such and all sections put upon an equal basis.

In the eastern zone or territory, lower freight rates are enjoyed than in any other territory. The States within this zone are actually enjoying rates so low that no other section of the United States can compete. The shackles of discrimination in the making of freight rates have been forged so fast about the ankles of southern industry that economic progress is impossible in that section. Economically, the South is held in chattle slavery and no avenue of escape is seen so long as these discriminatory freight rates exist. We are treated as might be colonial possessions.

I believe that when the Nation as a whole knows of these in-

rates exist. We are treated as might be colonial possessions.

I believe that when the Nation as a whole knows of these inequalities they will not continue to tolerate them. More wars have been won by starving the enemy than by the use of lead and steel to slaughter soldiers. There is no substitute for bread and education; these things are necessary to the well-being of any people; deprived of them, men do not make good citizens. It is a terrible thing to think that one section of our great country would force upon other sections a thing that strangles economic existence, an arbitrary structure designed to prevent competition in the field of arbitrary structure designed to prevent competition in the field of industry—structures that are relics of a punitive policy which should have been buried long ago.

The argument is advanced that the South and other less-favored rate sections can afford to pay larger sums for transportation because of their lower wage scale. I can see no merit to this argument, for I believe that higher freight rates have had more to do ment, for I believe that higher freight rates have had more to do with the low industrial wage scale in the South than any other one factor. Certainly the southern manufacturer, who must pay a higher freight-rate bill than his competitor in the eastern zone, cannot be expected to pay his labor a rate comparable with the eastern manufacturer and long remain in business. It is too much to expect when the hard dollar-and-cents facts are considered. My belief is that a leading of territorial freely protect with restar will result in belief is that a leveling of territorial freight rates will result in an equalization of wages. I know that southern industry wants to pay its labor more money and I know that freight rates have prevented it. The will is there. All southern industry asks is a way. I am certain that the establishment of a national freight-rate structure will point the way.

Surely the people of America won't let such unjust discrimination continue. I know that as a Member of the United States Senate I would not support or vote for any measure which had for its purpose imposing on any section of the country an unjust, unfair, and discriminatory measure which would place that section in a position unequal to the rest of America. Place all sections on an equal basis and eliminate territorial discriminations, the American way.

Unemployment, Alien Registration, and Immigra-

EXTENSION OF REMARKS

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, April 6, 1939

ARTICLES FROM THE WASHINGTON TIMES-HERALD AND THE GREENSBORO (N. C.) DAILY NEWS

Mr. REYNOLDS. Mr. President, I respectfully request unanimous consent to have published in the Appendix of the CONGRESSIONAL RECORD three clippings, all of which interest themselves, certainly to an extent, with the distressful unemployment situation existing in the United States today, and with national defense.

The first is from the columns of the Times-Herald, of Washington, D. C., of today, which is an endorsement—by the local Civitans Club-of my bill calling for the registra-

tion and fingerprinting of all aliens.

The other two clippings are from the "Public Pulse" columns of the Daily News, of Greensboro, N. C., by the pens of Mr. Grant Shepard, of Hillsboro, N. C., and Mr. Harry Daniels, a North Carolinian now residing in Washing-

These two latter clippings are particularly pertinent at this time when we are engaged in the discussion of the subject of unemployment in relation to the W. P. A. And further, these letters by Messrs. Shepard and Daniels are worthy now of note at a time-this hour-when some are advocating the letting down of our immigration bars and admitting millions of refugees from European shores to compete with the unfortunate unemployed of America. I avail myself, therefore, of this opportunity to thank both Mr. Shepard and Mr. Daniels for their letters to the Greensboro Daily News.

There being no objection, the clippings were ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald, April 6, 1939]

CIVITANS ENDORSE ALIEN REGISTRATION

Endorsement of the bills now before Congress to provide for the national defense by the registration of aliens in the United States was voted by the Civitan Club of Washington at a meeting yesterday at the home of Dr. Grant S. Barnhart, 1434 Rhode Island Avenue NW.

> [From the Daily News, Greensboro, N. C.] VINDICATOR

EDITOR OF THE DAILY NEWS:

This past week I experienced very considerable pleasure from reading the first number of The Vindicator, and also the speech of Senator ROBERT R. REYNOLDS delivered on the floor of the Senate

of the United States of America on March 22.

As a very humble member of the citizenship of this country who does not believe in "hair splitting" when confronted by a crisis, I immediately became a member of the Vindicators and wrote to Senator Reynolds offering my poor services in any way they might

be useful.

Having a very limited income, my usefulness is, naturally, greatly handicapped. However, by cutting out cigarettes and the one drink of whisky which I have been taking before supper, I can save a few dollars each month which can be devoted to this purpose.

Objection has been made to the shutting off of immigration for 10 years on the grounds that when the Constitution was written and adopted this highly creditable, altruistic idea was that this country should be a haven for all oppressed peoples, irrespective of color, race, or creed. This attitude is laudible. But when the situation reaches a point * * * like the existing situation * * * it becomes more laudable yet to temper altruism with a proportionate amount of practicality.

It is unreasonable to expect that those eminent gentlemen who drafted and enacted our Constitution could have imagined a condition such as the one which confronts us today. Those men who traveled to Congress on horseback, because the state of the roads

made wheel transport too difficult, could not possibly have visualized our section of the continent as it is with a population of 125,000,000 people. It would have been exactly as credible to them as to tell them that into a 10-gallon bucket, already filled with water, you could add more water and not have the excess over 10 gallons spill over the sides of the container. You probably would not have been given serious attention if you had told them that in 150 years there would be more men out of work in this country than was the entire population when they enacted the Constitution. And they would have called the doorkeeper to put you out had you And they would have called the doorkeeper to put you out had you suggested that it was possible to find in all the world the number of billions of dollars to feed these unemployed which have been found and distributed by the Roosevelt administration in the past

The man who maintains that within the next 100 years we will be looking for a place for our surplus population is far from a fool.

Unfortunately there has been a considerable number of the im-

be looking for a place for our surplus population is far from a fool. Unfortunately there has been a considerable number of the immigrant population of later years which can be very truly designated as undesirable.

The fact is that since their arrival here they have done all in their power to cause discord and revolt against the very form of government which has given them refuge from the danger of being penalized for precisely the ideas which they are endeavoring to cram down our own throats. A frank exposition of the absurd position that fool impractical ideas more than occasionally lead us into, we ignore if possible.

I recall once on an evening in 1920, I called upon on old comrade who had commanded H Company of the Twenty-third Infantry, when I had E Company. He lived in a large apartment house in New York City and had only just been discharged from Walter Reed Hospital, badly crippled as a result of wounds received in October 1918 at Blanc Mount Ridge. The doorman, the telephone operator, and the two elevator men were ex-German soldiers, healthy and strong. Endeavor, if you can, to understand my feelings, when all that day and for many preceding days, I had been working hard and with no success to find jobs for men who had been good soldiers in the Second Division, A. E. F.

That is just one experience, an incident of many. And, in the rough language of wartime infantry, it was being just a bloody plenty too altruistic. As I understand the situation, we have a lawmaking body and an executive department, both National and State. It is my profound belief, based on no little research, that had the executives done what was necessary to enforce the laws already available it would not have been necessary for Senator Refynolds and his associates in Senate and House to take the position they have been forced into taking.

It is my belief that the President, the governors, the mayors,

position they have been forced into taking.

It is my belief that the President, the governors, the mayors, et al., have a very grave and just accusation coming to them in this particular connection at least.

GRANT SHEPARD.

HILLSBORO.

TELLS OUR BOB TO GO TO IT

EDITOR OF THE DAILY NEWS:

Go right ahead, Senator REYNOLDS, and "bang" away in the Senate, and keep on "banging" until such time as it may take to have passed your bills to make the United States free of "isms," Communists, Bolsheviks, and all activities conducted by aliens which go for the destruction of our American standards of

You will be bitterly attacked from time to time by the enemies of our democracy, and obstacles towering like mountains will be drawn in front of your efforts, and many will call you by different "handles," but your's is a good fight and will withstand anything directed against the accomplishment of it.

There are some so-called experts on the subject of immigration who would have us believe that the admission of immigrants go to make prosperity and decline unemployment. These expert advisers have, I believe, overstuffed themselves on "baloney." They say that "common sense" should tell us that for every one immigrant admitted to this country two or three jobs are created by the needs of the immigrant.

If this is common sense then the New Deal and all its programs have been entirely wrong to rid us of unemployment. I for one would hate like the devil to see our doors open to 12,000,000 immigrants for the purpose of stimulating business to solve the unemployment situation. If this is common sense, "I am from Missouri." Never mind about bringing in the 12,000,000 immi-

Missouri." Never mind about bringing in the 12,000,000 miningrants to prove it.

Again, if the claim of some experts is true, then we are not suffering from unemployment, but decidedly from a decline in our population. The conservatives and the anti-liberals on Capitol Hill tell us that they are getting rather tired of voting large sums of money to feed the hungry and the needy. Why not then stop the influx of immigrants?

the influx of immigrants?

The New Deal has studied the unemployment situation from all slopes and treated the unemployment generously with unlimited funds with the hope of reaching the cause of it. Never for one moment would I believe that the New Deal saw unemployment as due to the need of a larger population.

I don't think there is the slightest modicum of common sense in the idea of admitting immigrants to decline unemployment.

I would say to close the doors to immigrants for the next 10 years would do us no harm, despite the claim by some that immigrants add a stimulus to business in which decline and increase of unemployment works out its own problems.

WASHINGTON, D. C.

HARRY DANIELS.

The Silver-Purchase Program

EXTENSION OF REMARKS

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES Thursday, April 6, 1939

VARIOUS EDITORIALS ON THE SUBJECT OF SILVER

Mr. TOWNSEND. Mr. President, with further reference to editorial opinion on silver, I ask leave to have printed in the RECORD six editorials on this subject.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Los Angeles (Calif.) Times] SILVER SILLINESS

The Secretary of the Treasury is now quoted as saying that ne does not believe the administration's policy of unlimited buying of silver, even at a price 50 percent above the world quotation, can ever raise our stock of the metal to one-fourth our gold holdings. Nor does he see any prospect of getting the price of silver up to

\$1.29 an ounce.
Since the two objectives constitute the whole purpose of the Silver Purchase Act, and there is no hope of ever attaining them, or either of them, why persist in it? Mr. Morgenthau's sole remaining defense is that it increases the buying power of silver-

Suppose it does; why should we make them a present of the money wherewith to buy our goods and the goods of rival countries as well? What we pay for every addition from domestic sources to our vast and useless stock of silver penalizes 97 out of every 100 of our own citizens for the benefit of the remaining 3, who happen to be in the silver-producing business. The rest of it helps, among other things, to promote Mexican seizures of American property.

[From the Jackson (Miss.) News]

The United States has continued to purchase Mexican silver, despite the expropriations and the increase in tariffs on American goods. * * * It might be well to remind Mexico, quietly but firmly, that this Nation will find itself unable to purchase silver after June unless the good-neighbor overtures find some practical response.

[From the Clarendon (Tex.) News] WHEN GOOD NEIGHBORLINESS PROMOTES BAD

Texans are more interested in the Mexican situation than most Texans are more interested in the Mexican situation than most other States by reason of our border line with that Republic. Texans have been outstanding in their support of a "good neighbor" policy toward our neighbor to the south, but continued acts of ill-faith and downright banditry on the part of the Cardenas administration have about exhausted the patience of citizens of the Lone Star State. Star State.

Star State.

Mexico has stolen hundreds of millions of dollars worth of American-owned properties at different times—principally American oil properties. Mexico takes these products and barters them with enemies of democracy in Europe. What are we doing about it?

We have a remedy. The United States has no reason left to buy Mexican silver. We don't need it. Still Mexico sells us her silver at prices that have been inflated so high above the world market through taxation and other processes that it costs as much as domestic silver. Why continue this folly just "to help them out"? All the United States needs to do to bad neighbor Mexico is to stop soft soaping her. And one way to quit soft soaping her is to quit buying her silver. That's a practical way to reform a bad neighbor.

[From the New London (Conn.) Herald]

The administration continues to pay 64.64 cents an ounce for sliver, against the world price of 43 cents. This gives the western silver-producing States a bounty of about 50 percent. The Government now has 2,500,000,000 ounces in storage. A profit of about \$1,000,000,000 so far has been handed to the silver producers in the small group of silver States.

The silver trick was supposed to raise domestic commodity prices. If it had done so, millions of Americans would have been paying much more for what they eat. But the farmers have been suffering from lowered prices instead, and were it not for the Government checks they would have even less income. So we pay the billion profit to the silver producers and the billions to help the farmers. And in spite of everything the boys show signs of not voting right

[From the Lockport (N. Y.) Union Sun and Journal] TREASURY'S FOREIGN POLICY

Events move rapidly in Washington. In its jittery atmosphere a calm Senator warns that our Government is cultivating a "holy war spirit"—a remark that deserves to be hung on the time copy hook for future reference.

Secretary of the Treasury Morgenthau appearing before a special Senate committee failed to give definite data concerning the purchases of silver from Mexico and other nations. "Under the direction of Congress," Mr. Morgenthau said, "the Treasury buys each day all the silver offered to it. We have no way of knowing the origin of that silver."

Naturally the United States keeps books and those books must Naturally the United States keeps books and those books must show how much silver the United States bought from Mexico. Also how much Chinese silver, and the reduced amounts as the area of China is diminished by warfare. But it is now said that we are still being flooded with China's silver, although through another medium, Japan, mowing its way through North China, has seized the remaining silver supplies of that country, and it is Japan, an eastern totalitarian state, not China, that is now reaping the benefits of our silver-purchase policy.

Mexico confiscated American and British-owned oil and bartered it to the western world's totalitarian states. Our silver purchases

Mexico confiscated American and British-owned oil and bartered it to the western world's totalitarian states. Our silver purchases are a great aid in making this possible, as it furnishes much needed revenue to bolster Mexico's shaky financial structure.

The whole silver policy is based upon unsound economic theories. It is an expensive luxury to load on the backs of the already overburdened taxpayers. The justification for the continuance is a domestic subsidy. Certainly there is none for the continuance of the foreign silver buying, particularly as it is not only driving the world off the silver standard, but also giving aid and comfort to the totalitarian nations at the expense of the democratic nations. democratic nations.

Secretary Morgenthau would perform a service to his country if he would explain the Treasury's inconsistencies of silver purchases and leave the determination of the foreign policy of our Govern-ment with the State Department, where it belongs.

[From the Savannah (Ga.) News] SILVER SUBSIDY ILLEGAL?

The whole 6-year \$60,000,000 silver-subsidy program is without legal authorization, according to Neil Carothers, dean of the college of business administration, Lehigh University, in the last of six articles on silver in the current issue of the Annalist.

articles on silver in the current issue of the Annalist.

The domestic subsidy and the general silver-purchase program are two entirely different things, according to Professor Carothers, and a suit by some harried taxpayers to stop the subsidy might have some exciting consequences. Congress never has passed a subsidy law, he points out. It has never specifically approved the subsidy. It has never at any time given any indication that it would in sober judgment have the hardihood to pass a law making cash presents year after year to a group of corporations. In the murky obscurity of the monetary hysteria of 1933 and 1934 it was possible to "get away with anything." The general public, after 6 long years, is gradually coming to understand the character of our monetary measures, and any Member of Congress who votes for a continuance of this subsidy will very likely find himself before the bar of public opinion. bar of public opinion.

bar of public opinion.

Undesirable as the subsidy to domestic producers is, the general silver policy under the Silver Purchase Act is far more vital to the Nation's welfare. A leading newspaper has recently taken the position that the whole silver program belongs "essentially in the category of cheap political chiseling." It is far more than that. It may wreck the finances of the Nation before it is done. The flood of gold pouring into this country from the distressed nations of Europe has waxed and waned from month to month, but the vast purchases of silver bullion have failed to establish the 1-to-3 proportion required by the Silver Purchase Act. The Treasury kitten is still chasing its tail.

The silver Senators demanded that the country "do something"

The silver Senators demanded that the country "do something" for silver, "do something" for China, "do something" for Mexico. We did something for silver and got a millstone around our necks. We did something for China and that unhappy country had its financial system wrecked just at the time when a relentless enemy mancial system wrecked just at the time when a relentless enemy was attacking her. Having wrecked the finances of China, we have been buying her silver since to keep her alive while she fights a war. We did something for Mexico and the result would fit well into a Gilbert and Sullivan opera if it did not belong in a tragedy. The New York Times recently reported that the leading newspaper of Mexico has declared that our large Treasury purchases of silver from Mexico provided the funds which enabled that country to seize and hold oil properties of American citizens. Let Us Have Economic Justice for Our Rural People

EXTENSION OF REMARKS

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Thursday, April 6, 1939

Mr. MURRAY. Mr. Speaker, I wish to call your attention and the attention of the Members of this House to the serious. deplorable, and chaotic condition of the unorganized and poorly protected farmers of America. These people are more disheartened, gloomy, and more at sea than they have been any time the past 20 years. For 10 years this unorganized, unprotected group of farmers has been contributing from 25 percent to 35 percent of the cost of feeding this Nation, and that includes the general public as well as the people on relief. History records that in times of political or economic upheavals the rural people carry more than their share of the load, and in recent times the Russian peasants and the farm people of our own country are striking examples.

I trust my remarks will be economically sound and as non-

political as possible.

For over 2 months I have been constantly hearing of the problems of the world, and I would like to begin to hear something of the problems of the farm people of Wisconsin, Minnesota, Iowa, and the rest of the United States. In fact, I believe the time has come when we should more fully realize that "charity begins at home."

OUR ECONOMIC LIFE

Our economic life, although deeply interwoven, is usually divided into labor, agriculture, and capital, and our every effort should be to obtain a fair relationship between the three. In these three groups we have organized and unorganized labor, organized and unorganized capital, organized or protected agriculture, and unorganized and weakly protected agriculture.

Organized capital, such as stock exchanges, banks, mortgage companies, finance companies, and tax-exempt bonds, is in a position to exact its fair share from society. Unorganized capital, like the small investor who may not be able to find a very remunerative place to invest his funds, is not of my particular interest today. Organized labor and organized agriculture—where they have bargaining powers with laws to help enforce them-are not of my discussion today.

UNORGANIZED LABOR

I wish, Mr. Speaker, to call your attention and the attention of the Members of this House to the serious problems of the unorganized group of labor and its relation to unorganized agriculture.

To me, the W. P. A. is simply a subsidy to unorganized labor. I think every normal man should have learned in the past 10 years that he is, and should be more or less,

"his brother's keeper."

I have been living in close contact with these men on W. P. A. and I appreciate many of their problems. This subsidy to unorganized labor of the W. P. A. compares favorably with corn-hog and soil-subsidy checks to farmers and tax-exempt-bonds subsidy to capital. New jobs through improved agricultural and business conditions will work for gradual reduction of the W. P. A.

I believe that if the American laborer and the American farmer had produced and processed the 86,000,000 bushels of corn, the 371,000,000 pounds of barley malt, the 494,000 head of livestock, and other enormous agricultural imports of 1937, both labor and agriculture would have profited thereby. If W. P. A. labor had produced and processed this \$868,000,000 worth of imported, competitive agricultural products, the relief rolls would have automatically been reduced.

Let us abolish the \$10,000 soil-subsidy checks to big corporation farmers and stop issuing tax-exempt bonds to capitalists while we are working out this problem of the unorganized labor people on W. P. A.

I think everyone of us can have a little more sympathy with the view of the W. P. A. worker getting \$12 a week, when he knows that corporation farmers are getting up to \$10,000 per year from the Federal Treasury and when he views the subsidies that are being enjoyed by capital in its many phases.

UNORGANIZED AGRICULTURE

It is not my intention to give a rehearsal of all of the ills of agriculture, but it is surely fair that we take a little time to

get a picture of this-our greatest industry.

Fifty million additional acres of land were put under cultivation at the time of the World War and this has hung as a millstone around the necks of the farmers of America ever since that time. These are more or less floating acres and by floating acres I mean acreage that can be shifted into most agricultural crops that can ruin the market for almost any crop. We must always remember that we have sufficient land in this country on which to raise enough food to feed at least three times our present population and that this food will be produced any time there is a price incentive or satisfactory market to justify its production. Let us at least see what these 50,000,000 wartime additional acres and other influences have done to the national farm income of this country. Chart 1 shows:

Year	Total real- ized national income (million dollars)	Realized income from agri- culture (million dollars)	Percent
1920	68, 434	10, 569	15. 44
	70, 051	9, 048	12. 90
	72, 398	6, 761	9. 33
	56, 254	5, 517	9. 80

Source: National income in the United States 1799-1938, National Industrial Conference Board, pp. 7 and 65.

Figures also show that the rural people of America, representing over 25 percent of the population of this country, have for many years been receiving from 6.2 percent to 9.8 percent of the national income. This same group of people have, or should have, over 50 percent of the buying power of this country and it is only fair and reasonable to assume that this great group of people must have their share of the national income if they are going to buy the products of industry.

RELATIONSHIP OF INDUSTRIAL WAGES TO FARM PRICES

We all know that industrial wages must be sufficient to buy agricultural products and we know that this is particularly true of dairy products.

Chart 2, giving data from the United States Bureau of Labor Statistics, shows the dependence of factory pay rolls on farm income. "All primary purchasing power originates in the soil, except that obtained from fisheries and mines. When farm income goes up, factory pay rolls invariably follow, but they do not lead the procession. One is cause, the other effect. It is high time for American industry to forge an alliance with American agriculture, using the tools of modern science."

Chart 3 shows that since 1920 farm prices have been way below industrial wages, and also, that farm prices have been below the level of living costs.

I am not so interested in talking today of the relation between this scale of industrial wages and farm prices as I am interested in raising the farm prices for the 25 percent of the people of this country who live on our farms. This is not to say, mark you, that I want to bring industrial wages down, but I know and I think you know, we must lift agricultural prices up.

PROTECTED AND UNPROTECTED MILK

Chart 4 shows that protected milk brings twice as much as unprotected milk. It also shows the difference between the prices that the protected dairyman gets for his product that goes as fluid milk to the cities, in comparison with the

price paid the unprotected farmer whose milk finds its way to the manufactured dairy products such as condensed milk, cheese, and butter.

Another concrete example is better found in our grocery stores right here in Washington, D. C., where it costs 14 cents to buy a quart of milk and where a pound of good Wisconsin cheese can be bought for 14 cents, and please remember that it takes about 5 quarts of milk to make a pound of cheese.

Mr. Speaker, what are the constructive things to do to give economic justice to our rural people?

First. Let us quit boasting of our agricultural greatness and give more attention to the justice of the individual who is trying to make a living on his farm. I am not so much interested in telling you that Wisconsin produces a billion pounds of condensed milk a year, 175,000,000 pounds of butter, or nearly one-half a million pounds per day, or nearly a million pounds of cheese a day, as I am to have you know that this butter and cheese is being sold at less than two-thirds of what it costs to produce it. I am not so interested in telling you that 1 cow out of every 100 in the United States is in my district—286,000 cows in my district and 25,000,000 cows in the United States—as I am that the milk from this one cow is bringing less than two-thirds of what it costs to produce it.

Please remember that we have more dairy cattle than we have people in my district, so you can readily see what this loss of income means to the business and economic life of this region.

Second. Let us lower direct and indirect taxes so that business can improve and buy the products of our farms. Many farm leaders think that the best method of helping agriculture is by helping industry and business so that they can in turn employ labor and labor can buy the farmers' produce.

Chart 5 shows the comparison of Wisconsin farm taxes, gross income, and land values from 1910 to 1938, and the conditions in Wisconsin are typical of all agricultural States. This chart points out that, while high taxes have steadily been maintained during this period, gross income and farm values, as everyone knows, are at a very low level.

Let us remember that we have 58 hidden taxes on a loaf of bread, 32 hidden taxes on a can of peaches, 45 hidden taxes on sugar, 38 hidden taxes on a pound of bacon, and $1\frac{1}{2}$ -cent hidden taxes on every quart of milk, and that 23 cents of every dollar that we spend goes for taxes.

If taxes are paid by the sweat of the worker's brow, the present low farm prices are surely doing worse than that—they are sweating out the lifeblood of the unorganized rural people of America at this time. The result is that thousands of them do not now have a standard of living comparable with the low standard of W.P. A. workers today, and in many areas 30 to 40 percent of the farm loans are delinquent.

Third. Let us put farm interest rates in keeping with the value of money. I contend that if the banks cannot pay over 2 percent for money, farmers are entitled to lower interest rates at this time, as farm loans are by far the best security in America today. Up to the present time Federal land-bank loans have been made to farmers with interest rates ranging from 4 to 6½ percent, and I believe that a definite policy should be established as to these loans, because after June 30, 1940, a new program will of necessity have to be set up.

Chart 6 shows the negligible drop in interest rates on farm mortgages from the prosperity year of 1928 and the depression year of 1937. It shows that in 1928 interest rates were slightly more than $5\frac{1}{2}$ percent, while in 1937 the rates continue to range well over 5 percent.

Fourth. Let us be frank enough to say that the so-called reciprocal-trade treaties have worked, and are working, an injustice to the American farmer and the American laborer, and that the farmer and the laborer are being "crucified on the altar of world commerce" today. These so-called trade treaties have been a stumbling block to every constructive farm program presented for the welfare of the farming and laboring people of this Nation for the past number of years, and I include the present farm program.

The time has come when we must face the consequences as to the effect of these trade treaties. When Congress delegated the power to make these treaties it assumed a grave responsibility. While there is considerable doubts as to the legality of these treaties, as they were never ratified by the Senate, there is one thing certain about them and that is that the Congress did not have the moral right to extend the power and authority of these treaties to any one man to have control of the milk checks of every farmer in America and the grocery bill of every citizen of our country.

Chart 7, covering the years from 1935 to 1937, inclusive, shows a normal price fluctuation of cheese. The chart should also convince the most skeptical person that there is something to farm prices except "supply and demand."

The price of cheese went from 17 cents per pound to 12½ cents per pound when the renewed reciprocal treaty went into effect and at the same time the storage was reduced from 99,572,000 January 1 to 85,798,000 pounds on July 1, 1936.

It is generally known that when a cargo of butter arrives at one of our ports it is easy for it to have a very depressing effect upon the millions of pounds of butter that are being produced and that are in storage in the entire country.

We must recognize that the psychological effect of supply and demand can be, and is, just as effective and deadly as actual supply and demand. It has often been said, "if you scare a man to death by threatening to shoot him, he is just as dead as if you had shot him."

If this is to be only an industrial country and not an agricultural one, let us be honest enough with the farmer to tell him so in order that he may farm accordingly.

Let us convince the industrialist that he cannot trade part of his wares for South American beef and expect the livestock raisers of this country to be able to buy the rest of his products.

Let us let the people know that our total exports in 1937 were \$3,345,158,000 and our imports \$3,084,061,000, or a favorable balance of \$261,097,000—but in 1937 we exported \$776,084,094 worth of war supplies. Deducting these war supplies we had an unfavorable trade balance of \$514,987,094. Who wants a favorable trade balance on the basis of war materials?

Let us realize that our big markets, our big business, is right here at home and that foreign markets absorb less than 10 percent of our production.

America is the richest market in the world, otherwise all the producers in the other countries would not be fighting to invade it under cover of the trade treaties.

Let us realize that the American farmer is entitled to the rich home American market. This is not his privilege—it is his vested right.

Let us follow the leadership of our colleague the gentleman from Michigan [Mr. Crawford] and raise more of our own sugar in the splendid sugar-beet fields of Wisconsin, Montana, Minnesota, Iowa, Michigan, California, and other States. Let us work and plan to raise more sugarcane in Florida and Louisiana, and let us realize that our imported sugar is coming from where maximum labor costs are 12½ cents per hour.

Let us give the American laborer American pay. Let us give the American laborer the American standard of living in producing this sugar.

Let us investigate and find out what the trade treaties have done to the glass and pottery workers in the factories of America.

Fifth. Let us abolish noneconomic artificial trade barriers between States. Inspected milk is selling for 3 cents a quart on the farms in my home county in Wisconsin. The freight rate from there to Washington, D. C., is \$1.30 per hundred when shipped in cans. The railroads do not have any tank-car rates, as no milk is being shipped that way, but I think I would be safe in saying it would not be over \$1 per hundred, or 2 cents per quart. Why 14-cent milk when we have a national surplus is surely a fair question to ask?

I wondered the other day when we had the local milk question up and we heard about the health problem if the Congressmen who voted to extend the power to make the trade treaties forgot to insist on a health chart on the cattle that produce the imported butter and cheese. We surely should demand that these imported dairy products come from cows as clean as our own. We have spent millions of dollars of the taxpayers' money of this country in eradicating livestock diseases and the dairymen of this country can well ask that imported dairy products meet the requirements of their own.

There is just one thing I must mention in connection with the so-called reciprocal-trade treaty with Great Britain. The duty on wool rags was cut in half, being reduced from 18 to 9 cents per pound. It seems that the State Department thinks it will "meet a demand in this country not filled by domestic production." I do not know exactly how to interpret this statement or the significance of the import, but I know one thing for sure, and that is, if the present farm prices prevail much longer, there will not be any need of importing rags as our farmers will have an ample supply of their own.

Sixth. Let us quit subsidizing people and influencing them to start farming as long as the present low prices prevail. There are no doubt lawyers in our midst and I have often wondered what their reaction would be if the Government would subsidize lawyers in their home towns and furnish them lawbooks and offices, as has been done for new farmers in our rural areas the last few years. I think you know the answer.

Seventh. Let us quit appropriating money to put large new acreages under irrigation, and then subsidize millions of acres in our older farm sections to take them out of production, and then turn around and import products of millions of foreign acres.

Eighth. Let us quit subsidizing big corporation farms. If we are going to subsidize any farmers, let it be farmers that own, operate, and live on their own farms or only the familysized farms, the real agricultural people.

Ninth. Let us educate the general public to realize that if a pound of cotton or a certain amount of cheese, butter, wheat, or any other farm produce requires 1 hour of labor, that this farm labor and the farmers are entitled to a minimum wage as well as any other citizen in this country, and I doubt if any honest man will deny it.

Tenth. Let us educate the public that the time has come when the farmer is entitled to domestic allotment price, parity price, or cost of production for all products that are consumed in this country. Let us bring home to the people that the farmer is entitled to a floor under his agricultural prices, which will act as a ceiling for his hours as well as anyone else. Let us educate the public that the cost of production or parity price of farm products is just as easy to compute as is a fair wage for labor or a proper return for capital.

On January 11, 1939, on this floor, you will remember, it was brought up that a certain class of labor on W. P. A. was getting 18 cents an hour in Tennessee, and a comparatively few miles away in Illinois \$1.02½ per hour was being paid for the same class of labor. This differential is based, it is claimed, upon so-called living wage ratios of the two localities. Which one is the living wage ratio—the 18 cents per hour or the \$1.02½ per hour?

What is a fair return for capital—is it seven-eighths percent call money; 2 percent paid by the banks, or the 20 percent of the finance companies?

In my mind, Mr. Chairman, it is just as easy to ascertain agricultural production costs as it is industrial production costs.

CONCLUSIONS

Let us not be unfair to previous farm programs because we at least have had a farm program.

Let us all try and look at this problem constructively and appreciate the fact that it is fundamental to the economic safety of this Nation. Thus it utterly transcends party considerations or partisan prejudices.

I think it would be far from reasonable if we do not frankly admit the beneficial points and the constructive lessons we have had and enjoyed from our farm programs.

Let us begin to realize that due to the generosity of the past Congresses agricultural colleges and agricultural high schools have been established all over the country and the country is honeycombed with men who have had high-school and university agricultural training and these men have a broad view of the interpretation of the needs of agriculture.

Let us be careful not to have our farm organizations have too much controversy as to whether domestic allotment, cost of production, or parity is the right term to use in order to obtain our goal; if we do, farm people will be divided as our organized labor groups are today. I am not so much interested in the name of this agricultural "child" as I am the welfare of this agricultural "child."

Let us note that the American farmer has begun to dissect the "weasel words" of the professional office seeker and that he is getting analytical of the "bedtime stories" of the professional politician.

Let us realize that we cannot subsidize five crops with a national farm value of less than one-half of the farm value of the many other farm crops, and expect to have a worthwhile program.

Let us keep all of the good things developed so far in these previous programs and put our energy to work for a plan that will be equitable to all branches of agriculture and to society.

Let us all, who can through our agricultural experiences, give constructive thought and suggestions to the gentleman from Texas [Mr. Jones], the gentleman from North Dakota [Mr. Lemke], the gentleman from Nebraska [Mr. Coffee], the gentleman from Kansas [Mr. Hope], and other agricultural leaders in this House to the end that the farmer can have a greater and deserved share of the national income, so our farmer can enjoy the benefits equally with the rest of the people of our Nation, and at the same time fulfill this vitally necessary function of being a successful consumer in the economic scheme of life.

Let us remember that Wisconsin is an agriculturally conscious, forward-looking State, where parity and cost-ofproduction theory has been in practice in the Wisconsin city milk supplies. Where somewhere near decent, honest, fair prices have been given the dairyman whose product has had this protective legislation. Whether our Wisconsin colleagues are from a metropolitan area, like Mr. Schafer and Mr. THILL, or a prominent lawyer like Mr. KEEFE, or a leading newspaperman like Mr. Bolles, or men with a lifetime of agricultural experience like Mr. Griswold and Mr. Gehrmann. or businessman and farmer like Mr. Hawks, or businessman, lawyer, and farmer like Mr. Johns, or lawyer, businessman, farmer, and newspaperman like Mr. Hull—and although I have no authority to speak for any one of them-I am certain you can be well assured each and every one of them will be found working for economic justice for our rural people.

In conclusion, Mr. Speaker, with the right leadership, I think this agricultural problem will in time be solved as nearly as well as we ever can expect to solve any of the problems of our economic life.

Let us make a start and give the American market back to the American farmer and bring the Government back to the people, and wholeheartedly devote ourselves to the economic justice of our rural people.

The Public Interest in Transportation

EXTENSION OF REMARKS

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 5, 1939

RADIO ADDRESS BY HON. FRANCIS D. CULKIN, OF NEW YORK, MONDAY, APRIL 3, 1939

Mr. CULKIN. Mr. Speaker, under leave to extend my remarks, I insert the following radio address which I made over

the red network of the National Broadcasting Co. Monday evening, April 3, on The Public Interest in Transportation:

Good evening friends: There are now pending in the Congress three bills which would seriously affect the economic well-being of every man, woman, and child in these United States. They are the Lea bill, the so-called Fletcher bill, and the Wheeler bill, and have to do with transportation. These bills were written by the railroads and will create a railroad monopoly of transportation in America by placing the complete control of all types of common carriers under the Interstate Commerce Commission.

the Interstate Commerce Commission.

The railroads, in their palmiest days, when they controlled whole States and were powerful at the seat of Federal Government, never enjoyed such power as they are given by these bills. The effect of this legislation is to make the international bankers—Kuhn, Loeb & Co. and J. P. Morgan & Co.—the actual managers of the class I railroads, the masters of American transportation.

I wish to state preliminarily that I make no war on the rail-

railroads, the masters of American transportation.

I wish to state, preliminarily, that I make no war on the railroads. They have played an important part in the development of America and are essential to our national life and progress. I will vote for any legislation which will enable the railroads to put their house in order, even to the extent of further loans from the R. F. C. But I am unalterably opposed to the creation of a transportation monopoly which will certainly slow our country down, if it does not destroy us nationally.

Distances are so great in the United States that adequate low-cost transportation is essential to the well-being of our people. In some sections of our country we have great surpluses of the products of agriculture and industry for which there are no sale. In other sections there is suffering because of the unsatisfied demand for these products which cannot be carried to the sections where they are needed because of the excessive costs of transportation. No relief for these groups can be had through this proposed legislation. On the contrary, it will put the American people in an economic strait jacket. strait jacket.

strait jacket.

The Interstate Commerce Commission is railroad minded, and bitter experience has shown that it is not concerned with the transportation problems of the farmer or the industrialists. The chief concern of the Commission, as is apparent from its written record, is to enable the railroads to continue to pay interest and dividends on their bonds, stocks, and other alleged assets, which theoretically represent the railroads' swollen and watered capitalization, much of which is obsolescent.

BOGUS VALUATION

DOGUS VALUATION

One fact will make this clear. The Commission's appraisal of the value of the railroads, made largely by railroad employees, is over \$26,000,000,000. The face value of the bonds and the par value of the stocks of the railroads are \$18,000,000,000. The present market value of the stocks and bonds of the railroads is \$9,180,000,000. It is a far cry from nine billion to \$26,000,000,000, but this fact has not deterred this railroaded-minded Commission from endeavoring to make the American people pay dividends on \$18,000,000,000 worth of value, which market reports show does not exist. I exempt from my condemnation of the Commission several members of that body who have, times without number, protested against this outrageous procedure.

Due to the demand of the National Grange that the farmers of the West be protected from the rapacity of the railroads, the Interstate Commerce Commission was born in 1887. It was supposed to be a rate-making body that would stand between the farmer, consuming public, and oppressive freight charges. It had simple beginnings, and for a time was true to its mandate from the Congress. Lawyers will tell you, however, that today it is easier to get into the Supreme Court of the United States than the Interstate Commerce Commission, and an average of 3 years to get a decision on one.

The RAILROADS RUN THE COMMISSION

THE RAILROADS RUN THE COMMISSION

The fact is that at the turn of the century the railroads took over the Interstate Commerce Commission, and since that time have completely controlled a majority of its members. From 1900 on the railroads have written their own ticket. Year after year freight rates have been increased by leaps and bounds by the Commission at the direction of the railroads; and the farmer, in many instances, has to let his crops remain in the ground and his fruit on the trees because he could not meet these ever-increasing rates and get his product to the consumer in the cities. During this period the Commission has not regulated the railroads—the railroads have regulated the Commission. When men in public life say the railroads are being regulated, I do not doubt their sincerity but question their serious study of this problem.

For the past several years the American public has been deluged with propaganda in behalf of the railroads, the cost of which is said to run over \$10,000,000 a year. They have flooded the country with false and lying statements concerning the economics of truck and water transportation. The average American is a kindly soul and

water transportation. The average American is a kindly soul and has more or less been taken into camp by this artful and skillful propaganda carried on through paid advertising, oft-times reflected

in the editorial pages of our newspapers.

TRUCKS SAVED THE PEOPLE

The railroad lobby says that trucks pay no taxes. As a matter of fact, they pay annually \$417,000,000 in taxes. This is 47 percent of the value of truck property and \$89,000,000 more than the rail-

roads pay in taxes annually. The trucks serve 50,000 communities in the United States which at present are without railroad transportation. Approximately 8,000,000 people live in the areas where there is no rail service. It is estimated that there are another 25,000,000 of our citizens who live in areas where the railroad service is marginal, a train a day being the usual procedure. These people have been getting conveniences and necessities by daily service from the trucks at reasonable cost. These trucks employ 3,545,000 men, over three times the employment given by the railroads. The trucks carry but 5 percent of the national tonnage. They have been a godsend as an employment agency in these troublesome days. They have been a godsend because they bring the conveniences and necessities of life to our people everywhere.

READ THIS HISTORY

In an evil hour the Congress placed trucks under the charge of the Interstate Commerce Commission. The Interstate Commerce Commission permitted the rates to be raised to within 90 percent of the rail rates. The Commission had no thought of the convenience. the rail rates. The Commission had no thought of the convenience, the comfort, and the necessity of the American people but only of the convenience, the comfort, and the necessity of the railroads. Throughout the length and breadth of the land trucking outfits have urged the Commission to lower rates. Their applications were in vain. The Commission in many cases is now compelling trucks to charge an average of 40 percent more than the trucks feel justified in asking. This is the Commission which in legal theory represents the public interest. It is, in fact, bureaucracy at its very worst. worst.

WATER TRANSPORTATION

Now a word about water transportation. Water transportation is the first and last line of defense of our people in this field. The latest figures available show that in 1937 there were 583,100,000 The latest figures available show that in 1937 there were 583,100,000 tons carried over our coastal and internal waterways. This tonnage was carried largely at one-tenth of the railroad rates. This low-cost transportation is one of the principal factors in the upbuilding of America. Our waterways are in charge of the United States Army engineers, who are the greatest body of public servants in the history of popular or any other type of government. Their findings are supreme in the field. They have no masters, political or financial. I have been on the Rivers and Harbors Committee of the House for 10 years and can say to you that the propaganda set forth by the railroads in regard to the economics of waterways is entirely untrue and unsound. Every waterway or harbor that has been improved has been authorized only after the United States Army engineers have found that the economic savings to the American people have justified the cost. Let me emphasize again that the savings by water transportation are always reflected again that the savings by water transportation are always reflected back to the people in decreased cost of living.

I wish I had time tonight to discuss fully these savings. One

or two illustrations will suffice:

TREMENDOUS SAVINGS TO THE PUBLIC

Due to the intervention of water transportation of petroleum products, from the oil fields to the filling stations, every citizen of America saves 20 cents on a gallon of gasoline at the pump. (See p. 138, pt. 1, hearings before Merchant Marine and Fisheries Committee of the House on H. R. 3615 of the 75th Cong.; also p. 1079, pt. 2, hearings before the Senate Committee on Interstate Commerce on the Water Carrier Act of 1935.) Except for water transportation, you would be paying 38, instead of 18, cents for a gallon of gasoline. This finding is based on a thorough examination of the subject, and has never been disputed by the railroads. Another example: Fifty years ago, England, France, and Germany said we couldn't make steel in America because the iron ore and coal were so far apart. Lake transportation bridged this gap. This costs a mill per ton-mile, and the steel mills around Pittsburgh were brought into being. In that area, the railroads have had one of their greatest and most profitable developments.

My hearers know that railroad development has always been the Due to the intervention of water transportation of petroleum

My hearers know that railroad development has always been the My hearers know that failroad development has always been the greatest where the rails and waters meet. For example, \$12,000,000,000 worth of freight in normal years is moved over the improved harbor of New York. This fact applies in a lesser degree to all the harbors on the Pacific, Atlantic, and Gulf coasts. The fact is that railroads and their employees have been the chief beneficiaries of waterways. Waterways, be it said, carry only 20 percent of the national tonnage. national tonnage.

The American people should stand as a rampart of steel against the attempts of the railroad lobby to place their water transporta-tion system under the murderous jurisdiction of the Interstate Commerce Commisson.

THE PEOPLE SHOULD ACT NOW

The American people should guard themselves against the vast,

far-flung, amply financed propaganda which has for its purpose the creation of a monopoly of transportation in America.

Eternal vigilance is the price not only of personal but economic liberty. Make your protest heard. Tell your representatives in the House and Senate that if water, trucks, and air transport are to be subject to bureaucratic supervision, that they should be regulated by an impartial body, and not by a hand-picked, railroad-minded commission.

Write your Senator and Representative tonight. You will thus render an important service to the cause of low-cost transportation so vital to the welfare of all our people.

Good night.

Social and Economic Problems of Puerto Rico

EXTENSION OF REMARKS

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1939

Mr. IGLESIAS. Mr. Speaker, for many years past, honest and free elections were impossible in Puerto Rico. We had suffered under the domination of so-called traditional political education of the old time. This procedure was observed for a very long period of years. Fortunately for us, in keeping faith with the American institutions we could hold elections in the year 1932, which undoubtedly was the best treatment under the most wise law, and that was accorded to all the people. Freedom and respect for the masses of laborers were held all over the polls. Frauds and abuses diminished by 95 percent. Some of our citizens that were continually defeated for years have become now responsible leaders in the legislature and the government, elected by the will of the majority of the people.

All leaders of parties saw by themselves that a new era of reconstruction had come to the island to perfect and maintain our democratic American institutions proclaiming the gospel of social, economic, and political rehabilitation.

Free and guaranteed rights to vote granted to the people have given the island a better conception of progressive thoughts and more opportunity to acquire greater capacity to pave the way for more progress.

I have been informed that some representatives, political or otherwise, of the island have expressed the idea to some functionaries of the Federal administration in Washington, that, when a new machinery for rehabilitation and relief be reorganized in Puerto Rico, that it should be placed in the hands of a responsible representation of the insular government under the authority of the Governor.

Few of our young "ilustrados" and business "ilustrados" appeared to have a clear understanding of just where the people of Puerto Rico stand, or where they are heading, and it is only natural to hope that the visiting of a commission composed of higher university mentalities, economists, and sociologists that are going to the island, will meet them and certainly could obtain an adequate picture of affairs over there, provided the commission will act with open brains.

REPRESENTATION IN THE ISLAND

Puerto Rico is an organized Territory of the United States, founded on a democratic constitution formulated by the Congress of the United States. In the 1936 elections the Coalition cast 298,059 votes for the Resident Commissioner, while the opposition, the Liberal Party, polled 254,470, thus giving the Resident Commissioner a majority of 46,563. Of the 39 members comprising the lower house of the legislature, 26 were elected by the Coalition Parties as compared with 13 elected by the Liberal Party, and for the senate membership, the Coalition elected 14 as compared with 5 for the Liberals. The legislature of the island was elected by the people and entrusted to maintain our loyalty and preserve our American institutions to the United States. Labor has a substantial representation in the administrative affairs of the insular government, very properly representing the aspirations and ideals of the masses of workers of Puerto Rico. Violent factions did not exist in Puerto Rico. The insular government have about 7,500 officeholders of which less than 200 are continental Americans, the others are Puerto Rican-American citizens.

CONDITIONS IN PUERTO RICO AS REPORTED

As soon as the island of Puerto Rico became a part of the United States in 1898, and particularly since the Puerto Rican people became citizens of the United States, unprecedented progress has been made along almost every conceivable line. To realize and believe that statement, one must have lived on the island in the old days.

We always have had a serious unemployment problem and will continue to have one until new sources of employment can be created. Wages for agricultural laborers are low, but they are higher than those prevailing in many of the independent countries in the Caribbean area and in Central America.

SOCIAL AND ECONOMIC PROBLEMS TO BE INVESTIGATED

Some time ago we had a very lengthy conference with a great man in authority, a true friend of Puerto Rico and of the humanity, and we discussed a sweeping 25-year program for economic, social, and educational rehabilitation of Puerto Rico. Our true friend indicated a very sympathetic attitude toward the future needs of the island and the reform of its present economic and social plight.

The program tentatively outlined would call for a big program of study, investigation, and rehabilitation to be carried on by Congress, with the view to solve the present and future conditions of labor, education, and sanitation. income tax in the island which was almost a half of that imposed in the mainland could be extended in proportion to match the cooperation and help from the Federal Government.

Our good friend manifested his greatest interest with the suggestion that a joint committee of higher capability should be appointed by the President of the United States or by Congress to study the possible ways and means to have this constructive program suggested carried on.

The Senator from Maryland [Mr. Typings] once expressed similar thoughts. The Senator was eager for a thorough and complete study of all social and economic angles of the life of the Puerto Rican people to serve the purpose of guiding Congress in giving the nearest best solution to the actual problems of the island. A big program to be done is what the Senator from Maryland had in mind. As a matter of fact. Congress has never appointed a joint commission of this character.

Every problem affecting Puerto Rico should be studied and discussed in a scientific and practical way in the island. The great questions should be dealt with by experts in Puerto Rico at some length, mainly in connection with the constant requests received by the Members of Congress relative to the conditions that prevail in the island on account of overpopulation, unemployment, agriculture, and industrial fields.

Our friends in the mainland are giving the impression that they want to carry on this work to try to solve once and forever the plight of the people of the island, and to extricate the people from depressing conditions.

CABLES OF PROTEST

SAN JUAN, P. R., March 29, 1939.

Hon. SANTIAGO IGLESIAS,

Resident Commissioner from Puerto, Rico, House Office Building, Washington, D. C.: The Senate of Puerto Rico wishes to make its most urgent protest against the hasty approval by the Senate of the United States or the Reurtel-Ellender Act (S. 69), which discriminates against Puerto Rico by diminishing still further the sugar quota allotted to Puerto Rico and respectfully requests that before said bill is reported to the House of Representatives by Committee on Agriculture, public hearings be held, since the Senate of Puerto Rico feels that American citizens residing in this island have a right to be heard before the approval by Congress as it has been approving of laws greatly prejudicial to the interests of this Territory of Puerto Rico.

BOLIVAR PAGAN President pro tempore, Senate.

New York, N. Y., March 24, 1939.

Hon. SANTIATO IGLESIAS,

Resident Commissioner from Puerto Rico, House Office Building:

Very much surprised about the way Sugar Act revised in Senate without public hearing. Hope you will do everything possible to stop this bill from passing the House, as same is highly discriminatory against Americans in Puerto Rico.

JOHN BASS, President, Fajardo Sugar Co. of Puerto Rico.

SAN JUAN, P. R., March 27, 1939.

Hon. MARVIN JONES,

Chairman, Agriculture Committee,
House of Representatives, Washington, D. C.:
Further curtailment our sugar production, mainstay island's economy, precisely at time when Puerto Rico is being choked by

worst economic crisis in its history and faces unprecedented, really tragic, unemployment situation growing out of drastic reduction, its production imposed by Federal legislation and fiscal measures, is causing greatest concern and anxiety. It seems inconceivable that Congress would so forget its responsibility toward island's nearly 2,000,000 American citizens that it would completely destroy their faith in its sense of justice and create here a conflict of gravest nature and consequences. As American citizens, proud of Nation's

democratic traditions, and ideals we cannot remain indifferent to the absurdity of a situation which persists in drastically reduc-ing our production and employment, and lays Nation open to charge that it is pursuing here despotic economic colonial policy. Earnestly urge for opportunity to appear and be heard by your

Domestic Minerals and National Defense

EXTENSION OF REMARKS

HON. FRANCIS H. CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 6, 1939

LETTER FROM J. CARSON ADKERSON, PRESIDENT OF AMERICAN MANGANESE PRODUCERS ASSOCIATION

Mr. CASE of South Dakota. Mr. Speaker, under permission granted by the House, I offer the following letter from J. Carson Adkerson, president of the American Manganese Producers Association, to the Honorable Andrew J. May, chairman of the Military Affairs Committee, pertaining to the strategic minerals bill (H. R. 5191), recently reported to the House. I offer the letter in behalf of Mr. May, who as chairman of the Military Affairs Committee is reviewing the Army Day parade this afternoon. I hope the letter will be read by every Member of the House, as it deals with an important matter, the development of domestic reserves both for industry and for national defense.

> AMERICAN MANGANESE PRODUCERS ASSOCIATION, Washington, D. C., March 28, 1939.

Washington, D. C., March 28, 1939.

Hon. Andrew J. May,
Chairman, Military Affairs Committee,
House of Representatives, Washington, D. C.

Re: Strategic minerals (Faddis) bill, H. R. 5191, approved by House
Military Affairs Committee.
My Dear Congressman: The expenditure of \$100,000,000 for
strategic minerals should accomplish a twofold purpose. 1. Build
up a stock pile. 2. Develop American resources. The Faddis bill,
H. R. 5191, will not do this.

MANGANESE

If the bill, in its present form, becomes a law, it is most likely that at the end of the first year the United States Government will be out \$100,000,000 and still there will be no larger stock pile of manganese in the United States than now exists.

manganese in the United States than now exists.

Testimony before your committee shows that stocks of manganese ore in United States Government bonded warehouse yards on November 30, 1938, amounted to 851,879 long tons, and that privately owned stocks, on which the duty had previously been paid, would bring the total tonnage of foreign manganese, now within the United States, to well over 1,000,000 tons. This is the largest stock pile of manganese in the history of the United States. If \$100,000,000 is made available the first year, it would simply mean the transfer to the Government of 554,000 tons of manganese ore already in the United States and now owned by steel commanies.

ore already in the United States and now owned by steel companies, and at the end of the year the net result would be no actual in-

crease of stocks of manganese in the United States; the steel companies would have the American taxpayers' money; American manganese mines would continue idle; the United States Government would carry the bag for American steel companies, and still there would be no adequate national defense.

ROTATION

With reference to the rotation provision carried in the bill, witness for the Navy Department testified before your committee that the purpose of this was to replace manganese in stock pile to avoid deterioration. The net result of this provision would be to permit the same steel companies, from time to time, to buy back from the Government this same manganese, presumably at greatly reduced prices, to avoid this so-called deterioration.

It might be added that manganese does deteriorate, but just the same as iron ore and pig iron, or building brick and building stone, will deteriorate.

will deteriorate.

WAR DEPARTMENT WILL ADMINISTER

Your report says that the War Department may be depended upon to administer the act fairly. However, the bill itself provides for the joint administration by six Government departments. The War Department's hands are therefore tied. Evidence before your committee will show that several of these Government departments are permeated with members and followers of an "international control of minerals" group, who are definitely on record as seeking development of manganese resources in foreign countries and suppressing developments in the United States. and suppressing developments in the United States.

CONGRESS SHOULD OUTLINE POLICY

CONGRESS SHOULD OUTLINE POLICY

This same dependency on policy was left by Congress to the administrative departments of the Government in passage of reciprocal-trade-agreements legislation.

The President, Franklin D. Roosevelt, in his message to Congress March 2, 1934, asking for this legislation, said: "You and I know, too, that it is important that the country possess within its borders a necessary diversity and balance to maintain a rounded national life, that it must sustain activities vital to national defense, and that such interests cannot be sacrificed for passing advantage."

In testimony before congressional committee, Francis B. Sayre, Assistant Secretary of State, said:

"The whole purpose of this program of trade bargaining is this: to restrict the commodities covered in the agreement with any specific country to commodities of which that country furnishes the chief source of supply of importation into the United States."

In spite of this, the duty on manganese, the No. 1 strategic mineral, was among the first items cut through the trade agreement with Brazil, although Brazil supplies only minor quantities of manganese to the United States, Soviet Russia being the major shipper. In the year 1933 Brazil shipped no manganese at all to the United States.

shipper. In the y

In testimony before your committee, it was repeatedly stated, in effect, that no one could doubt the patriotism of the administrative departments of the Government and that Congress could depend upon them to protect the domestic manganese industry. Likewise, it might be said that no one could doubt the patriotism Likewise, it might be said that no one could doubt the patriotism of the President of the United States or the Assistant Secretary of State, but unfortunately there are other agencies at work within the administrative departments of our Government.

Furthermore, the administrative departments of the Government have consistently refused to enforce the Buy American Act and require the use of domestic manganese in steel purchased for Government contracts, as provided in the law.

LXXXIV-App--84 I quote from a letter dated June 12, 1935, from the Acting Secretary of the Navy, H. L. Roosevelt, to Senator James E. Murray, with special reference to the use of domestic manganese under the

American law:

It seems that the State Department is endeavoring to carry out the purpose of the law enacted by the Congress to promote for-eign trade, and any attempt on the part of the Navy Department to exclude foreign manganese ore admitted under this trade agreement might be held to be in conflict with the action of the State Department."

EDUCATIONAL ORDERS FOR MANGANESE

Report No. 283 of the House Military Affairs Committee, accompanying H. R. 5191 to the floor, says:

"The committee has written into the bill a declaration of congressional policy, the effect of which is to encourage as far as consistent to do so, the discovery and development of the sources

consistent to do so, the discovery and development of the sources of raw material in this country, and it is felt that the situation is similar to that which requires the placing of what is known as 'educational orders' with dormant and inactive factories."

Under other national-defense bills, "educational orders" provide for the purchase of manufactured products, without the usual competitive bidding against imported products, without bond, and under the law there is no specified price limit. Under the strategic minerals bill there are no such provisions to cover the purchase of manganese or other raw materials. In the case of manganese, discoveries have already been made, developments have already been carried forward, and what the producers now want is a market and an opportunity to ship on a parity basis with steel prodket and an opportunity to ship on a parity basis with steel products and under the terms of laws already passed and which should now be fully in effect.

EXCHANGE OF GOVERNMENT-OWNED COTTON AND WHEAT

This provision might serve to deny American farmers that por-This provision might serve to deny American farmers that portion of a foreign market for their privately owned cotton and wheat which they otherwise might enjoy. Particularly, if sold to Soviet Russia, it is possible the Soviets may resell these agricultural products in the world's market at any price they would bring in order to obtain foreign cash or credits, just the same as they have done many times in the past. This would serve to lower the world price of these farm products and thereby injure the American farmer. Most certainly the American farmer has little to gain by this proposed trade.

FOREIGN DEBTS

Although World War debts are not specifically mentioned, they are included in the provisions of this bill.

Domestic manganese producers, as well as producers of other raw materials listed in the hearings and subject to purchase under this bill, will ask why they are being specifically called upon to shoulder the World War debts. Certainly, manganese, the No. 1 strategic mineral, should not be loaded with this burden during this emergency.

Manganese producers, as the producers of one raw material slope feel that this burden should be shouldered by all including

alone, feel that this burden should be shouldered by all, including domestic producers of manufactured products.

This provision, if allowed to hang over the domestic manganese industry, would tend to discourage further investments and developments within the industry and retard the national-defense

LOOK AHEAD

The expenditure of \$100,000,000 for strategic materials of foreign origin will hardly be a drop in the bucket toward adequate national defense. There were 38 raw-material items submitted by representatives of the War Department in testimony before your committee as essential to our national defense, necessary to be imported from foreign countries, and subject to purchase under this bill.

Even should the entire \$100,000,000 be spent for manganese alone, it would still not mean adequate national defense in manganese, as It would still not mean adequate national defense in manganese, as no one can foretell how long an emergency may last. Domestic manganese deposits would still have to be developed and mines put into operation, at emergency costs; and it may not be done in time. So why not, during peacetime, encourage developments of these available materials within the United States when producers are ready to go and, one by one, remove such items from the strategic materials list?

CONCLUSION

Domestic producers of manganese ore have expended years of work and many hundreds of thousands of dollars in the developwork and many hundreds of thousands of dollars in the develop-ment of domestic manganese and have contributed more toward the solution of the problem of manganese for national defense than all other groups and agencies combined, including the entire steel industry of the United States and all the administrative departments of the Government. This has been done by domestic manganese producers with private funds and not with the tax-payers' money. We justly feel that domestic manganese producers are entitled to proper consideration and encouragement at the hands of our Government in the national-defense program. hands of our Government in the national-defense program.

RECOMMENDATIONS

To carry out the purposes of the act and the will and intent of Congress "to encourage the development of these resources within the United States," as expressed in the bill, may we recommend that the language of sections 5 and 6 in Faddis bill, H. R. 5191, be eliminated and in its place insert the language contained in sections 5 and 6 of the Thomas bill, S. 572, as approved by the Military Affairs Committee of the Senate.
Yours sincerely,

J. CARSON ADKERSON, President.

Shall We Monetize Surplus?

EXTENSION OF REMARKS

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 6, 1939

ARTICLE BY O. M. THOMASON

Mr. VOORHIS of California. Mr. Speaker, the following article by Mr. O. M. Thomason, of Willernie, Minn., in the March issue of Money, is worth studying and thinking about. It deals with a proposal which has the virtue of simplicity and may help us to understand the relationship that should exist, but does not now exist, between money and wealth.

> HOW ABOUT COTTON CURRENCY? (By O. M. Thomason, Willernie, Minn.)

Since trying to limit goods production to buying capacity has not proved very satisfactory, why not reverse the procedure? Why not make the power to consume match the capacity to produce? I mean try it on a limited scale with reference to a single product,

just as an experiment.

Just as an experiment.

Why not try it on cotton? While it primarily affects the South, yet cotton is acutely a national problem. In 1936 we exported 57 percent of our cotton crop. We might easily have consumed 70 percent of it at home. And the export market is getting progressively more contracted, thanks to Egypt, Russia, and Brazil. Another reason for foreign market contraction is the dearness of American dollars. American dollars are dearer than the English equivalents. When an Englishman comes here to buy cotton he must first buy dollars. Since our dollars are higher than his money, he naturally goes to Mexico, Brazil, Egypt, or Russia, where money is cheaper.

The longer this continues the more muddled we become. We fight boll weevils with airplanes and plow up cotton with tractors (since the mule's conscience will not permit him to walk on the cotton plants). We cut down acreage with one hand and add fertilizer to the soil with the other. In the end, like the man riding the merry-go-round, we get off at the same place we got on.

In spite of all our efforts at "regulation," production goes up and consumption goes down; and a surplus, like the sword of Damocles, hangs over the head of the cotton farmer. We scan the horizon for fortunes while at our feet is uncounted gold.

We have a vast potential market at home. Counting reliefers, part-time workers, W. P. A.'ers—all those in the lower income groups—we have some twenty-odd million families in need of cotton products. The average annual incomes of the lowest income groups in 1936 was \$941 per family. This, totaling some 75,000,000 people. constitutes our greatest potential market. Why not try it on cotton? While it primarily affects the South,

groups in 1936 was \$941 per family. This, totaling some 75,000,000 people, constitutes our greatest potential market.

Each family in that group needs at least two new mattresses, four

Each family in that group needs at least two new mattresses, four comforters, six bedsheets, four pairs of overalls, six shirts, six pairs of B. V. D.'s, six house dresses, to say nothing of tablecloths, pillow slips, hand and bath towels, diapers, handkerchiefs, and what not. Even the millions, both blacks and whites, who plant, tend, and pick the cotton are in desperate need of all those items. If you had seen, as I have, their patches upon patches, their lumpy straw beds, their gunny-sack towels, you would agree they need them.

Meanwhile, the Nation is flooded with "plans," "solutions," blabla, and political hokum. Everybody's talking about it and nobody's doing anything. Why not become reckless and make a little experiment?

Let's forget about exports and tariffs. Let's forget about battle-

Let's forget about exports and tariffs. Let's forget about battleships to keep open our foreign markets. Let's supply our home
needs first. All we need to do is work a little bank magic of
financing. Since the Government (and all the rest of us) is
"sold" on the idea of bonds, let's estimate our cotton surplus and
print large denomination, non-interest-bearing bonds, equaling the
aggregate value of our surplus cotton at its retail price to the ultimate consumer. This ultimate price should include costs plus a
reasonable profit for all, from the grower to the retailer. Let a
ceiling of prices be fixed to prevent inflation.

Let the bonds be deposited with the Federal Reserve banks
against which the Treasury could issue to private and postal banks
demand deposits. Then let the Government announce that within
a given time, say, 90 days, there would be in the hands of twentyodd million families enough buying power to purchase one billion
or two billion dollars' worth of cotton goods, such as described
above. This can be done simply by monetizing the cotton, as
symbolized by the bonds. Let's forget about exports and tariffs. Let's forget about battle-

above. This can be done simply by monetizing the cotton, as symbolized by the bonds.

What would happen? Immediately cotton mills would start at full capacity. Cotton warehouses would disgorge their storage. Garment workers would be working full time. Dealers would start stocking against the day when the money would be released. No need to put money in at the top. With a market like that just around the corner ample finances for industry would be available. This new money—cotton currency—would be good, in the initial purchase, for cotton goods only. Checks supplied to such pensioners would be especially designed and would not be legal tender

for any other than cotton goods. It would be credit money, the same kind banks loan, and would be paid to the pensioner on the account of over-paid taxes, social heritage dividends, or even on a fletitious account. The account is immaterial. Some of the cotton currency would be issued in money as a matter of reflation.

Once the money had passed from the original pensioner it could be held as bank credit or drawn out as currency the same as any money. From there on it would be legal tender for all debts, money. From ther public and private.

If at the end of 6 months the South, indeed the whole country, had not experienced an upsurge of recovery—if it was found that the plan was destroying civilization faster than it is now being destroyed, then it could be discontinued. Nothing would be lost by the experiment.

If the total monetization amounted to only \$10,000,000,000 in 6 months that would be just that much extra business. It would come out of no man's pocket as taxes—any kind of taxes. It would be just like finding it in the road, or in a glass jar buried in the peach orchard.

The Government, since it acted only as referee, would be out of pocket merely the cost of printing the currency—about seventenths of a cent a bill. The bonds would still be lying there in the vaults, as a symbol of habit.

But—and this ought to be worth something—some 10 billion dollars' worth of goods would have been used and enjoyed. And

maybe, incidentally, we would have learned something. Even if we had learned that it wouldn't work, that would be something. Let's quit talking so much and try just one thing.

P. W. A. Projects in Fifth Congressional District of Louisiana

EXTENSION OF REMARKS

HON. NEWT V. MILLS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1939

Mr. MILLS of Louisiana. Mr. Speaker, under permission granted me to extend my remarks, I include a list of pending non-Federal P. W. A. projects in the following parishes of the Fifth Congressional District of Louisiana, the district I represent. The list is as follows:

Docket No.		Location Type of project	Loan	Grant	Total	Total esti-

These applications for projects pending before the Public Works Administration as of January 18, 1939, are eligible for allotment if an additional appropriation of funds is made.

Overcoming Difficulties Under Adverse Conditions

EXTENSION OF REMARKS

HON. ARTHUR W. MITCHELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1939

FOUNDER'S DAY ADDRESS DELIVERED BY HON. ARTHUR W. MITCHELL, OF ILLINOIS, AT TUSKEGEE INSTITUTE, ALABAMA, APRIL 2, 1939

Mr. MITCHELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address,

which I delivered at Tuskegee Institute, Alabama, on April 2, 1939:

Four weeks ago I sat in a joint session of the Senate and House of Representatives in the Nation's Capitol and participated in the celebration of the one hundred and fiftieth anniversary of the of Representatives in the Nation's Capitol and participated in the celebration of the one hundred and fiftieth anniversary of the establishment of the Government of the United States of America. The speakers on this occasion were the most outstanding to be found in the nation: The President of the United States, the Chief Justice of the Supreme Court of the United States, the Speaker of the House of Representatives, and the President of the United States Senate. One of the most noticeable things which characterized every speech delivered on this occasion was the effort made by each speaker to give credit to everyone who had played a part in the founding of our Government.

In my speech today, while I shall of necessity place major emphasis upon the outstanding work of that great leader of men, our lamented Booker T. Washington, I must not neglect to speak a word of commendation in behalf of those men who persuaded the Legislature of the State of Alabama to make an appropriation for the beginning of this institution; nor must I forget to commend those who were not members of the legislature and who were not members of the committee that brought Dr. Washington to this section, but who gave liberally of their talent and their ability to make this institution what it is today.

The picture that I have in my mind at the moment is first that of an ex-slave, Lewis Adams by name, who, after he became a freedman, devoted his energies to doing some substantial work

to help his race get on its feet and start its march toward success. In the same picture I see a white man, an ex-slave owner, George Campbell by name, lining up with the ex-slave, Lewis Adams, and together making the fight to secure funds to build a school at Tuskegee, for the training of the newly emancipated slave and his

As I look at another section of the picture I see them seeking a teacher for this school, a person to head this new educational movement. It is my humble opinion that in this matter, as in all the other early moves leading to the establishment of Tuskegee Institute, God directed the activities of those entrusted with that important duty of finding a teacher for the proposed school. They used the good judgment to appeal to Hampton Institute for a man, and in response to that appeal comes our here, whose life and work and in response to that appeal comes our hero, whose life and work I shall talk about today, along with the problems which still confront us in the South—yes, confront black and white alike, and which must be met by men of vision and patriotism like Lewis Adams, George Campbell, your State legislature, and Booker Wash-

I have said we must remember in grateful reverence all who made this great institution possible. Then let us spend a moment at least in sincere and heartfelt thanks to those members of the State least in sincere and heartfelt thanks to those members of the State Legislature of Alabama who had the foresight in 1880-81 to appropriate money to make the starting of such an institution as this possible. I wish I knew and could call the name of every member of the legislature who voted for the bill appropriating the first money which went into this great temple of human uplift. The of the legislature who voted for the bill appropriating the first money which went into this great temple of human uplift. The two most prominent members of the legislature at that time who took the deepest interest in this work were Hon. W. F. Foster and Hon A. J. Brooks. Can we not say of them they truly wrought

Hon. A. L. Brooks. Can we not say of them they truly wrought more nobly than they knew?

It was my privilege to hear from the lips of Dr. Washington himself a thrilling story of how the people of Tuskegee, and scores of others, contributed of their meager means at the very outset to make the founding of this school possible. To them we owe a deep make the founding of this school possible. To them we owe a deep and lasting debt of gratitude. There were scores of persons who were fellow teachers with Dr. Washington, members of the trustee board, and interested philanthropists, such as Olivia Davidson, Warren Logan, Robert Taylor, George W. Carver, Emmett J. Scott, C. W. Hare, R. O. Simpson, R. C. Bedford, William Baldwin, Jr., Robert Ogden, Andrew Carnegie, John D. Rockefeller, Julius Rosenwald, Gen. S. D. Armstrong, Dr. R. R. Moton, and hundreds of others whose names cannot be called during this brief address who others whose names cannot be canted during this orier address who manifested unusual interest in the welfare and the growth of Tuskegee Institute. Most of these saintly persons, like Dr. Washington, have already passed to their reward. At this point I pause to say to those still living, and to the departed spirits of those who have passed on, a truly grateful race, yes, a truly grateful Nation, pauses in its work today to honor you and the noble work you did

for your fellow man.

pauses in its work today to honor you and the noble work you did for your fellow man.

To those I have named, and to those whose names I have not called, every Tuskegee man and woman—yes, every true American—feels in his heart a debt of lasting gratitude for the service you rendered and for the lasting contribution you made for humanity. There are stories about many of these persons whose names I have called if told on this occasion would thrill your very hearts and souls, but the occasion will not permit me to dwell overlong on the contributions coming from these thousands of persons singularly. At the same time it is important that mention be made of them and the part they played here. Over and above the Legislature of Alabama, the work of Lewis Adams, that of George Campbell, John D. Rockefeller, Julius Rosenwald, Robert Ogden, and all the others to whom mention has been made, stands written in letters of gold, the name of that humble but prophetic and matchless leader, the first president of this school, Dr. Booker T. Washington. His contribution is so large and lasting that I must speak at some length about him and his achievements. And while I shall not only endeavor to talk to you about him, his work, his struggles, his achievements, his opposition, the handicaps he overcame, and his ultimate triumph, I feel that I must say something about the unfinished task which remains for us to carry on. No speech on this occasion would be complete if something was not said about the duties and responsibilities of this present-day generation; a generation which has in so large a measure inherited this school and its unsurpassed bilities of this present-day generation; a generation which has in so large a measure inherited this school and its unsurpassed opportunities.

It is perhaps difficult for you to draw a picture of Tuskegee Institute 58 years ago, consisting of nothing more than a few acres of ground, one or two simple buildings, less than 100 pupils, two or three teachers, and with the influence confined to the Tuskegee or three teachers, and with the innuence commed to the Tuskegee community. As you look about the spacious grounds now consisting of thousands of acres, you see scores of magnificent buildings, hundreds of instructors and teachers, representing the best to be found anywhere in the world, thousands of earnest, hardto be found anywhere in the world, thousands of earnest, hard-working students; in fact, a great university with the equipment and endowment causing it to rank among the best and most favored in the country. The improvements in the physical plant are small indeed in comparison with what has been done through and by this institution in educating people, young and old, white and black, in a truer realization of what life really means in the Southland and in our country.

But I am not to talk to you only about the grounds and the buildings and the teachers, and the students, and those who have been lifted through the powerful and far-reaching influence of this great university; I think it is not out of place to say a word

about the hardships, the struggles, the handicaps, yes, the down-right opposition that the founders met as they sought to build. Keep in mind the fact that Booker Washington came upon the scene early in the life of the freedman preaching a new doctrine of education. The newly emancipated slave, for the most part, of education. The newly emancipated slave, for the most part, was seeking the type of education which promised to free him from toil and labor. He had the bitterest feeling toward any training called education which would cause him to labor in the field, or in the workshop. In other words, his early conception of education was that it was a kind of training that fitted one for white coller these and that type of inh only. To set up an for white collar jobs, and that type of job only. To set up an institution calculated to meet and combat such ideas in the minds of the people was no easy or pleasant job.

When this strange prophet came into the wilderness, crying that there must be a trained head, a trained hand, and a trained heart, opposition was manifested against him from every corner of the South where Negro schools were being built, or being contemplated. Many so-called educators of that day, differed with him so bitterly that he was branded a race traitor. Not infrequently so bitterly that he was branded a race traitor. Not infrequently was his school, with its magnificent workshops and well-equipped classrooms, and its great opportunity for the development of manhood and womanhood, referred to by the populace as a prison. Many of those who attended his school in those days were looked upon with scorn and even hatred by those who attended the so-called higher institutions of learning. It was for Booker Washington, the true leader of his people, to change sentiment, and to popularize practical and realistic education. This task had to be performed along with the equally arduous one of raising funds with which to equip his institution, and carry forward the work. The struggle and burden of defending this so-called new type of education in those early days of Negro freedom was so tre-

of education in those early days of Negro freedom was so tre-mendous and overwhelming that most men would have refused the task or fallen under the load; but to these man-killing strug-gles and the equally arduous burden of raising many thousands of dollars annually with which to develop and equip the physical plant, and to pay the meager salaries of teachers and instructors Rocker Weshington refused to be desurted in his effort and be use Booker Washington refused to be daunted in his effort, and he succeeded despite all opposition.

Picture, if you can, those stormy days when Mr. Washington was walking the cold New England shores, going from door to door, seeking funds with which to keep this institution going. I have seen him in New York, and in Boston, and other cities, when he had walked for hours seeking conferences with people, begging for funds that Negro boys and girls might have an opportunity to get at least the fundamentals of an elementary training, both in books, and in industry. He did this work and met the hardships attendant thereto without complaining or grumbling. I have seen him at the close of a day's work in the East when he appeared to be at the point of physical exhaustion, but I do not recall ever having heard a single word of complaint fall from his lips. Early in the life of this school, those who visited Tuskegee and those who came to know Mr. Washington by meeting him, or by hearing him speak, realized that Booker Washington was no ordinary man. He was proclaimed a leader sent from God. I think it could truly be said of him as Shakespeare said of Julius Caesar:

"His life was gentle and the elements So mixed in him that nature might stand up And say to all the world, "This was a man."

Two years ago, through special request of mine, the Congress of the United States paid special homage to the life and work of Dr. Washington by giving me 30 minutes to address the Congress on the occasion of Founders' Day. I think it is not out of place for me here to repeat one or two short paragraphs of the speech which I delivered on that occasion. Speaking to the Congress of the United States of America, I said:

"Mr. Speaker and Members of the House, no greater honor has "Mr. Speaker and Members of the House, no greater honor has ever come to me than this privilege which I now enjoy, standing as I am before this great body of lawmakers in an humble effort to honor the name and memory of that great American, Booker T. Washington. I had the privilege and rare honor of knowing him personally and intimately. He was my teacher, my benefactor, and my ideal of real manhood and Christian citizenship. At the outset I desire to warmly thank our able and beloved Speaker, the majority leader, and every Member of this House for giving me this opportunity to deliver a eulogy on the life of that great teacher, patriot, statesman, and matchless leader of men.
"I regard this as a most unusual occasion fraught with good will

teacher, patriot, statesman, and matchless leader of men.

"I regard this as a most unusual occasion fraught with good will
and recognition of an humble people who have for three centuries
borne their burdens in making America the great country it is,
but who have in a large measure been neglected by this country
when honors were to be distributed. For a century and a half this
Nation, through its Congressmen, has paid special honor to its
white illustrious sons who gave largely of their lives and abilities
to the building and maintenance of the Nation. Such great Virginians as George Washington, Patrick Henry, Thomas Jefferson,
Madison, Marshall, Randolph, Lee, and many others whose names
are household words with school children, have been eulogized
from this Well time and again: but today we are doing honor to a

are notisened works with school children, have been entigized from this Well time and again; but today we are doing honor to a great colored American.

"George Washington fitly bears the name of 'Father of his Country.' Booker Washington might as fitly bear the name of 'Father of his race in America.' Take from American history the part played in its making by the patriots and statesmen who were

born in the State of Virginia, and you take from the Nation its brightest lights and most outstanding guideposts. Take from the history of this country the part played in its making by Booker T. Washington, and the great school which he founded, and you leave a blank which not only greatly impoverishes American history, but you rob a deserving race of the largest single contribution it has made to those great leaders whose names adorn the walls of the world's hall of fame."

The conditions under which I now appear are different from those under which I appeared in the Congress of the United States 2 years ago, when I stood in the Well of the House where thousands of great statesmen of this Nation have stood, including many of our Presidents, and talked largely to lawmakers about the work of our great leader. Today I stand on the spot where Booker Washington, himself, stood many, many times, and for more than 30 years preached the doctrine of thrift, honesty, and citizenship building, along with that of racial good will. It was on this very spot that many of his most effective addresses were delivered to the world. It was inspiring to me to talk in the Nation's Capitol about the life and work of Booker Washington, but it is far more inspiring to me to stand here where Mr. Washington stood, and by his forceful eloquence lifted a people from the lowest depths of serfdom to self-support and respectability.

It has been said that when Mr. Washington assumed the leadership at Tuskegee, he found his race a group of discouraged people, unsettled in their determination and their future; he left them a well-organized race, having increased their numbers from six millions to ten millions, and under the severest handicaps had thrown off more than 50 percent of their illiteracy, had acquired property in the form of homes, churches, and businesses worth hundreds of millions of dollars. They had organized and established families, and were building respectable family life, coming into real citizenship, sharing with white Amer

of this country.

Many books have been written about the marvelous achievement of the Negro educationally, economically, and spiritually, during the first 75 years of his freedom. About this I shall have little to say. For the remainder of time allotted to me on this occasion, I prefer to talk to you about the unfinished task which now stands before us, and which he, if he could speak from this rostrum, would ask you to engage in carrying out. But first, I want to see if we cannot get for ourselves and our posterity a very practical lesson from what I have said about the manner in which the founders of Tuskegee worked together.

Inasmuch as Adams, the ex-slave, and George Campbell, the ex-slave owner, with their associates and comrades were able to form a human association strong enough to influence a legislative body to appropriate money to start such an enterprise as this, and inasmuch as they were able, by their mutual interest and confidence, to bring the proper person here to lead their movement, and since this combination of individuals was able to secure the cooperation of thousands of men and women in all parts of the world, and to secure millions of dollars with which to carry forward this work, do you not think the whole story suggests to you and me this simple truth, viz: "If black men and white men of Alabama wish to accomplish the best that the State offers and affords they must learn to work together, as did Lewis Adams and George Campbell, with the lawmaking body of this State seeking to render the proper aid."

What would be accomplished all over this State, and all over the

Southland, if the races would cease to hate each other and work untiringly for the best interests of humanity? While thousands of students are mastering the courses of the curriculum of this school, let us learn more perfectly that larger and more important lesson of race cooperation. What are the conditions which we are facing today? What does this age demand of us now, and what is

facing today? What does this age demand of us now, and what is our attitude toward the unfinished task, and what are our capabilities to perform the duties now enjoined upon us?

Notwithstanding the fact that we have been able to erase a very large percentage of our illiteracy, increase our numbers from 6,000,000 to 15,000,000, increase our wealth from a few thousand dollars to more than a billion, we are still a dependent people, largely wrapped up in poverty, and helpless in a large degree in the matter of self-support. And what is perhaps worse than anything I have pointed out, there is too great a tendency among us to cling to the old idea that the purpose of our education is to free thing I have pointed out, there is too great a tendency among us to cling to the old idea that the purpose of our education is to free us from what we term "unpleasant toil," and to set us up in an environment where there will be little or no occasion for real struggle, and where the desirable things of life will be so accessible and easily reached that the days of real struggle will practically be over. Many of us still think that once we can graduate from some accredited school our problem will be solved. Such is not

Let me give you some facts which should appeal to you—I am no pessimist, but I do not ignore facts: A few days ago I called the office of Colonel Harrington, Administrator of the Works Progress Administration, and was told by a statistician in his office that more than 400,000 (13.3 percent) Negroes are on relief at this very moment. That is, they are holding W. P. A. jobs; and should those jobs be taken from them, there is no other place that they know about to which they could turn for employment. I am also informed that there are more than one-half million Negroes whose formed that there are more than one-half million Negroes whose applications are now on file for W. P. A. work. I was further informed that of all the racial groups in the United States, the Negro

race has the largest ratio of its people on relief today. serious problem and must be faced by Negro leaders and by those who are responsible for the government of our Nation and States. I believe, like Booker Washington, that the Negro's largest and best opportunity is in the South, and on the farms of the South.

Last Tuesday I spent 15 minutes in conference with the President

of the United States, discussing with him the advisability of enlarging our resettlement-project program so as to make it possible for large groups of Negroes in the South to definitely settle on the farm and to become owners of this soil so that they would not drift to our cities, as they are doing, where no jobs await them, and where they are soon swallowed up, and in most cases destroyed, by the

contaminating influence of city life.

This age demands that we think seriously of our own problem; that we take into account the fact that the educated Negro must not only be a consumer, but must be a producer. It seems to me that we ought to take special delight in the wonderful record made by our own Dr. Carver here at this school who, by his scientific research, experiments, and work has added materially to the scientific accomplishments of our country. It must not be thought of young Negroes that they are to be educated in such an atmosphere and in such an environment that they will become despisers of work rather than effective workers, making contribu-tions to the welfare of this Nation and the country. Does any-one deny that our economic condition is such that it requires the most serious thought and most drastic action on the part of our educators and our leaders? Why has Dr. Carter Woodson written a book entitled "The Miseducation of the Negro?" Is it not because he has watched the manner in which thousands of so-called educated Negroes are spending their lives and has become disgusted with their manner of living, and justly so?

Fifty-eight years ago when this institution was founded, we were traveling largely by the ox cart and the horse-and-buggy method. Then it required 2 or 3 days to make a business trip to Montgomery and return. Now the trip can be made within 2 or 3 hours. This means that we live in a machine age. We drive motor cars and vehicles which do not tire. We make our living largely by the aid of these machines, and we are likely to lose sight of the part that our fellow human beings play in the process of our daily living. Living under such influence as now surrounds us, is there any wonder that we become less and less patient? These machines, as wonderful and helpful as they are must not Fifty-eight years ago when this institution was founded, we were These machines, as wonderful and helpful as they are, must not These machines, as wonderful and helpful as they are, must not be allowed to crush to the death those virtues out of which real manhood and womanhood are made. There may be a substitute for the out-lived ox cart, the stage coach, yes, the horse and buggy, but there can be no substitute for honesty, thrift, industry, and racial good will, which Booker T. Washington pioneered in bringing to the South through his work at Tuskegee, and through out the nation. I am calling upon you to recultivate the old-fashioned patience, tolerance, honesty, industry, and brotherly love which he lived and taught.

Booker T. Washington was no heliever in bothque methods

Booker T. Washington was no believer in hothouse methods when it comes to molding character and building citizenship. His method was that of patience, tolerance, brotherly love, and racial good will. We must acquire that patience and endurance which sustained John Milton until understanding broke upon his blinded eyes; that patience, fortitude, and courage which kept Columbus sailing against all counsels until the New World loomed over the horizon. In his method of education Mr. Washington believed that men and women should be taught how to live and should be able to live of their own effort. In other words, he believed that the salvation of a people, like the salvation of an individual, is to be worked out by that people. He shaped the curriculum of his school so that it met, in a large measure, perhaps more than that of any other institution, the demands of that day, as his great wisdom enabled him to interpret the needs of

It is fair for me to ask you on founder's day how well are we following in the footsteps of Booker Washington today? Is the program which he worked out for a newly emancipated and poverty-stricken people being carried through by those of us on whose shoulders his mantle fell when he passed on in 1915? What whose shoulders his mantle fell when he passed on in 1915? What more solemn and deep meaning question can I address to our present-day leaders? Are our institutions seeking now to prepare the youth to meet the demands of this age, and not only to take care of themselves but to make a contribution to the growth and welfare of this Nation? Let me bring the question closer home to you: Are we preparing to meet the actual demands of our day? Rural electrification is spreading over our land. Powerful dams are being built across our rivers and streams. The water power is being harnessed just as Franklin and Edison tamed the lightning. By the use of our inventions we no longer have to send up kites into the skies to bring down the electricity. We are manufac-

his people and the South.

into the skies to bring down the electricity. We are manufacturing it all over our country. This is enabling us to have electric power in the most isolated country home. Where we formerly had the old victrola we now have the radio. Country dwellers, by the use of rural electrification, have frigidaires, and modern machinery of every kind and description. Are our boys in our schools mastering such subjects that they will be able to install this modern electric machinery and keep it in running condition? It is the duty of those of us who still live and enjoy the fruits of Dr. Washington's labor to make our contribution. labor to make our contribution to a program of development in the South that will bring about a larger realization of the dreams of the founders of this school.

If Booker Washington's program of education had been carried out on a large scale in our schools, do you think there would have been any occasion for Dr. Carter Woodson, the great historian, to write his now famous book, The Miseducation of the Negro? If that large group of Negro educators, who lived in the days of Booker Washington but who spent the major portion of their time fighting him and his program, had joined hands and hearts in helping him put over the realistic educational program which he gave this country and the world, perhaps the late James Weldon Johnson. nim put over the realistic educational program which he gave this country and the world, perhaps the late James Weldon Johnson, in disappointment and disgust, never would have written his book Negro-Americans, What Now? In the name of Booker Washington, in the name of the founders of this school; yes, in the name of this great nation and humanity itself, I call upon everyone of you to rededicate your lives to service, to mandkind, and to a thorough friendship for your fellow man, be he white or black, Jew or gentile, Protestant or Catholic.

Jew or gentile, Protestant or Catholic.

All that I have tried to say about the founders of this great institution, and about the institution itself, has but one purpose; that purpose is to help you prepare for the emergency which is yours, and to inspire you to be baptized anew in the spirit and enthusiasm of Booker Washington so that you may go forth to make your contribution to your race, to your nation, and to the world.

world

In these fantastic times you are likely to forget and to put too much stress upon the latest things of life rather than upon the lasting things of life. I have been terribly disturbed at times because of the uproarious approval I have seen even the so-called educated people of my race engage in over the fistic victory of some man with small brain capacity, when these same so-called educated people have been rather cold and indifferent toward the worth and achievements of such men as George W. Carver, Carter G. Woodson, Robert Russa Moton, F. D. Patterson, and other men who understand that men are measured by brain and not brawn. Here let me remind you of the words I heard uttered by Mr. Washington so many times while addressing the student body from this very rostrum:

"Were I so tall to reach the pole,
Or grasp the ocean with my span,
I must be measured by my soul:
The mind's the standard of the man."

I know our lot is hard, and there are moments of discouragement when those who do not think seriously and deeply are likely ment when those who do not think seriously and deeply are likely to give up. But these discouragements and hardships and handicaps should have but one purpose, and that is to drive you forward to do your best and to overcome whatever impediments beset your pathway. Has it ever occurred to you that Joe Louis, the Negro heavyweight champion of the world, while working his way up was discriminated against in the use of the best gymnasiums and places for training? No doubt much of his training was done out of doors, in back alleys, and on street corners, while those that he had to fight in his career upward were provided with the best gymnasiums and the best training facilities known to mankind. But when they met Louis in the crucial moment they went down because he had learned in the world of hard knocks to overcome difficulties which these men had not been permitted to encounter. The same might be said of Jesse Owens, knocks to overcome difficulties which these men had not been permitted to encounter. The same might be said of Jesse Owens, the great runner. Doubtless he was not permitted to train on the best cinder paths at our high-class universities and schools where those were trained against whom he had to compete. He had to come the rough way; but when the test came the very fact that he came the rough way gave him the stamina and grit which caused him to triumph over those who did not know the hardships which he had already learned to conquer.

A veer or two ago when I was making a tour through the South

A year or two ago, when I was making a tour through the South, I stopped to visit the battlefield at Vicksburg, Miss. Near the entrance to the battlefield were parked scores of school busses. The trance to the battlefield were parked scores of school busses. The old colored gentleman who served as my guide pointed these busses out to me and remarked that they were all used by whites and there were no school busses for colored children, although many of the colored children had to walk 3 or 4 miles to reach the high school in the city of Vicksburg. He was much disturbed because of this inequitable distribution of accommodations for school children in his section. I reminded him that many of these accommodations of recent years have not served to strengthen human beings but have rether weakened them. Soft treatment has never hear known. have rather weakened them. Soft treatment has never been known to develop one to the point where he can sustain hard knocks. Have you not observed in families where there are large numbers of children that often most of the hardships of the family and the strenuous errands fall upon the shoulders of one or two, while the others are permitted to escape these burdens and hardships? But have you watched them in later years, after they had all reached the age of maturity, and when years of adversity with the real struggles of life came upon them? Were not those who had been forced to carry the burden in the heat of the day the ones who were able to rally to the rescue, not only of themselves but of those

who thought that they were the more fortunate because they had been able to escape much of the drudgery and hardship of life?

Who knows but that this race of which you are members is being trained now through this world of hardships and drudgery and discrimination for the purpose of preserving civilization when the

crucial moment comes?

Finally, I call upon every one of you to be up and doing. Make sure to build your house by the side of the road and be a friend to man. Take with you the immortal words of Carlyle:

"The poorest day that passes over us is the conflux of two eternities; it is made up of currents that issue from the remotest past and flow onwards to the remotest future."

President Slaps Wisconsin

EXTENSION OF REMARKS

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1939

EDITORIAL BY M. H. KNIGHT

Mr. KEEFE. Mr. Speaker, under leave to extend my remarks, I am putting into the RECORD an editorial written by Mr. M. H. Knight, associate editor of the Janesville Daily Gazette of Janesville, Wis., entitled "President Slaps Wisconsin." as follows:

PRESIDENT SLAPS WISCONSIN

Milk trains from Wisconsin used to rumble through Warm Springs, Ga., en route to Florida vacation lands where for economic reasons the region could not maintain a large dairy industry 12 months in the year to support a 4 months' boom season. It seems that those trains made considerable noise as they sped through the resort city, and that one Franklin D. Roosevelt, a light sleeper, was awakened frequently by the noise.

Now, a man awakened from a deep sleep is likely to set his mind to making the cubic which disturbed himself Mr. Rocsevelt.

was no exception. He probed the cause of the disturbance, and then on future wakeful nights wondered just why it was that Florida had to go all the way to Wisconsin for dairy products when there were so many good Democratic States intervening. So, said the President, last week in a talk to an Alabama audience: "That gave me, feeling that something was wrong with the agricultural. gave me a feeling that something was wrong with the agricultural economy of these States of the lower South, because you and I know from what we have been taught and from the experiments that have been made that these States can produce perfectly good milk and cream."

The trains which kept Mr. Roosevelt awake were operating 16 years ago. But when this insomnia victim became President of the United States things began to change. In his own words, "I think that we have done more in those 6 years |since his election than in the previous 60 years to make Southern States self-supporting. * * * It means, incidentally, getting the South out of hock to the North."

It is quite all right for the South to work toward as great a degree of self-sufficiency as possible. It is another matter for the President of the United States to encourage overproduction in a farm commodity, without thought of the eventual outcome. It does, however, exemplify the meddling tactics which have disturbed the equilibrium of normal supply and demand in this Nation to the greatest extent in its history.

Nation to the greatest extent in its history.

The fact is, as nearly as we can determine it, that 6 years ago there were sufficient cows in the United States to supply the demand for dairy products, with considerable to spare. These cows were in the hands of farmers trained through generations in the dairy industry. They represented a huge investment, and any interference with the marketability of their product would run the danger of eventually ruining a great industry, and with the economic fortunes of large numbers of the Nation's Spare. it the economic fortunes of large numbers of the Nation's finest people

while the Government is encouraging the South to produce its own dairy products, what is it doing to take care of the problem created thereby in the North? Nothing, of course. It sounds a lot like promulgation of the self-sufficiency idea for every locality. Wisconsin is adapted to dairying. Its people know the dairy business and they have millions upon millions of dollars invested in it. There isn't a State between Illinois (in the Wisconsin dairy care), and the South where that holds true. Competition from area) and the South where that holds true. Competition from that source likely would never become serious without Govern-ment encouragement because neither the climate, the soil, nor the people of the South is adapted to dairying.

people of the South is adapted to darying.

In a nation already possessing a dairy products surplus that can be handled only by a nation-wide advertising campaign, bankers wouldn't think of encouraging the industry in new localities, excepting at the urgency of a paternalistic government.

We have no fear but that Wisconsin dairy interests will take care of themselves, perhaps with some painful interludes, in fair competition. If the Federal Government decides to throw its economic resources behind a wrecking crew, however, the outcome will not be so certain.

The Progress of the Farm Security Administration in Rehabilitation of Farm Families of the Fifth Congressional District of Kansas

EXTENSION OF REMARKS

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Thursday, April 6, 1939

LETTER FROM HON. C. B. BALDWIN

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD. I include the following letter from the Honorable C. B. Baldwin, Acting Administrator, Farm Security Administration:

United States Department of Agriculture, FARM Security Administration, Washington, April 4, 1939.

Hon. John M. Houston,

Hon. John M. Houston,

House of Representatives.

Dear Mr. Houston: We have just received a report on the progress of the Farm Security Administration borrowers throughout the country, and we felt that the figures for your district might be of particular interest to you.

As you no doubt know, our major activity is the rehabilitation of needy and low-income farm families through small loans, accompanied by guidance in sound farming methods to insure the best possible use of the money.

possible use of the money.

Most of these families are extremely poor credit risks, judged by normal standards. None of them can obtain adequate credit on reasonable terms elsewhere. Many have been on relief. Our program is designed to make them independent of further assistance, by providing them with the equipment and the training necessary for successful farming.

From the beginning of the program in 1935 until January 1, 339, a total of \$232,410,369 had been loaned to approximately 50,000 farm families in the United States. These borrowers 1939, a 650,000 already have repaid approximately \$72,000,000 into the Federal

already have repaid approximately \$72,000,000 into the Federal Treasury.

The Farm Security Administration has made such loans to 389 farmers in your district since the inception of the program in July 1935. The loans from emergency-relief funds have totaled \$258,537.02, an average of \$664.62 per family.

These farmers have repaid \$40,959.30 up to January 1, 1939, although much of the money will not be due for 4 or 5 years.

We have just completed a survey of the progress made by a group of typical rehabilitation borrowers as of January 1. This survey, covering 237 families in your district, showed they had increased their total net worth since coming into the program from \$122,860 to \$155,400 at the end of the 1938 crop year—over and above all debts.

These families, therefore, had added a total of \$32,540 to the

from \$122,860 to \$155,400 at the end of the 1938 crop year—over and above all debts.

These families, therefore, had added a total of \$32,540 to the wealth of their communities, or an average of \$137,29 per family. We consider these net-worth figures, which reflect the difference between total assets and total liabilities of each family, an even better indication of progress than repayment figures, because they show the actual progress made by the family.

During the past crop year alone, these families increased their total net worth by \$23,800, or an average of \$100.42 for each family. One of the primary aims of the rehabilitation program is to enable borrowers to raise their own food supplies and livestock feed, so they will be less dependent upon cash crops. Their progress is indicated by the fact that the 237 typical F. S. A. families who reported in your district had stored away 21,100 quarts of fruits and vegetables last year to tide them through the winter. The average family has increased its annual production of homeanned food by 60 quarts since it first received an F. S. A. loan.

Moreover, the production of meat for home use has risen a total of 44,320 pounds annually, or 187 pounds per family; and the average increase in egg production for home consumption was 53 dozen per family.

So dozen per family.

Relatively few families owned milk cows when they first sought F. S. A. aid, and this lack often was reflected in the health of their children. By the end of the 1938 crop year, however, the borrowers in your district reported that they had increased their milk production by an average of 233 gallons annually, or a total of 55 160 gallons.

of 55,160 gallons.

This increase in the production of foodstuffs does not mean additional competition with farmers in other areas, since virtually additional competition with farmers in other areas, since virtually additional competition with farmers and the competition of the the entire output was consumed at home. It represents improved diet, based on foodstuffs which previously were not available, usually accompanied by a marked improvement in health.

One of the most frequent causes of distress among farmers is the fact that they are overburdened with debts. Consequently the Farm Security Administration has set up local farm debt adjustment committees to bring the debtor and his creditors together for a friendly discussion of their mutual problems. These committees have no legal authority to compel adjustments; but usually they find it possible to reach agreements for extending the time of payment, reducing interest rates, or scaling down the obligations. As a result, the farmer is saved from foreclosure and his creditors obtain substantial payments on what might otherwise have been uncellettible debts.

creditors obtain substantial payments on what might otherwise have been uncollectible debts.

In your district 136 farm families had been helped through such debt adjustments up to January 1939. Their obligations were scaled down from \$733,750 to \$518,650, a total reduction of \$215,100 or 29.3 percent. As a direct result of these adjustments, a total of \$8,543 in back taxes was paid to local governmental agencies.

Another main object of the rehabilitation program is to get better land tenure for borrowers who are tenants or sharecroppers. While many of the borrowing families are owners, the report showed that among the tenants, 134 had obtained written instead of oral leases. Moreover, 49 had advanced from a sharecropper to a tenant status during the year.

In your part of the country, one of the most general causes of rural distress has been inadequate acreage for sound farming operations. In helping borrowers to a new start, we have tried to help them obtain sufficient land. As a result, borrowers studied in your district increased their total land operated by 7,920 acres, or an average of 33 acres per family since acceptance on the program.

or an average of 33 acres per family since acceptance program.

There are three other measures of the progress made by these rehabilitation borrowers. The report showed that 30 families were getting medical attention, through participation in group medical care programs; six were practicing definite erosion control measures; and 211 children of school age were enabled to attend school as a direct result of the rehabilitation program.

Our field workers reported that they knew personally of 321 families in your district who were eligible and in need of rehabilitation loans, but were unable to obtain them because of lack of funds.

Next to the rehabilitation program, the Farm Security Administration's chief function is to make loans to tenants, sharecroppers, and farm laborers for the purchase of family-size farms under the terms of the Bankhead-Jones Farm Tenant Act.

While loans have been confined to certain counties in each State, we will have made approximately 10 such loans in your district, aggregating \$96,415 by the end of this fiscal year.

Last year, the first in which the tenant purchase program was in operation, five loans, totaling \$44,635, were made in your district. This year we estimate we will be able to make five loans aggregating about \$51,780.

If you would like any further information on the Farm Security Administration program, please let us know.

Sincerely yours,

C. B. BALDWIN, Acting Administrator.

Address Before League of Republican Women

EXTENSION OF REMARKS

HON. JOHN C. KUNKEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 6, 1939

ADDRESS OF HON. JOHN C. KUNKEL, OF PENNSYLVANIA, ON APRIL 3, 1939

Mr. KUNKEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered before the meeting of the League of Republican Women at the Mayflower Hotel April 3, 1939:

It is always a great pleasure for me to have the privilege of addressing any gathering of Republican ladies, because it is my firm conviction that the increased activity, organization, and enthusiasm of the ladies of our party was a main reason for the emergence of the Republicans in 1938. There isn't anyone in Congress today who owes the fact of his presence here to the ladies' councils and organizations to a greater degree than I do, nor is there anyone who is more appreciative of that fact. In the Nineteenth Congressional District of Pennsylvania your organizations not only work right through the year to develop sentiment for the aims and ideals of the party but then they see to it at election time and on election day that those ideals and aims are made effective by marshaling the vote and by having it registered at the polls. When you consider that in Dauphin County alone, one of the three counties in my district, the Dauphin County councils have a membership of about 5,000, you can realize their vast importance and their vast influence on election day. The ladies in Cumberland and Lebanon Counties are also most active and effective. dressing any gathering of Republican ladies, because it is my firm

This afternoon I would like to give you some indication as to my conception of one phase of our Government and then to correlate that conception with the issues of today, particularly the issue of unrestricted governmental regulation which Congressman MUNDET

when you first read English history, the natural tendency is to have a great deal of sympathy in most instances for the King in his struggles with Parliament. This is no doubt because the King is a vivid personality. The historians tell us his personality and relate anecdotes about him and we acquire a certain familiarity with him as an individual through these sources. Later, when we are more mature and study this same history with a view to analyzing its development, particularly in relation to our present conditions and our present form of government, we find that the most important political factor in that history is the struggle between the Parliament, an institution representing the people of England, and the King, an institution representing the execu-tive branch of the Government. In other words, the King changes from a personality into an institution and we view kings in our roun a personality into an institution and we view kings in our study not so much as personalities but as symbols of an institution. And it is at this point that we realize that the struggle between Parliament and the King is the most important political phase of English history and that this struggle to a very great extent recapitulates the development of democracy and of those institutions which guarantee us our individual liberties today, at least it recentified as the history up to the time of the formation least it recapitulates that history up to the time of the formation

Now, what was the essence of this struggle? The real nub of it was that it was a real continuing battle between two forces each of which wanted all the power and all the privileges they could get at all times. Sometimes one was weak and the other transport of the property of the proper could get at all times. Sometimes one was weak and the other strong and then the strong one gained. Sometimes Parliament gained its ends by refusing to vote funds. Sometimes the King gained his way by refusing to call Parliament. At times there was war and bloodshed when neither would give in to the other. But by and large it was just a knock-down, drag-out fight by two institutions represented by personalities, both of whom were extremely eager to increase their prerogatives at the expense of the other whenever they had the chance.

When the fathers of this country came to the time of its founding, they had the above fact firmly in mind not only through their

they had the above fact firmly in mind not only through their knowledge of and associations with the mother country but also from previous experience in the Colonies themselves. It is my belief that their evaluation of this fact—this necessary jealous struggle between two institutions whose interests would always to a major degree be opposed—was a most important concept in their minds at the time they drew up our Constitution. They distributed the powers of government between the legislative branches with three main ideas in mind: (1) The then existing political set-up in England and the Colonies, (2) their ideas of what that set-up should be, and (3) the belief that future conditions might make certain changes necessary. But always with the fact firmly in mind that those branches of government would continue that jealous struggle, since it had existed historically from time immemorial and because it was theorem; in the situation

struggle, since it had existed historically from time immemorial and because it was inherent in the situation.

The Supreme Court, as it has functioned since the Court under Chief Justice Marshall first stated that a Federal law was unconstitutional, is a peculiarly American institution. I want to confine my remarks to a discussion of the relation between the executive and legislative branches of our Government. But it is important to notice that courts in other countries do not have the power to declare legislative enactments unconstitutional. Also that this power was not explicit in the Constitution but was only implicit in its. was not explicit in the Constitution but was only implicit in it, and that its exercise by the Court was attained in the last analysis by the Court actually reaching out and using this power. In other by the Court actually reaching out and using this power. In other words, the more dominant position of our courts as compared to courts in other countries is mainly due to the assumption by our courts of this power because of the Court's desire to participate in this struggle and to establish its institutional importance more firmly. Courts as an institution must be in the main impartial, both as to their own powers as well as in respect to the rights, duties, and powers of others. But it is interesting during this discussion to note the source of what we are all glad to concede today is one of the Court's most important functions.

is one of the Court's most important functions.

My conception of the whole theory of our Government is that the various branches should continue to insist on their powers and should strive to get more unless checked by the people themselves. It is that constant interplay that insures that the checks and balances established in the Constitution should have that relation which conditions existing from time to time demand that they which conditions existing from time to time demand that they have. There is no reason to criticize an Executive unduly for seeking to expand his sphere of Executive influence. Naturally there is a great deal of reason to criticize a legislative body that abrogates its powers and turns them over to an Executive as the past few Congresses have done. The framers of our Constitution contemplated an Executive who would desire to be more influential and provided for it; but I do not believe they ever contemplated and provided for it, but I to not believe they ever contemplated a Congress that would willingly turn over the exercise of the rights granted to it. And so I believe it to be the duty of Congress and the duty of an individual Congressman to hold on firmly to every iota of power that Congress now has, to struggle to regain powers and influence that have been lost or loaned. That is the way in which Congress can at least begin to lessen the unre-stricted Government monopoly and power, now ever increasing, whose dangers are so evident and so all embracing. This is only one phase of the problem but it is one toward which all of us on Capitol Hill can work for right now.

Our present Chief Executive has a very strong and vivid personality, and it seems to me that this fact has very frequently beclouded the really serious questions under discussion. Too many times Congressmen and citizens ardently espouse a measure because they like and admire our President, while others too frequently strenuously oppose a measure because they do not like our President or are against his general ideas. This is really a return to that immature stage of our development in which we were interested in kings as individuals and before we more maturely began to analyze the king as the symbol of an institution. Naturally, decisions made on the basis of feeling and emotions held as to a person-

ality are apt to be made in derogation of the real issues involved.

But the Congress at present can make slight headway in this direction—in fact, can scarcely hold its own against the tide, and that is where you and your workers can do the work that will really count. You can start now to show the dangers of this unrestricted governmental control and to point out that one means of combating it is to secure this spirit in future Congresses. When you show that the American people desire this, then the Executive will know that it is necessary to yield, and very probably our next President— or symbol of executive power—will be one who sees that such a or symbol of executive power—will be one who sees that such a yielding back is the part of wisdom and necessity and of the spirit of the times; and the result of your efforts and of the efforts of thousands of those working with you for the same results will be a swing back, under our system of checks and balances, to that more perfect equilibrium that will secure the greatest freedom of individual action, initiative, and opportunity to the citizens of this country that existing conditions will permit of this country that existing conditions will permit.

The Mexican Problem—Expropriation by Mexico of Foreign-Owned Oil Properties

EXTENSION OF REMARKS

HON. JOHN KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1939

Mr. KEE. Mr. Speaker, the old saying that the poor are always with us aptly applies to our problem in Mexico. From the earliest days of our country's history down to the present time the people and the Government of the United States have been continuously faced with serious questions of policy in our relations with our temperamental neighbors to the south and with their even more temperamental and usually undependable and unstable government.

Regardless of all argument to the contrary, it must be conceded that the Government of the United States, in dealing with the many serious questions which have arisen between the two countries during the past century, has exercised to a remarkable degree a spirit of patience and restraint. Considering the situation frankly and uninfluenced by either bias or prejudice, let us see what the record shows and what every

informed person knows to be true.

Whether it be because our people have felt that it would be shameful for us to use our superior strength and resources to crush a smaller and weaker nation; whether because we have a natural contempt for those who exhibit a disregard of their pledged word and solemn treaties; whether it be because of our natural horror of war and bloodshed, or for whatever reason, the fact remains that this country through many years has calmly and without any effort at retaliation, accepted and ignored more carefully calculated and deliberate insults from the Mexican Government, more open violations of international law and ethics, more oppressive acts toward our nationals and a more callous and insolent disregard of our rights than we would have borne, without recourse to arms, from any other nation on earth. True, at one time, a matter of 90 years ago, we were a party to the writing in blood of a chapter in the history of our Mexican relations, but that chapter seemingly taught no lessons to our neighbors, and engendered in them a spirit of resentment that has deepened in bitterness with the passing of the years.

Our past experience with Mexico and with what, in charity, may be called Mexican diplomacy, has been such as to accustom us to the uncertainty of Mexican action. We know that the southern Republic seems never to have followed a dependable property doctrine as to "mine and thine," that confiscation of the property of others evidently seems to that nation to be a meet and proper action under both their civil and moral code, and that, as to reparation, restitution, or compensation, one who expects either must find comfort in a new beautitude expressed in the words "Blessed is he who expecteth nothing, for he shall not be disappointed." These salient features of Mexico's standard policy in her dealings with foreigners-and especially with Americans-have become so familiar to us that announcement of initiation of new refinements in this policy causes but little excitement or comment. Like David Harum's dog, we evidently feel that a certain number of fleas are good for us, therefore we give but slight notice to the addition, now and then, of an additional parasite. However, it seems that our most recent insectivorous infliction is so overgrown as to demand our attention. Especially is this true in light of the fact that, receiving the same dose of grief as ourselves, the British lion has emitted a roar as audible as the shot fired at Lexington.

TT

For many years the Government of Mexico has pursued a policy involving the expropriation of agrarian properties owned by American citizens in that country. For these properties no adequate compensation was awarded the owners either at the time of the expropriation or thereafter. Repeated representation and protests were made by our Government in respect to the action of the Mexican Government, but without avail. Recognizing the right of Mexico to expropriate property for public use, as we would recognize that right as fundamental to every government, we have insisted only that any such expropriation must be followed by adequate, effective, and prompt compensation for the property so expropriated. There is nothing new or strange in this position. That private property may not be taken for public use without adequate compensation to the owner is a principle of law more widely recognized, perhaps, than any other. The requirement is in the Constitution of Mexico as well as in our own Constitution. It is a recognized principle of international law. No other rule would be either just, fair, ethical, or honest.

The controversy in respect to the expropriation of agrarian properties has now reached the point where a basis or plan of settlement has practically been agreed upon between the two countries. As to these properties, Mexico has agreed that compensation shall be made in accordance with a valuation to be fixed by commissioners to be selected by our respective Governments. It is not my intention at the present time to discuss the matter of agrarian properties, except insofar as the questions raised thereby are tied in with and are a part of the problem raised by the recent expropriation by the Government of Mexico of foreign-owned oil properties. It is the expropriation—or confiscation—of these last-mentioned properties that will be here discussed.

In March 1938 President Lazaro Cardenas of Mexico made public announcement that his Government had expropriated the properties of all the foreign oil companies engaged in business in that country. By properties is meant not only the lands and leases owned by these foreign countries, but also, included in this order, was the oil wells, rigging, power plants, pipe lines, barges, boats, and other transportation facilities; refineries, storage tanks, sumps, pump stations, motors, engines and boilers, camps, camp sites, club houses, dwellings, office buildings, warehouses, railways, rolling stock, and other equipment; receiving tanks, tank farms, wharves, piers, and sea lines; in fact, the entire assets and tangible property of the oil industry in the Republic of Mexico. At a fairly conservative estimate, the property so, by one stroke of the pen of Señor Cardenas, taken over from its legitimate owners, has a value of over \$400,000,000; and, in my humble judgment, the Government expropriating this property, not having paid for it at the time of its taking, will not pay for it and, though it had the disposition to do so-which it has not-cannot pay for it.

As heretofore stated, our difficulties with Mexico, arising out of the seemingly chronic disposition of that country to appropriate for its own use the property of foreigners who, by invitation or otherwise, have invested money for the development of that country and its resources, have been al-

most continuous since the early years of that Government. It is well known, of course, that these troubles have not been confined to the oil business. The same trouble has been encountered in the mining business, railway operations, agricultural enterprises, forestry development, and many other branches of industry. The oil controversy, however, has perhaps been and is the one of greatest importance, and has from time to time caused the greatest crises in our relations; it is not by any means the oldest of the unsettled questions nor is it of recent origin.

ш

For many years prior to the drilling of the first productive oil well in Mexico the presence of this important commodity in the coastal region of that country was, or should have been. known to the most casual investigator. Throughout the entire region lying mostly between the Panuco and the Tuxpan Rivers there have existed from time immemorial numerous small lakes or beds of asphalt similar to the larger deposits found on the island of Trinidad or in Nicaragua. Many years ago these deposits were investigated by American interests engaged in the asphalt industry; these interests had in view the exploitation and marketing of the natural asphalt of which the deposits consisted. The deposits were found, however, to be either too limited in extent or too far distant from the coast to be of commercial value or to make their exploitation practical or remunerative. At that time it does not seem to have occurred to the asphalt explorers that the surface deposits were merely seepages from an unlimited supply of petroleum confined far down beneath the earth's surface. There is a record, however, of one attempt by the Mexicans to drill for the hidden wealth; this attempt was made as far back as 1869, but like most Mexican trials at development, it was a failure and was never repeated. The British also drilled a number of wells in 1898 and 1899 but without success. It required American experience, determination, and courage to find and develop this field.

A majority of the deposits or seepages, above mentioned, scattered all over the area afterwards developed, were what is known as "live" seepages; that is, the crude oil, which has an asphalt base, was continually bubbling up from the subterranean depths. One may yet stand upon the thin crust covering one of these seepages and watch the evidence that clearly indicates its nature and origin. A small bubble will slowly take form, gradually expanding into a perfect globe, first a dark brown in hue, then a bright yellow, and now with the iridescence of a soap bubble it will suddenly break and a film of oil spread out over the surface. With the steadiness of clockwork these bubbles continue to rise and fall and break, even as they have continued for who can say how many thousands of years. These seepages, found throughout the section I have indicated, are usually located near what is known as a basaltic uplift, a wedge basalt thrust up by volcanic action through the great oil-bearing limestone strata lying far below the surface.

It was these seepages, correctly interpreted in the year 1900 by Edward L. Doheny, an American, which finally led to the drilling of the first oil well in Mexico, and to the consequent discovery of one of the greatest oil fields the world has ever known. As stated, the field was well defined by these surface indications, the first well drilled confirmed Doheny's judgment as to the meaning of the seepages, and just as clearly indicated the extent of the territory likely to be productive. Therefore, any claim made by Mexico that her citizens sold and disposed of their oil interests in ignorance of the value of the property is untenable.

The fact that this was destined to be a great oil field was apparent from the beginning. The Mexican Government was undoubtedly well advised from the time of the drilling of the discovery well that it had within its borders this tremendous reservoir of wealth. All that was needed to turn this potential wealth into actual gold was development and exploitation. All that was needed to bring about this development was the expenditure of money. These truths were elementary. It would seem, however, that our southern neighbors were not willing to risk their own money in the effort at development, and therefore the expenditure of

foreign, especially American, capital was invited and welcomed. The slogan apparently was "Let the gringoes take the chances."

The lands under which were situated these vast underground pools of oil were owned by Mexican citizens, and these citizens, like the citizens of any other country faced with the same situation and opportunity, were ready to sell or lease. Did the Mexican Government, immediately following the discovery of oil under these properties or at any time during the ensuing exploration and development period, make claim that the ownership of the subsoil wealth was vested in the nation? It did not.

Did the Mexican Government during this time make any objection to the alienation on the part of its citizen-owners to foreign purchasers for cash of their land or of their oil rights? It did not. Did the Mexican Government then propose to place in its constitution the declaration that the Government claimed an inherent right to the ownership of everything below the surface of the land? It did not. Did the Mexican Government, at any time during the development period and while foreign capital was flowing in, expropriate anything or announce any intention of doing so? It did not.

On the contrary, from the time of the drilling of the discovery well, down through the ensuing years, the Mexican Government continued its policy of inviting and welcoming the investment of foreign capital in the continued development of this new-found source of national wealth. As long as the foreign oil companies poured a steady flow of gold into the country for exploration and development, as long as they continued to develop new productive fields, as long as they continued to pay the native landowners for their oil lands and oil rights in good American and British money, as long as they continued to build tanks, warehouses, piers, sea lines, railways, refineries, and permanent improvements, just that long the Mexican Government applauded and encouraged.

It is true that the Mexican Government was, during this time of development, continuously insisting on a more than generous "rake-off" as a governmental prerequisite. This took the form of outrageous fees for so-called permits, inspections, recording, and registering of titles—since declared void—and property and production taxes averaging over \$25,000,000 per year. As a matter of fact, in 1922 the production and export taxes paid by the oil companies to the Mexican Government amounted in that one year to the sum of \$43,990,070.25.

As the investments of the various foreign oil companies grew greater, so did the demands of the Mexican Government grow greater, more numerous, more onerous, and exacting. These demands were always met by the investor; not without protest, it is true, but the uselessness of protests to a Mexican Government has been so well demonstrated by the diplomatic experience of our Government that the fact they are useless is elementary. Therefore, as stated, the increasing demands were met and the charges paid simply because there was no alternative. From 1912 until the close of 1927, marking the period of greatest production, the Mexican Government collected in taxes alone from the oil companies, upon a total production of 1,443,239,366 barrels, the sum of \$224,-052,042.43. By the year 1916-and I am using this year as representing an average one in the period prior to the falling off of production—the pay rolls of the oil companies had reached the sum of \$37,500,000 per year. The greater portion of this sum went to Mexican laborers, who were better fed, better clothed, better housed, and better paid than they had ever known before and far better than any other class of labor in the country. Approximately 50,000 oil workers, a majority of them Mexicans, were being given steady, regular employment, and, as shown, the Mexican Government was receiving in taxes from this one industry a steady income unequaled in amount by that of any other industry in the entire country. But this did not satisfy a government that believes in taking what it wants and which has the power to take. Not contented with the golden eggs, the Government longed for possession of the goose.

**

Early in the year 1915 Venustiano Carranza, having won the Presidency of the Mexican Republic after a four-cornered fight with Villa, Zapata, and Huerta, looked with longing and covetous eyes to the oil fields, and perhaps also to other valuable properties owned by foreign interests. The oil fields were probably the richest and most promising area for the production of wealth ever discovered in the Mexican Republic. Foreign enterprise through the course of many years, and at tremendous cost, had explored the territory, defined the limits of the fields, drilled the wells, built highways and railways through the jungles, erected storage tanks and warehouses, built refineries, sea lines and piers, laid pipe lines to transport the products, completed everything necessary for reaching the markets of the world, and set the stage for a drama of prosperous business. Here before the eyes of El Presidente was a source of undreamed-of income, and it did not belong to El Presidente. Then and there, no doubt, was born in his mind the idea of adopting some scheme or device through which as much of this property as possible might be taken over by the Mexican Government without, of course, any necessity of compensating the owners. No need to say that no such intent was announced, but, on the contrary, all rumors or suggestions of intended confiscation or expropriation were instantly denied.

On January 7, 1915, the first steps for carrying out Carranza's scheme were taken. On that day he issued a decree in which he ordered that "all development and operation of oil wells must cease immediately and remain suspended until the completion of specific laws governing the exploration, production, transportation, and marketing of this product." What these "specific laws" were intended to be was not indicated; any intent to nationalize the oil industry was denied; and yet the great industry was ordered to be closed down until such indefinite and undetermined laws could be formulated and enacted.

This decree brought an immediate protest from William J. Bryan, then Secretary of State of our Government, who expressed to the Carranza government the fear that this decree was but the forerunner of an intended act of confiscation. To this protest Aredondo, then the agent of the Carranza government in Washington, replied on January 22, 1915, that he had been directed by Carranza to advise our Government that "no confiscation is menacing oil properties." This was but the first of many similar assurances to come to our State Department from the Mexican Government. The keynote of Mexican diplomacy seemed then and seems now to be "not to let your right hand know what your left hand does," with the result that while one hand signs a note of assurance that all foreign rights will be protected the other hand affixes a signature to an order or a decree directly to the contrary.

At the time of the Bryan protest, to wit, early in 1915, Carranza evidently had in contemplation the new constitution, which was afterward promulgated, and under the terms of which he hoped to accomplish his undoubted purpose to confiscate all foreign-owned oil properties. The puzzling question to him was how he could give this extreme measure the guise of legality. The oil companies were not operating under concessions from the Mexican Government. On the contrary, they were operating upon properties which they had purchased outright or leased from the native Mexican owners. These owners had been paid in cash for their property and had executed deeds, leases, or contracts to the purchasers. These transactions had been approved by the Mexican Government, and the writings showing transfer of the titles and property rights to the various companies had been duly recorded in accordance with the provisions of the Mexican laws. The Government therefore could not cancel these deeds or contracts as it would a "concession."

And right here it might be well to correct a misunderstanding that is prevalent as to the rights of the oil companies in the Mexican properties. It has been frequently said, and without any foundation in fact, that the oil companies operating in Mexico acquired their properties through "concessions" from one or the other of the various unstable governments that came and went during the many revolutionary years in that country. Coupled with this statement, the idea has been conveyed that in many instances these supposed concessions were acquired fraudulently or through bribes to officials, and in total disregard of the rights and the interests of the Mexican people. This is not true.

I do not know and have never heard of any foreign oil company operating in Mexico under a contract or concession secured from the Mexican Government or from any of its representatives. I never heard of but one concession being made, and this was to a Mexican company, and I will speak of that later. To the contrary of the erroneous idea of concessions, every foreign company doing business in Mexico secured its properties and rights in the same manner as similar companies operate in the United States, to wit, by lease or purchase of the lands or oil rights from the individual owners. I can testify to the fact that these individual owners were never ignorant as to the value of their holdings and that the considerations and royalties paid by the purchasers of these properties measured up to the standard of prices that would have been paid in the United States for the same properties had they been located here and owned by shrewd, hard-fisted American landowners.

At the time the various foreign oil companies entered the Mexican field it was necessary for them to trade with the individual landowners and not with the Mexican Government for the simple and very good reason that the Mexican Government then made no claim whatsoever to any interest or right in the subsoil deposits under Mexican lands, other than to certain minerals having no connection with petroleum. At that time the Government, under its constitution and its statutes, recognized and admitted without question that the title to the petroleum under all privately owned lands was vested in the owners of the surface. Therefore the oil companies dealt with the surface owners direct, paid them for their properties, secured conveyances therefor, and placed these writings to record, all with the knowledge, consent, and approval of the Mexican Government. No company claims title under any "concession," and, as stated, the Mexican Government itself at that time made no claim of any rights whatsoever in the property which could be subject to

As evidence, however, of what the Mexican Government would have undoubtedly done had the oil companies been operating under concessions instead of purchase, I need only point to the case of the Maritime Oil Co. On June 10, 1912, Madero, then President of Mexico, through his Minister of Promotion, Colonization, and Industry, granted to three Mexican citizens and their assigns the right to explore for and market the petroleum from the subsoil of certain sections of what is known as the maritime zone, and margins, banks, and beds of rivers, esteros, and marshes in the State of Veracruz and Tamaulipas. The areas included were indisputably under Federal jurisdiction and therefore properly subject to concessions. This concession was assigned by the three concessionaires to the Compania Petrolera Mexicana-Mexican Oil Company-which, in turn, in August 1913, assigned it to the Maritime Oil Co., also a Mexican corporation, but with American stockholders. This assignment was approved by the Minister of Fomento of the then de facto government. The Maritime Oil Co. started a well on an island in the Panuco River and spent \$100,000 United States money in getting it down about 2,000 feet, or within an estimated 100 to 200 feet of the producing strata. Meanwhile, Carranza came into power, captured Mexico City, and immediately declared all acts of his predecessor, President Huerta-under whom the concession owned by the Maritime Co. had been grantednull and void. In January 1915 Carranza ordered all work on the Maritime Oil Co.'s well suspended, and, on August 7 following, his Minister of Fomento declared the original concession forfeited and canceled it. A protest by our Government in behalf of the Maritime Oil Co. availed nothing. Illustrative of the character of redress usually received from the Mexican Government is the following reply addressed by Carranza to a communication from the Maritime Oil Co.'s attorney. I quote:

QUERETARO, MEXICO, January 6, 1916.

Senor Lic. D. J. Hoff, Kansas City, Mo.:

Replying to your message dated yesterday, Compania Petrolero Maritima, which you represent, can apply to the Department of Fomento soliciting a new contract in the matter to which you refer. I salute you.

V. CARRANZA.

In other words, "we have confiscated your concession and \$100,000 worth of your property, and you can now commence all over again. I salute you." This being a concession, Carranza knew that he could cancel it without technically violating international law. The fact that he broke one of the Ten Commandments and violated the moral code did not trouble him. No moral question could either burden the soul or lay heavy upon the conscience of Mexico's V. Carranza.

VI

On January 19, 1916, aroused, no doubt, by Carranza's decree of January 7, ordering suspension of all oil operations in Mexico, our then Secretary of State Lansing wired to Special Agent Silliman, at that time representing the United States Government at Queretaro that he [Lansing] had been reliably informed that the defacto authorities of Mexico "contemplated issuing a decree for the nationalization of petroleum." The Secretary requested that Carranza be seen and asked to delay such decree until our State Department could have an opportunity to examine its proposed terms. He requested Silliman to point out to Carranza "in unequivocal terms the dangerous situation which might result from the issuance of any decree of a confiscatory character." To this telegram Silliman made answer on January 21 that the secretary of the department-presumably of Fomento, and so forth-advised him "that the Government is not contemplating such a decree."

Here was another one of the "right-hand" assurances carefully calculated to allay suspicion and camouflage the contemplated "left-hand" action. Secretary Lansing was apparently not satisfied with the assurance, for on January 22 he wired Silliman that "Department officials have had personal knowledge that for more than a year such a measure was contemplated." Lansing evidently knew what value to give to Mexican assurances. The apprehension of the Secretary was well founded. Thirty-seven days thereafter, to wit, on February 28, 1916, Carranza again issued a decree ordering "suspension of all drilling and works of exploitation in the oil fields, and all dealings in oil lands until the Secretary of Fomento presents the project of the new law regarding the This decree, calling a halt upon a great industry which had not yet been nationalized, was certainly incompatible with the assurance just previously given to Lansing that the Mexican Government did not have the nationalization of the industry in contemplation. It will be also noted that the decree warned that a new law was in the offing, but no hint was given as to the nature of the contemplated new measure. As a matter of fact, no such hint was necessary. Every word and action of the Mexican Government clearly pointed to its intention to grasp, if possible, the great business that had been developed and built up by foreign capital under the Mexican Government's encouragement.

At this time, and while Carranza was busy with his undertaking to formulate laws authorizing an expropriation or confiscation of the entire oil industry, the individual Mexican States in which the oil fields were located suddenly commenced, in common parlance, to "horn in" to the situation with attempts to get control of the industry and of the wealth it represented. The method of making laws by decree, which Carranza had brought to a state of perfection, having been popularized and proven to be effective, General Aguilar, then the Governor of the State of Veracruz, concluded to get into the decree business as a profitable sideline. On January 15, 1916, this enterprising and thrifty Governor issued a decree which declared that the State government of Veracruz had and would exercise complete jurisdiction over all oil properties.

The decree (1) forbade any contracts, sales, conveyances, or leases without the consent of the State government of Veracruz; (2) forbade any transfers of stocks, bonds, or rights, either corporate or individual, without consent of such State government; (3) declared all contracts or transactions made without such consent null and void; (4) decreed that all contractual parties, including purchasers, lessees, and grantees, shall in all cases renounce their rights as citizens of a foreign government and their right to appeal to their own government for protection or redress.

This decree brought a protest from Secretary of State Lansing; and, inasmuch as by this decree the Governor of Veracruz was poaching on Carranza's preserves and was in a fair way to wax rich and fat upon the fees charged for his licenses and permits, Carranza, on August 31, 1916, issued a counter decree denying to the various States any jurisdiction over oil exploitation and production and invalidating all prior acts of the various Governors in reference thereto. Carranza was not disposed to stand idly by and let an ordinary State Governor invade his private pastures and grow fat on the

grazing.

In the meanwhile, the Carranza government was making it as difficult for the oil industry as possible. It was collecting from twenty-five to forty million dollars per year in taxes from the oil companies, supplemented by fees for permits, licenses, recording, registering, inspections, protection, and every other imaginable and supposed service forced upon the companies at the Government's price and paid for by the companies upon the alternative of being closed down at a moment's notice. These measures, while profitable, were not accomplishing the Government's objective. They were all, however, part of the series of steps that led up to the final event precipitating a controversy that has raged between the American and the Mexican Governments for over 21 years, and into which the British, Dutch, and other Governments have been drawn, finally resulting—

(1) In the nationalization of petroleum by the Mexican Government, from which act subsequently resulted:

(2) (a) The loss by all foreign investors, with no hope of any compensation therefor, of all petroleum interests purchased by them since May 1, 1917.

(b) The loss by all foreign investors, with no hope of compensation, of all petroleum interests purchased by them prior to May 1, 1917, in lands upon which they had performed no positive acts of development, as such positive acts are defined by the Mexican Government.

(3) The expropriation by the Government of Mexico without, up to this day, any payment of compensation to the owners of all oil properties and interests of all foreign investors in the Republic, and in its final analysis this expropriation actually amounts to—

(4) Confiscation by the Mexican Government of all oil properties owned by foreign investors in the Republic of Mexico, and which properties have an actual value of ap-

proximately \$400,000,000.

VI

The event precipitating these drastic changes and finally bringing the result at which there is no doubt the Government of Mexico was aiming during all the years, to wit, confiscation, was the formulation and adoption of the new constitution of Mexico which went into effect on the 1st day of May 1917. Into article 27 of this constitution was written this declaration:

In the nation is vested the direct ownership of * * petro-leum, and all solid, liquid, or gaseous hydrocarbons.

This article completely changed and reversed the attitude which the Mexican Republic has held since its formation as a Government upon the question of ownership of the petroleum under the surface of lands. It takes the ownership of this substance away from the owners of the surface, where it had always been, and vests it in the Government. And not only this, the interpretation of the provision insisted upon by the Mexican Government, and which will still be maintained if foreign governments, including our own, permit the

Mexican officials to "get away" with such an interpretation, will give the provision a retroactive effect, thus entirely voiding all titles of foreign owners to oil interests, however or whenever acquired, and entirely releasing the Government of Mexico from any obligation to pay for these expropriated properties. But of this later,

The new constitution was the brain child of Carranza and his coterie of advisers. It was adopted by a "constitutional assembly" held in January 1917, was promulgated or made public on February 5 following, but did not become effective until May 1 of the same year. Immediately after the adoption of this constitution it became apparent that the Mexican Government intended to give the petroleum provision a retroactive interpretation. Protests immediately flowed in from foreign governments whose citizens had made legitimate and supposedly secure investments in Mexican oil properties.

On June 6, 1917, Secretary of State Lansing of the United States Government sent a telegram to Ambassador Fletcher in Mexico City asking him to obtain from the Mexican Government a clarification of the situation, to wit, an expression of the intention of the latter government with reference to giving a retroactive effect to the new constitutional provision upon the ownership of petroleum. In this telegram Lansing said:

The Government of the United States has noted with grave concern evidence of an intention on the part of the Mexican Government to give certain provisions of the constitution * * * retroactive application to the rights of foreign owners of property in Mexico to the extent of destroying or impairing their rights. This amounts to confiscation, and to this the Government of the United States cannot consent because, as the Mexican Government has already been informed by the Government of the United States, it cannot acquiesce in the direct or indirect confiscation of American-owned properties or discrimination against American citizens with reference to their legally acquired rights and interests in Mexico

As might readily be anticipated from past experiences, this telegram from Secretary Lansing, together with other similar earnest and emphatic communications evidencing the firm stand of the American Government, brought the usual Mexican "assurance." Ambassador Fletcher on August 2, 1917, wired Secretary Lansing as follows:

In interview with President Carranza * * * he assured me that it was not the intention of the Mexican Government to take over properties now in exploitation, and distinctly stated that there would be no confiscation of these properties

Subsequent events prove this assurance to be worthy of just as much faith and credit as the former ones in reference to the Government's intention touching the matter of nationalization of the petroleum industry; in other words, it was worthy of none.

VIII

For the past 22 years—the years ensuing since the incorporation of article 27 in the Mexican Constitution—the controversy has continued. Upon the one side—the side of the investors—of the men who, upon invitation and trusting in the laws then upon the statute books of Mexico, gave of their time, their ability, their experience, and their money to develop the rich but hidden and almost inaccessible resources of an impoverished country, there has been patience and restraint under most intolerable and provocative conditions. Upon the other side there has been arrayed the forces of a government seemingly motivated by a desire to acquire something for nothing and operating without any apparent regard for the most elementary rules of human conduct.

During these 22 years the Mexican Government has never for a moment relinquished its evident purpose to confiscate the oil properties of foreign owners by any means within its power without, if possible, laying itself open to liability for payment under international law. Moral law was evidently not considered, and, of course, no such liability could ever accrue under Mexican law; if it did, the law would certainly have been immediately revised to meet any such contingency and relieve the Government from the obligation. The Mexican Government during these years has tried to achieve confiscation indirectly by the imposition of impossible operating

conditions such as have heretofore been mentioned. In later years these conditions have been made more burdensome by adding to them extreme labor exactions fomented and supported by governmental force. All these obstacles and burdens having been met by the oil industry, the Mexican Government has ever been forced back to a reliance upon its strained, illegal, and illogical interpretation of article 27 of its new constitution. The Mexican Government saw clearly that to achieve its objective of confiscation without admitting the confiscatorial nature of the act it was imperative that article 27 be enforced retroactively without admitting it to be retroactive. It must be made to operate to deprive in an apparently legal manner the landowners of all right and title to the petroleum thereunder without regard to the date of acquisition of the property. In this respect the interpretation of article 27 by the Mexican Government and its reasoning through its official mouthpiece is something strange and

In March 1918, Pastor Rouaix, who possibly above all others was responsible for the incorporation of article 27 in the Mexican Constitution, offered a most ingenious interpretation of the article. He asserted, in effect, that the article was not retroactive even though it operated to invalidate titles which had been legally acquired and were valid prior to the adoption of the constitution. In a letter published March 16, 1918, in El Nationale, a Mexico City newspaper, he reasoned that inasmuch as the new constitution declared that the petroleum had always belonged to the Government, therefore that declaration alone made this an absolute fact; and, consequently, regardless of who claimed the property or of the title under which it was claimed, there was nothing retroactive in the Government walking right in and taking over a property which the constitution said had always belonged to the government.

It is interesting to note the basis for the Mexican claim that the government always owned the petroleum under all the lands of the country and had never—and in fact could never have—parted with the title to it. Here is the argument.

In the year 1784 the King of Spain issued certain ordinances pertaining to "New Spain" or Spanish possessions in America, of which possessions Mexico was then a part. In one of these ordinances—the Mexican decree would seem to be a lineal descendant—the King claimed the lands of Mexico to be his "royal patrimony" and claimed ownership of the minerals in the subsoil; but the King granted to his subjects:

The right to have and hold * * * sell, transfer, rent, give, or leave them under testament on an inheritance, or in any other manner transmit the rights to them which they possess to persons who can acquire the same, under the same terms as those under which they are held.

The terms are set forth to be the payment of taxes to the royal treasury and the obligation to work the mines.

It will be noted that this royal decree or ordinance refers to minerals only and says nothing whatever about petroleum nor employs any term even remotely implying an intention to include this substance; and, indeed, the intention to include petroleum could not be read into the document, for at the time of the promulgation of this ordinance, petroleum as a thing within the subsoil and as the world knows it now, was undiscovered, undisclosed, and unknown. In addition to this, that the King, in his use of the term "minerals," actually intended it to apply to metals and metallic substances alone, is demonstrated by the wording of another ordinance issued subsequently and supplemental to the first one. The status of coal having been left uncertain in the first ordinance, the King in 1789 issued a second ordinance declaring that coal "not being a metal or semimetal" belonged not to the Crown but to the surface owners of the land in which it is found. And in later years-nearly 140 years later-the Academy of Jurisprudence in Mexico determined that petroleum was nonmetalliferous and therefore belonged to and had always been the property of the owners of the land.

Yet, strange to say, it is upon this 1784 ordinance of the King of Spain, promulgated before the achievement of Mexico's independence and before petroleum was known to the world except, perhaps, as "pitch" for Noah's Ark, that the Mexican Government bases its argument that the petroleum in the subsurface of Mexican lands belongs to the Government, always belonged to the Government, and will continue to belong to the Government, notwithstanding any laws to the contrary enacted at any time by any legislative body of the Government.

Brushing aside the fact that petroleum was unknown at the time of the issuance of the ordinance by the King of Spain reserving to himself the minerals under the lands in New Spain, or Mexico, as his royal patrimony, the Mexican Government claims that these minerals included petroleum; that with the achievement of Mexico's independence in 1821 the royal patrimony became the Mexican patrimony; that the King's ordinance must rightly be interpreted to mean that his subjects upon their acquisition of the lands never acquired the minerals thereunder, including petroleum, and that, therefore, no Mexican landowner ever acquired the minerals, including petroleum; that, in view of this situation, the Mexican Government, having taken over the rights of the King, has always owned the subsurface valuables, including, of course, petroleum, and never lost that ownership, regardless of all grants, contracts, statutory laws, or even constitutional provisions, to the contrary. The further claim is asserted, as I have already stated, that there is nothing retroactive in the action of the Mexican Government after the lapse of nearly 100 years in bridging this gap with its new constitutional plank which declared "in the nation is vested the direct ownership of petroleum" and walking over this plank into a recovery of its lost "patrimony."

IX

Now, let us look for a moment at the other side of the picture as disclosed by recorded history. No laws were enacted in Mexico with reference to mining rights from the time the country achieved its independence in 1821 until after an amendment to the Mexican Constitution adopted on December 14, 1833. This amendment clothed the Mexican Congress with the power to "promulgate laws obligatory throughout the Republic relative to mining and commerce." Pursuant to this authority, a mining code was enacted in 1884, in which ownership of both coal and petroleum was established in the owners of the surface of the lands. In plain terms, the statute asserts—

The following substances are of the exclusive property of the owners of the land, who may, therefore, develop them without the formality of any denouncement or special adjudication.

And then the statute lists the substances, and among these so listed is petroleum. This statute in no wise established a new principle; it merely confirmed what had always been understood in Mexico, to wit, that the owners of the surface of lands were also the exclusive owners of any petroleum that might lie beneath the surface. Thus the fact was recognized in Mexico's first mining code, written into the country's laws years before the existence in the country of petroleum in any quantity was known.

The law of 1884 was superseded by a similar one placed on Mexico's statute books in 1892, which was also declaratory of the respective rights of the nation and of individual landowners in mineral deposits, and this later law recognized the ownership of petroleum to be the owner of the surface of the land. And, again, the law of 1892 was superseded by a third act adopted in 1909, which, likewise, declared the petroleum in the subsoil to be the exclusive property of the landowner and not of the nation.

These laws, established by the sovereign legislative power of Mexico, pointed out to foreign investors the owners of petroleum rights, to wit, the persons from whom petroleum rights must be acquired by those designed either to purchase or lease such rights. It was under these laws, guaranteeing as they do the validity of the landowner's title to the petroleum in the subsoil, that American and other foreign investors acted in purchasing and leasing the lands and rights which have since been expropriated by the Mexican Government.

The laws above mentioned remained upon the statute books as part of Mexico's laws of the land, unrepealed and never legally questioned until the new constitution was proclaimed on May 1, 1917, with its article 27, which declares that complete ownership of all petroleum is vested in the nation itself to the exclusion of the landowner. It may be presumed that, by implication at least, this provision of the constitution repealed the former petroleum laws, for the constitutional provision and such former laws are certainly inconsistent. And yet it was not until December 1925 that Mexico undertook to promulgate a petroleum law in conformity with the declaration respecting the ownership of petroleum contained in the new constitution. The constitutional change and the laws later enacted thereunder, in their effect, both actual and contemplated, were, we now realize, but heralds of the closing act in the tragedy; to wit, the confiscation under Lazaro Cardenas.

.

The stage had been set by Mexico's successive rulers prior to the entrance of Cardenas upon the scene. Each new President brought into the play a change in script and players, new rules, and new methods of approach. For years after the adoption of the new constitution, the successive Presidents fought the American and other foreign property owners with the weapons of decrees and Presidential orders. Under Obregon there was instituted the doctrine of "positive acts," which brought on a serious crisis and in 1923 led to what was known as the Bucareli Conference, to which each country appointed a commission. The agreement arrived at by this commission in August 1923, not only in respect to the matter of expropriation but also upon the question of what constituted "positive acts" such as would preserve to foreign owners their title to the lands and rights acquired prior to 1917, not only became the basis for our recognition of the Obregon government, but was hailed by our Government as a satisfactory adjustment of a controversy. Under this agreement between the commissioners it was determined that the Americanowned properties in Mexico could not be expropriated without payment of "the just value thereof at the time of taking," and, furthermore, "on the basis of immediate compensation in cash."

This agreement, to which the Mexican Government was pledged, lasted only through the Obregon regime. Immediately upon the accession to power of President Calles, who followed Obregon, a new method of attack on the property owners was initiated; this was in the form of the petroleum law of 1925 and the alien land law of 1926. Both of these laws invaded the past, destroyed transactions long years complete, functioned retroactively, and served to deprive all foreign oil producers and investors of their oil rights and properties which had been bought, paid for, and title acquired under Mexican laws in force of the time of acquisition.

Under these laws the Government of Mexico went back to its plan of giving retroactive effect to the constitutional provision of 1917. Legal titles were attempted to be turned into 50-year concessions and most of the agreement of the Bucareli Conference was repudiated. Again our Government protested, and it was then that Dwight Morrow was sent down to Mexico to make an effort to settle the controversy. A compromise was effected. Calles, enlisting the aid of his supreme court, confirmed the titles of the foreign landholders, in part at least, without a time limitation, and restored the Bucareli Conference's definition of "positive acts." It looked like a satisfactory settlement—but was it?

On March 27, 1928, our Department of State enthusiastically and optimistically issued the following press release:

Together these steps voluntarily taken by the Mexican Government would appear to bring to a practical conclusion the discussions which began 10 years ago with reference to the effect of the Mexican Constitution and laws upon foreign oil companies. The Department feels, as does Ambassador Morrow, that such questions, if any, as may after arise can be settled through the due operation of the Mexican administrative departments and the Mexican courts.

As a matter of fact, since clearly demonstrated, the State Department, in its claim that these steps voluntarily taken by the Mexican Government would appear to bring to a practical conclusion the 10-year controversy, was grievously in error. Even if it had been true, the fact is that the "practical conclusion" so reached was a practical retreat upon our part. In the first place, anyone at all familiar with Mexican procedure can fully appreciate what it would mean for American claimants to leave the settlement of their disputes with Mexico to the "due operation of the Mexican administrative departments and the Mexican courts." ondly, by this compromise agreement we acquiesced in the Mexican contention: (1) That the Mexican Nation and not the private owner holds the legal title to all the petroleum rights under all lands whereon no positive acts of development had been performed prior to May 1, 1917. (2) That petroleum rights in lands acquired before May 1, 1917, on which such positive acts had actually been performed, would have to be brought within the terms of Mexican law, and the exercise of these rights after January 11, 1929, would be conditioned upon the holders thereof making application before that date for what is called "confirmatory concessions."

Thus the so-called compromise engineered by Morrow, in effect recognized Mexico's nationalization of the oil industry in a manner against which we have been continuously protesting since the first telegram sent by Secretary Lansing to the United States consul at Queretaro on January 19, 1916, which has heretofore been quoted. By recognizing Mexico's doctrine of "positive acts," and other regulations, and especially in recognizing Mexico's claim to any interest in the petroleum prior to 1917, we acquiesced in a procedure which deprived not only American, but other foreign investors, of petroleum rights for which these investors had paid enormous sums to individual landowners.

At the same time we admitted the right of Mexico to take over these rights without the use of any process and with no obligation to pay any compensation whatever therefor. The Mexican Government was not even required to perform any act of expropriation, and, therefore, those who lost under the compromise agreement made by Mr. Morrow were not only never compensated but are without hope of ever receiving any compensation, even though Mexico should be required to pay for the property later expropriated under the orders of President Cardenas. In my opinion, the Morrow compromise is bound to figure largely as a weapon in the hands of Mexico when the time comes, if ever, for a settlement by Mexico of our claims on account of the expropriation of the oil properties.

XII

For 10 years, following the Morrow accomplishment of 1928, more or less of a truce seems to have been established between the oil companies and the Mexican Government. Of course, both the large and petty persecutions of the operators, including all the old and with many modern refinements, continued. There was increased taxation, additional costs, and added regulations. Labor difficulties increased under governmental encouragement and support. Year-after-year production was curtailed because of the hampering of operations. Then in March 1938 the newspapers of the country suddenly blazed forth the announcement that President Lazaro Cardenas, with a denunciation of "foreign meddlers," had seized all of the foreign oil properties—expropriated them—taken them over bag and baggage.

Following the announcement of the expropriation of these properties, Secretary of State Hull promptly issued a statement in which he rightly recognized the right of the Mexican Government to expropriate the properties if the same were needed for the purpose of advancing the public welfare. The Secretary just as promptly and correctly pointed out the obligation devolving upon the Mexican Government to pay for the properties so taken. Secretary Hull said:

This Government has not undertaken and does not undertake to question the right of the Government of Mexico in the exercise of its sovereign power to expropriate properties within its jurisdiction. This Government has, however, on numerous occasions and in the most friendly manner pointed out to the Government of Mexico that in accordance with every principle of international

law, of comity between nations, and of equity, the property of its nationals so expropriated are required to be paid for by compensa-tion representing fair, assured, and effective value to the nationals from whom these properties were taken.

The United States Government has always reserved to itself the right of expropriation of private property for public use. This is accomplished here in proceedings in our courts for the exercise in due form of the right of eminent domain, but the act of taking is governed by our constitutional provision which provides "nor shall private property be taken for public use without just compensation." An almost identical provision is found in the Mexican Constitution, which provides that "private property shall not be expropriated except for reasons of public utility and by means of indemnification."

It would seem, therefore, that there should be no question in dispute between Mexico and the United States Government as to our right to insist that American owners of oil properties which have been expropriated shall be compensated. Even under the Mexican Constitution the term "expropriate" carries with it the obligation to pay for that which is expropriated.

In a note handed to Dr. Don Francisco Castillo Najera, Mexican Ambassador at Washington on July 21, 1938, referring to the matter of the expropriation of agrarian properties, and answering the Mexican Government's contention that it had the right to do practically as it pleased in order to carry forward a policy for the improvement of internal conditions, Secretary of State Hull said:

The issue is not whether Mexico should pursue social and economic policies designed to improve the standard of living of its people. The issue is whether in pursuing them the property of nomic poincies designed to improve the standard of living of the people. The issue is whether in pursuing them the property of American nationals may be taken by the Mexican Government without making prompt payment of just compensation to the owner in accordance with the universally recognized rules of law and equity.

The logic of the position of the American Government as to the agrarian properties expropriated by Mexico, applies equally to the oil properties which have been taken over in the same manner. The position of the Government of Mexico upon the issue seems to be most concisely expressed by Eduardo Hay, Mexican Minister of Foreign Relations, in his note of August 3, 1938, to Ambassador Daniels, wherein, referring to the expropriation of the agrarian properties, Hay said:

My Government maintains, on the contrary, that there is in international law no rule universally accepted in theory nor carried out in practice, which makes obligatory the payment of immediate compensation nor even a deferred compensation for expropriations of a general and impersonal character like those which Mexico has carried out for the purpose of redistribution

This being the view of the Mexican Government upon the question of its obligation to pay for agrarian lands expropriated by it, there is no reason to assume other than that it is also the view of that Government in respect to the expropriation of all other properties. If lands can be seized for the purpose of redistribution, without compensation to the owners, then, by the same token, all other properties-all wealth-can be seized and redistributed without incurring any obligation of payment.

XIII

Regardless, however, of the declarations of Secretary Hay. the Government of Mexico, as has heretofore been stated, has agreed to compensate American owners for the agrarian lands expropriated. Commissioners have been selected by the respective countries to whom has been delegated the duty of determining the value of such lands, and the agreement between the two countries provides that when the value has been determined Mexico shall discharge its liability by payment of at least \$1,000,000 per year. While the settlement has no connection with the matter of the expropriation of the oil properties, it is interesting in its bearing upon the question of what the oil-property owners may expect in the way of a settlement of their claims-if such settlement should ever be reached.

It is interesting to speculate upon the length of time that will probably elapse before the owners of the agrarian properties will receive payment of the amounts due them. At the present time it seems to be impossible to secure any accurate information upon the total value of the agrarian properties expropriated and payment for which is to be made under the terms of the settlement. In the note addressed by Secretary of State Hull to Señor Najera, the Mexican Ambassador, on August 22 last, the Secretary said:

Agrarian expropriations began in Mexico in 1915. Up to August 30, 1927, 161 moderate-size properties of American citizens had been taken. * * Not a single claim has been adjusted and none have been paid. The owners of these properties * * * lost their property, its use, and proceeds from 11 years to more than 20 years and are still seeking redress.

The value of the 161 properties is not stated. In the same note Secretary Hull states:

Subsequent to 1927, additional properties, chiefly farms of moderate size, with a value claimed by the owners of \$10,132,388, have been expropriated by the Mexican Government. This figure does not include the large land grants frequently mentioned in the press. It refers only to the moderate-sized holdings which rendered only a modest living. None of them as yet has been paid

The State Department advises that an accurate valuation cannot be made of the expropriated agrarian lands until all American claims have been filed. But if "a number of small properties" expropriated within the last 11 years-properties which, as stated by the Secretary of State, are "only modestsized holdings which rendered only a modest living" have a claimed value of over \$10,000,000, what must be the value of the 161 holdings expropriated since 1927 and of all the combined large land grants which have also been taken. As a matter of fact, it is generally understood that it is the larger land grants which carry the greater value. As an example, one of these large grants taken over from an American citizen has a reported valuation in excess of \$4,500,000. We can readily see, therefore, that in the matter of the expropriation of agrarian properties alone the Government of Mexico has created for itself a tremendous debt-an obligation which it admits. In securing, however, from the American Government an agreement that this obligation can be liquidated at the rate of only \$1,000,000 per year, it would seem that Mexico has driven a splendid bargain for herself at the expense of the American landowners, and that necessarily these landowners may not expect to receive full payment until the lapse of many, many years.

Notwithstanding, however, the fact that the terms of this settlement are favorable to Mexico, yet the settlement is no doubt the best that could be had under present conditions. It was really a notable accomplishment to secure from the Government of Mexico an acknowledgment that any obligation whatever rested upon that Government. Also, a payment of \$1,000,000 each year is better than nothing, and Mexico's ability to pay more, under present conditions, is doubtful.

The above statement can be more fully appreciated when it is understood that it is estimated Mexico's potential liability for agrarian properties, including those of British, American, and all other foreign ownership, expropriated up to the end of 1933 was 956,000,000 pesos, or at the rate of exchange then current over \$340,000,000. It is also estimated that, adding to the above sum the value of agrarian properties expropriated since 1933, Mexico's probable total bill for seized landsagrarian properties only-will amount to approximately \$700,000,000. Whether or not this estimate is even approximately correct, no one is in position to say. It may be beyond reason; it may be otherwise. Accurate information is not available. Neither can we say how much of the total amount will be owing to American owners, but it certainly will be a substantial sum, and it would appear certain that these American owners are assuredly facing a long period of patient waiting.

Assuming that, as indicated by acceptance of the obligation to pay for the expropriated agrarian properties, the Mexican Government intends to recognize the same obligation in the matter of the oil properties, the question immediately presenting itself concerns Mexico's ability to pay.

It is certain that in event of any attempt at arranging a settlement, it will be the intention of the Government of Mexico to depress the value of the oil properties by the exercise of all the subterfuges initiated and advanced by that Government throughout years of controversy, and to force the acceptance of a valuation so nominal that the owners of the confiscated properties will at the conclusion of such settlement still be the victims of confiscation. Furthermore, we have no evidence that there will be forthcoming any assurance of payment of any valuation, however fixed.

As has been stated, the confiscated oil properties have an estimated value of approximately \$400,000,000. In advised circles this valuation is considered a moderate estimate. Let us see for a moment whether or not the Government of

Mexico possesses the means of payment.

In the third diplomatic note from the British Government to the Mexican Government sent to the latter Government immediately before the withdrawal of the Mexican Minister from London, the British Government took occasion to review the financial condition of the Mexican Government. From this note we obtained the following facts which may be accepted as correct, inasmuch as no denial of the statement has ever been made by Mexican authorities.

Mexico's external debt, including all foreign claims not represented by Mexican Government securities, amounts to approximately \$243,000,000 of principal and \$267,000,000 accrued interest, making a total of \$510,000,000. Mexico's foreign debt on account of the expropriation of the national railways is approximately \$240,000,000 principal and \$226,-000,000 accrued interest, a total of \$466,000,000. There are additional foreign claims, represented by outstanding evidence of indebtedness amounting to approximately \$50,000,-000, an internal debt of approximately \$90,000,000. debtedness of the Mexican Government arising out of the expropriation of the agrarian lands has been estimated to amount to \$700,000,000. To the latter amount must be added the obligation of the Government for the oil properties at the estimate heretofore given, to wit, \$400,000,000. Summing up, we find that the Government of Mexico is today burdened with an indebtedness of \$2,222,000,000. This is a most impressive indebtedness and is entirely beyond the ability of the Mexican Government to pay. We are, therefore, confronted with the very vital question, How can the nationals of our country and those of other countries whose properties have been taken receive any redress for the wrongs which they

To sum the matter up upon the whole case as presented by the record, we can reach no other than the following conclusions:

- (1) The expropriation by Mexico of the foreign-owned oil properties without prompt and adequate compensation amounts to confiscation, and is in violation of international
- (2) Even if the Government of Mexico had any intention of paying for the confiscated oil properties, the financial condition of that Government is such as to render such payment at an adequate value impossible.
- (3) Any effort to arrive at a solution to the problem such as was reached in the case of agrarian properties will be futile.
- (4) It is the right and duty of the Government of the United States to demand from the Government of Mexico redress for the injuries suffered by our nationals.
- (5) It being impossible for Mexico to make payment to the owners of the oil properties of an adequate compensation therefor, the only recourse that can possibly be pursued by our Government is to demand and require that the confiscated American-owned properties be restored to their owners, and that payment be made by the Government of Mexico to the owners for damages for such time as the properties have been detained.

In other words, a settlement of the problem created by the Government of Mexico by the confiscation of the oil properties of foreign owners, is found in the one word "restitution."

Keep America Out of Foreign Wars

EXTENSION OF REMARKS

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1939

RADIO ADDRESS BY HON. HAMILTON FISH, OF NEW YORK, APRIL 5, 1939

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following radio speech delivered by me over the National Broadcasting Co.'s red network on Wednesday evening, April 5, 1939:

Tomorrow, April 6, will usher in the twenty-second anniversary of our entrance into the World War. At a time when the American public should be calm it is continually being excited into a frenzy by President Roosevelt and his New Deal spokesmen. The

renzy by President Roosevelt and his New Deal spokesmen. The youth of America are again being prepared for another blood bath in Europe in order to make the world safe for democracy.

Twenty-two years ago we went to war avowedly for the same purpose. Although we turned the tide of defeat into victory, the nations of Europe have since then gone to the right or the left into fascism, nazi-ism, or communism. Once again we have those in high places urging us to police and quarantine the world with American blood and treasure.

If Hitler and the Nazi government regain Memel or Danzig.

If Hitler and the Nazi government regain Memel or Danzig, taken away from Germany by the Versailles Treaty, and where the population is 90 percent German, why is it necessary to issue threats and denunciations and incite our people to war? I would not sacrifice the life of one American soldier for a half dozen Memels or Danzigs. We repudiated the Versailles Treaty because it was based on greed and hatred, and as long as its inequalities and injustices exist there are bound to be wars of liberation.

The Versailles Treaty sowed innumerable dragon teeth of future wars, and it is not surprising that after 20 years fully armed war-riors are springing up all over Europe. The sooner certain pro-visions of the Versailles Treaty are scrapped the better for the peace of the world.

I believe that if the areas that are distinctly German in popula-There will be no war in western Europe. There may be a war between the Nazis and the Communists, but if there is that is not our war or that of Great Britain or France or any of the democracies.

The time to wage war on war is in time of peace. If we do not speak out now it will be too late after war is declared. I call on all American citizens to participate in a campaign to keep us out of all foreign wars, unless we are attacked. We are willing to spend millions for national defense, but not a single dollar to send American soldiers to foreign lands to fight other peoples' battles, or repeat the folly of trying to make the world safe for democracy. If we do we will lose our own free institutions and come out a Feecist or Communist nation.

Fascist or Communist nation.

I call upon all would-be Republican candidates for President in 1940 to make their position known, without evasion or reservation, on this vital issue of keeping out of foreign wars. The people have a right to know how every candidate stands on collective security, entangling alliances, military and naval pacts, armed intervention seared dislowers war commitments and delegating to intervention, secret diplomacy, war commitments, and delegating to the President discretionary war-making powers. There should be no compromise or quibbling on this greatest of issues, and the people should have an opportunity of a clear-cut referendum on this question in the general election in 1940, as they did on the League of Nations in 1920.

We know where the New Deal administration stands. for internationalism, intervention, secret diplomacy, military alliances, and against our traditional American foreign policy of neutrality, nonintervention, peace, and no entangling alliances.

New Deal spokesmen have stirred up war hysteria into a veritable

renzy. The New Deal propaganda machine is working overtime to prepare the minds of our people for war, who are already suffering from a bad case of war jitters.

What is behind this far-reaching and continuous campaign of hate, emanating from New Deal sources, that discovers daily a new crisis? The time has come to call a spade a spade, and to stop pusylfocting and shadow-hoxing on the war issue that affects stop pussyfooting and shadow-boxing on the war issue that affects the lives and welfare of the American people. We are still a free people, and have a right to discuss in detail the administration's war-hysteria policy.

One word from the White House would stop the talk of war and the inevitableness of war, but not only is there no such word but instead there is a steady flow of alarming and provocative statements that add fuel to the war flames.

The American people should understand the deliberate purpose of the recent absurd statement from the White House spokesman, that Germany was planning to attack the Americas. If a young schoolboy had made such a remark he would have been spanked and put to bed. President Roosevelt, ashamed or afraid to make such a false and vicious statement, uses the camouflage of a White House spokesman to incite the passions and hatreds of our people.

such a false and vicious statement, uses the camouflage of a White House spokesman to incite the passions and hatreds of our people and spread his war propaganda.

President Roosevelt is the No. 1 warmonger in America, and is largely responsible for the fear that pervades the Nation which has given the stock market and the American people a bad case of jitters. If the people want to they can keep us out of foreign entanglements, military alliances, and war, and I believe they propage to do se.

ropose to do so.

It is the duty of all those Americans who desire to keep out of foreign entanglements and the rotten mess and war madness of Europe and Asia to openly expose the war hysteria and propaganda that is impelling us to armed conflict. We have as much right to criticize the dangerous foreign policies of the New Deal as we have any of its disastrous domestic policies. Actually, I believe it is far more important to oppose our entrance into any secret naval or military alliances or war commitments than any other issue before the people.

secret naval or military alliances or war commitments than any other issue before the people.

Why all this propaganda and war psychology about Germany, Italy, and Japan? Not one of these totalitarian states has the slightest idea or capacity of attacking or invading America, President Roosevelt, his mysterious spokesman, and Mr. Stimson to the contrary notwithstanding. It is true that we deplore the racial and religious persecution in Germany, but we never thought of making war on Soviet Russia when the Communists were butchering millions of Christians, Kulaks, conservatives, and even social democrats. We never considered attacking Turkey for slaughtering Armenian Christians at any time during the last 50 years. We never thought of going to war with czarist Russia for the pogroms against the Jews, far more bloody than the concentration camps of Germany. Germany.
What are the underlying motives behind the New Deal hymns of

What are the ductrying motives beind the New Deal Hymns of hate and threats of war against the totalitarian states?

I accuse the administration of instigating war propaganda and hysteria to cover up the failure and collapse of the New Deal policies, with 12,000,000 unemployed and business confidence destroved.

I accuse the administration of deliberately scrapping our traditional foreign policies for internationalism, collective security, economic sanctions, naval alliances, and war commitments without

nomic sanctions, naval alliances, and war commitments without the consent of the Congress or of the American people.

I accuse the administration of conducting a childish and un-American campaign of name calling, hatred, and abuse that inflames the war passions of foreign nations and our own people.

I accuse the administration of leading the American people to a rendezvous with war, death, and bankruptcy. The American people want no rendezvous with that kind of destiny.

What we need in America is a stop-war and a stop-Roosevelt crusade before we are forced into a foreign war by internationalists and interventionists at Washington, who seem to be more interested in solving world problems rather than our own.

The answer to the dictatorships is not force, compulsion, threats, abuse, and hatred, but to make democracy work in our own country by keeping out of the eternal wars of Europe and Asia, putting our

by keeping out of the eternal wars of Europe and Asia, putting our own house in order, restoring confidence, and putting our own wage earners back to work.

wage earners back to work.

I am opposed to the 25-percent levy on German imports as a measure that incites hatred and retaliation between nations and promotes war. It is inconsistent with the avowed theory of the administration that commercial restrictions constitute a menace to peace. The delegation by Congress of tariff-making powers to the President was unwarranted and proves the danger of placing such enormous discretionary powers in the hands of any one man.

The German and Italian Governments are confronted with such fundamental problems as overpopulation, insufficient foodstuffs, and lack of raw materials. The solution of their problems is not armaments but an assured supply of food, oil, cotton, and raw

and lack of raw materials. The solution of their problems is not armaments but an assured supply of food, oil, cotton, and raw materials. Unless the German and Italian Governments can obtain sufficient foodstuffs for their people and supplies for their factories they will be driven by desperation into war. If European nations are to avert another world war they ought to arrange immediately for an economic conference and put their cards down face up. The old-fashioned balance of power and military and economic encirclement system is useless under modern methods of warfare including airplanes and submarines. No one is more opposed to dictatorships and armed might than I am, but it is no concern of ours what form of government exists in any contern in any contents. concern of ours what form of government exists in any country in

the world.
I believe I believe we have far more to fear from our enemies from within than we have from without. All the Communists are united in urging us to go to war against Germany and Japan for the benefit

of Soviet Russia.

Great Britain still expects every American to do her duty, by preserving the British Empire and her colonies. The war profiteers, munitions makers, and international bankers are all set for our participation in a new world war. The American people have been burned once; they remember that Sweden, Norway, Holland, and Switzerland managed to keep out of the World War. They must

determine whether we will maintain our policies of peace or be dragged into another bloody foreign conflict.

To that end I introduced a few days ago a neutrality bill, known as "The Keep America Out of Foreign Wars Act," which prohibits the sale and shipment of arms, ammunition, and implements of war to all belligerent nations. This bill also includes the provisions in the present Neutrality Act that American citizens travel on belligerent ships at their own risk, and prohibits the extending of loans or credits to warring nations. In place of the cash-and-carry pro-vision, expiring in May, I have provided that American ships carryvision, expiring in May, I have provided that American ships carrying contraband, such as cotton, scrap iron, and even foodstuffs to belligerent nations may do so at the risk of the owners. The present cash-and-carry provision discriminates in an intolerable and unfair manner against American shipping and in favor of those nations which control the seas, such as Great Britain and Japan. The Republican Party, as a general principle, is opposed to delegating the constitutional power vested in the Congress to the President to declare war, whether he is a Democrat or a Republican. It is opposed to granting unwarranted discretionary power to the President in any neutrality bill that might involve us in foreign wars.

President in any neutrality bill that might involve us in foreign wars.

Former Secretary of State Henry L. Stimson, who testified today before the Senate Foreign Relations Committee in favor of intervention, economic sanctions, and collective security, does not represent the Republican Party, which is definitely opposed to intervention, entangling alliances, and interference in European feuds and conflicts. Every suggestion of Mr. Stimson has been repudiated by former President Hoover in his recent speeches on the administration's foreign policies. I doubt if there are more than one or two Republicans in either the House or Senate who favor the Stimson doctrine of having our armed forces police the world.

Let's have an end to all this war talk and hysteria, provocation, and flirting with war, and try to solve some of our own problems back home for the best interest and welfare of our people in the American way, and by keeping out of foreign wars.

In conclusion, I urge the radio audience, in view of the possible danger from a huge armament program, to write to their Representatives in Congress to sign discharge petition No. 7, to bring to a vote in the House my proposed constitutional amendment giving the American people the sole power, by a national referendum, to determine whether their sons shall be conscripted to serve in our armed forces outside of the Western Hemisphere. This in no way interferes with our national defense. I believe that the men and women of America who are opposed to sending their sons to die on foreign battlefields should have the right and power to voice their views in a national referendum. I am convinced that this is a proper issue to submit to the people in a free country through a free ballot, and that it would tend to preserve and promote peace proper issue to submit to the people in a free country through a free ballot, and that it would tend to preserve and promote peace and keep us out of foreign wars.

Riders on Legislative Bills

EXTENSION OF REMARKS

HON. FRANK CROWTHER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, April 6, 1939

ARTICLE BY ARTHUR KROCK

Mr. CROWTHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Arthur Krock.

IN THE NATION

TAX REVISION BLOCKING STRATEGY IS SUSPECTED (By Arthur Krock)

Washington, April 5.—Advocates of realistic tax revision at this session of Congress read with greater interest than any others the President's denunciation at Warm Springs yesterday of "so-called riders" added to bills "which have no relation whatsoever to the title or the purpose of the bill." They could not help but wonder whether he had made such a point of "riders" at this time in anticipation of an attempt to add effective tax relief to the routine tax extension bill which must be passed before the end of this fiscal year.

The corporation tax structure containing the regular corporate.

The corporation tax structure containing the regular corporate income levy and the stump of the undistributed-profits tax, and treating capital gains as income with only a meager allowance for capital losses, expires this year. So do the "nuisance" taxes. Congress must renew them in some form, of which the simplest would be continuance by resolution. Secretary Morgenthau and Under Secretary Hanes of the Treasury, with the public blessing of Secretary of Commerce Hopkins, have—except for the "nuisance" taxes—prepared a complete substitute program with a graduated corporation levy and other encouragements to "venturesome investment." The corporation tax structure containing the regular corporate

LXXXIV-App-

The President's inner New Deal circle has opposed this program as desertion of the social-economic theories hitherto expressed in taxation during Mr. Roosevelt's two terms. The President himself has several times publicly retreated from leadership in offering the program to Congress. Since the House committee, where revenue measures are required by the Constitution to "originate," is under administration control, this plan is being formulated by the realistic revisionists: To attach the Treasury program to the simple House renewal bill through action of the Senate Finance Committee and the Senate, both of which are much more independent of the White House.

TAX REVISION WOULD BE RIDER

This would be a rider. It would be added to the bill. It could This would be a rider. It would be added to the bill. It could not be said to "have no relation whatsoever" to the title and purposes of the renewal legislation because it would be germane. But it certainly would call for a change in the title and would wholly alter the purposes. Advocates of this course believe the President laid the groundwork for stronger opposition to their plan of procedure by denouncing all riders. They fear that Democratic Senators, looking for an "out" to avert Presidential or constituent wrath over support or nonsupport of effective tax revision, may find one in the Warm Springs statement. They see an attempt to hold congressional revision to very slight units of the Treasury plan as may be agreed on by the administration and the House committee.

This suspicion and this apprehension may find basis in developments of the next few weeks. The President has been very mysterious about the Treasury program. Everything he has said has been damaging to its consideration at this session, though he has left the door ajar for his reentrance if he decides to make it.

Whether or not the President's attack or riders is proved to have been another maneuver against the Treasury program, the statement has further elements of deep interest, for it was through the device of the "rider" that the President obtained his great monetary powers, which recently he has asked Congress to renew. Another the come method that the administration sought it was through the same method that the administration sought, in 1935, to jam through Congress in 5 days a "share the wealth" or "share the burden" plan which represented a complete reversal or "share the burden plan of American tax philosophy.

FAMOUS "RIDERS" OF 1933 AND 1935

The President's powers over money flow from what is known as the Thomas amendment. It "had no relation whatsoever to the title or the purpose of the bill" to which it was attached in the Senate. This was in April 1933. The House had passed a three-way farm relief bill, the original A. A. A. When this reached the Senate Mr. Thomas added the "amendment" which gave the President authority to devalue the dollar as much as 50 percent, to issue \$3,000,000,000 in greenbacks, to expand Federal Reserve credits by \$3,000,000,000, and to accept silver in payment of the war debts. The President's accredited agents lobbled successfully for this over the opposition of Senator Glass and others. It was added to the farm bill, to which it was not germane.

The "rider" attempt of 1935 was a most remarkable episode indeed. After a White House conference that lasted 2 hours and 40 minutes, June 24, 1935, the Democratic leader, Senator Robinson, standing on the portico of the Executive Mansion, announced "a drive for immediate action on the wealth-sharing tax program, proposing to attach it" to the "nuisance" levies extension within 5 days thereafter.

Senator Harrison, who had opposed the suggestion, went to the Senator Harrison, who had opposed the suggestion, went to the Capitol and told colleagues the President wanted this done. The outcry from press and public became so great that 2 days later the President denied at a press conference "any record" of his approval of the scheme, and it was dropped. Senators Harrison and Robinson took the rap in silence, though Mr. Harrison expressed incredulity when told of the press conference. This, too, was a "rider" if there ever was one.

Federal Bureau of Investigation Is Congratulated on Its Program to Aid Law Enforcement Agencies Throughout the Nation

EXTENSION OF REMARKS

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 6, 1939

ADDRESS BY HON. JENNINGS RANDOLPH, OF WEST VIRGINIA. APRIL 1, 1939

Mr. RANDOLPH. Mr. Speaker, it was my privilege on a recent morning to be present and participate in the graduation exercises of the Federal Bureau of Investigation National Police Academy. The addresses of Attorney General Murphy, Director J. Edgar Hoover, Senator Pepper, and others were splendid contributions in a discussion of law enforcement in this country. The ceremonies were among the most impressive that I have ever witnessed. I shall not soon forget the scene in the great hall of the Justice Department.

My address on that occasion follows:

Mr. Clegg, Rev. Montgomery, Mr. Woods, Mr. Attorney General, Mr. Hoover, Senator Pepper, distinguished guests, members of the tenth session of the F. B. I. National Police Academy, ladies, and gentlemen, it is indeed a pleasure for me to be present this morning at the graduation exercises of the tenth session of the F. B. I. National Police Academy, for this occasion marks another milestone in the advancement of the profession of law enforcement. With pardonable pride I have always considered myself a real friend of law enforcement, and for many years it has been my genuine pleasure to observe the remarkable progress which has been made in the field of scientific crime detection. As a legislator, it is a source of satisfaction to know that you men of law enforcement are constantly seeking to insure a greater measure

of, it is a source of satisfaction to know that you men of law enforcement are constantly seeking to insure a greater measure of security to the citizens you serve.

One is either for law and order or against law and order; and those who stand for law and order demand effective law enforcement. Thus it was with intense interest and admiration that I ment. Thus it was with intense interest and admiration that I have noted the recent statements of Attorney General Murphy in the public press supporting the administration of the Federal Bureau of Investigation by J. Edgar Hoover, for the ideals of Director Hoover are symbolic of law and order. He has crusaded for more effective law enforcement for the past 22 years. He has done much to elevate the standards and ethics of modern law enforcement to a higher plane, and there can be no question in the minds of our citizens of the preeminent place which he occupies in the law-enforcement profession today. I am glad that with ples in the law-enforcement profession today. I am glad that with the wholehearted and enthusiastic support and cooperation of the Attorney General of the United States, he will be able to continue his splendid career and tireless efforts to curtail the activities of the kidnapers, bank robbers, extortionists, and other vicious criminals who are a menace to the honest law-abiding

citizens of our Nation.

Less than 4 years ago the F. B. I. National Police Academy did not even exist except in the minds of Mr. Hoover and his associates. At that time there was a real need for the intelligent, systematic, and practical training of peace officers in modern law-enforcement methods. The necessity of thorough and intensive training had long been recognized as a prerequisite to success in the older professions of law and medicine, but in the field of law enforcement, this had appreently been entirely overleaded. law enforcement, this had apparently been entirely overlooked and neglected. Great strides had been made in the adaptation of various branches of physical science and chemistry to scientific crime detection, but the average police officer was totally unaware of what the scientist could do for him in the detection of crime and the apprehension of criminals. The ultraviolet ray, spectro-

and the apprehension of criminals. The ultraviolet ray, spectrograph, microscope, the infra red ray, moulage, and high-precision apparatus—all these modern aids to law enforcement were as yet not comprehended by the man on the beat.

The science of fingerprint identification which had been known for centuries was still quite novel to most of our police officers. As a matter of fact, the few individuals who knew how to classify fingerprints and develop latent fingerprints at the scene of a crime, guarded this knowledge most jealously for fear that some bright young officer would take his job away from him. Indeed, fingerprinting had been surrounded by an air of mystery, and the fingerprint expert had become a sort of "medicine man" in many of our police departments.

Then, too, during the years prior to 1935, there had developed in this country a strong sentiment in favor of a national police force

this country a strong sentiment in favor of a national police force similar to those maintained in certain foreign countries. The proponents of this scheme urged that a national organization proponents of this scheme urged that a national organization could much better cope with the dangerous criminals roving about the country in high-speed automobiles than the numerous local police departments and law-enforcement agencies, many of which were not equipped with adequate personnel properly trained in modern scientific crime-detection methods. Mr. Hoover was vigorously opposed to such a program, for he realized the first line of defense against the attacks of the criminal was in each local community. The Federal Government, however, could aid and assist in the solution of those crimes perpetrated by roving bands of marauders who operated on a Nation-wide basis. It was with this idea in mind that new legislation was enacted and the F. B. I. National Police Academy was established to assist those local law-enforcement authorities who were anxious and desirous of improving their facilities and activities in the field of modern

local law-enforcement authorities who were anxious and desirous of improving their facilities and activities in the field of modern law enforcement. Truly, today we are developing the best possible system of national policing with local, county, State, and Federal officers working shoulder to shoulder for a common cause.

It was realized at the outset that it would be a practical impossibility to bring all of the law-enforcement officers in the country to Washington and to train each one individually. Accordingly, a plan was formulated to instruct each representative in the F. B. I. National Police Academy in order that he might be able to return to his department and pass on to his brother officers the same training which he had received in Washington. In this manner thousands of police officers in every State in the union have been instructed in the best known police techniques by graduates of the academy. The great majority of the 297 officers who have previously graduated from the academy have established training programs in their respective communities, and

there can be no doubt but what the F. B. I. National Police Academy is the most potent force in furthering modern police training in the world today.

You members of the tenth session of the F. B. I. National Police Academy represent a total of 4,678 police officers who are looking to you for training in the various phases of scientific crime detection upon your return to your departments. You have made great personal sacrifices to come here to Washington and receive 3 months of intensive training in a great variety of subjects. You are to be congratulated on the successful completion of this strenuous course of instruction. Many of you will encounter difficulties upon your of intensive training in a great variety of subjects. You are to be congratulated on the successful completion of this strenuous course of instruction. Many of you will encounter difficulties upon your return home due to jealousies on the part of some of your superiors and fellow officers. As Mr. Hoover has said, you must overcome these obstacles. This will require tact, diplomacy, and courage on your part, and I am sure that your departments will benefit greatly in efficiency and reputation by your attendance at the academy.

I know from my own personal observations that law enforcement in my own State of West Virginia has benefited considerably by the attendance of five officers in the previous sessions of the academy, and I am delighted that a citizen and police officer from my State is a member of the graduating class this morning. I am looking forward to the time when every law-enforcement organization in the State of West Virginia will be represented by a graduate of the F. B. I. National Police Academy.

I want to wish each member of the graduating class of the tenth session of the F. B. I. National Police Academy the greatest possible success in your future careers as law-enforcement officers and in your training activities. You are our peacetime heroes. May each of your departments and the citizens of your communities benefit to the fullest extent from the training you have received during your stay in Washington.

May the influence of your zeal and honesty of effort be extended through the departments you represent in furthering the cause of law and order. As "home-town G-men," I know you will have the courageous, energetic, enthusiastic, and capable support of the chief law-enforcement officer of the Nation, Attorney General Murphy, and of J. Edgar Hoover, his Director of the Federal Bureau of Investigation.

Investigation.

American Foreign Policy

EXTENSION OF REMARKS

HON. JAMES SECCOMBE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, April 6, 1939

ARTICLE BY FELIX HINKLE

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by the Honorable Felix Hinkle, editor of the Canton Economist:

> EENIE-MEENIE-MEINIE-MO (By Felix Hinkle)

Of all the independent major nations in the world today, the

Of all the independent major nations in the world today, the United States has the cleanest record.

If our "theft" from the Indians can be justified on the grounds of "civilized progress"; if we can continue the myth about Sam Houston's "avenge of the Alamo;" if we can remain undisturbed in our hero-worship of Admiral Dewey; if the "trick" the American marines played in our "sister" state of Colombia can be offset by the engineering achievement in the Panama; yes, if we can shuffle these comparatively small skeletons around without too much rattling, we can look the balance of the world in the eye and maintain a straight face.

maintain a straight face.

But, compared to the out-right avarice and trickery which has characterized the shaping and reshaping of the Old World for generation upon generation, our "land of the free" is a veritable Garden of Eden.

Garden of Eden.

However, this very fact places a tremendous responsibility upon our shoulders. We Americans are out in the open, so to speak, where we can see clearly. We have enormous economic and psychological weight. What we say and do counts heavily. The big question is, How shall we exercise this potent influence?

Opinion is divided upon this point but I take the position that we should leave the quarrels in Europe entirely alone. I think we should leave them alone even to the point of neglecting our nationals and relinquishing all responsibility for the foreign holdings of American citizens.

of American citizens.

of American citizens.

As far as our nationals are concerned, they can clear out whenever they want to. They do not have to stay. And foreign investments were made by businessmen who had, or should have had, their eyes open to all eventualities.

At any rate, I do not see why the farmer's son should be required to drop his plow and grab a gun because an oil tank of an American company is being threatened in Rumania. Furthermore, I see no justice in becoming compromised because some

adventurous citizen insisted on riding a truck of nitroglycerin into the mouth of hell. There is not much sense in sacrificing a shipload of innocent boys in order to save one fool nor in spending a billion dollars to salvage a fleet of commercial trucks.

Then there is another notion based upon our so-called "duty" toward one country or the other. To me this surge of pseudo patriotism is either the product of inexcusable ignorance or it reppatriotism is either the product of inexcusable ignorance or it represents a genuine trait of sheer quixotism. All the barking and growling you hear in Europe is nothing more or less than "The pot calling the kettle black." The present "crisis" is just one period of "pay-off" in the "set game" which has been in progress over there for hundreds of years.

Take this argument between Italy and France as an illustration. This scrap antedates the World War—in fact, it antedates Mussolini himself. It is an inherited quarrel like the Kentucky feuds. Italy wants control of Tunisia because of its strategic importance, but also in order to avenge a deep-seated national wrong.

Italy wants control of Tunisia because of its strategic importance, but also in order to avenge a deep-seated national wrong. The narrow stretch of water which separates Tunisia and Sicily forms an impregnable gateway between the eastern and western Mediterranean. The country which holds the key to this gate controls the Mediterranean itself. Even ancient Carthage owed its greatness to this geographical accident.

This matter is of vital importance to Italy. Most of her holdings front upon the waters of this great ocean. Furthermore, she is required to reach her East African territories through the Suez Canal. As a consequence, Italy frets under an arrangement which places the control of Tunisia in the hands of some other European power.

But there is still something deeper than the strategical elements aggravating this cancerous problem of Tunisia. Its roots reach

back into the nineteenth century.
In 1869 Tunisia went bankrupt while under native control. England, France, and Italy formed a triple protectorate. Subsequently, Italy began the development of the country. She built a railroad. France became concerned over this activity and arranged

raincad. France became concerned over this activity and arrange a secret treaty with Lord Salisbury, of England, whereby France got exclusive control and Italy was squeezed out.

It happened that there were many more Italians in Tunisia at this time than there were French. This situation brought on political difficulties so France met the problem by passing a law which automatically made a French citizen of every child born in

which automatically made a French citizen of every child born in the second generation regardless of its actual nationality.

It is not hard to imagine how the Italians responded to this political finesse—what they thought of the idea of becoming a Frenchman by mandate. And up to this day that old sore has not been satisfactorily healed.

Then there is the matter of the Suez Canal with Italy playing third fiddle to England and France and the port of Djoubiti and scores of other smouldering volcanoes which space will not permit me to enumerate—all of which are part and parcel of one great chain of intrigue and racial batreds chain of intrigue and racial hatreds.

And it is from this point of view that I conclude America should

And it is from this point of view that I conclude America should stay out of the European dog fights. Our ambassadors are mere "babes in the woods" when they enter the jungles of European diplomacy, and this is not to their discredit. They simply have been "brought up" in a different atmosphere.

In my opinion, Europe cannot possibly solve its problems through the instruments now being used. Some of these days one of these "shoulder chips" is going to be knocked off and then all hell will break loose. If we are on one side or the other, we will go down with them. But if we stay out, we will have a chance of doing something really helpful.

As I see it, our job is to keep on keeping on the best we know how—always in the spirit of "malice toward none and charity toward all." The most effective thing we can do is to set a good

example.

W. Arthur Simpson, Director of Vermont Old-Age Assistance Commission, Declares Old-Age Aid Here to Stay Unless Abused—Says Vermont's Policy Sound Regarding Public Assistance

EXTENSION OF REMARKS

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES Thursday, April 6, 1939

ARTICLE FROM BURLINGTON (VT.) FREE PRESS OF APRIL 4, 1939

Mr. PLUMLEY. Mr. Speaker, the Honorable W. Arthur Simpson, of Vermont, is nationally recognized as an authority with respect to, and one of the most efficient administrators of old-age assistance laws. What he has to say will be read with interest and profit by many people, including

those in administrative and executive positions having to do with the problems he so ably discusses. I am inserting a newspaper article which appeared in the Burlington Free Press of date April 4, 1939.

The article is as follows:

[From the Burlington (Vt.) Free Press of April 4, 1939]

Four years ago this month the legislature passed and the Governor signed the original old-age assistance act in Vermont. Since then the Vermont old-age assistance department set up by the act has made more than 8,000 grants to needy persons over 65 years of age, spent a little over two and a half million dollars and had requests for assistance from almost 12,000 aged persons.

After 4 years of operation what conclusions can be arrived at? W. Arthur Simpson, director of the department and chairman of the Vermont old-age assistance commission, has reached these

The principle of aid to the aged is wise and just, and old-age assistance is here to stay unless it is betrayed by its own friends

in wanton mishandling.

In adopting categorical assistance to the aged, the State has definitely assumed the obligation to provide financial assistance to aged persons who are in need. Those citizens who meet requirements within the limitations of the State policy are entitled to receive payments from the State.

In the opinion of the State agency, based on its experience in administering a humanitarian policy on the basis of demonstrated need and within the ability of the taxpayers to finance, the Vermont law should not be liberalized. Financial provision should, however, be made to permit adequate grants under the State program to all persons definitely in need of assistance.

APPROVED APRIL 11, 1935

"The original Old Age Assistance Act in Vermont," Mr. Simpson explained, "was passed by both houses and approved by the Governor on April 11, 1935. This act provided for complete State responsibility and supervision without financial participation by the towns or cities and provided that the operation of the plan should be dependent upon Federal participation. A special session of the general assembly passed an act which was signed by the Governor on December 14, 1935, authorizing the payment of old-age assistance grants in full for 3 months without participation and for one-half on December 14, 1935, authorizing the payment of old-age assistance grants in full for 3 months without participation and for one-half payments thereafter if Federal participation was not effective. The Vermont plan for old-age assistance was approved by the Social Security Board on December 31, 1935, being one of 15 State plans first approved by the Board. Federal participation in grants became effective for February 1936.

"Prior to the passage of the Vermont law, no one had ever made even the most superficial study of the problems of old-age dependency in the State. It was recognized at the outset, however, that a universal noncontributory pension of some fixed amount for all those who reached a given age was neither fitting nor financially sound. There are in the State approximately 37,000 persons 65 years of age and over, Vermont having as large a proportion of its population over 65 as any other State in the Union.

"An equal payment of \$30 per month would cost \$13,320,000 a year and would have a potential increase of as much as 3 percent a year because the number of aged in the population has been

year and would have a potential increase of as much as 3 percent a year because the number of aged in the population has been increasing at that rate. It is recognized that under present conditions \$13,320,000 a year could not be paid in Vermont exclusively for one-tenth of the population. The remaining 90 percent of our people, from whom the money would ultimately have to be taken, could not be expected to produce it, remembering that they not only have to support themselves and their own families in decency, but also the many other functions of government that are necessary to the well-being of the community. to the well-being of the community.

SOUND PHILOSOPHY

"There has been an alarming tendency in many States to initiate programs of pensions for the aged with little reference to the adjustment of grants to individual needs. Dramatized from a humanitarian standpoint and exploited as a vote catcher, old-age humanitarian standpoint and exploited as a vote catcher, old-age assistance pension movements promise to headline unsound fiscal policies of the Nation. It is conceivable that they will force a break-down of the entire system of aid to the needy aged. We are fortunate that Vermonters have developed a sound philosophy in regard to public assistance and its relation to the public interests, and that it has not been politically expedient to capitalize the need of old folks or to advocate liberalization of policies in an effort to get votes. Because of its significance to the taxpayer and to the general public, as well as to those who receive aid from public sources, sound factual information is necessary for an understanding of State services and their relations to existing needs."

PAID FOR 300 BURIALS

Of the slightly over two and a half million dollars spent by the department to date, more than 96 percent went for grants and funerals and only 3.7 percent for administration and expenses, Mr. Simpson stated. Approximately 50 percent of those on the rolls who die are buried by the State. Last year the department paid for more than 300 burials in cases where relatives were not able to do it. For this purpose only State money is used, as Federal money is not available, he said. The State has been reimbursed about \$23,000 from estates, by recipients themselves, or from sale of property. of property.

The average grant for a recipient in Vermont is \$15 per month as against a national average of \$19.55. However, the per capita expenditure for old-age assistance in this State is \$2.36 as against \$2.64 for Connecticut. \$2.58 for Maine, \$5.35 for Massachusetts, \$2.02 for New Hampshire, and \$2.04 for Rhode Island.

PER CAPITA EXPENDITURE

For all types of public assistance and general relief in Vermont the per capita expenditure is \$4.79 compared to \$7.15 in Connecticut, \$7.36 in Maine, \$12.25 in Massachusetts, \$8.06 in New Hampshire, and \$7.58 in Rhode Island. Of the \$4.79 spent by Vermont, \$2.12 is for general relief and \$2.67 for public assistance, which includes old-age assistance, aid to dependent children and state of the same of th dren, and aid to blind. One-half of this sum is supplied by the Federal Government. Vermont's figure of \$2.12 for general relief compares with the average for the Nation of \$3.07 and the State's \$2.36 for old age compares with \$3.04 nationally.

Hay and Reciprocal-Trade Agreements

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1939

Mr. REED of New York. Mr. Speaker, the tariff reduction on hay effected through the reciprocal-trade agreements has been detrimental to American producers who have been forced to compete with Canadian imports. Hay is one of the five most important agricultural crops raised in this country, both as to acreage and value of production. The decrease in the demand for hay for work animals has been offset by the increasing number of dairy cattle and a decided commercial demand for this product in certain areas of the country. Because of the competition between American and Canadian hays in New England and in the North Central States, the Hawley-Smoot Tariff Act raised the tariff on hay to \$5 per short ton to discourage increasing importations.

Under the Reciprocal Trade Agreements Act of 1934 a treaty was negotiated with Canada, reducing the tariff on hay from \$5 to \$3 per short ton. This reduction in tariff has materially increased our imports from Canada, our principal source of this commodity. This hay very definitely competes with domestic hays and prevents farmers who are producing hay for commercial market from receiving an

adequate price for this product.

By virtue of authority granted under the Tariff Act of 1930, President Roosevelt on August 10, 1934, declared that an emergency existed because of the drought and admitted hay into this country free of duty. Although imports of hay for 1932 and 1933 were relatively small, there was a marked increase in 1934 and in the early part of 1935, due to the demand caused by the drought. However, the Canadian agreement became effective on January 1, 1936, and that year shows a substantial increase in imports of hay. Although we did not have a drought in this country in 1937, the imports of hay were over four times the amount they were in 1929 and practically all of these imports came from Canada.

All through the thirties our exports of hay have been very materially reduced to approximately 20 to 25 percent of the 1929 level. Although in 1937 we find a very large increase in our exports to Canada, this increase is temporary in nature and is due entirely to the crop failure in certain areas of Canada in the crop year 1936-37.

This is another example of how the State Department has reduced tariffs without giving adequate consideration to the problems of the domestic producer.

PAPER AND MANUFACTURES UNDER THE RECIPROCAL-TRADE AGREEMENTS

It is difficult to understand how anyone can say that the paper industry has benefited from concessions received under the Reciprocal Trade Agreements Act. The term "paper and manufactures" is a broad one covering printing paper, cover paper, wrapping paper, tissue paper, pulp, wallboard,

papeteries, and many other kinds of paper. It is almost impossible to estimate just how important this industry is to the workers of the country, but paper, alone, ranks seventeenth among all the industries of the country in the number of wage earners and this is not quite half of all the workers

engaged in the industry.

Eighteen trade agreements have been concluded, 16 of which became effective before January 1, 1938. In these 16 agreements the United States received concessions from 7 countries on various types of paper and products. The records of the Bureau of Foreign and Domestic Commerce show that total exports in 1937 were 83.5 percent of 1929, while exports to trade-agreement countries which gave us concessions were but 72.3 percent of 1929. Of equal significance is the fact that exports to all other countries were 92.6 percent of 1929. Can anyone say that the paper industry benefited from these concessions?

On the import side of the picture we get a different story. Of the 16 agreements completed and in operation before January 1, 1938, the United States gave six concessions, which had a decided effect on our import trade. imports in 1937 were but 71.0 percent of 1929, but imports from concession trade-agreement countries were 90.3 percent while imports from all other countries were but 50.7 percent of 1929. Certainly no one can deny that these concessions

aided the countries which received them.

Valuable as these import concessions may be to foreign producers, they work a definite hardship on our domestic producers. It seems rather incredible that the present administration can give such valuable concessions on a product and receive concessions on the same product that have little or no value. It leads one to suspect that President Roosevelt and Secretary Hull are more interested in lowering our tariff schedule than in promoting and enlarging our foreign market for domestic producers.

President Roosevelt's Foreign Policy

EXTENSION OF REMARKS

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, April 6, 1939

ARTICLE BY HON. HERBERT HOOVER IN LIBERTY MAGAZINE

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following article by the Honorable Herbert Hoover, appearing in Liberty Magazine of April 15, 1939, entitled "President Roosevelt's Foreign Policy":

There is no subject more difficult to discuss rightly than foreign policies. They compound our affections and dislikes as well as our interests and ideals. Few of us will agree upon the weights we attach to every argument or fact. The indignation of everyone of us at the ravishing of Czechoslovakia adds difficulty to sober discussion. But we simply must have conclusions on national policy. That cannot be side-stepped.

The United States cannot pursue a policy of isolation in the world. We have too many dangers, too many interests, and we have enormous responsibilities. The Monroe Doctrine, with its requirements on our part to defend South America against any Old World invasions, is in itself a negation of any policy of isolation. That area of our international relations was settled for us many years ago, and we have confirmed it repeatedly.

The other large immediate question is our attitudes toward the

The other large immediate question is our attitudes toward the area of Europe, Asia, and Africa. There are two widely divergent directions which we can take in respect to them at the present time. Neither is isolation. But their destiny is as far apart as the two poles. The one makes for peace in the world, the other envisages force or war.

The first of these is to hold to broad neutrality and thereby exert the moral influence of the United States to lessen the causes of controversy and war in Europe and Asia. That method proceeds through peace treaties; through diplomatic effort; through encouragement to meet at the council table; through arbitration; through promotion of international law; through the establish-

ment of such agreements as the Kellogg Pact, the Hague Tribunal, a properly reorganized Court of International Justice; through promotion of land disarmament, limitation of navies, and through control of aircraft and submarine misuse; through dignified procontrol of aircraft and submarine misuse; through dignified protest at persecutions; through moral refusal to recognize gains of wrongdoing; through mobilization of world public opinion against transgressors. And especially through economic cooperation can world strains be reduced. All these are the constructive processes of peace. They build for peace and good will. They may not always succeed or hold for long at a time, but while they do hold they prevent war and they uphold the standards of international conduct.

The second direction that we could take is to depart from neutrality in the controversies between other nations and to exert the physical force of the United States on one side of a conflict. That method proceeds through declarations of support, through alliances which shift the balances of power in the Old World, or through threats, or through economic pressures, such as punitive

tariffs, or through economic sanctions, or through military force, and finally through war. None of these are processes of peace.

All in this category of actions are provocative actions. They have hitherto always cracked up in war itself. They make also for division of the world by hate and friction. They solve nothing. They render any service through the first category almost

impossible.

It is my belief that the first category of relations represents the long view and the realistic view; that the second category represents the short view and the emotional view. For if civilization is to be preserved and to prosper, it will be through the first category of international relations, not by wars and threats of

The League of Nations was a heroic attempt to build peace by associating all nations, whether democracies, kingdoms, or dictatorassociating all nations, whether democracies, kingdoms, or dictatorships. Its purpose was to replace the theory of balances of power and military alliances which had invariably plunged the world into war. It was wrecked on several rocks. The first was the prompt building of balances of power and military alliances by certain nations—ideas utterly antagonistic to the whole concept of the League. The second was that it attempted to combine these two categories of international relations; that is, force and the processes of making peace. There were other reasons for failure, but these two are pertinent to the situation today. The League also proved to have great values where it exerted itself in making peace and not attempting force.

During the whole history of our country, except that period of 3 years between entering into the Great War and up to our rejection of the League of Nations, our policies have been of the first category in our relations to European and Asiatic nations.

Beginning a period of 14 months ago, Mr. Roosevelt has shown a certain sequence of steps in the development of a change in these traditional American policies in respect to Europe and Asia. The

a certain sequence of steps in the development of a change in these traditional American policies in respect to Europe and Asia. The full extent of the President's proposed change in policies has not been made public. His private statements to the General Staff and to the Senate Military Affairs Committee are naturally not officially available. He has given some public indication of them in his proposal "to quarantine dictators"; his message to Congress proposing that America should determine who are aggressors against other nations in Europe and Asia and apply to them methods stronger than words and short of war; and the reported statement to the Senate Military Committee that the American frontiers were some place in Europe. The expressions of Ambassador Bullitt certainly Senate Military Committee that the American frontiers were some place in Europe. The expressions of Ambassador Bullitt certainly warrant the European democracies in the belief that they may look to the United States for some sort of aid. These expressions are vague enough, but at least indicate a radical departure from the categories of peaceful processes into the categories of force.

The Baltimore Sun sums it up as "the prospect of revolutionary change in the role played by the United States on the world stage." Any such change in policies should be frankly submitted to and confirmed by the American people.

The time to debate a momentous change which involves peace

The time to debate a momentous change which involves peace and war is before we enter the paths of force. After we have traveled that path for a while debate is silenced as moral treason, I have seen too much of international life and friction not to

that the world changes and that the scene shifts, and that other policies may be necessary. But our job is to examine the situation with which we are faced now. And this is an appraisal of the outlook now and the policies which should be pursued by America.

Before we examine the reasons for adopting one course or the other, let me clear some underbrush as to some conclusions that

we generally agree upon.

We all agree that we must have adequate defense to hold the 1. We all agree that we must have adequate defense to hold the Western Hemisphere against military attack from overseas in accombination. Whatever our Army and Navy say is necessary for this purpose we will make any sacrifice to provide. We have no quarrel with proper defense programs for this purpose.

quarrel with proper defense programs for this purpose.

2. Most of us intensely dislike every color of nazi-ism, fascism, socialism, and communism. They are the negation of every ideal that we hold. They are the suppression of all liberty. In Germany the persecution of the Jews, the attitudes toward the Christian faiths; in Russia the wholesale executions, the destruction of Hebrew as well as Christian worship, the ruthless starvation of millions of peasants when resources were available to save them—all of them outrage our every sense of justice. While we stand it in the name of free speech, we resent the Bund, the Communist, and Socialist Parties in the United States taking advantage of our

liberties of free speech and free assembly to preach doctrines which

liberties of free speech and free assembly to preach doctrines which would destroy these very liberties.

It is not with any approval of these un-American activities that we reserve the question as to whether America should send her sons to Europe to die in a war against these ideologies, or that we should enter into measures that may lead to that end.

3. There is no objection or any legal prohibition against England or France buying airplanes or munitions in the United States. What we are concerned with are what changes in our foreign relations have surrounded these otherwise purely commercial transactions transactions.

Those who advocate that we should depart from neutrality and on nations in Europe and Asia with processes of force base it on one or all of three different grounds:

First They claim that we have an obligation and a duty to maintain liberty throughout the world.

Second. They insist specifically that if the democracies of Eng-

land and France are attacked we must come to their support, not only to maintain liberty but in fear that were they overcome we would be the next victim.

Third. They insist that if we throw or threaten to throw our weight now with France and England, they will not be attacked

The problem is not so simple or the conclusions so certain as this description would assume. At this moment most of the proponents of these policies deny that they want us to go to war. Maybe not, but they want us to act warlike, and we need to look down this alley to see where it ends. Propaganda is build up that way. As it goes along, sometime we may get to the stage where our emotions will be forced by the cry that we are quitters and cowards or have let down those who have relied upon our vague expressions.

Most of us are sympathetic with these countries, but a vast and

resolute majority of us are against being drawn into war.

Before we start on these departures from the processes of peace

Before we start on these departures from the processes of peace into the path of force there are several major questions to consider.

1. The basic premise of many of these assertions about the situation in Europe is open to question.

The American people are deluged with propaganda and unreliable reports. Despite all contrary appearances the forces pressing to war which would necessarily involve the western European democracies are at the date of this writing not as strong as the forces pressing to avoid war. No one is so foolish as to say that there is not an immensity of combustible materials in Europe. But the universal knowledge of them and the experience of the last war make men far more cautious than they were in the last war make men far more cautious than they were in the year 1914.

Furthermore, most competent observers agree that Germany and Italy have no present notion of making military attack upon

the British and French.

Moreover, England and France can, in the belief of competent observers, amply defend themselves against attack. No one can deny that the superiority in land fortifications of the French and British make them impregnable from any land force that can be brought to bear against them. They have three times the naval strength of the dictators. They have the industrial resources, the men and the money either to buy or to build superior air fleets if they wish to organize themselves for these purposes. Their populations, their empires, and their natural resources give them ample man power and far greater reserves of manufacturing capacity and of war materials.

and of war materials.

The relative positions of England and France to their possible opponents are far stronger today than they were in 1914.

No competent observer believes that the dictatorships, singly or in combination, could successfully attack the Western Hemisphere even if they were inclined to try it, which they are not. And this applies both before and after the next European war, if any. They would be far weaker after the next war than today, no matter what the outcome.

Altogether while the situation in Europe requires watching as

Altogether, while the situation in Europe requires watching as to its effects upon us, yet those who are promoting American entanglements in Europe are ringing the alarm bells of American

entanglements in Europe are ringing the alarm bells of American dangers entirely too hard.

2. From an American point of view, the reason we would enter into these paths of force is purely ideological. We want no economic advantages. We have no territorial expansion. There need be no fear that we cannot defeat any attempt of foreign dictatorships in encroachment upon the Western Hemisphere. The appeal is solely on the grounds of saving liberty, either abroad or at home. Thus it becomes an appeal to idealism pure and simple. While England and France are countries of stanch idealism for home. Thus it becomes an appeal to idealism pure and simple. While England and France are countries of stanch idealism for liberty, they are naturally long-established imperialistic democracies, controlling millions of subject races. Germany and Italy are imperialistic states also seeking possessions for trade and raw materials. Italy obviously never received the territorial possessions promised her by England and France under the treaty of 1915 by which she entered the Great War. England and France, on the other hand, do not wish to surrender any of their possessions. In other words, there is here a conflict between "haves" and "have-nots."

Without taking any position on the right or wrong of these controversies, we can at least conclude that their differences are not wholly ones of idealism for liberty alone.

3. Particularly is the case of Italy a good example of where right and wrong are beyond our determination. Americans should be slow to deny the justice of her claims under the war treaties. We were not a party to them, but we do become a party to this controversy if we line up to support France against Italy. As a matter of fact, the equitable settlement of that controversy would contribute more to the world's peace than any other step that could be taken this day. In any event, it all emphasizes that it is not

iliberty alone which is at stake.

4. These exponents of vague use of force in association with European democracies would be much more logical, much more European democracies would be much more logical, much more frank and open, and, in fact, much more effective in their purpose if they would straightforwardly advocate a formal military alliance right away. That would need have the approval of Congress, and our people could have something to say about it. Their purpose is, either ignorantly or in fact, to get us so involved that we would have to join in war if it came. If we had a frank and open military alliance we would possibly have something to say about controversies in Europe which might lead us into war. We have no such voice under these vague proposals.

A test that these exponents of abandonment of processes of peace for processes of force might apply to their own thinking is just this:

just this:

Are they prepared to openly advocate military alliance with

European democracies?

European democracies?

5. Those who propose even a vague alliance of force with England and France should inform the American people how they are going to avoid marrying the alliance of France with Communist Russia. France is committed lock, stock, and barrel to Communist Russia. They should also explain fully why the United States should assume, for instance, that Italy is our enemy. For 20 years Russia has tried to undermine our Government; Italy has done no such thing. Italy has been a firm friend of the United States ever since our country was born. Moreover, they should explain how far the United States will go to guarantee the possessions and policies of England and France in respect to their subjective people in every part of the world. That is what it would mean. It is not necessary to go into the merits or demerits of these important phases to at least indicate the labyrinth of commitment we may be venturing at least indicate the labyrinth of commitment we may be venturing into.

6. Another question enters into this problem, and that is, how long these destructive ideologies, especially the most aggressive ones in Germany and Russia, can last. It is my belief that they

have reached their high point.

have reached their high point.

The common people in both Germany and Italy are equally as terrified at being drawn into war as are the people of other countries. Their economic systems are showing signs of degenerating weakness. Having enjoyed liberal institutions, the vast majority of their people have constant desire and hope for return of greater liberty. Public opinion is making itself felt despite the restraints. Communism in Russia is rapidly disclosing itself as a purely gangster government. And the gangsters are quarreling.

Patience on the part of the democracies might well see a considerable part of these dangers decrease from these internal pressures.

pressures.

7. It is proposed that we take upon ourselves the job of determining and aiding to stop aggressors in the world. The theory and practice of stopping aggression is a difficult and costly role. That was to be one of the functions of the League of Nations. But the League was supposed to combine the intelligence of all nations outside the controversy and to make judgment. The League split repeatedly upon the facts of who was the aggressor. It seems a difficult role for America to undertake alone, and for many reasons. One of them is that warlike acts are the result of long antecedent history of mixed rights and wrongs. Another of our difficulties would be that we are composed of all nationalities, some of whom will be clamoring for their fatherlands on both 7. It is proposed that we take upon ourselves the job of deterities, some of whom will be clamoring for their fatherlands on both sides of every single case that comes up. It would add sadly to the divisions of an already divided people. We would also become even more than today, the battleground of every foreign propaganda on earth.

Moreover, the whole theory of stopping aggression is in fact an attempt to maintain the status quo in national boundaries all over the world. We need only to look back even 100 years of history

the world. We need only to look back even 100 years of history to see how many fights we could get into. In fact we have been aggressive in our time. Otherwise parts of the Rocky Mountains and California would belong to Mexico today.

We will be told that the job of determining the aggressor is easy because we know today who the world's aggressors are. And we are told we can stop them with more than words and less than war. There is no other nation in the world who would believe that this can be done and keep from provoking war for long. It is certain that the highly realistic democracies in Europe will make no such declarations of national policy.

But over it all is something more important. We cannot become

But over it all is something more important. We cannot become

But over it all is something more important. We cannot become the world's policeman unless we are prepared to sacrifice millions of American lives—and probably some day see all the world against us. In time they would envisage us as the world's greatest bully, not as the world's greatest idealist.

8 We ought, in coming to conclusions, to recollect our own experience with the Great War. We went into that war for many reasons, including direct war upon American citizens and ships. Above all, we hoped and believed that we were going to "make the world safe for democracy." It was to be a "war to end war." No one will deny that we failed in these latter hopes. The violence of the peace treaties and the destruction of war created these brutal dictatorships. Many students of European affairs, including those of our former allies, hold that political action by some of our former allies in Europe greatly contributed to the death of the peace-loving democracies, such as Germany which sprang up after the war. Whether this be true or not it must be obvious

that America has not the power to impose a course of action upon the nations of Europe which would end war for the future or would make the world safe for democracy. All European history is a treadmill of readjusting boundaries among mixed populations. It is a treadmill of war for power and mastery. It is certain that we engage ourselves in these age-old controversies the moment

we throw our might into European balances of power.

9. We should also examine the question of where we will be after even another world war to save democracy. We should consider what would likely happen to us if we become engaged in another such war, whether we win or lose. I recently stated:

"Our first purpose is to maintain liberty in America. If civiliza-tion based on liberty falls in the United States, it is gone from the We must safeguard that, not only in our own interest but

in the interest of the world.

"Personal liberty and free economic life are not built for modern war. A great war today is a mobilization of the whole people. That means democracy must temporarily surrender to dictatorship, no matter what one may call it, in order that we may bend our

full energies to war.

"It means that our country must be mobilized into practically a Fascist state. It would be so organized. It went some distance in the last Great War, although we did not use that term at the time. It would have gone much further if the war had extended longer. "I speak of this not from hearsay but as one who participated in the economic organization of the Great War. I saw the rise of opposition to demobilization of the interests which benefited, and I have seen the attempts to restore these measures ever since. "Today the lowered vitality of free enterprise, the necessity to

I have seen the attempts to restore these measures ever since.

"Today the lowered vitality of free enterprise, the necessity to subordinate or repudiate our enormous peacetime national debt to make way for finance of a new war together with the ideas of economic power which impregnate our Government all drive to the improbability of after-war demobilization of centralized power.

"If it were that or the loss of our national independence it would not be too great a price. But let us at least recognize that a war to save liberty would probably destroy liberty. In my view another great war will make dictatorship universal.

"Even if we escaped this result yet the sacrifice of our sons and the moral and economic destruction are a bitter prospect to

and the moral and economic destruction are a bitter prospect to contemplate. Surely we learned this from the last war."

These are but a part of the reasons which can be advanced for our keeping neutral on European controversies.

In conclusion, the question of our foreign relationships rises far above partisanship. And those citizens who hold views on either side should not be charged with politics, pacifism, or militarism. We are discussing the sacrifice of life of millions of our sons and we are discussing the lives of women and children. We are discussing the future of our Republic and the future of liberty.

What have not been stated yet are sound reasons which at the present time warrant us from departure from our traditional policies. One thing is certain: This Nation should be taken into full confidence as to what Washington is doing and proposing. And we will then debate it further.

Beyond all this is an even greater question: What can the United States do within the processes of peace in contribution to

peace today?

The world has many staggering problems. One is reduction of the armament which is impoverishing people everywhere and which builds only toward disaster. Another is to secure immunity of women and children from hideous attack by blockade and from of women and children from hideous attack by blockade and from the air. The witness of that might indeed enrage us into war. Another is to secure relief of millions from religious and racial persecution. That persecution, most dreadfully directed against the Jews, results not only in their sufferings but it brutalizes the people of any country where this cry is raised. Another problem is to end the present economic war and secure economic progress for the world. Economic suffering drives nations to exploitation of others and to war.

Is not contribution to solution of these and many other prob-

Is not contribution to solution of these and many other problems a larger purpose for America in the field of foreign relations? There are great things we could do to bring peace and tolerance and prosperity to the world—to add to humanity and to lessen brutality. But that is possible only if we hold to our neutrality. And that question must be settled before we can begin upon constructive processes of pages.

structive processes of peace.

J. D. Ross

EXTENSION OF REMARKS

HON. JOHN M. COFFEE OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Thursday, April 6, 1939

EDITORIALS EULOGIZING J. D. ROSS

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein three

editorials dealing with the life and achievements of the late J. D. Ross, administrator of the Bonneville Authority. Mr. Ross was much loved and highly respected throughout the country, but especially in the Pacific Northwest, with which he was identified for more than a third of a century. The late Mr. Ross was a man of congeniality and versatile attainments and interests. His record in connection with Seattle's municipally owned light system is one of the outstanding examples of what can be done with publicly owned operations in America. In his passing, Seattle, the State of Washington, and the Nation, have sustained an almost irreparable

Mr. Ross' life and career served as an inspiring example worthy of emulation by the newer generation. To those of us who reside in Washington State, the gracious act of President Roosevelt in honoring Mr. Ross by appointment as engineer with the P. W. A., then as a commissioner of the Securities Exchange Commission, and finally as Administrator of the Bonneville development, was ineffably pleasing. We will all miss Jim Ross. He has gone from us in the flesh but his accomplishments will live through the generations to come. As Edwin M. Stanton said at the deathbed of Lincoln, "Now he belongs to the ages." The Bible contains this phrase: "By their fruits ye shall know them." By the fruits and results of an active, splendid, and inspiring life our posterity will grow increasingly aware of the late J. D. Ross.

The editorials are as follows:

[From the Seattle Post-Intelligencer of March 15, 1939] J. D. ROSS

J. D. ROSS

If you have sailed on the Alice Ross on the man-made lake above Diablo Dam, and have suddenly heard over the lap of the waves, seemingly coming from nowhere, the soft strains of Beautiful Isle of Somewhere, you will appreciate one trait of that great man who has just left us, J. D. Ross.

If you have seen the bewitching gardens, a veritable tropical paradise, which have been nurtured by his hands at the dam site, and which have filled thousands of visitors with wonderment, you have come into contact with still another facet of J. D. Ross.

J. D. Ross.

If you have beheld the dam itself, and the great house of turbines which feed power into the maw of our metropolis, you have sensed the mechanical genius of J. D. Ross.

If you have read of his plans to transmit the power of harnessed rivers over this whole land of ours; if you have heard of his learned discussion of Einstein's theory of relativity; if you know of his researches in the chemist's laboratory, then you comprehend

a bit of his renown as a scientist.

But if you have not sat in the presence of J. D. Ross, if you have not learned from his lips his love of his fellow man, if you

have not learned from his lips his love of his fellow man, if you have not witnessed his gentle, persuasive way with a child, then you have forever missed that part of J. D. Ross which was his strength and his comfort and his real greatness.

What a pity it is that "J. D." had to turn the last page of life at the very time that his greatest dream was being realized.

He sought above all else to transmit the blessings of natural power into the service of mankind. He had found joy in the building of Bonneville and Coulee Dams on the Columbia, and he grasped with utmost eagerness the task given him by President.

bower into the service of mankind. He had found joy in the building of Bonneville and Coulee Dams on the Columbia, and he grasped with utmost eagerness the task given him by President Roosevelt to perfect the grid system by which the power of those projects will be delivered at low cost to homes and farms and factories over this whole Pacific Northwest.

He visioned also the routing of the power of our rivers into the fiatlands of the Middle West, and confidently projected the distribution of cheap water power to the whole Nation.

Seattle's "City Light" was his infant; he nurtured it with the same zealous care that he bestowed upon his beloved plants and flowers on the Skagit. In the face of heavy odds and strenuous opposition he carried City Light over the foundling stage to an efficient success, and in late years he guarded its fine progress all the while he gave of his precious hours to the chores which the President put upon him, first as a commissioner of the S. E. C. and then as administrator of the Bonneville project.

The work will go on, and the imprint of the genius of "J. D." will be on it. Let those who carry on for him be inspired by the honesty of his purpose and make full use of the heritage of wisdom he has bestowed.

We who loved "J. D." as a man, we whose children loved him, will share the deep sorrow of Alice Ross, his widow, who toiled and heat death heated beside him avers without of the power of the progress in the progress in the card heated beside him avers without of the power of the powe

will share the deep sorrow of Alice Ross, his widow, who toiled and battled beside him every inch of the way, a personage in her own right who chose to remain in the shadow of his greatness.

But we will also share the memories of his kindly ways, his homely humanities, his devotion to the real values of life. Seattle has lost a loyal son who gave without stint and asked naught. The President has lost one of his most valued and trusted aides. Science has lost a genius.

And the "beautiful isle of somewhere" has gained a dauntless spirit.—John Boettiger.

spirit.-John Boettiger.

[From the People's World, March 21, 1939] NORTHWEST LAMENTS DEATH OF J. D. ROSS

The death of J. D. Ross, superintendent of Seattle's city power, and administrator of the great Bonneville project, robs the Northwest and the Nation of an outstanding fighter for public power and leaves a gap which President Roosevelt's tribute to him says "will be almost impossible to fill."

"will be almost impossible to fill."

His career was interwoven with Washington's 50 years of statehood, and always it was "J. D." who could be counted on to fight the maneuvers of the Power Trust to block public power.

He envisioned a national pool of power to extend the benefits of public power throughout the United States, and he held the expansion of transmission lines should be determined by the needs of the people, not by the profits or lack of profits of the few.

The ashes of "J. D." will rest in an urn on Ross Mountain in the Skagit. But the fighting spirit of the famed engineer will inspire the people of the Northwest to batter down all Power Trust attacks on public power.

Trust attacks on public power.

[From the Seattle Daily Times of March 15, 1939] "J. D."

Still in the strong uptake of a career which had become nationally important, James Delmage Ross has surrendered his great engagements and prospects in response to the summons of death. To his associates of years in City Light, at Bonneville, and to thousands of friends in public and private life, he was affectionately known as "J. D." His story is that of one who dreamed in large dimensions, and by force of an indomitable spirit, made dreams come true. In times of controversy it has been said of him that he had no regard for the cost to others of his dreaming, planning, and executing. But it is known that he cared little or nothing about money for himself; criticism of his expenditures on public projects has never raised question of his honesty and sincerity. No man of his time has been held in such confidence and warm exteen by the receive of his home city.

man of his time has been held in such confidence and warm esteem by the people of his home city.

City Light was ever closest to the heart of "J. D." The huge Skagit project, now nearing completion just as he planned it, was his pride and joy. The battles he fought for it make lively chapters in local history; and how expressive it is of his genius both as engineer and artist has been sensed by every visitor. It is sad that he could not have lived to see and enjoy fulfillment of this, his most cherished dream. Though called to places of highest responsibility by the President of the United States, he retained his superintendency of City Light, without salary, by official appointment and common consent. To the very last he was actually in the service of Seattle; more nearly than any other the indispensable man. The work he left unfinished will be carried on as it must be; but his peculiar abilities and qualifications are rarely combined in one man. He will be sorely missed. We may not have another quite like "J. D."

Cotton Export Subsidy

EXTENSION OF REMARKS

HON. CHARLES HAWKS, JR. OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Thursday, April 6, 1939

ARTICLE BY PAUL MALLON

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Paul Mallon:

BEHIND THE NEWS (By Paul Mallon)

SPONSORS OUTWITTED EVEN THEMSELVES ON COTTON SUBSIDY PLAN

The administration outwitted everyone, including itself, on the

cotton-export-subsidy plan.

As shrewd a maneuver as ever went wrong was concocted be-tween Agriculture Secretary Wallace and House Agriculture Chair-man Marvin Jones. The export-subsidy plan was to have been planted invisibly in the Agriculture Department appropriation bill. But they planted it so deep they lost it and now are sunk in a hole of their own making.

The cotton subsidy—latest of the President's proposals—seems buried beyond retrieve.

How the snarers ensnared themselves is as rare an inside piece as

you will run across in a month of Congresses.

Mr. Wallace first sold the cotton-subsidy idea to the President and the White House publicly espoused it. They figured they would need \$15,000,000 to start it. So last Monday, Wallace went

up to Congress, saw House Floor Boss RAYBURN and Jones, told

them his need.

In their private conference in RAYBURN's office Jones thought it would be foolish and fatal to ask the House for \$15,000,000 for cotton alone. The wheat, dairy, tobacco, and other blocs would start complaining again that cotton was getting everything and they nothing.

So the plan was worked out whereby Jones would ask for \$60,-000,000, without identifying specifically what it was to be used for, thus to corral the hopes of all the blocs. Next day Jones got his amendment unanimously approved by his committee and presented

amendment unanimously approved by his committee and presented it to the House, appropriating \$60,000,000 and providing that no more than 25 percent could be used for any one cfop.

Dairy blocers jumped up, explaining some of the money was intended for the dairy farmer and implying (erroneously) that none of it would go for staple crops. The leaders did not clarify the situation, let it go to a vote, and found themselves unexpectedly defeated by the astounding margin of 195 to 98. Seldom does a House turn down a farm chairman on one of his own amendments, even when the purpose is not generally understood.

even when the purpose is not generally understood.

Now the administration is trying to redeem the lost cause in the Senate, but their cotton kitten is out of the bag, their opposition is much stronger in the Senate than in the House, and their hopes are in the hole with them.

Keynote Address Before the Young Democratic Clubs of Missouri Convention

EXTENSION OF REMARKS

HON, HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES Friday, April 7 (legislative day of Thursday, April 6), 1939

ADDRESS BY DAVID A. McMULLAN AT JOPLIN, MO., FEBRUARY 24, 1939

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the RECORD the keynote address delivered by Hon. David A. McMullan, chairman of the Eleventh Congressional District of the Young Democratic Clubs of Missouri, before the Young Democratic Clubs of Missouri Convention at Joplin, Mo., on February 24, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There being no objection, the address was ordered to be printed in the Record, as follows:

Fellow Young Democrats, at this, our seventh annual convention, I thought it would be well for us to counsel with one another about the position of our party at this time compared to the time of the formation of our Young Democratic Club.

It is not necessary to review the economic, moral, and political chaos that existed in our country in 1932. Young people demanded relief from those conditions—demanded security—demanded united action—demanded leadership! We saw in the principles and leadership of the Democratic Party an answer to what we were seeking.

About 7 years ago a group of young people, believing in the principles of the Democratic Party, met and formed the Young Democratic Clubs of Missouri. In every State of the Union young people were spontaneously and enthusiastically organizing because this Nation lacked leadership and those in power were overcome by the terrible problem which confronted them. An uninspired and medicore Republican Party had fallen into confusion and weakness. We organized, I quote from our preamble, "to stimulate in the young people of Missouri an active interest in governmental affairs, to increase the efficiency of popular government, to foster and perpetuate the ideals and principles of the Democratic Party. Our organization was sustained by the party organization. We became a party organization. We were given an active and important part in campaigns and we gave a good account of ourselves. Young people from all over the State swelled our ranks. The higher percent of young people who supported us and who support our party now is a matter of common knowledge.

We played a large and important part in the Democratic Victory of 1932 and in the successive Democratic victories since. What has happened since the formation of our organization? Under the leadership of our President, Franklin D. Roosevelt, and with the aid of a militant united Democratic Congress, the financial house was put in

of a militant united Democratic Congress, the financial house was put in order—great social reforms were enacted, the Government was changed from one whose chief concern was for the few to one whose sole concern was for the many. While in the short space of 6 years our party has solved, or is well on the way to solving, some of our Nation's problems, many serious ones still confront us. We must especially bend our efforts

well on the way to solving, some of our Nation's problems, many serious ones still confront us. We must especially bend our efforts toward the problem of unemployment and to the preservation of our principles of government. To do this we must stand united and continue to develop leadership. We must function as a responsible and reasonably coherent unit. We must not permit a breakdown in the Democratic majority, with an attendant result of inaction and confusion. A solution of the problems of the moment does not permit a stalemate between the various branches of government and their component parts. This applies to State and local governments as well as to our National Government.

As the party in power, our primary duty is to govern. Our primary obligation is the welfare of the people. To meet these obligations we must draw from that which is most fundamental in the tradition of our country to see clearly and act resolutely.

Our founders first decided upon the destination of our Government; and when this had been determined, they chose appropriate methods for reaching that destination. The language that charts the course of American Government is found in the Declaration of Independence, "We hold these truths to be self-evident, that all men are created equal."

As regards our Government, the interest of all, whether high or low, are equal. The working classes are, by nature, members of the State equally with the rich and are very largely in the majority. Therefore, the public administration must provide for the welfare of the working classes. Action along this line will not be harmful to any interest but on the contrary it will be to the advantage of all. A great step has been taken by our party in this direction by the wage and hour bill. It is a recognition of the principle that it is the duty of the State to secure the working people from the cruelty of men of greed who use human beings as mere instruments for money-making, and to protect the working people from being made the victims of force and injustic

the public authority.

Every man has by nature the right to possess property as his own, and while the State has by no means the right to abolish it, it should control its use and bring it into harmony with the interests of the public good so that it ministers to the needs of all. Every of the public good so that it limits to the needs of an. Level effort must be made that at least in the future a just share only of the fruits of production be permitted to accumulate in the hands of the wealthy, and that an ample sufficiency be applied to the workingman. It is a reproach to our methods and principles when the heads of our great corporations can obtain hundreds of thousands of dollars in salaries or bonuses when not a cent is paid to the investor and means were see and to the employed and to the investor and meager wages are paid to the employee and

to the investor and meager wages are paid to the employee and thousands of workers laid off.

There is an individual side to private property. It is, after all, the only safeguard of human and individual liberty. The aim of social legislation should be to make private property more widely held, not restrict it or destroy it altogether. Private property must not be administered solely at the pleasure of him who happens to own it, not for selfish and exclusive private interests. Society can be destroyed by too much individualism or by too much socialism. It can be saved only by a combination of the two.

We must be liberal but not radical. The agencies created to carry out social reforms must be placed in the hands of those in sympathy with their purpose. Enactments in the past 6 years have created agencies to administer great social reforms. These were democratic measures. They embody democratic ideas. Caution should be taken that they are not placed in the hands of radicals or reactionary individualists who are not in sympathy with their real purpose—radicals or reactionary individualists who will by sabotage destroy their effectiveness and popularity and use them for their own ends.

With all of the confusion despetiem, otherwise for and town. for their own ends.

With all of the confusion, despotism, atheism, fear, and terror that beset the governments of the earth, we hear the question, "Is there danger that democracy in the United States may succumb to either fascism, nazi-ism, or communism? Some may laugh it off, but sensible men have experienced many shocks in recent years. Lenin and Hitler could not have foretold their triumph, although both demanded it, and their dreams came true.

When we organized 7 years ago, we believed and have added large numbers to our ranks who believe that our country is best served

numbers to our ranks who believe that our country is best served by the application of the great political principles upon which our party was founded and which were adopted by our country's founders as the guiding principles of a government to protect the rights and liberties of the people.

We have all heard men in all walks of life plead for the preservation of our American form of government without a single reference to the substance without which that form would be an empty shell. The form of our government is about all we teach. As a result, the idea how American government works is fairly well

known to the average American pupil, but we should teach and preach why it was called upon to work in the first place. Americans should have a reverence for the Declaration of Inde-

pendence. It is as important as the Constitution, for the reason that the Constitution did not create American government and state its purpose. The Declaration of Independence embodies the whole story of American political philosophy. It is the one clear-cut repudiation of communism, the ringing refutation of nazi-ism, fascism, and every other form of the arbitrary, all-powerful, God-denying totalitarian state.

The Constitution sets up a system or form of government to carry out the object and purpose of government. Unde wrong in the social and economical fields can be righted. Under it every

Wrong in the social and economical fields can be righted.

Keeping in mind the principles of our party and using the instruments of government, our party must stand united to approach the problems confronting our Nation. If Democrats were banded together as are the enemies of democracy, we could easily check the onslaught of foreign powers.

Every Democrat should join with all other Democrats in keeping the enemy out of the entire field of the State and preserve for his country the American ideals which were written into its basic law by the constitutional fathers. In order to do this we must give

country the American ideals which were written into its basic law by the constitutional fathers. In order to do this, we must give our attention to youth. We must not look upon politics as a racket and upon young people trying to voice an opinion as one trying to "muscle in." There is and must continue to be a place in our party for a youth organization. Our leaders must continue to recognize that these youths of today are to be the politicians of the future and will take over the Government of this country. The majorities who will have to defend Democracy are being cradled now; and if our party leaders are far-sighted, they will make sure that those future majorities are grateful to our party for united action, leadership, and constructive reform.

In 1932 the Republican Party was in the exclusive control of a

for united action, leadership, and constructive reform.

In 1932 the Republican Party was in the exclusive control of a few who shaped its policies for their own selfish interests. In my city, St. Louis, the Republican Party organization was a closed corporation. Young people who attempted to actively participate in its political affairs were looked upon with suspicion, and, if they disagreed in any one particular with Republican leaders, they were given the cold shoulder. As a result many young people associated themselves with the Democratic Party where they were welcomed, encouraged, and aided in their work. Many of these young people have performed outstanding service to the community and hence have reflected credit and honor to our party.

young people have performed outstanding service to the community and, hence, have reflected credit and honor to our party.

In my ward we organized a young Democratic Club in February 1932 and attracted many young persons to our party by providing the light relitiest instruction and entertainment. We were enintelligent political instruction and entertainment. We wer couraged and received assistance from the ward organization. couraged and received assistance from the ward organization. And what was the result? These young people became interested in politics, became interested in our party, joined the ward organization and began working for our party with all the pep and enthusiasm of practical youth. As chairman of the ward organization, I often look over the list of its officers, precinct captains, and workers and see the splendid young men and women brought to our ranks through that Young Democratic Club. Our party, our community, our organization has been enriched by their work; our ward leaders have gained by their efforts. The policy of supporting the Young Democratic Clubs must be pursued by our party organizations—national, State, and local.

the Young Democratic Clubs must be pursued by our party organizations—national, State, and local.

Every young person will follow some leader. Hence, our party leaders must be very careful that they not follow leaders who would sovietize or nazi-ize our government. If our party leaders wish to remain in power, if they wish to see the principles of our party promulgated and handed down, it is necessary that they continue to recognize, instruct, and encourage youth.

Young people are interested in governmental affairs. Young people are interested in the policies of government. Young people have a larger stake in the welfare of our country than any other group because their future is at stake and the policies which are

have a larger stake in the welfare of our country than any other group because their future is at stake and the policies which are shaped now will affect them and the long term obligations now being incurred must be met by them. Therefore, youth must be consulted, heard, instructed, and encouraged.

We are the official youth organization of the Democratic Party. We, the Young Democratic Club of Missouri, do not demand patronage. We were organized "to foster and perpetuate the ideals and principles of the Democratic Party and to provide for our people through its administration the highest degree of justice and social welfare." We call upon the leaders of our party for renewed recognition, assistance, and encouragement. We offer our organization and services to our party to deliver the message of democracy to youth and to train and educate youth in the science of democrate government. Our party leaders have not falled us in the past; they Our party leaders have not failed us in the past; they must not fail us in the future.

It is the work of our party to see that the present state of man be

not worse than the former, and this can be done by the united effort of our party leaders in applying the principles of our party to present-day problems. It is the work of our party to see that the future be better than the present, and here is a youth organization

that is the answer.

We pray that our officers, who are appointed to guard our political welfare, may be enabled, with God's help, to discharge the duties of their respective stations with honesty and ability, so that they may carry out the purpose of our Government, encourage and teach youth in the ways of true democracy, so that the social welfare be secured and future generations be spared the advance of the mortal enemies of democracy.

Civil Liberties

EXTENSION OF REMARKS

HON. ROBERT M. LA FOLLETTE, Jr. OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Friday, April 7 (legislative day of Thursday, April 6), 1939

ADDRESS BY HON. FRANK MURPHY, MARCH 27, 1939

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD an eloquent and illuminating address delivered by Attorney General Murphy on the National Radio Forum on March 27, 1939, his subject being Civil Liberties.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Democracy today is in a fight for its life. Wherever we look we see determined efforts to tear down the things that the masses of mankind have been painfully struggling to achieve all through the ages. The right of self-government, the right of every man to speak his thoughts freely, the opportunity to express his individual nature in his daily life and work, the privilege of believing in the religion that his own conscience tells him is right—all these precious things that men have won through blood and anguish are hanging in the balance

in the balance.

We must not let the scales drop the other way. If we do, we betray civilization itself. We must fight to keep these treasures just as bravely and vigorously as those who have gone before us fought to gain them. Democracy will not save itself. It isn't something automatic that will go on and on by its own power. We can't just be dreamy and sentimental about it. We must bestir ourselves and see that it works smoothly and efficiently in every respect. We must actually apply the principles of democracy to the world we live in—give them life and substance and meaning.

It will not be enough to do just half the job. We will have to be thorough and conscientious, because those who would like to destroy democracy are doing a thorough job of it wherever and whenever they have the chance. They are giving no quarter—

whenever they have the chance. They are giving no quarter-

whenever they have the chance. They are giving no quarterneither must we.

The phase of democracy that I have in mind particularly tonight is civil liberty. But I want to emphasize once more that our fight will not be won by halfway measures. Not only must we make civil liberty a living reality, but the democratic ideal must be applied in every part of our life—social, political, and economic.

Perhaps it would be helpful to start at the beginning and ask, "Why have civil liberties at all?" Generally speaking, we believe in them, because we are convinced they represent the best possible compromise between the governmental regulation that is necessary for an orderly society and the absolute freedom that has no limits except the laws of nature. But there is another reason that comes closer home. We who are devotees of democracy believe in civil liberties, because we know that without such rights as freedom of religion, freedom of speech and press, freedom to assemble peacefully, and to petition our Government for the correction of wrongs, democracy cannot possibly exist.

If this, in brief, is the reason for our faith in civil liberties, what is our present situation?

It is common for orators on patriotic occasions to point to the

It is common for orators on patriotic occasions to point to the early years of our Union as the period in which love of civil libearly years of our Union as the period in which love of civil liberty was at its height. They remind us that it was the denial of liberty that drove the fathers into violent revolution. They point out that the colonies refused to ratify the Constitution until they were assured that a bill of rights would be added. From such good evidence they picture the period surrounding the Revolution as a "golden age" of liberty from which, for one reason or another, we have steadily declined.

we have steadily declined.

There is another view—which, I suspect, is held by a considerable number of people today—that seems to take civil liberty pretty much for granted. Those who subscribe to it look back over 150 years of political democracy in this country and conclude that what has existed so long will continue to exist. If they see any present danger to their liberties, it is at best a long way off.

There is a good deal to be said for both these attitudes, and particularly the first. Certainly none of us can forget or ever cease to revere the spirit of those who wrote and embraced the Declaration of Independence. We cannot forget how bravely they took up Patrick Henry's challenge of "liberty or death" and fought their way to liberty at such terrific cost.

But if we examine these attitudes closely, we will find that

But if we examine these attitudes closely, we will find that neither of them is entirely accurate. The first, which views the present with alarm, is unrealistic because actually we have made progress in public tolerance since those early days. As evidence, we need only to recall the notorious alien and sedition acts, legislated, and enforced by the last Federalist administration which

preceded the term of Thomas Jefferson. Under the alien act, non-citizens could be deported or could be imprisoned for 3 years withcitizens could be deported or could be imprisoned for 3 years without trial or hearing. Under the sedition act, a newspaper editor or public speaker or, for that matter, a person in private conversation, could not utter any word which might be interpreted as a reflection on the administration. Violation of this law could be punished by Presidential order without trial, hearing, or the right of appeal. Unbelievable as it may seem today, the proprietors and editors of the four leading anti-Federalist newspapers of the day were prosecuted under this statute for sedition. One man was given a sentence of 2 years for erecting a sign which read, "Downfall to the traitors of America."

In 1800 public feeling against the Alien and Sedition Acts re-

In 1800 public feeling against the Alien and Sedition Acts resulted in the election of a new administration. But political persecution was by no means at end. From time to time in the history of the succeeding years we find strong evidence that the group in power or in the majority was actively intolerant of those whose political views differed from their own.

In those days, as now, it needed a broad mind and a great heart to be tolerant of a political philosophy utterly opposed to one's own. Here was an infant Nation embarking on a political experiment without equal in the history of the human race. The priment

to be tolerant of a political philosophy utterly opposed to one's own. Here was an infant Nation embarking on a political experiment without equal in the history of the human race. The principle of government by the people was on trial before a world committed almost entirely to government by kings. What could be more natural than that men of strong convictions, each convinced that his way was the best and each one determined that the new experiment must succeed, should come to disagreement over policies and methods? In fact, every ingredient of a period of great stress in the national life was at hand. And it is a time like that when men are most sorely tempted to look upon civil liberty as a protection only to themselves and not to those with whom they disagree.

Obviously, we are in a period of that kind today. The danger of class consciousness—something for which the vast majority of Americans have little sympathy in normal times—has been increased by unemployment and insecurity. The danger is not a theoretical one. It is not something invented in the mind of the social psychologist. It is an actual condition evidenced by happenings that come almost daily to my attention.

Only recently I received a letter from a wife and mother complaining that the small business conducted by her husband and son had been ruined because they opposed the political principles of the city administration. Intimidation had driven their customers away. Here is a form of persecution without benefit of an Alien and Sedition Act.

In another community a young man who actively opposed the

away. Here is a and Sedition Act.

In another community a young man who actively opposed the boss of the local political machine was indicted on a false charge. He was tried and convicted by a jury consisting entirely of persons connected politically with the leader of the machine. He was denied bail on appeal. After several postponements the case came to the appellate court but not until after the defendant had served his term.

Reports have come to the Department of Justice that persons who have testified before congressional committees have been beaten or discharged from their employment. In other words, for exercising the elementary right of conveying their views to their Government, they were subjected to physical cruelty or loss of their jobs.

I believe most of you will remember the recent Harlan County

prosecution which brought to light widespread denial of the rights of workmen to organize and bargain collectively. That unfortunate condition is steadily being corrected, and I believe that as time goes on there will be less and less of it.

Events such as these are the reason for my earlier statement that the casual attitude which takes civil liberties for granted and recognizes no danger to them is just as unrealistic as the view that the American people are steadily leaving their love of liberty behind them.

I do not wish to appear to you as an alarmist. I have the greatest confidence that the American people will ride through this storm with their liberties and their faith in these liberties unharmed.

I only want to repeat and to stress as strongly as I can that warning which John Curran uttered 150 years ago for his generation, for our own, and for all that are to follow: "The condition upon which God has given liberty to man is eternal vigilance." My purpose is to emphasize that if we wish to keep what we have gained and so long held, we must be alert. We must be on guard against those tendencies and attitude, in ourselves as well as others, that open the door to one denial of liberty and then another.

The Government, of course, can help us keep watch. It can take the initiative and lead the way. But we must remember—and this is important—that Government cannot do the whole

I am afraid that a great deal of the present apathy toward civil rights traces back to the notion that their protection is the sole responsibility of the Federal Government. I am afraid there is considerable misunderstanding as to the meaning and effect of the Federal Bill of Rights which includes the first 10 amendments

of the Federal Constitution.

Students of law know, of course, that the Bill of Rights in the Federal Constitution is a prohibition on the Federal Government. In other words, it forbids the Federal Government to deny to the people those liberties of speech and assembly, of religion and the

press, that are so vital to our freedom. Each State having its own constitution and bill of rights, it was assumed by the authors of the Federal Constitution that the State governments would protect their own citizens from infringement of these liberties not caused by the Federal Government.

not caused by the Federal Government.

Since the Federal Constitution was adopted, however, another amendment—the fourteenth—has been added, which provides that no State shall make any law abridging the privileges and immunities of United States citizens, or deprive any person of life, liberty, or property without due process, or deny to him the equal protection of the laws. Under this amendment it has been held that a citizen may invoke the aid of the Federal courts when he is denied full protection by the courts of his State.

I do not wish to give the impression that the Federal Government is powerless to protect civil liberty. For although most of a citizen's rights are created and protected by the constitution and laws of his State, there are certain rights which he obtains not from his State but because he is a citizen of the United States. The distinction should be kept in mind, however, when the Federal Govern-

State but because he is a citizen of the United States. The distinction should be kept in mind, however, when the Federal Government fails to act in situations that seem to call for its intervention. It serves to explain why it does not take action in every situation where some liberty has been abused.

The Federal Government today is determined, nevertheless, to protect civil liberties by all means available to it. It will not be for this faction or that, this class or that class, this nationality or that one, but for all the people. We propose to protect civil liberties for the businessman and the laborer alike, for the Jew and the Gentile, and the people of all races and creeds, whatever their origin. We believe it must be done consistently and with a fine impartiality—otherwise it cannot be truly democratic.

In this determination we have recently created a separate unit on

In this determination we have recently created a separate unit on civil rights in the Criminal Division of the Department of Justice. One of the first duties of this unit has been to consider and determine just where the Federal Government can act and to define the limits of its jurisdiction. Within those limits it will exercise its second duty of ordering investigation and prosecuting for violations of rights which the United States Government is charged with protecting.

The unit is now at work under my supervision. The complaints of citizens which have already reached me have been given careful consideration. In many cases, we have had to reply that the matters complained of were so completely outside of the Federal Government's jurisdiction that we could do nothing. In other cases, we have proceeded to obtain the facts and to determine whether or not a Federal law has been violated.

Yet, when all this is done, when the Federal Government has done its part, and when the State has given all the protection it can, something more is required. The courts cannot review every denial of civil rights that may occur in our midst. Year by year since the Constitution was adopted, it has become more and more obvious that tolerance cannot be enforced by law. No government, however strong, can guarantee complete observance of the spirit of the Bill of Rights. The golden rule canot be made effective by United States marshals. The great protector of civil liberty, the final source of its enforcement, now and always, is the invincible power of public opinion.

No court or law can make wholly inviolate the right of freedom of speech. Once it is denied by ordinance or some arbitrary exercise of power, what decree or court award can restore to the citizen denied, his right to speak on that occasion? Only the insistent will of a tolerant and democratic and informed people can insure freedom at all times to the voice that utters an unpopular

The courts can provide a remedy for lawlessness, but for its complete prevention there is only one place to look, and that is to an overwhelming public determination that it must not happen here.

It is anything but an easy job, this task of protecting civil liberty, and it is made twice burdensome by the fact that there is little pleasure in enforcing liberty for those who would deny liberty to others if they were in power. It is not easy to detest an extremist philosophy and yet insist on the right of any man to advocate it freely.

Yet, apparently we must do just this if we are to practice our Yet, apparently we must do just this if we are to practice our faith in democracy. We must remember that America was founded by men who came to these shores to escape intolerance in other lands. We must remember that the political system which they advocated, fought for, and established under the Constitution was heresy in the eyes of the government that ruled them. We must never forget that the democratic way is not to crush the alien view, but to let it be heard and to defeat it by demonstrating that our own way of living contributes the most to human happiness.

human happiness.

Only in this way, through the vigilance of a citizen body thoroughly schooled in the meaning and purpose of civil liberty, will we achieve the general enjoyment of civil liberty. Government, by precept and example, and by providing remedies in individual cases of denial of liberty, can make a large contribution. But in the last analysis, the American tradition of individual freedom, handed down to us by Roger Williams, Thomas Jefferson, Abraham Lincoln, and many another devotee of liberty, will be carried forward only if each of us practices every day that faith in which Voltaire declared to his adversary, "I do not agree with a word that you say, but I will defend to the death your right to say it."

W. P. A. or Private Employment

EXTENSION OF REMARKS

HON, HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES Friday, April 7 (legislative day of Thursday, April 6), 1939

ADDRESS BY HON. T. J. COOLIDGE, MARCH 20, 1939

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the Congressional Record a very able address delivered by the former Under Secretary of the Treasury, Hon. Thomas Jefferson Coolidge, on March 20, 1939, in Boston, at the New England town hall meeting.

There being no objection, the address was ordered to be

printed in the RECORD, as follows:

This problem should be approached from the point of view that unemployment and care of the needy is a vital problem of society and the question is how and by what agencies should this problem be handled.

be handled.

When I think of the W. P. A. I visualize our Federal Government raising vast sums of money from the taxpayers and spending this money to give work to millions of men on local projects.

We must, of course, recognize that taxes are paid by everyone—so much of our earnings is taken for purposes of government. The result therefore of W. P. A. is that vast sums of money are taken from all of us and spent by a Federal agency. I raise the question, Does this process increase employment? I think not, and I am confident it decreases useful employment and national income.

If our more than 40,000,000 workers were left with their money, they would spend it as they desired for more food, more clothes.

If our more than 40,000,000 workers were left with their money, they would spend it as they desired for more food, more clothes, better housing, and other purposes. In so spending they would give employment just as certainly as by the Federal Government spending, and work for millions of men would be directed to produce what the people want. I am confident that greater general prosperity will result in permitting the workers to spend their own earnings rather than by taxation and spending by the Government. When we speak of private business we just mean everyone. If everyone were taxed less, of course, they would have more and spend more and private business would expand and employ more. There is no great magic in the Federal Government through the W. P. A. taking the people's money and spending it the way some official decides.

official decides.

The less the Government spends the more the people have to spend and the more private business will expand to take care of the wants of the people. Heavy taxation, coupled with restrictions of many sorts laid down from a distant Government, will impoverish the workers and, far from curing unemployment, will actually create it.

One most unfortunate result of Federal spending by W. P. A. for local needs is that it necessarily breaks down responsible State and local government. A power is created superior to our elected representatives before which they must bow down and beg. The success of a mayor depends on his ability to obtain funds from a cess of a mayor depends on his ability to obtain funds from a Presidential appointee without responsibility to the people of his city. For effective local rule a mayor should be responsible to those who vote for him, and his chief job should be spending wisely the money raised from them. Now, his concern is to obtain someone else's money, and no one cares how wisely other people's money is spent. The foundation stone of our democracy is responsible local government. W. P. A. means a bureaucracy, armed with billions of our own money, destroying this foundation and deciding our local problems. Little is left of our State sovereignty when the State does not perform its duty to care for its citizens. It must be recognized that to have both Federal and State Governments spending for welfare purposes is destructive of efficiency and responsibility.

ments spending for welfare purposes is destructive of emicles, and responsibility.

The bureaucratic spenders in Washington necessarily receive enormous power which can and has been used to coerce our elected representatives and our voters. Undue power is surrendered to the Executive which some day may be instrumental in destroying our

form of government.

It was Jefferson who wrote, "We are endeavoring to reduce the Government to the practice of a rigorous economy to avoid burdening the people and arming the magistrate with a patronage of money, which might be used to corrupt and undermine the principles of our Government." This danger he foresaw is still with us. The belief that our elected State and local officials are not competent to be problem.

tent to handle our local affairs is a belief that democracy and free enterprise will fail, and is not worthy of a great and free people who believe in self-government. Remember it is only the wealth of the 48 States that can be reached by Washington.

It may be that it would be somewhat more convenient to have

the Federal Treasury a central tax-collecting agent for certain taxes that could be distributed pro rata to the States.

It may be that it would benefit the States to have a Federal auditor make public the methods used by the States to promote

auditor make public the methods used by the States to promote the well-being of their citizens.

However, never should money be given or withheld from a sovereign State at the whim of appointed officials, nor should the methods of spending be dictated. That is the road to destruction of responsible representative government. Our country is too large, the interests and conditions to diversified, for the people to govern from Weshington in domestic officers. Fither the people must govern from Weshington in domestic officers.

the interests and conditions to diversified, for the people to govern from Washington in domestic affairs. Either the people must govern locally or they must be ruled from Washington.

Let us not forget that our Nation of 48 States became the wealthiest and mightlest Nation the world has ever known, with the standard of living the highest yet seen and unbounded individual opportunity. Our pride of accomplishment was immense, and we were the envy of the world. All this was accomplished without the Federal Government spending our money in countless billions to take care of us. We can, with our skilled workers, competent management, and ample capital, become more prosperous than ever and enjoy a yet higher standard of living for all. However, if this is to be done, we, the people, must do it ourselves. It never was and never can be done by a Washington bureaucracy.

bureaucracy

Those in need should be helped. The question is how and by

whom.

I believe that our local and State governments are the ones who should care for the needs of their people as their people decide; that is the liberal doctrine of home rule and the basis of our representative government. A distant government should not take our money to spend for local purposes in distant parts. The local people know best the needs of their neighborhood and will spend their own funds more wisely. Our form of government requires that the States be sovereign as respects their citizens; our State and local representatives must not be pawns for Washington bureaus to move.

State and local representatives must not be pawns for Washington bureaus to move.

W. P. A. means vast Federal spending. Remember that less Federal spending leaves more for the workers and the local governments and greater prosperity for all.

Many years ago the fear of this type of spending made Jefferson, the founder of the Democratic Party, plead: "If we can prevent the Government from wasting the labors of the people under the pretense of taking care of them, they must become happy."

Under present conditions what do we see? In 6 years of peace a deficit of \$20,000,000,000. We look forward to nothing but a continuation. This is the road to monetary chaos. It is an appalling situation and must be corrected. Yet next year we may see perhaps four or five billions of our dollars taken from us pouring out in great streams, of which W. P. A. is the largest. Great minority groups are formed to bring pressure on our Congress to spend our money. Our Federal Government was not founded or formed for money. Our Federal Government was not founded or formed for these purposes, nor can it cope with the pressure of these groups. We must retrace our steps to an underlying principle of our Con--that the States be sovereign as respects the welfare of their citizens.

What would happen if this entire four billion spending were canceled and in its place one-half the amount—two billion—were voted to be distributed in proportion to population to the States to spend as they decide? The Federal Budget would be under control. spend as they decide? The rederal Budget would be under control.

Responsible local and State government would be reestablished, local credit restored. Under these conditions I feel certain that private enterprise would greatly reduce the load of unemployment, while funds would be readily available locally to care for the reduced number of unfortunate people.

Our great democracy, restored to its underlying constitutional principles, would move forward to greater heights of achievement

and prosperity.

Buying Union-Label Goods

EXTENSION OF REMARKS

HON. LYNN J. FRAZIER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES Friday, April 7 (legislative day of Thursday, April 6), 1939

RADIO ADDRESS BY I. M. ORNBURN, SECRETARY-TREASURER, UNION LABEL TRADES DEPARTMENT, AMERICAN FEDERA-TION OF LABOR

Mr. FRAZIER. Mr. President, I ask unanimous consent to insert in the RECORD a radio address on the subject, Buying Union Label Goods, recently delivered by I. M. Ornburn, secretary-treasurer, union label trades department, American Federation of Labor, over the blue network of the National Broadcasting Co.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This year marks the thirtieth anniversary of the union label trades department of the American Federation of Labor. Through the united action of one-half of the affiliated national and international labor unions of the American Federation of Labor, this department has a long list of achievements during the past 3 decades.

The union label, shop card, and service button are the trademarks of union workers who have made steady progress during this period. The unions that have adopted insignia have greatly increased their membership and also the demand for union-made

products and union services

The union label is a symbol which is displayed by means of a cloth or paper label, stamp, or other imprint upon products to assure consumers that the merchandise is made in unionized shops or factories.

The shop card is a printed sign which is displayed in a window or on the wall of all shops and other business establishments whose employees are unionized.

The service or working buttons are similar to the insignia of

The service or working buttons are similar to the insignia of lodges or fraternal orders and are worn in the same manner. The working button gives assurance that services are rendered by a member of a labor union.

All of these emblems stand for American labor standards, including higher wages, shorter hours, and better working conditions. They are a continual boycott against sweatshops and unsanitary conditions. They are a perpetual strike against child labor and low-paid women as well as men workers. And, finally, they are the emblems of a union crusade for higher American standards of living.

living.

For the past 58 years the American Federation of Labor has consistently advocated the three basic principles which are now generally accepted as a foundation for permanent prosperity. Through labor unions, hours of labor have been reduced from an average of 72 hours a week to an average of 40½ hours a week. By decreasing hours more jobs are created. This is the best method through which America can reemploy its millions of job-

method through which America can reemploy its millions of job-less men and women workers.

The second great principle advocated by the American Federa-tion of Labor is a wage adequate to raise a family according to American standards. It includes not only the necessities of life, but also the educational, cultural, recreational values that go with our modern civilization. From an economic standpoint, higher wages for all willing workers would create a purchasing power that would guarantee industrial stability.

Recently, before the Temporary National Economic Committee of the United States Senate, noted economists brought out the startling statement, that since 1929 because of the depression, wage and

statement that since 1929, because of the depression, wage and salary earners have lost \$120,000,000,000, farmers have lost \$38,000,-000,000, and stockholders have lost \$20,000,000,000. In other words, these three groups of society would have had a total of \$178,000,000,000 more income if the economic machine had continued to

nese three groups of society would have had a total of \$178,000,000,000 more income if the economic machine had continued to produce each year as much as it did in 1929.

To create more jobs and to pay more wages, it is necessary at the same time to create a demand for those goods which the new hands produce. In order to increase consumer demand, which is conceded to be the principal factor in our recovery program, it is also necessary that all workers receive an income higher than so-called prevailing wage scales. They must receive union wages. When consumers buy goods made by organized workers who receive higher pay they automatically increase buying power in the same degree, and that in turn creates better times.

Not only does the American Federation of Labor advocate the purchase of union-made goods by American consumers, but we also urge the buying of American-made products. We have approved the campaign of economic boycotts as a protest against the racial and religious persecution in Germany and the atrocious bombing of innocent women and children by Japan in China.

The union label is the best guaranty that products are manufactured in America. The purchase of American-made goods is not only a patriotic duty, but it will greatly help business recovery of American industries.

The consumer can greatly assist in this campaign by patronician.

of American industries.

The consumer can greatly assist in this campaign by patronizing only those firms that sell union-label goods. They are always

American made.

A good illustration of what buying American can do to help our A good illustration of what buying American can do to help our own workers and industries is found in the recent action of our Government in raising the tariff 25 percent on all German goods, including Czechoslovakia. When the importation of shoes from Czechoslovakia stops thousands of American shoe workers will find employment in our boot and shoe industries. This will create purchasing power and increase employment in other lines. It is one of the solutions of our economic difficulties. The sooner America discovers this fact the quicker we shall emerge from this disastrous depression. disastrous depression.

disastrous depression.

A potential market for more than \$30,000,000 worth of American manufactured goods, providing employment for more than 75,000 workers has been opened in the United States through the cancelation of the Czech trade treaty and this withdrawal of trade concessions extended to other countries under that pact. America can now obtain a firmer hold on the domestic sale of glassware, pottery, gloves, textile, and other products as well as shoes. It will help the producers of raw materials. This is an example of what it means when the American Federation of Labor urges our consumers to buy American products.

The best way to prevent America's being drawn into another world war is for the Western Hemisphere to become economically

independent. We have all the products in the new world to become self-sufficient and if we develop our domestic trade among pan-American countries there will be less possibility of our becoming engaged in Old World entanglements.

The union label trades department recently issued a union label catalog-directory for the purpose of increasing the sale of union-made products. This catalog-directory is a 48-page book containing a complete list of names of nationally known manufacturers of union-made products. It also contains a full-page letter from President Roosevelt, who endorsed the principle of union-label buying. Facsimiles of all union labels, shop cards, and service buttons with the names of officials of the respective national and international labor unions affiliated with our department are included in this booklet.

ment are included in this booklet.

A free copy of this union label catalog-directory will be sent to interested parties. Address all requests to the Union Label Trades Department, American Federation of Labor, Washington,

D. C.

The 1939 Union Label Catalog Directory will be issued on July 1 of this year. The chief purpose of this annual buyers' guide is to give to fair manufacturers the reward of a union market of 25,000,000 consumers with a purchasing power of over \$6,000,000,000

The support of women's auxiliaries has become an important factor in our union-label campaign. In the struggle for human rights, economic freedom, and social justice, women are playing a more and more important part. Through enfranchisement they are exerting a greater and greater influence upon State and national legislation. Women play an important part in the educational activities of every locality. Their efforts are becoming much more effective through the collective buying of union label products.

Men require the cooperation of women in domestic, social, educational, political, and economic problems. With the advent of women's suffrage the voters of labor unionists' families began to ballot collectively. By patronizing union firms, they buy

In conclusion, I desire to appeal to all Americans to buy union-made and American-made products. If you would like to know how to create more jobs for American workers; if you would like to aid in raising wage levels of union workers; and if you would like to assist in bringing back better times to America, then buy union label, union-made products and use union services.

By the Rio Grande

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Friday, April 7 (legislative day of Thursday, April 6), 1939

EDITORIAL FROM THE BOSTON POST OF APRIL 2, 1939

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial from the Boston Post of the issue of April 2, entitled "By the Rio Grande."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

> [Editorial from the Boston Post of April 2, 1939] BY THE RIO GRANDE

Putting the matter mildly, it is certain that the United States is nursing a hotbed of radical communism in Mexico, and is footing the bills because of our good-neighbor policy.

The Mexican Government for a long time has picked up enough petty cash to keep the Cardenas government in the saddle by selling silver to this country.

We found that this Government, so strengthened and nurtured,

grew more ambitious for foreign money, and expropriated oil lands discovered and exploited by American capital.

We can readily see that Mexican peons, groaning under crushing taxes, might well look askance upon the wells draining vital oil from the pools under their own native land.

They, however, know little and care less about contractual obligations assumed by their Government. Few peons ever were in sympathy with any Mexican Government, and at least this one has given them physical evidence that it is doing something, even at the expense of the foreigners.

But the fact remains that foreign investments have kept alive more than one Mexican Government, and this one is no exception.

The danger, as we see it on the northern rim of the country, is not so much an economic one at the present time, but a political one. We prate officially of Latin-American democracies, when few of them really exist.

Mexico certainly is not a democracy, and at the present time is the Russia of the Western Hemisphere. To think that we actually created this Russia is one of the things that are unsettling and disturbing.

Mexico opened her doors to Leon Trotsky and established this arch plotter in security and comfort. The expropriation was advocated by Trotsky from the moment he set foot on Mexican soil.

Now, within the past few days, we are witnessing preparations for an influx of the people which supported the red government of Spain. A handsome yacht has appeared off the Mexican coast, making advance arrangements.

of Spain. A nanosome yacht has appeared on the lackean coasy, making advance arrangements.

Flying the American flag, it was greeted by emissaries of President Cardenas. There is no secret that the officials who fled the coming of General Franco in Spain—Juan Negrin and Julio Alvarez del Vayo—are about to settle in Mexico, with plenty of treasure from the looted churches and coffers of that unhappy land, and hundreds of active followers. of active followers.

It will only take a few months for this nest of revolutionaries to

get in their work in Mexico.

The red state will naturally welcome their funds and support. Meanwhile, north of the Rio Grande, we will probably continue to be good neighbors and extend the protection of the American flag, through the Monroe Doctrine, over the most dangerous and disturbing elements in the modern world.

New Deal and the Republican Program

EXTENSION OF REMARKS

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES Friday, April 7 (legislative day of Thursday, April 6), 1939

RADIO ADDRESS BY HON. ROBERT A. TAFT, OF OHIO, MARCH 18, 1939

Mr. McNARY. Mr. President, on Saturday, March 18, the distinguished Senator from Ohio [Mr. TAFT] delivered an appealing address over the National Broadcasting System. which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The Republican Party today is still the minority party, but the general impression in Washington and throughout the country is that the New Deal tide is rapidly receding and that the people are again looking to the Republican Party for leadership. It is most important that the Republicans, even though they are still in the opposition, formulate their program on which to appeal to the people for a change of administration, and the Frank committee has been marking an adelucation of Republican principles.

opposition, formulate their program on which to appeal to the people for a change of administration, and the Frank committee has been working on a declaration of Republican principles.

We find an overwhelmingly difficult problem before us. After 6 years of New Deal rule, after every kind of experiment, and the addition of \$20,000,000,000 to the national debt the fundamental problems are still unsolved. More than 10,000,000 people are unemployed in the United States today, about 3,000,000 of them receiving a bare subsistence from W. P. A. Twenty million people are looking to the Government for food. Millions more are receiving inadequate wages and fall in that underprivileged class for whom the New Dealers have shed tears in every speech, and to whom they have repeatedly promised prosperity and security. And yet there are more people underprivileged today, more people who have barely enough to live on, or not enough to live on, than there have been at any time except at the very bottom of the depression.

The national income in 1938 was not much more than \$60,000,000,000. If we go back 10 years, we find a national income of \$80,000,000,000 and 10,000,000 fewer people among whom to divide it. The average income per individual is 30 percent less than it was in 1928. Of course, times are hard.

There can be no absolute proof that this condition has been created or prolonged by the policies of the present administration, but we have come out of every past depression more quickly, to a higher standard of income, and to greater employment, without measures of the New Deal character. Certainly there is no doubt that the New Deal character. Certainly there is no doubt that the New Deal character. Certainly there is no doubt that the New Deal character. Certainly there is no doubt that the New Deal character. Certainly there is no doubt that the New Deal character. Certainly there is no doubt that the New Deal character.

objectives.

objectives.

There can be only one main purpose in any intelligent program today—that is to improve the condition of the millions of unemployed and the other millions who are below a reasonable standard of life. If that problem cannot be solved, our whole republican form of government must admit itself a failure. When we see the conditions which exist in some of our cities, and I have seen them in Ohio as you have seen them in New York, we very quickly lose our pride in the statistics which show a higher average standard of living in the United States than elsewhere. When

you see the conditions which social workers see every day you cannot be surprised that they are eager to adopt any measure which seems to furnish direct assistance to the bitter conditions their charges face, no matter what the other consequences of those

It is a problem which challenges the Yankee ingenuity of the

It is a problem which challenges the Yankee ingenuity of the American people, and, of course, we Republicans claim a little more of that Yankee ingenuity, particularly from Maine and Vermont, than is possessed by the Democrats. The New Deal must have credit for trying every possible remedy which anyone suggested, sound or unsound, and through experimentation they have eliminated a considerable number of their favorite panaceas; at least they have eliminated them in the minds of all reasonable men, even if they themselves are unwilling to abandon them.

The New Deal is such a conglomeration of all kinds of measures that it is interesting for a moment to try to analyze just what it really is. Its objectives undoubtedly were to help the Nation, and particularly the lower-income groups, but from the beginning it has been motivated apparently by a complete distrust of our entire economic and business system, extending almost to every individual businessman. The assumption was that because a great depression occurred all of the former principles accepted as the cause for American leadership in the world should be discarded, and this in spite of the fact that the depression was world-wide and affected many other nations where an entirely different business system many other nations where an entirely different business system existed. There has been no real interest in trying to restore private industry, and the assumption has been that the Government

could do everything better than it was done before.

This critical attitude extended to the most accepted fiscal principles, such as the belief (which has inspired every past President, Republican and Democrat) that there is a moral obligation to hold Government expenses down to revenues and conduct the United States Government on the same sound business principles which are necessary to avoid bankruptcy in private industry and ultimate repudiation by Government.

The President even abandoned the sound currency ideas which have always guided the United States, devalued the dollar under the almost childish Warren theory that this would increase domestic prices, and flirted with the idea of an inflation of the currency. There is no doubt that the New Dealers have a deep-seated distrust of the entire system of individual initiative, free competition, and reward for hard work, ingenuity, and daring which have made America what it is.

They have relied on three types of Government activity. The first type consists of direct relief, in different forms, to the lower-income groups. Beginning with assistance to the States, which were building up a very satisfactory method of handling relief, a combination of direct and work relief under public-spirited citizen boards cooperating with private agencies, the New Deal suddenly decided that no one could do the job as well as they could, and, as a condition of the financial assistance which was necessary, inas a condition of the financial assistance which was necessary, in-sisted on complete administrative control. Finding this too much of a job, they returned the unemployables to the States and under-took to provide work relief for all employables. That job has never been completely done, and the expense is so tremendous that it probably never will be. The attempt to administer from Wash-ington a great work-relief program throughout the entire United States has resulted in inefficiency politics and a vast average States has resulted in inefficiency, politics, and a vast expense which threatens a complete bankruptcy of the Federal Government. Other relief measures are the C. C. C., the N. Y. A., the Farm Security Administration, and other minor agencies.

The second type of New Deal activity includes the Government

regulatory measures, which attempt to raise the income of this group or that group by controlling prices, wages, hours, and practices throughout the United States. Such were the N. R. A. and tices throughout the United States. Such were the N. R. A. and the A. A. A. Such are the laws regulating agriculture today, the Guffey Coal Act, the wage-hour law. This type of law has completely failed in its purpose. Farm prices are as low today as they were 5½ years ago, before the agricultural control measures began. The administration of the Guffey Coal Act for 2 years has done no more than impose expense on the industry. The wage-hour law threatens to drive hundreds of people out of small business, and may do more harm than good. Attempts to fix prices have been frequent in history throughout the world. Without questioning the wisdom of the purposes sought, experience has shown, as in the case of the Brazil coffee control and the East Indian rubber control, that such attempts are doomed to failure. Our own

control, that such attempts are doomed to failure. Our own experience does not contradict that conclusion.

Furthermore, this type of law is one of the most discouraging to private enterprise. No man can tell when the Government may step into his business and nullify all of the effort and energy and ingenuity he may have shown in developing that business. Mounded by inspectors, excessive regulation, reports, and red tape. Many have gone out of business and many have stayed out of business because they could not feel certain that with all this Government regulation they might not be utterly wasting their time and their money.

their money.

The other type of New Deal experiment is direct Government business activity in fields where the Government thinks that private enterprise has fallen down on its job. Of this character are the T. V. A., the Rural Pectrification Administration, the lending agencies extending Government credit to home owners and farm owners, the building of canals and other self-liquidating public works. Unquestionably some of this activity is justified, though usually the reason that private capital has failed to enter the field is because the enterprise is unprofitable in spite of the glowing prospectus of some Government department.

But there are some unprofitable things which a government should start, and governments always have done something of this kind. It is a question of degree. It is very doubtful in my mind whether the T. V. A, ever was justified in view of the development of public utilities in the Tennessee Valley, but now we have it and have to operate it to the best advantage. Private capital could not undertake the building of canals, but neither should the Government unless they are economically sound and justified by the tolls which can be collected.

The lending of funds to stimulate the building industry under the F. H. A. seems to me justified as an emergency matter. And so also the Federal farm-loan banks fill a need which for one reason or another private capital could not reach. In this lending field, however, the Government, as far as possible, should create a set-up which can be taken over by private lending agencies under Government supervision, and in general, there should be no further extension of Government activity and competition unless it is

absolutely necessary.

I have pointed out that the New Deal seemed to be inspired with a hostility to the entire preexisting American economic system. The result is that these three types of measures which I have described have not been administered with any special care to preserve the best features of private industry and encourage it to bring about recovery. The relief measures have been inefficient and expensive. They have resulted in a tremendous burden of taxation, which bears down on the man who is trying to make his own living. There has been no effort to preserve conditions under which a man, striving for a private job and doing his job well, shall be encouraged and preferred to the man on W. P. A. The other two types of measures, Government regulation and Government competition, have directly discouraged private activity of every kind. More men have gone out of business in the last 5 years than have gone into business because of the complete uncertainty

have gone into business because of the complete uncertainty whether they can survive a constant Government interference. Now we are told that everything has changed and the administration is going to treat business like human beings. The very adoption of a so-called policy of appeasement admits that American businessmen and men who would like to go into business have been badgered and discouraged to an extent which requires an absolute reversal of Government policy. Secretary Hopkins made a speech in Des Moines and Secretary Morgenthau is having mottoes hung in the offices of the Treasury Department with the legend toes hung in the offices of the Treasury Department with the legend "Does it help recovery?"

"Does it help recovery?"

But, as the old saying goes, "Fine words butter no parsnips."

The appeasement policy is like the famous "breathing spell for business," only a smoke screen to conceal the real policies of the administration. It cannot be sincere. Whenever any question of action arises, the President is just as determined in his previous policies as he ever has been before.

Within the left for days Secretary Moreonthan and Secretary

policies as he ever has been before.

Within the last few days Secretary Morgenthau and Secretary Wallace have argued for a continuation of the President's power to devalue the dollar, although a stable currency is one of the greatest necessities for mental reassurance to American business. The President himself has indicated that he wishes a continuation of his power to issue \$3,000,000,000 in greenbacks, a power which he says is a convenient club in his closet. A club against whom? Against Congress? Against the economic royalists, in case the President chooses to blame them for depressed prices? Nothing would be more calamitous to business revival than the sudden decision of the President to issue billions of paper greenbacks with cision of the President to issue billions of paper greenbacks with no property whatever behind them. How easy for the President to give up these monetary powers, which hang over the business world like the sword of Damocles.

world like the sword of Damocles.

Businessmen are agreed that the amendment of the National Labor Relations Act would do much to reassure manufacturers, and stimulate additional investment in plants. The American Federation of Labor has demanded an immediate hearing on its amendments. Yet up to this time the President and the C. I. O. have successfully prevented the setting of any date even for hearings on the amendments already introduced before the Committee on Education and Labor in the Senate.

If taxes cannot be reduced at least an increase can be prevented

Education and Labor in the Senate.

If taxes cannot be reduced, at least an increase can be prevented. The pay-roll tax is today the most burdensome tax on business, and incidentally a bonus to get rid of labor and install machinery and increase unemployment. The tax is already 5 percent of the pay roll, and goes up to 6 percent the 1st of next January. This increase is wholly unnecessary except to build up an imaginary reserve to astronomical figures, and provide the New Deal with cash to pay deficits. Senator Vandenberg has introduced an amendment to suspend the going into effect of this increase, but the administration is definitely opposed.

The S. E. C. still takes the attitude that businessmen are pre-

The S. E. C. still takes the attitude that businessmen are presumptively crooks. Only this week a committee suggesting minor modifications in the securities law, the merit of which I do not modifications in the securities law, the merit of which I do not know, was met by a blast from Mr. Douglas, characterizing their plan as a "phoney," and implying that their only interest was to line their own pockets at the expense of the investors. The S. E. C. is still pressing for a bill giving it additional regulatory powers over the drafting of trust indentures and the private business negotiations involved in such indentures. The appeasement policy is completely insincere. The present administration has no confidence in the efficacy of private business activity. While their policy continues, it is impossible to achieve any real progress toward the elimination of unemployment.

What then should be the Republican program? It must combine a policy of encouragement to private industry, which can put millions of men to work, with sincere and effective administration

of relief measures to assist directly the lower-income groups. It must recognize the absolute necessity of relief measures in this country for many years to come. Before the great depression it was reasonable to hope that our economic system had reached a was reasonable to hope that our economic system had reached a point where Government help was unnecessary except in cases of misfortune. It was reasonable to hope that a man who worked diligently during his active life could provide a home and an income for his old age. But the depression of 1929–32 showed us that our system had not reached that point. Even if we eliminated unemployment, the fact remains that many people must work at poor jobs, the product of which is of so little value that the rest of the population will not pay them an adequate living. And so we must assist the lower-income groups by direct relief, by work relief, by old-age pensions, by unemployment insurance, and by some form of housing subsidy and by some form of housing subsidy.

But the administration of this relief must be carried on with the

But the administration of this relief must be carried on with the greatest care that it may not destroy our entire American system and put the whole population on relief. It must be carried on with economy, because the cost of supporting those who do not work is undoubtedly borne by those who are working. The return from capital will never support but a small proportion of the population. The greatest part of the cost of relief can only come from the income of those who are actually working, and if we impose too heavy a burden on that income there will no longer be any incentive to work and certainly no incentive to put other men to work

burden on that income there will no longer be any incentive to work, and certainly no incentive to put other men to work. I think we must recognize, after all, that relief will never do more than provide a bare living and will never be a satisfactory substitute for real work in private industry. Old-age pensions can never be so high as to be a satisfactory substitute for a house and a reasonable income, saved by the effort of the family which has worked successfully. We see today that we have reached the limit of popular appropriate of further appropriatives for W.P.A. and if we were able income, saved by the effort of the family which has worked successfully. We see today that we have reached the limit of popular approval of further expenditures for W. P. A., and if we were raising by taxation our entire budget we would find the popular opposition even stronger. And it is right that it should be so, because the burden of supporting those who do not work cannot be allowed to grow to a point at which it will discourage all initiative and all effort on the part of the other two-thirds of the population. For the same reason the relief agencies must be administered so that those on relief are not better off than the people who are working. A man who has saved and built his home should certainly be better off than the man who has saved nothing. He should be better off than the man who has the good fortune to live in a subsidized apartment house built by the Government.

in a subsidized apartment house built by the Government.

In short, in administering relief, we must recognize that it is only a palliative, only a stopgap, and that it is not an end in itself, as many of our New Deal friends seem to think.

as many of our New Deal friends seem to think.

In the second place, we must take every possible measure to cure the unemployment problem. It can only be cured by more jobs in private industry. We must, therefore, take every possible measure to encourage people to put their time and money again into the development of private industry. We must see that there is an incentive and a reward for initiative, hard work, and persistence. The problem is partly psychological and partly practical. The people must feel again that the making of a deserved profit is not a crime, but a merit. They must feel again that the Government is interested in the prosperity of the businessman. They must feel again that the Government does not regard every businessman as a potential crook.

again that the Government does not regard every businessman as a potential crook.

But there must be more than mental reassurance. There must be an abandonment as far as possible of Government fixing of prices, wages, and business practices. Americans must be assured that they will not be met by Government competition in their field of business activity. They must feel that Government activity will be confined to keeping their markets open, free, and comby will be confined to keeping their markets open, free, and competitive, so that they will have an equal chance with their little neighbor or their big neighbor. They must feel that Government expenses will be held down as far as possible, so that the tax burdens may not deprive them of the fruits of their most successful efforts. They would like to know that the currency is stable, the Government's fiscal policy sound, and all danger of inflation of the currency removed. of the currency removed.

If we can restore business activity to the conditions which existed in 1928 we would have a national income of \$90,000,000,000, nearly 50 percent more than we have today. If it could be done then, why can't it be done now? If there were any such increase in income in this country millions of men would be employed, not only in manufacture, but in transportation, in distribution, in agriculture, and in mining. Certainly the greater part of those unemployed today would reach the goal of real jobs. Taxes can be reduced. We can reduce the pay-roll tax today and still take care of all present requirements. We can cut down the cost of every Government deportment and climinate agreements. present requirements. We can cut down the cost of every Government department and eliminate a reasonable number or make them self-supporting. The return of relief to local administration, with a liberal Federal grant, will still cost the Federal Government much less than the present W. P. A. expenditure, amounting to more than \$2,000,000,000 this year. I do not underestimate the difficulty of doing it, and it is almost impossible for Congress to do it against the opposition of an extravagant Executive, whose party still controls both branches of Congress and is opposed to cutting down the present expanded functions of the opposed to cutting down the present expanded functions of the Federal Government. Its cost can certainly be reduced to \$7,000,-000,000, twice what it was in the days of Hoover, and a reasonable increase of prosperity would provide the taxes to balance the Budget.

But prosperity can only be brought about by increased production. This country was built up by millions of men, starting new enterprises, putting their time and money into some machine

shop, or store, or farm, or any one of a thousand commercial activities. Perhaps they could employ 2 men, then 10 men, then hundreds, and in the case of the great industries, finally thousands or hundreds of thousands. Employment increased steadily for 150 years, not by arbitrary building up of consumers' purchasing power, but by encouraging production and putting men to work. The theory that relief payments stimulate production is disproved by our own experience.

We hear a good deal today about the necessity of lending more money to little business and railroads and other enterprises; but it isn't loans that are needed by any business enterprise I know of. If they are entitled to borrow, they can borrow today from the banks. What they need is more capital, more people willing to put their money into stocks, more people willing to put their time and energy and money into building up new enterprises and developing new products; more people willing to abandon the low fixed return from Government bonds for the chance of a material profit

from business enterprise.

This was the way America was built up, and the only way to resume it is to assure people again that Government will not interfere with their normal and reasonable efforts to make a living, and raise themselves and their families to a condition a little better than that of their neighbors; that Government will not take away from them the profit which they may make; that reasonable success will receive the recognition it deserves, at least from their

friends and neighbors.

If we can stop spending money now, if we can stop the tremendous expansion of Government activity, regulation, and taxation, it is not too late to resume the progress which made this country the envy of the world; but if we continue for 6 years more the course which we have pursued, he is a bold man who will say that we can then restore prosperity under a democratic form of government.

Anti-Semitism

EXTENSION OF REMARKS

HON. W. WARREN BARBOUR

OF NEW JERSEY IN THE SENATE OF THE UNITED STATES Friday, April 7 (legislative day of Thursday, April 6), 1939

ADDRESS BY REV. DR. MAURICE S. SHEEHY

Mr. BARBOUR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Reverend Dr. Maurice S. Sheehy, head of the department of religious education at the Catholic University of America, on Tuesday, March 14, over the national network of the Columbia Broadcasting System, together with my introduction of the speaker.

There being no objection, the introduction and address were ordered to be printed in the RECORD, as follows:

INTRODUCTION

(By Hon. W. WARREN BARBOUR, United States Senator from New Jersey)

Jersey)

The growing unrest and intolerance taking place in Europe and Asia today probably have done more than anything else to closely coordinate and unite all religious activity in the United States, and to bring forth a greater and truer feeling of brotherhood and understanding among members of the Catholic, Protestant, and Jewish faiths. At a time when all human tolerance is fast disappearing from so large a part of the world, the great fundamentals upon which this Nation of ours was founded take on increasing significance and new value. An evidence of this awakening is seen in widespread movements already under way in our country to protect and preserve the fundamentals of our representative form of democracy. One of these organizations is the Council Against Intolerance in America, of which I have the honor to be a member of the executive committee—a council composed of leaders throughout the Nation embracing all religious faiths and political throughout the Nation embracing all religious faiths and political affiliations banded together to preserve those rights for which humanity has struggled through the ages—rights which still remain

humanity has struggled through the ages—rights which still remain in this country of ours and must at all costs be forever preserved.

It is of special significance tonight that we are to have the pleasure and privilege of hearing from the Reverend Father Sheehy, head of the department of religious education of the Catholic University in Washington. Father Sheehy, who has devoted his life to the broad and enlightening field of education and religion, has as his topic tonight, The Popes Condemn Anti-Semitism. His mes-sage is especially appropriate at this time.

THE POPES CONDEMN ANTISEMITISM (By Rev. Dr. Maurice S. Sheehy)

It is a source of great happiness for me to avail myself of the invitation of the Council Against Intolerance in America to trace

in brief outline the role that the papacy has played in opposing that victous form of intolerance known as anti-Semitism. This talk, I believe, is opportune, since during the past 2 months 12 pieces of scurrilous anti-Semitic literature have come to my desk from anonymous sources. We Catholics have during the past few weeks witnessed an outpouring of sympathy and good will on the part of our non-Catholic neighbors in America on the occasion of the death of Pope Pius XI, the Pope of Peace. One might hope that the death knell for religious intolerance might be sounded in this country, but as long as one small religious group is misrepresented by vicious and irresponsible forces religious liberty is not fully assured our country.

assured our country.

The first Popes said nothing about anti-Semitism, since they themselves, like their Master, Christ, were Jews and subject to all the injustices heaped upon Jews. As early as the sixth century—in the year 538—Pope Gregory the Great wrote: "We forbid you to molest the Jews or to lay upon them restrictions not imposed by the established laws; we further permit them to live as Romans and to dispose of their property as they will." Sad to relate, Pope Gregory, in his Christlike attitude, had to oppose some fanatical bishops of his time.

A later papal document, very probably from the pen of Calixtus II, was a charter of protection to the Jews. It contained these four propositions:

 The Jews are not to be coerced into Christianity.
 No one is to injure them in life or limb or to take away their property or to interfere with such customary rights as they have enjoyed in the places where they live.

enjoyed in the places where they live.

3. They are not to be attacked on festival occasions nor compelled to render feudal services beyond what is customary.

4. The cemeteries of the Jews must be zealously protected. This charter was reissued and confirmed by some 20 or 30 pontiffs over a period of 400 years. And yet there were occasionally documents concerning the Jews which seem to reflect more the prejudices of their times than the traditional attitude of the Papacy. The bull "Cum Nimis Absurdumi" of Paul IV, constraining the Jews to live in ghettoes is a case in point. Yet a defense of that particular procedure might be urged as a protective measure in a time of great unrest. Heinrich Graetz, Jewish historian and author of a monumental work, History of the Jews, writes: "It is remarkable that the Bishops of Rome, the recognized champions of Christianity, treated the Jews with the utmost toleration and liberality. The occupants of the Papal throne shielded the Jews and exhorted the clergy and the princes against the use of force in converting them to Christianity."

them to Christianity."

Too few historians of medieval times recognize the fact that the Popes had a twofold responsibility—one as spiritual and the other as political leaders. The Holy See never looked upon those unbaptized as its spiritual subjects. The Popes as sovereigns of a temporal state had an official relationship with the Jews who were

temporal state had an official relationship with the Jews who were citizens of that state.

In the Middle Ages Jews of all Christian countries looked to the Holy See for protection. More than one of the Popes, beginning with Innocent IV, issued decrees exonerating the Jews from the calumny of ritual murder—a lie comparable only in viciousness to that alleged against the Christians in the first ages of Christianity. At the time of the worst excesses of the Spanish Inquisition Sixtus IV and Clement VII exerted themselves to check the severities exercised against convert Jews. In 1255 Gregory IX issued a Bull reproving the false accusations against the Jews. This was addressed to the clergy, nobles, and lords of France. This document is so significant as a portrayal of the attitude of the Popes that I beg leave to quote it at some length:

quote it at some length:

quote it at some length:

"Certain of the clergy and princes, nobles, and great lords of your cities and dioceses have falsely devised certain godless plans against the Jews, unjustly depriving them by force of their property and appropriating it themselves. * * * In their malice they ascribe every murder, wherever it chance to occur, to the Jews. And on the ground of these and other fabrications they are filled with rage against them, rob them of their possessions without any formal accusation, without confession, without legal trial and conviction contrary to the privilege granted them by the Apostolic See. They oppress the Jews by starvation, imprisonment, and by tortures and sufferings; they afflict them with all kinds of punishments, and sometimes even condemn them to death, so that the Jews, although living under Christian princes, are in a worse plight than were their Iiving under Christian princes, are in a worse plight than were their ancestors in the land of the Pharaohs. * * We ordain that you behave toward them in a friendly and kind manner. Whenever any

behave toward them in a friendly and kind manner. Whenever any unjust attacks upon them come under your notice redress their injuries and do not suffer them to be visited in the future by similar tributations." (So far the words of Pope Gregory IX.)

In 1273 the scene of outrages against the Jews shifted to England, then, of course, a Catholic country, and Gregory X took up their defense, ordering that no injury be inflicted upon their persons or their property. In 1389 a strong protest against persecution of the Jewish people came from Boniface IX. One of the outrageous things attempted was to coerce the Jews into giving up their faith, and almost every form of compulsion seems to have been employed. This impelled Pope Martin V, in the beginning of the fifteenth century, to decree as follows:

"Whereas the Jews are made to the image and likeness of God and a portion of them one day will be saved, and whereas they

and a portion of them one day will be saved, and whereas they have besought our protection, following in the footsteps of our predecessors we command that they be not molested in their syn-

agogs; that their laws, rights, and customs be not assailed; that they be not baptized by force, constrained to observe Christian festivals, nor to wear badges; and they be not hindered in their business relations with Christians."

Sad to relate, the plea of the Holy Father was ignored then, even as allegedly civilized rulers chose to ignore the pleas of Pope Pius

as allegedly civilized rulers chose to ignore the pleas of Pope Plus in our own day.

A fact of more than passing significance is that many of the Popes had Jewish physicians, particularly at a time when poisoning was a fine art, and, as an eminent Catholic scholar, Father James Gillis, has pointed out, "It would almost seem that certain Popes like Alexander VI, Julius II, Leo X (the Medici of the Renaissance), and Clement VII felt themselves safer in the hands of Jews than of Catholics."

After the division of Christondom in the sixteenth century, the

After the division of Christendom in the sixteenth century, the Popes were more concerned with the struggle to preserve the unity of the Christian religion than with the challenge to Christian toler-

of the Christian religion than with the challenge to Christian tolerance presented in occasional outbreaks against the Jews.

Shortly after his coronation, Pope Pius IX was riding through Rome when his carriage was held up by a crowd surrounding a man who had fallen to the ground in a fit. "What is it?" asked the Pope. "Only a Jew," answered a bystander. "Is he not a man and your brother?" asked the Pope sharply and, stepping from his carriage, he drove the sick Jew to his home, leaving him with a present and his blessing. The story does not end there. A delegation of Jewish people called later on Pope Pius IX to thank him and gave him as a momento a heautiful chalice. him as a momento a beautiful chalice.

In our day intolerance toward Jews has either masked itself under the guise of racism or it has been uncamouflaged religious bigotry. In regard to the former, Pope Pius XI declared on July 30, 1938, referring to the unscientific (if not demented) racial theories of

"It is forgotten that humankind, the whole of humankind, is a single, great universal human race. All men are, above all, members of the same great kind. They all belong to the single great family of the living. Humankind is therefore a single universal race.

few weeks previously Pope Pius XI had denounced another

manifestation of racism in these words:

"There has appeared in the Italian press in recent days an Italian racial credo prepared by a group of university professors under Government auspices. The proclamations of this credo include: That great races and small races exist; that the concept of a race is a partly biological one; that the majority of the Italian population are of Aryan origin; that movements of races in history are purely legendary; that a pure Italian race now exists; that it is necessary to make a definite distinction between European Mediterraneans and Orientals and Africans; that Jews do not belong to the

raneans and Orientals and Africans; that Jews do not belong to the Italian race; that the purely physical and psychological European qualities of Italians must not be altered in any way."

Under the direction of Plus XI, who assumed to himself the office of Prefect of the Congregation of Seminaries and Universities, went instructions in which all Catholic teachers were urged "diligently to arm themselves from biology, history, philosophy, apologetics, and jurisprudence to refute stoutly and skillfully these doctrines:

"1. Vigor of race and purity of blood must be conserved and forstered at any cost; and whatever leads to this end is by that very fact justifiable.

"2 It is from blood wherein the centure of the race is contained."

"2. It is from blood, wherein the genius of the race is contained, that all intellectual and moral qualities flow as from their most potent source.

"3. Religion is subservient to race and must be adapted to it.

"4. The prime source and supreme rule of the whole order of justice is race instinct."

Sad indeed is the fact that never has the sight of intolerance more grieved the Papacy than in our day, but happy the circumstance that we have until recently enjoyed the dauntless leadership of Pope Pius XI. Time and again he condemned anti-Semitism. In September 1938, addressing a group of Belgian pilgrims, our Holy Father said:

"Aprehen is called our patriarch, our appearer." Anti-Semitism is

"Abraham is called our patriarch, our ancestor. Anti-Semitism is not compatible with the sublime reality of this text; it is a movement which we Christians cannot share. * * * No, it is not possible for Christians to take part in anti-Semitism. We are Semites spiritually."

Certainly no clearer statement could be expected from the head of the Catholic Church. Pope Pius XI states in the simplest possible terms that to be a Christian and to be anti-Jewish are incompatible terms. "Master, which is the great commandment of the law?" Jesus was once asked. And He replied: "Thou shalt love the Lord thy God with thy whole heart and thy whole mind and thy whole soul; and thou shalt love thy neighbor as thyself."

The essence of the Christian religion is love, even though some nominally Christian are subtle agents of anti-Jewish propaganda.

On September 25, 1938, the church through the Congregation of the Holy Office, issued this declaration:

"The Catholic Church habitually prays for the Jewish people who were the bearers of the divine revelations up to the time of Christ.

* * Actuated by this love, the Apostolic See has protected this people against unjust oppression, and, just as every kind of envy and jealousy among the nations must be disapproved of, so in an especial manner must be that hatred which is generally termed anti-Semitism."

"We are Semites spiritually." What did the recently deceased Pope mean by these words? Perhaps from my own priestly experience of today I can suggest an answer. The essence of Catholic worship is the mass. In the mass there are readings from the law of Moses, the psalms, the prophecies. The divine office which every priest is obligated to say daily contains all the psalms and excerpts from every book of the Old Testament. Catholic life is enriched by and flows out of the heritage of Jewish religious culture. As a Catholic I salute the Jew as my spiritual ancestor, who preserved belief in one God in hard, cruel times, who worshipped and still worships the true God.

Only 2 days have elapsed since Pope Pius XII has taken over the chair of Peter. But I know—and the anti-Semitic leaders of Europe know—that the former secretary of state of Pope Pius XI will spare no effort to rid the world of a hatred that shakes the foundations of

civilization.

civilization.

In America we all—Catholic, Protestant, and Jewish—have learned to live side by side in peace and understanding. There are forces operating in our day to arouse racial and religious animosities. The Council Against Intolerance, under the auspices of which I speak this evening, is striving diligently to get at the causes of this intolerance and to eradicate them, since they have no place in the American way of life. Won't you help us? Perhaps a first step should be an examination of conscience by every American to determine whether or no ill will finds a resting place in his heart, and then we might all ponder these words in the Book of Proverbs:

"Six things there are which the Lord hateth, and the seventh his soul detesteth; haughty eyes, a lying tongue, hands that shed innocent blood, a heart that deviseth wicked plots, feet that are swift to run to mischief, a deceitful witness that uttereth lies, and him that soweth discord among brethren."

soweth discord among brethren."

The Score at the End of 7 Years

EXTENSION OF REMARKS OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Friday, April 7 (legislative day of Thursday, April 6), 1939

ARTICLE FROM THE HARDWARE WORLD FOR MARCH 1939

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the RECORD an article entitled "The Score at the End of 7 Years," which was reprinted from the Hardware World for March 1939 by the National Small Business Men's Association of Akron, Ohio.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[Reprinted from Hardware World for March 1939 by the National Small-Business Men's Association, Akron, Ohio]

THE SCORE AT THE END OF 7 YEARS

	National income	The Budget	
United States England	49 percent recovery	\$20,400,000,000 in the hole. \$400,000,000 to the good.	

The population of the United States is 130,000,000. the population of the United States is 15,000,000. The population of the United Kingdom, which we shall call England, is 45,000,000. Therefore, on a population basis, the national income of the United States should be three times that of England. In 1929 it was four times that of England. From the low point of the determinant of the dependent o two-fifths times that of England. From the low point of the depression, 1932, England's national income had increased 101 percent at the end of 1937. The national income of the United States, from the low of 1933, had increased only 49 percent at the 1937 high. National tax receipts in England have increased 11 percent since 1932. In the United States they have increased 193 percent. England did not attempt to spend itself out of the depression. From 1932 to 1938 the British budget shows a surplus of about \$400,000,000, which means that that sum was the amount of tax

revenues which remained after Government spending.

The United States did attempt to spend itself out of the depression. From 1932 to 1938 the United States Budget shows a deficit of \$20,400,000,000, which means that that sum was the amount of money spent over revenue collected.

The income per person in England has caught up to that in the United States. The per-person figure, \$500, is the same.

LXXXIV-App----86

Year	National income		The Budget

"W. P. A. Guidebook Arouses Fuss"

EXTENSION OF REMARKS

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES Saturday, April 8 (legislative day of Thursday, April 6), 1939

ARTICLE FROM THE BALTIMORE SUN

Mr. REYNOLDS. Mr. President, I ask unanimous consent for publication in the Appendix of the Congressional RECORD of an article from the columns of the Baltimore Sun, issue of Saturday, April 8, 1939, without comment, at this

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of April 8, 1939.]

W. P. A. GUIDEBOOK AROUSES FUSS, LINKING WASHINGTON AND NEGRO—ALLUSION TO "COLORED DAUGHTER" OF ADOPTED SON IS BLASTED AS LIBEL IN HOUSE DEBATE

(By C. P. Trussell)

(By C. P. Trussell)

Washington, April 7.—New hot water for the W. P. A's Federal writers' project was being stored up on Capitol Hill today because of what that agency views as an "incidental reference" in its guidebook of Washington to George Washington Parke Custis.

The reference, apparently unnoticed outside the project until recently, was to the effect that the stepgrandson of George Washington—who later became his adopted son—and father-in-law of Gen. Robert E. Lee, was the father of Maria Syphax, a Negro.

First to blast the assertion as "a libel" and "an attempt to stimulate a feeling of class hatred" was Representative Keffe (Republican, Wisconsin), who, after conducting his own investigation, took the issue to the floor of the House yesterday.

Today his speech in the Congressional Record caused a rumbling on the Senate side to supplement the fighting going on there over

on the Senate side to supplement the fighting going on there over the W. P. A.'s supplemental appropriation. Several Senators threatened to take the matter to the Senate floor before the debate is ended.

is ended.

Tucked away in the middle of a chapter captioned "the Negro in Washington," and telling of the disposition of a large body of freed slaves, the guidebook relates:

"They were settled in Arlington in a place known as 'Freedman's Village, very near a tract left by George Washington Parke Custis to his colored daughter, Maria Syphax."

Admittedly, directors of the writers' project had questioned this before permitting its publication for Nation-wide distribution nearly two years ago. Convinced, however, that it was written on "competent authority," they let it pass.

The authority, Mr. Kefff countered, was the "mere assertion of a young Negro student trained at Howard University.

"And the fact disputed by tremendous evidence to the contrary to be found in the Congressional Library," he added, "is but another evidence of the insidious influence that communism has prompted in cultivating racial prejudice.

"Here in a Government-sponsored publication, with no authority

"Here in a Government-sponsored publication, with no authority other than the word of E. D. Preston, Jr., is a gross libel upon the character and reputation of one of our first citizens. This

libel has been achieved and is being disseminated by the Works Progress Administration through the instrumentality of a project that has cost the taxpayers of the Nation since the summer of 1935 through February 28, 1939, \$15,016,632."

CITES CONTRADICTING AUTHORITY

Citing as his own authority the Congressional Globe, Mr. KEEFE

added:
"This young woman, Maria Syphax, was the daughter of two
old retainers who had served his (Custis') grandmother (Martha
Washington) and George Washington for many, many years.
When she passed to him as part of his inheritance he manumitted
her, or freed her, and upon her marriage he gave her a little
17-acre tract of land upon which she lived at or near the present Arlington."

Arlington."
A former three-term prosecuting attorney for Winnebago County, Wis., Mr. Keefe, a newcomer to Congress, did not come across the guidebook until February, and when he read the chapter on The Negro in Washington he got busy. Threading through this chapter, he said, was a very obvious attempt on the part of the writer to "portray the oppression of the Negro by the white race, thereby stimulating a feeling of class hatred."

"To me," he observed, "this propaganda, whether it be right or wrong, can only result in stimulating racial intolerance."

POINTS TO DISCRIMINATION CHARGE

In one place, he noted, the chapter read:

"Regardless of qualification, the Negro worker meets with defi-nite discrimination. Many American Federation of Labor unions exclude him, even more than the white worker he remains poorly led and unorganized."

At another point, Mr. Keefe recalled, was:
"From the preservation of the color line in the District grave consequences arise. Educationally, segregation means the maintenance of a dual system—expensive not only in dollars and cents but also in its indoctrination of white children with a belief in their superiority and of Negro children with a belief in their interiority, both equally false.

(Politically it is believed by many that the determination to

"Politically, it is believed by many that the determination to keep the Negro 'in his place' has lessened the agitation for suffrage in the District."

QUOTES CHAPTER'S CONCLUSION

Concluding, the chapter asserts:

"In this border city, southern in so many respects, there is a denial of democracy, at times hypocritical and at times flagrant. Social compulsion forces many who would naturally be on the side of civic fairness into hopelessness and indifference.

"Washington has made steps in the direction of justice, but many steps remain to be taken for the sake of the undernrivileged and

"Washington has made steps in the direction of justice, but many steps remain to be taken for the sake of the underprivileged and for the sake of a greater Washington."

Wanting to know who was the author of the chapter, Mr. Keefe wrote to Henry G. Alsberg, director of the writers' project, and was advised that the "final writing" was done by Prof. Sterling Brown, a member of the history staff at Howard University, the Government-aided Negro institution of higher education here, and a consultant of the W. P. A. project on a part-time basis.

SAYS SEVERAL COLLABORATED

Preparation was under the editorial direction of Joseph Gaer, a

member of Mr. Alsberg's staff. But, the director explained:
"* * It is difficult to designate by name any one person responsible for an article in our book because the work is done collectively. A number of people collaborated in the gathering of the material, the checking of facts, the drafting and writing, and then the final editing."

This came a week after Mr. Keefe had written to Col. F. C. Harrington, W. P. A. Administrator, taking issue with the statement concerning George Washington Parke Custis, and asking for an explanation

explanation.

REFERS TO PRESTON ESSAY

Answering this, Mr. Alsberg wrote:

"The authority for the statement you refer to has been taken from E. Delorus Preston, Jr., who, in his essay on William Syphax, a Pioneer in Negro Education in the District of Columbia, states:

"On his mother's side William Syphax descended not only from a distinguished line but his ancestry savored very definitely of the plantation aristocracy of the South.

"Maria Syphax was the daughter of George Washington Parke Custis and a maid of Martha Washington."

SEARCH FOR ORIGINAL WILL

'Further, the article continued:

"It is stated, however, that Custis recognized Maria as his child and gave her a piece of property on the Arlington estate."
"There are numerous descendants of Maria Syphax living in Washington," the Alsberg letter continued, "also claiming that she was the daughter of George Washington Parke Custis.

"We are instituting a search through the historical records survey for the original will of George Washington Parke Custis in Alexandria, but so far the original will has not been found * * * We have made every effort to check all factual material for accuracy."

PRESTON IDENTIFIED AS TEACHER

Mr. Keefe sought further information concerning Preston. record could be found at the Congressional Library, so he appealed to Mr. Alsberg, and was referred to Dr. W. H. Siebert, professor of history at Ohio State University.

"Mr. Preston," Dr. Siebert answered, "is a colored man whose parents live in Washington. He graduated from Howard Univer-sity in June 1918 and taught in Negro schools in the South for

sty in June 1918 and taught in Negro schools in the South for several years. He entered the graduate school of Ohio State University in September, 1931, his major subject being history. "He wrote a dissertation on the underground railroad for fugitive slaves through a section of Ohio. My recollection is that he has published other articles in the Journal of Negro History. I recommended him to various positions in Negro colleges, etc., since that time, but have no record of the places he may have filled."

NO ANSWER TO LETTER

Mr. Keefe then went after relatives of Preston here, and was told that he now was teaching in a southern school. He wrote also to Professor Brown, asking for the source of his information concerning

Maria Syphax.

"Despite the fact that the institution which he serves is supported in large measure by the taxpayers of the United States," he told the House, "I, as a Member of Congress, have not as yet received a reply to my letter, and, despite repeated telephone calls, I have been unable to contact the gentleman."

In some of the material in the guidebook Mr. Keefe saw evidences of "communistic propaganda."

"Secretly and cleverly throughout the land," he said, "Communists who have wormed their way into high places in the Government are now seeking to aline us as allies of communistic Russia, and to identify Communist ideals as part and parcel of our

Russia, and to identify Communist ideals as part and parcel of our future economy."

Democracy in Action

EXTENSION OF REMARKS

HON. JOSEPH F. GUFFEY OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES Saturday, April 8 (legislative day of Thursday, April 6), 1939

ADDRESS BY HON, FRANCIS B. SAYRE

Mr. GUFFEY. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an able and eloquent speech delivered by Hon. Francis B. Sayre, Assistant Secretary of State, at the Fourth Conference of the Women's National Democratic Club, held at the Shoreham Hotel, Washington, D. C., on Wednesday evening, March 22, 1939. The address is entitled "Democracy in Action."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a signal pleasure for me to have this opportunity of speaking It is a signal pleasure for me to have this opportunity of speaking to you, representatives of the Democratic women of America. You represent a great and potent force, not only in this country but in the world. The future destiny of untold millions must depend upon the outcome of the profound conflict of ideas and ways of life which are tearing the world apart today.

This struggle is nothing new. In the seventeenth century England was torn with the same elemental struggle between an autocratic group working for arbitrary selfish domination and those who fought for larger rights and greater liberties for the "common" people. In 1688 humanity won against the selfish few, as eventually

people. In 1688 humanity won against the selfish few, as eventually it always will.

In the eighteenth century the struggle blazed out again; once more the desires of a selfish few were pitted against larger human liberties. The fate of Colonial America hung in the balance. The people once more triumphed; and out of the struggle there people once more triumphed; and out of the struggle there emerged in 1776 in the New World a nation founded upon the audacious thesis that all men are created equal, and that therefore all must have equal rights before the law and none must have special privileges. Democracy, thus concretely realized, entered upon a new chapter of its existence. In 1788 this bold conception

was woven into the very fabric of the American Constitution.

In the nineteenth century the struggle between selfish forms of privilege, now taking the form of monarchy, and human rights and liberties, now expressed in the flaming new conception of democracy, broke out afresh. In 1830 and in 1848 Europe was spec-

democracy, broke out afresh. In 1830 and in 1848 Europe was spectacularly shaken and democracy again emerged triumphant.

Today it is essentially that same elemental struggle that shakes the world. In large areas of Europe again there have arisen small determined groups, in control of supreme military power, who to achieve their own purposes would defy human rights and human liberties. Again the eternal conflict rages between narrow and self-willed autocracy and human liberty and democracy. Democracy once more is at stake; and for the people of the United States, which was born of democracy, the issue cuts to the quick.

But at the present moment more than democracy is at stake. The forces of autocracy have thrown to the winds the great principles for which our fathers poured out their blood and upon which

alone human progress can rest. The issue today is not only between autocracy and democracy, but between a way of life based upon faith in the pledged word, the sanctity of law, the restraint of moral principles, and a way of life based upon ruthless force and unrestrained brutality. In a word, our whole civilization, the precious heritage of centuries, is now at stake. Shall it progress or shall it be smashed? The outcome is the vital concern of every civilized nation. The issue has been made burning clear by the events of the past week. events of the past week.

Tonight, however, I want to turn my thoughts in another direc-tion. Democracy may have to be defended from without; but it must be created from within. True democracy is a thing of the

It is true that democratic peoples may be forced to fight against aggression and brutal ruthlessness that would destroy them; but always we must remember that such a war cannot create A war to defend democracy, even victorious, may end democracy.

democracy. A war to defend democracy, even victorious, may end by crushing it.

Democracy is never a negative force. It cannot be created by mere condemnation or resistance of undemocratic governments. It is essentially constructive and creative, and emerges from the hearts and lives of the rank and file of people. It is imperative that nations built upon the great heritage of democracy should continually create and re-create the spirit of democracy in every rights generation. rising generation.

Democracy means more than a form of government. It means belief in a larger freedom for individual men and women, in the equality before the law of all men, in human brotherhood. Liberté, egalité, fraternité. It means a profound faith that the ultimate values in life lie in individual human personalities. You see, it gets down pretty close to the fundamentals of

Christianity.

Christ taught the infinite worth of each individual human personality, the power of love which knows no distinction of class or race or creed, the brotherhood of man under the Fatherclass or race or creed, the brotherhood of man under the Fatherhood of God. And, believe me, if we are to find solutions for the seemingly insoluble national and international problems which beset us on every hand, if we are going to avoid catastrophe and move forward in the great march of human progress, it must be and can only be by a return to the bedrock principles which Christ taught 1,900 years ago. In spite of the scoffing of so-called "practical men," history has proved and is proving that Christ was the most daring and understanding realist that ever lived. The cause of democracy is to be nourished and fortified then.

The cause of democracy is to be nourished and fortified then, not by defense from without, necessary as this may at times prove to be. True democracy can be won only by constructive effort at home and by intelligent support of measures such as make for

democracy.

The theme for this evening's discussion is international cooperation. Well, what does real democracy mean when translated into

terms of international cooperation?
This is a subject so vast that one can attempt within the allotted time only to touch upon one or two outstanding phases of it, and tonight I want to limit myself to the field of commercial and economic cooperation.

Within this field two profoundly conflicting policies are struggling for dominance throughout the world—the one a policy of economic nationalism and the other that of liberalized international trade. Upon the future of this issue will depend much of our future history.

The forces of economic nationalism are of great strength. They are built upon the twofold foundations of protectionism and of economic isolationism. Protectionist forces must always be reckoned with. Strong pressure groups with sectional or sometimes purely selfish ends in view are constantly seeking higher tariff walls or trade embargoes so as to cut off domestic markets from the competition of foreign goods and thus to secure monopolistic profits for themselves without regard to the increased costs to consumers.

To these forces, particularly during the period following 1929, has been added the weight of economic isolationism. The last decade has been a time of collapsing world prices, of depreciating and fluctuating currencies, of sudden and unpredictable shifts in the fluctuating currencies, of sudden and unpredictable shifts in the flow of world trade. No nation, as long as it was obligated to meet debt payments abroad and dependent for a substantial part of its income upon the sale of exports in foreign markets, could feel secure. As long as world prices were like shifting quicksands, as long as foreign currencies were varying widely from month to month and from week to week, as long as international trade was harassed and beset by rapidly increasing difficulties and hindrances, the only sound pathway to security for each nation seemed to many to lie in insolation so far as humanly possible from an ecomany to lie in insolation so far as humanly possible from an economically chaotic world. Economic nationalism won nations not so much by its inherent desirability as through the seeming compulsion of circumstances.

Economic nationalism has always been of popular appeal. It wins the ready support of the man on the street because it appeals to his patriotism to make his country independent of foreign markets and of other nations' policies over which his own nation has no control. It wins powerful industrial and political support because it means freedom from the competition of foreign goods and gives the possibility of monopolistic profits. It wins strong military support because a nation's strength in wartime often has to depend upon its own resources.

But theoretically desirable as economic nationalism may seem, But theoretically desirable as economic nationalism may seem, it cannot be had except at a heavy cost. As every student of the subject knows, no modern industrial country can possibly be 100 percent economically self-sufficient. Germany lacks petroleum and other raw materials; England without imported foodstuffs would face food shortages in a few weeks; Italy has no coal or cotton. Even the United States, the most nearly self-sufficient of any nation today, lacks tin and rubber and coffee and many tropical and other products necessary for modern life. The further our complex civilization progresses the more dependent every industrialized nation becomes on products of other countries and of other climes. The road toward self-sufficiency, therefore, is not easy. It becomes a matter of degree. Germany can produce synthetic fuel, but at heavy cost. England can intensify her agricultural program, but this involves shutting out many competitive foreign

gram, but this involves shutting out many competitive foreign foodstuffs and raising the cost of food to her people by millions of pounds. Italy can displace cotton by substitute materials, but the cost of producing these runs to staggering amounts. The United States could grow coffee plants under glass, but think of the cost

It is self-evident that the further a nation goes in shutting out desirable foreign products and supplanting them with home production of goods which the nation is economically or geographically unfitted to produce, the more staggering become the costs, and the more intense becomes the downward pressure upon the

nation's standard of living.

nation's standard of living.

Germany has probably gone as far in this direction as any industrial nation. The cost today in Germany of lard, of wheat, of synthetic rubber, of motor fuels, and of numerous other commodities is more than two or three times the price for which Germany could buy such commodities in world markets. "Tightening the belt" to create facilities for the production of costly substitutes is thus described by Dr. Hjalmar Schacht:
"I should like to make perfectly clear that autarchy, whether natural or produced artificially, cannot possibly be an ideal. It is opposed to the general principles of civilization. * * * We ought to reject autarchy on principle because it will necessarily

is opposed to the general principles of civilization. * * * We ought to reject autarchy on principle, because it will necessarily lead to a lowering of the standard of life of the German people."

As one studies the gradual effects of the policy of economic self-sufficiency, as one measures the towering costs and watches the standard of living of a great people being forced slowly, inevitably downward to lower and lower levels, one becomes more and more convinced that surely this is not the way toward a fuller and more abundant life for the individual men and women who bear the Nation's burdens.

fuller and more abundant life for the individual men and women who bear the Nation's burdens.

Surely this is not the pathway toward democracy. Economic self-sufficiency requires governmental prohibition or restriction of those imports which can be produced more satisfactorily abroad than at home. The Government must assume to dictate quite arbitrarily what imports shall be allowed to enter the country and what shall not; with no less arbitrary action it must control home production by ordering domestic capital and labor to enter into certain fields of production and to keep out of certain others. In time it necessarily and inevitably involves government dictatorship over the flow of capital, over prices, and over labor. Economic self-sufficiency cannot possibly be had without a degree of regimentation and arbitrary bureaucratic control in utter conflict with every American tradition and ideal of individual freedom. individual freedom.

As contrasted with the policy of economic nationalism, the policy of liberalized international trade makes for increased human liberties and for the progress of civilization. The geographical icy of liberalized international trade makes for increased human liberties and for the progress of civilization. The geographical distribution of raw materials is so uneven throughout the world and the diversity of climates and soils is so great that with the advance of invention and with the demands of modern industry nations must trade if humanity is to go forward. For a nation to cut itself off from various imports simply because they can be produced more cheaply in other parts of the world is manifest folly. folly.

Moreover, without increasing international trade, there can be no lasting world peace. Economic self-sufficiency rests upon heightening trade barriers and increasing measures of trade discrimination. It means economic conflict between nation and nation growing ever more intense and more savage. Nations desperately in need of raw materials and foodstuffs for the maintenance of their populations and of foreign markets for the sale of their surplus production, cut off from these through the break-down of customary processes of orderly trade, may be driven almost irre-sistibly toward methods of conquest and the mailed fist to take by force what they so sorely need. Economic nationalism is the way to war.

As between the two conflicting policies, therefore, of economic nationalism and of liberalized international trade, there can be no question which makes for and which makes against democracy. Indeed, it is no accident that the three dictator nations of the earth who oppose democracy are pursuing policies of more and more extreme economic nationalism.

What is the significance of this to you, representatives of democracy throughout America? Simply this.

If we are to look bare facts in the face, the most practicable, if not, indeed, the only practicable program for opposing economic nationalism and for trade liberalization is the American trade-agreements program. It is based upon the sound method of getting nations to agree reciprocally to reduce excessive trade barriers to their mutual profit and to refrain from all discriminations example. their mutual profit and to refrain from all discriminations against the other's trade. Here is a program for the good of all as opposed to the selfish interests of the few. And here is a program which, judged by the acid test of concrete results has proved itself highly

practicable.

Agreements have already been concluded with 19 countries that account for nearly 60 percent of our total foreign trade. Among them are Great Britain and Canada, respectively, our largest and our second largest customers. No fewer than 3,000 reciprocal concessions are contained in these two agreements. Our total trade with the areas embraced within them amounted in 1937 to over two and a half billion dollars. Of this, about two-thirds is covered

by concessions given and received.

United States exports have approximately doubled since 1933, the year preceding enactment of the Trade Agreements Act. By no means all of the increase can be attributed to the agreements, but it is significant that exports to trade-agreement countries averaged 61.2 percent greater in 1937 and 1938 than our average exports

aged 61.2 percent greater in 1937 and 1938 than our average exports to the same countries in 1934 and 1935, while our exports to non-agreement countries increased by only 37.9 percent.

Both agriculture and industry have profited enormously by the agreements already made and stand to profit still more. By means of the trade-agreements program important foreign markets have been secured for American products and American exports have been protected from foreign discrimination.

Less tangible but more important are the resulting gains which cannot be statistically measured. Policies of retaliation and ill-

Less tangible but more important are the resulting gains which cannot be statistically measured. Policies of retaliation and ill-will toward America and toward American products have been replaced by policies of good will and commercial cooperation. Just as the policy embodied in the Hawley-Smoot Tariff Act stirred resentment and spread a contagion of trade restrictions throughout the world, so today the United States is exerting a profound influence in the direction of trade liberalization. Actual and costly discriminations against American products in such important markets as Canada and France have been eliminated and guaranties have been secured against future discriminations in countries accounting for three-fliths of our total foreign trade. On many important products Empire preferences in favor of On many important products Empire preferences in favor of British goods have been bound against increase, reduced, or elim-inated. In view of the fact that the total foreign trade of the United States and of the countries with which we have concluded trade agreements guaranteeing most-favored-nation treatment constitutes almost three-fifths of the total international trade of

constitutes almost three-fifths of the total international trade of the world, it is evident that the effect of the American program must be worldwide and profound. In the success of this program for the liberalization of trade democracy has much at stake.

Yet at this very time the trade-agreements program is under severe attack in Congress. There are those who would place purely sectional interests above the national welfare. They would cripple the program by raising still higher excessive duties on this or that commodity or by hamstringing the process of negotiation by requirements making for increased delay or uncertainty. Whatever one thinks of the program, there is only one practical alternative. That is the method of the Smoot-Hawley tariff, everincreasing American tariffs and a more intense economic national-

increasing American tariffs and a more intense economic national-ism; and that means heightened trade barriers not only in the United States but throughout the world, increased economic ten-sions and financial strains, conflict reaching an acute and highly dangerous stage.

For those who genuinely believe in democracy now is the time for action. Autocratic and selfish forces are not confined to dictator countries. They are at work in this country as in others. In the field of economics we can effectively fight for democracy through aggressively opposing the crippling of the trade-agree-

ments program.

If democracy is to live again, as it lived in 1776, in this as in other significant ways we must put our faith and our beliefs into action.

One Man's Opinion

EXTENSION OF REMARKS

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Saturday, April 8 (legislative day of Thursday, April 6), 1939

ARTICLE BY GEN. HUGH S. JOHNSON

Mr. REYNOLDS. Mr. President, Gen. Hugh S. Johnson. famed columnist and most interesting writer, who pens informative observations, is right, exactly right, when he says:

Reason could never take us into war in Europe. But emotion

He is eternally right. After having read his One Man's Opinion in the Washington News, issue of March 24, 1939, I ask unanimous consent for the publication of his statement in the Appendix of the Congressional Record.

Mr. President, reports inform us that Italian troops have just invaded Albania. That was not at all surprising to those familiar with the Balkan situation. Italy has for the past several years been engaged in developing the petty Kingdom of Zog. They dredged the harbor of Durazzo, 20 miles from the capital, Tirana, and at the capital they brought about the construction of a magnificent airport, which reclines beneath Albania's lofty peaks. Her prospective oil fields have been probed, some of her swamplands have been reclaimed-all with Italian capital-and I was not surprised when the news, warm from the air, advised of the Italian invasion. Now, instead of merely a financial control, Italy has, in all reality, physical control of the kingdom, which has a population of 1.053,000 souls.

Now, instead of our consuming energy in excitement concerning the daily events of aggression in Europe, we should concentrate our thoughts and devote our energies to America, and confine our activities, mental and physical, to those matters interesting themselves in the welfare of the United

States of America

I am, again I say, in entire accord with my personal friend, General Johnson, gentleman and journalist, when he says:

Reason could never take us into war. But emotion could.

And here is hoping that our emotions will never out-weigh our common "horse sense"; but if ever Hitler or Mussolini should wade Atlanticward and reach for America with fist well-mailed, we could and we would crush the troublemakers of the world, thanks to those of the United States who believe in preparedness.

There being no objection, the article was ordered to be

printed in the RECORD, as follows:

[From the Washington News, March 24, 1939] ONE MAN'S OPINION (By Hugh S. Johnson)

Something sounds fuzzy in the "Stop Hitler" line-up in Europe by agreements among the nations which he threatens. The threatened nations have little reason to trust each other's

word.
Why should either Rumania or Poland, which seem to be in the path of Hitler ambitions and Russian resistance, stick its neck out for or against either in dependence upon promised or neck out for or against either in dependence upon promised or suggested aid from England or France. They have just proved to the small eastern European nations, both at Munich and in Czechoslovakia, that, if they don't like the looks of any war as it approaches, they will probably run out and leave their little partners to the Nazi wolves. It is not even altogether clear that either England or France is content to go to sleep with a thumb in the other fellow's mouth. If France settled with Mussolini by giving up Tunis, where would that leave England? If those nations, the so-called democracies, won't join to defend their own sacred rights and physical hides, who dealt us

fend their own sacred rights and physical hides, who dealt us any hand to sit in at their double-crossing contest? Mr. Walter Lippmann, building his argument on the Gallup

Mr. Walter Lippmann, building his argument on the Gallup and Fortune polls, says that the temper of the American people is so aroused that if Hitler provokes a war in Europe we can't keep out of it. Therefore, he thinks that "the only legislation which can surely be effective (to keep us out of war) is legislation which makes it clear before the fatal decision is taken abroad, that war is too dangerous a gamble to be risked by the dictators."

This seems wrong. These polls have proved pretty accurate in elections where the question is simply "Do you prefer Mr. A or Mr. B?" But on the complexities of European politics and diplomacy, which change from day to day and which not even our State Department, much less our columnists understand, these measures of "public opinion" are worthless because most of the people polled haven't the fogglest notion about what is being asked them. Just before the armistice and before debate had made the them. Just before the armistice and before debate had made the issues clear, you were a pro-German, if not a traitor, if you criticized the proposed League of Nations. The mass of public

criticized the proposed League of Nations. The mass of public opinion switched to the other extreme in a matter of months. I think there is no important public opinion that we should mingle in the European mess and none whatever for getting into war.

As I remember, Mr. Lippmann, himself, once wrote an unanswerable column arguing that you can't bluff in modern diplomacy unless you are able and willing to go through. Legislation by us to make it clear "that war is too dangerous a gamble to be risked by the dictators" must either be a bluff or a sincere preparation for war against dictators with a purpose to prosecute it if they do not comply with our wishes. I think that we have no such intent unless they threaten us. Against that possibility we must rearm. They cannot believe it to be a bluff when we say we will defend ourselves. We must leave no doubt that we are able to do so. There is overwhelming public opinion for that.

But to interpret that as an indication of public opinion in favor

But to interpret that as an indication of public opinion in favor of defending European nations who will not defend themselves is, I think, to misinterpret it.

None of this is said to condone Hitler's insane brutality. But there are forming here pressure groups—mostly of people naturalized or descended from nations threatened by Hitler. They argue quite naturally along the lines of Mr. Lippmann's column. It is argument springing from emotion rather than from any reasoning for our welfare. And that is dangerous. Reason could never take us into war in Europe. But emotion could.

The American Legion

EXTENSION OF REMARKS

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES
Saturday, April 8 (legislative day of Thursday, April 6), 1939

ADDRESS BY STEPHEN CHADWICK, NATIONAL COMMANDER, AMERICAN LEGION

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an interesting and able address by Stephen Chadwick, national commander, American Legion, before the Chamber of Commerce of Kansas City, Mo., February 22, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A man who has been at this work as long as I have, since the 25th day of September, has so many available subjects in his mind which he might discuss on an occasion such as this, that I feel I could, if it were within the powers of my overtaxed voice, keep you here for the rest of the afternoon; but I know that that is not in the realm of courtesy at any rate, and so I am going to direct your attention to only a few thoughts with reference to the American Legion.

am going to direct your attention to only a few thoughts with reference to the American Legion.

Upon the show of hands which was made here, it is evident that this is predominantly a Legion audience. I think it can also be fairly estimated that a great many of those Legionnaires whose hands were raised are members, likewise, of the chamber of commerce of this city. It is only natural because the American Legion today is not the American Legion that you people saw here in Kansas City in 1921. We were a young organization at that time, both young in years of our organization experience, and young in the years that go to make up the maturity of manhood. Today the American Legion, however, is composed of men and women of an average of 46 years and 8 months. It is but natural, therefore, that they should be among the dominant group in the leadership of the community in which they are located.

natural, therefore, that they should be among the dominant group in the leadership of the community in which they are located.

In 11,300 posts in the communities of the United States, those men, taken out of the cross section of American life some 20 years ago, are endeavoring to give to the Nation the benefit of their composite knowledge and experience. Our fights for rehabilitation for our disabled comrades; our fights for the dependents of those men who died, have been reasonably taken care of through legislation. The fight for the individual who meets with a disaster to his health will always go on, but a grateful nation, such as the American Nation has always been, has provided suitable legislation in accordance with design that the American Legion has taken from time to time to the Congress.

I never have an audience of this kind but that I express the appreciation of the American Legion for the acceptance of this direction in meeting this problem. So long as a free people are

I never have an audience of this kind but that I express the appreciation of the American Legion for the acceptance of this direction in meeting this problem. So long as a free people are grateful and evidence their gratitude toward the men who have served the Nation, so long as they do not forget the wounds and disabilities incurred by those who suffered wounds and disabilities, just so long that free people will not want for defenders. But out of experience we go further with our desires, and we endeavor to counsel the American people for their good and welfare. We discovered out of our experience that America contained values which could be found in no other nation on the face of the earth. We wanted to safeguard and transmit to posterity—not to our children alone but to all of the children of the Nation—the great values that we found in America and in American life.

The generation to which we belong was given the opportunity of travel. It was given the opportunity of observation in substantially every nation on the face of the earth. Whether we were serving there as soldiers or as members of the United States Navy, we contacted practically every known civilization upon the face of the earth. We left the service with one thought in mind, and that was that America offered more of life, and more of opportunity, and more of happiness, and more of liberty, than could be found in any other nation on the face of the earth; that those values were precious; and that the hand of the grasping nations, the hand of greedy individuals, are still to be seen upon the face of the earth.

the earth.

For 20 years now we have watched the development of some of the aggressor peoples, peoples who refuse to accept the philosophy

that underlies our Government. We have seen it ripen in some nations to where with the barbaric tread of aggression they have marched upon defenseless people who have placed themselves as helpless before the movements of an aggression. We look upon the situation in China and Ethiopia. We look upon the dismemberment of a small democracy that was set up as a result of the Versailles Treaty, and we tell America that America must never let itself become defenseless while aggression marches the face of the earth.

We have tried every experiment that could be offered—every expedient that could be offered to accomplish a world in which there is a reasoned peace. We approached the nations of the world with treaties to outlaw war as an instrument of national policy. We approached them with the suggestions of disarmament conference. Our President, who led us into the Great War when it became necessary that we go, gave to the nations a design for a society of nations, but we have seen it impotent to meet with the vast problems that are involved in the peace of the world. We have participated in nine-power pacts in an endeavor to save a people whom we deemed to be defenseless, and we have seen that nine-power pact ruthlessly brushed aside. We have many people who have come to us with suggestions that we should forsake the policies that were given to us by our fathers, telling us that democracy as a system of government is impractical and will never work, capitalizing upon the problems of our economic distress, to foment within the breast of disheartened people the idea that either by the dictatorship of the proletariat, or the dictatorship of an individual, and a voluntary regimentation under their beneficent dictatorship, we can accomplish something better than the system of government that was erected for us by our fathers.

We of the Legion have known throughout the years that that cannot be done. We have known that ours was the only design for a government for free men that has come upon the face of the earth. It is the only thing new or novel in government. Systems that are known as communism and fascism are as old and outmoded as human history because, wherever they have been appar-

We of the Legion have known throughout the years that that cannot be done. We have known that ours was the only design for a government for free men that has come upon the face of the earth. It is the only thing new or novel in government. Systems that are known as communism and fascism are as old and outmoded as human history because, wherever they have been apparent—and they have been apparent throughout the ages—a class government as exemplified in the feudal system; an autocratic government as demonstrated from time to time as individuals seek and take power over men; they have always in time been over-thrown by the thing which was established in our Government—the insurrective impulse which is in the breast of free men.

The man whose birthday we celebrate today, George Washington, had a choice between following the Old World publissorbles of an

The man whose birthday we celebrate today, George Washington, had a choice between following the Old World philosophies of an autocratic class, a class that were born to the purple, or following the much harder and much more difficult course which stands out in his life as the basis of his great contribution to this Nation of ours. He might have gone over to England; he might have been educated, as was the design of members of his family, to a position in the British Navy; but instead of that he elected to pursue a course of self-education, to move out into the frontier as a surveyor. He gained for himself a modicum of military experience by participation in the Braddock affair; and when the oppressions of the mother country, when the problem of taxation without representation and the other grievances which then existed among the American people became vocative and expressed, he was in a position to and did undertake the leadership of a cause which at the time seemed almost hopeless, and at many times throughout its course was to all apparent reason hopeless; and yet, by the force of his own personality, by the strength of his own belief in the rights of men, God-given rights of men, rights which came to them from their Creator, he carried on.

After the war in which he participated had been successfully won, when he saw a nation that was divided and disunited endeavoring to operate under a system that was insufficient for a united, free people, although he did not choose to, he accepted the responsibility of sitting in at the Constitutional Convention, and it was largely out of his magnificent influence that a Constitution was offered to us; and in that Constitution is contained a great deal of human wisdom that is applicable to our conditions today. Primarily our forefathers were engaged, at the time of the adoption of that Constitution, in endeavoring to preserve to posterity the rights of free men; erecting a government not to be a despot or a dictator; a government that could not in the very nature of things be a beneficient government that could provide for its people, but rather they were erecting a government which would protect men in their rights to accomplish their own destiny—to preserve opportunity for free men. Many people had been wooed away from that philosophy believing that government is an omnipotent thing and that it, out of its largess, can always provide for its people. Well, when we sit down to reason we know that cannot be true because the government, in the last analysis, must be its people. Otherwise it is a dictator and oppressor, either a class or an individual. Otherwise it sustains itself in power, not by its applied reason, not by the energies of its people, but by the blood purge in the hands of the dictator destroying the breath of freedom wherever it comes into being, or directing the attention of peoples to the exploitation of other free and defenseless peoples.

we sit down to reason we know that cannot be true because the government, in the last analysis, must be its people. Otherwise it is a dictator and oppressor, either a class or an individual. Otherwise it sustains itself in power, not by its applied reason, not by the energies of its people, but by the blood purge in the hands of the dictator destroying the breath of freedom wherever it comes into being, or directing the attention of peoples to the exploitation of other free and defenseless peoples.

George Washington made a magnificent contribution to the government of men as he sat, and out of that Convention, which at times gave the appearance that it might disintegrate and go to its home without having accomplished its mission, he gave the solemnity of his presence and the strength of his wisdom. He served the Nation throughout its first two terms as President, and when they endeavored to wish upon him the crown he said no. He could not see or understand that philosopy, but out of the richness of his experience he gave to this Nation some of its most solemn and serious advice; he gave to the Nation thoughts which

have been gems and have been applicable to every day of our national life. May I presume to quote you from his Farewell Address and read it against present circumstances?

We went into the World War, if you will remember, thinking we had a mission to make the world safe for democracy. I think that out of our experience in the World War we did make a great contribution toward making democracy safe for America, because we discovered in the pains of battle some of the great truths that are expressed for us in our Constitution. The primary truth we learned was this: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; and that among these are the pursuit of life, liberty, and happiness. And we learned that it did not make much difference where a man bent his knee or bowed his head to worship his Creator; he might be bent his knee or bowed his head to worship his Creator; he might be gentile, or Jew, or Catholic, or Protestant; he might be black, white, red, yellow, or brown; and we did not bother to inquire; but whatred, yellow, or brown; and we did not bother to inquire; but whatever his racial strain might have been, whatever his religious conviction might have been, he walked forward just as we walked forward and took the chance of death to preserve the fine things that are in our American life. We hope out of this generation that it will never be necessary for another generation to go into the same experience that we went into to learn and appreciate those truths. It might not have been necessary for us to have done it, if the advice of our first and great President had at all times been headed, so left's see what his educe was as he left the times been heeded; so let's see what his advice was as he left the Presidency:

'Against the insidious wiles of foreign influence (I conjure you to believe me, fellow citizens), the jealousy of a free people ought to be constantly awake; since history and experience prove that foreign influence is one of the most baneful foes of republican government. But that jealousy, to be useful, must be impartial, else it becomes the instrument of the very influence to be avoided instead of a defense against it. Excessive partiality for one foreign nation and excessive dislike of another cause those whom they actuate to see danger only on one side, and serve to veil and even second the arts of influence on the other. Real patriots who may resist the intrigues of the favorite are liable to become suspected and odious, while its tools and dupes usurp the applause and confidence of the

people to surrender their interests.

"The great rule of conduct for us, in regard to foreign nations is in extending our commercial relations to have with them as little political connection as possible. So far as we have already formed engagements, let them be fulfilled with perfect good faith. Here let

us stop.
"Our detached and distant situation invites and enables us to "Our detached and distant situation invites and enables us to pursue a different course. If we remain one people, under an efficient government, the period is not far off when we may defy material injury from external annoyance; when we may take such an attitude as will cause the neutrality, we may at any time resolve upon, to be scrupulously respected; when belligerent nations, under the impossibility of making acquisitions upon us, will not lightly begand the giving up proposition; when we may choose percent

hazard the giving us provocation; when we may choose peace or war as our interest, guided by justice, shall counsel.

"Why forego the advantages of so peculiar a situation? Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest humor or caprica?

est, humor, or caprice?

"The duty of holding a neutral conduct may be inferred, without anything more, from the obligation which justice and humanity impose on every nation, in cases in which it is free to act, to maintain inviolate the relations of peace and amity toward other

'The inducements of interest for observing that conduct will best be referred to your own reflections and experience. With me, a predominate motive has been to endeavor to gain time to our country to settle and mature its yet recent institutions, and to progress without interruption to that degree of strength and consistency, which is necessary to give it, humanely speaking, the command of its own fortunes."

The American Legion has in its every pronouncement accepted the basic tenet of our first President's declared foreign policy. From year to year we have enacted a resolution expressing it as our wish that the United States remain at peace with all nations of the world, and for that reason we have urged that the United States the world, and for that reason we have urged that the United States Government maintain a strict policy of neutrality regarding foreign affairs; and we have further urged that the United States be kept from any alliance which might draw this country into war. We have for 19 years advocated and counseled an adequate national defense for the United States of America and its possessions. We believe that our counsel has been wise. In our suggestions for the sectional defense we have deferred to the information of our payel and national defense we have deferred to the judgment of our naval and military leaders, men who have made the adequate defense of this Nation their life's work. We have not rushed out to accept the ill-considered proposals of the politician or the demagogue, as some have advocated theories of defense which are entirely unbalanced, and others have advocated suggestions for the accom-plishment of peace which meant the prostrating of ourselves as a people before the aggressor nations of the world.

people before the aggressor nations of the world.

Our military defense is outlined in our National Defense Act. It contemplates a modest standing army, a reasonable national guard, and a substantial organized reserve. Our naval recommendations have been always for a navy second to none, competent to meet the possible aggression of any other power or powers in the event they threaten the security of our land. We have never been hysterical in our approach, nor do we want the American people to become hysterical. We know the cost

of war because we were a part of it. The men who sleep today on foreign soil, our dead of the World War, were our schoolmates; we ate with them; we slept with them; we marched with them into the cruel crucible of war. We know the cost of human lives. And again, as we look at our great national debt, a large part of which survives from our involvement in the World War, and as we look at the enormous costs which have come from the depression, which found its genesis in the World War, we know the financial cost of war. This is no time for hysteria in this country of ours. We can only consolidate our victory of a World War and make the world safe for democracy if we establish here in America the practicability of the democratic ideal. Washington suggested that such was our problem, and it is today our problem. Ours is an experiment in democracy; ours is the only substantial world power that exists in the form in which it was established.

It has been the course of all nations that they live to rise to

which it was established.

It has been the course of all nations that they live to rise to glory and, through external force or internal decay, they move on into the limbo of history. It is not necessary that America take this course if the people of America will be wise, will be reasonable, will be considerate, and will look to the protection of their own homes and their own firesides. We cannot make the destiny of other peoples of the world, either by a declaration of force or an imperialistic policy, two things which are not inherent in the democratic ideal. It is time that we go back to the grass roots and drink deep from the fundamental principles that gave this Nation birth.

gave this Nation birth.

Washington also said: "A passionate attachment of one nation for another produces a variety of evils. Sympathy for the favorite nation, facilitating the illusion of an imaginary common interest, nation, facilitating the illusion of an imaginary common interest, in cases where no real common interest exists, and infusing into one the enmittee of the other, betrays the former into a participation in the quarrels and wars of the latter, without adequate inducement or justification. It leads also to concessions to the favorite nation of privileges denied to others, which is apt doubly to injure the national making the concessions; by unnecessarily parting with what ought to have been retained, and by exciting jealousy, ill-will, and a disposition to retaliate in the parties from whom equal privileges are withheld. And it gives to ambitious, corrupted, or deluded citizens (who devote themselves to the favorite nation), facility to betray or sacrifice the interests of their own country, without odium, sometimes even with popularity: guilding with the without odium, sometimes even with popularity; guilding with the appearances of a virtuous sense of obligation a commendable deference for public opinion, or a laudable zeal for public good, the base

or foolish compliances of ambition, corruption, or infatuation."

The American Legion was organized to promote peace and good will on earth, and to safeguard and transmit to posterity the principles of justice, freedom, and democracy. We abhor war and for that reason we counsel the American people today to the exercise of sound and solemn common sense. America's destiny is in no other lends, America's destiny is hear at hears of the sense.

other land; America's destiny is here at home.

other land; America's destiny is here at home.

There was a meeting the night before last up in New York where the two alien ideologies seemed to be arrayed against each other. I made the suggestion, and I feel it is a good one, that it would do a great many people, who live on the Island of Manhattan, a great deal of good if they could come as far west as Kansas City or Omaha, and find out what it is that makes this country great. It is not an alien ideology; it is not anything that exists in the Old World today. Our fathers left the Old World to build in this continent a new nation, erected to God, if you please, and believing that men have divine rights. If we fail in the experiment; if we fail in our duty to maintain and sustain it, then within the mind of man there is only one resort, and that is to surrender our rights, our liberties, and, as you do it, the rights and liberties of your children, to some man who has not yet been discovered in human history, who is wise enough to do it for us. That man does not and never will exist. Democracy may be a muddling process, but the men of the World War still believe that it offers more of life, and more of liberty, and more of happiness than any system of government that has ever been conceived upon the face of the earth.

Neutrality and Peace Legislation

EXTENSION OF REMARKS

HON. KEY PITTMAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES Saturday, April 8 (legislative day of Thursday, April 6), 1939

TESTIMONY OF BERNARD M. BARUCH AND HENRY L. STIMSON BEFORE FOREIGN RELATIONS COMMITTEE

Mr. PITTMAN. Mr. President, the Committee on Foreign Relations has commenced the consideration of five resolutions and two bills dealing with the present neutrality law, and making other suggestions with regard to peace legislation.

A subcommittee consisting of the Senator from Georgia [Mr. George], the Senator from Idaho [Mr. Borah], and myself has been appointed for the purpose of attempting to carry on a program of hearings that will be of value to the Senate. In the selection of the order of the witnesses we are attempting, in the first place, to obtain witnesses whose testimony, based on experience and also on knowledge of history and international law, will be of value. We intend also to have before us representatives of the farm associations of the country, the labor associations, and the veterans' associations, as well as representatives of the great women's organizations of the country, in an attempt to obtain not only opinions with regard to the construction of these acts and their effect, but a general consensus of opinion in this country with regard to peace legislation.

We have already listened to two very distinguished citizens of this country, one a distinguished Democrat, and the other a distinguished Republican. We have heard Mr. Bernard M. Baruch, who gave his services during our period in the World War as Director of the War Industries Board. I think he is one of the most patriotic citizens of the country. His ability, his sincerity, and his disinterestedness are recognized. We also heard Mr. Henry L. Stimson, former Secretary of State, who was connected with our Government before and ever since the war, except for a short period of time since this administration took office. He holds a different view than Mr. Baruch with regard to what should

be our foreign policy.

I ask unanimous consent that there may be published in the Appendix of the RECORD the statement made by Mr. Bernard M. Baruch before our committee, and also the statement made by Col. Henry L. Stimson before our committee.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

[From the New York Times of April 7, 1939] TEXT OF BARUCH NEUTRALITY LEGISLATION STATEMENT

WASHINGTON, April 6.-The text of the prepared statement delivered by Bernard M. Baruch before the Senate Foreign Relations Committee's neutrality hearing today was as follows:

"It is easier to proclaim neutrality than to maintain it.

"Its practice is almost as difficult as its definition.

"Since true neutrality is an almost unobtainable ideal, the best

"Since true neutrality is an almost unobtainable ideal, the best course for us to pursue is that which protects us as far as possible from involvement in war; that which preserves fairness in our dealings with belligerents; that which aids in the development of our defense; and that which guards us against economic collapse. "A sound neutrality law will prove a definite aid to peace and at the moment, an aid to the preservation of our method of our life, system of government, and the flow of our trade and commerce. "A neutrality measure, therefore, is an integral part of our protection and preparedness. But neutrality does not mean the certainty of bringing about what we all want—to stay out of war. "Peace is what we all want. Peace is what the world needs. But we get no further toward peace by giving legislation a label that belies itself.

belies itself.

CONCERNING THE PITTMAN BILL

"The essential difference between the so-called "peace act" and the existing legislation is that under the existing law the sale of armament is wholly prohibited with the coming of war, or conditions that are judged to be of war. The Pittman bill will permit the continuing sale of all commodities now dealt in with this restriction; all types of exports, including manufactured war weapons, may be sold, but only if title passes in this country and shipments made only on vessels other than those flying the American flag.

"Neutrality cannot be absolute. It can only be relative. The divergent rights of the neutrals and belligerents cannot be main-

"Neutrainty cannot be absolute. It can only be relative. The di-vergent rights of the neutrals and belligerents cannot be main-tained; they must be compromised. Theoretically, perhaps, neu-trality can be established and preserved under the theories of international law, but international law is, especially today, a minus quantity. Based on experience we find new truth in the phrase of the immortal Justice Oliver Wendell Holmes "that a page of history is worth a volume of logic."
"Before I go further in this expression of my views I think it

"Before I go further in this expression of my views, I think it wise to remind you gentlemen of the fact that wars are not fought wise to remind you gentlemen of the fact that wars are not fought merely for immediate results. Each participant makes an effort to impose his will upon his enemies by military and economic destruction. But, at the same time he keeps in mind the after results—new markets, new trades, and new intercourse, always at the expense of the defeated and frequently of the neutrals. Therefore, it is accurate to say that in every great war the neutrals have a stake in the future almost as great as any of the belligerents. JEFFERSON'S ATTEMPT RECALLED

"We dare not wholly abandon the protection of neutral rights. It is unsound to believe that if we hold no dealings with the actual belligerents we shall avoid the friction which makes for war. That

is a cloistered method that was tried once. Jefferson did it in 1807. He embargoed all ships and shipments. He sought to draw the country into a shell but the result was devastating.

"To prohibit one type of export (war weapons) without prohibit-

ing the other (food) is a legalistic formula that I think is devoid

of real justice.

"To embargo the sale of implements of war, under conditions that now exist, might be the means of cementing into power the stronger nations and reducing weaker nations to slavery or worse.

"We are trying to meet conditions existent at the moment. We are not trying to legislate for all time to come. If, when and as

are not trying to legislate for all time to come. If, when and as the circumstances that now justify this revision should change, the laws can be changed. I see no difference, in time of war, between the sale of life-sustaining wheat and death-dealing guns. Wheat is essential for armies, but were we to keep wheat away for that reason, the deprivation might become a mass-killing, particularly of women and children. I repeat:

"We can have either an absolute embargo, such as Jefferson had, or a war commerce, qualified not as to commodities but as to conditions of sale and shipment.

DOUBTS LAW CAN END FRICTION

"It may be doubted if any law, however wise, can do away with "It may be doubted if any law, however wise, can do away with friction. It is just as easy to engender disputes over wheat, copper or cotton, scrap steel, and pig iron (essential to noncombatants as well as to armed forces) as over sales of ammunition and artillery. What is the difference between selling trucks and tractors but not selling armored cars or tanks? Further, enforced limitations of other goods are ready subjects of several.

limitations of other goods are ready subjects of quarrel.

"In this country we have faced situations, similar in outline to the present, in 1794 under Washington, 1807 under Jefferson, 1818 under Monroe, and during the Great War under Wilson. No secure course was ever found. Such a road may be found, but only through an international agreement, capable of being enforced, which would firmly define the rights of neutrals or abolish those rights altogether.

rights altogether.

"The world's effort toward an international agreement under which neutrals were forbidden to deal with belligerents, that method being called economic sanctions, has failed. Sanctions are acts of war. The opposite—complete neutrality in which efforts are made to preserve the friendship of warring powers by

the neutrals—also has been a failure.

"After all is said and done, neutrality is what you make it or, maybe I had better say, what you can make it. We would only be fooling ourselves if we talk about international law. We must be strong enough to enforce our own theories of neutrality and wise enough to make those theories just. There is no thought of dominance in this idea. America will always be ready to cooperate on principles of equality, but we do not want to do all the cooperation.

STARTED "COME AND GET IT" IDEA

"Both the old law and the new bill carry on the cash-and-carry idea. I think I was the first to suggest that, or its twin, 'come and get it,' which is more descriptive of the plan. It treats all nations alike. Each has an opportunity to get what it needs from us provided it takes title at the port of shipment, and provided further, that the chipment is not made in American craft.

that the shipment is not made in American craft.

"Of course, it is obvious that this will largely limit sales of supplies to those able to pay for them and able to move them; but, after all, the rule holds good in normal commerce. I do not see that we are required to adjust all inequalities of this sort. If that is any intention, we may as well face it and go to war. We discourse the supplies that the same intention, we may as well face it and go to war. is our intention, we may as well face it and go to war. We discharge our obligations, including those to our long-term customers,

charge our obligations, including those to our long-term customers, by making available all of our products, just as we expect them to make available to us those supplies we need.

"As we now suppose, this rule would prejudice Germany and Italy in favor of France and England. Most of our individual sympathies run that way, but when we—not as individuals, but as a nation—let our policies in international trade follow our sympathies, we may be idealistic but we are not neutral.

"Furthermore on the continent of Acia most of our individual

"Furthermore, on the continent of Asia, most of our individual sympathies run to China rather than to Japan; and here the proposed rule works the other way. If we, tomorrow, recognized a fact as obvious as the sun in the sky, that a state of war exists between Japan and China, and so invoked this rule, we would be favoring Japan and prejudicing China. We have avoided that by refusing to recognize an existing ondition of war.

AN UNCOMFORTABLE POSITION

"But it certainly was an uncomfortable position to have recognized undeclared war in Spain, where Germany and Italy were involved, and not to recognize it in Asia, where China was involved. "Those who have not seen it at first hand may not view with

Those who have not seen it at hist hand may not view with sufficient gravity the vast modern change in the methods and principles of war. There was a time when nations risked their destiny on a sort of gladiatorial contest between relatively small trained armies of professional soldiers. Then the military effort was everything, and the economic effort was less important.

"Now, when whole nations have become instruments of war, and war itself an impact of civilizations, all this is changed. as important to supply and sustain the civilian contingent as the military contingent. Continuity of supply of every product in constantly increasing volume is absolutely necessary to maintain a

great nation in war.

"Even the battlefield effort is decided in favor of the nation which can hurl at the other the greatest tonnage of industrial produc-tion—steel, rubber, chemicals, trucks, airplanes, tanks, petroleum,

cotton-e.erything.

EVERYTHING A MUNITION OF WAR

"Everything is a munition of war, if not a lethal weapon. In the "Everything is a munition of war, if not a lethal weapon. In the World War the truth was recognized that not merely weapons, but all commodities, supplied to an enemy were contraband of war. A rusty old tramp steamer rolling up from South America with a cargo of nitrates was frequently as vital as a division of infantry on the fields of France. German defeat was as directly due to economic strangulation as to military assault.

"We have now an absolute prohibition of the export of lethal weapons. Now, on the essential principles we are discussing here—the principles of neutrality or keeping out of war—this has nothing

weapons. Now, on the essential principles we are discussing nere— the principles of neutrality or keeping out of war—this has nothing to do with either. It springs from another high purpose, which is to prevent our country from selling any kind of weapon with which men kill each other. It is a rebuke to war as an institution. It will not prevent war, take us in, or keep us out of war. If we want to make a gesture, let us do so, but let us not do it under any idea that it side neutrality or nesce.

idea that it aids neutrality or peace.

"If we do not supply the weapons other nations will. Such a rule serves to aid a country, such as Italy, which makes at least some of its own weapons, against others, like Ethiopia, which do not. It might even aid one South American nation, like Argentina, for example, which has easy access to other arms-manufacturing nations like England, against another like Chile, for example, which

FINDS ANOTHER LACK OF REALISM

"There is another lack of realism about this well-intentioned proposal. It would be easy to define and embargo some component parts of a lethal weapon—like parts of a howitzer, but not so easy to define other parts like cotton or toluol, which are equally necessary to its operation for propellants and explosives. As I have stated earlier, chemicals, petroleum, steel, and rubber are just as essential to the mass murder of modern war as machine guns or airplanes, or, for that matter, motortrucks, locomotives, and optical

glass.
"It is for this reason that I am now willing to include everything in the cash-and-carry plan. It is also for this reason that I think we should approach this discussion recognizing plainly that any economic restriction or discrimination is harmful to some bel-

ligerant and we should proceed with great caution.

ligerant and we should proceed with great caution.
"I understand that some of the pressure for this legislation is the reverse of a wish to treat all nations alike. It has been suggested that the aggressor nations if not halted will start a European war, that if there is a European war we can't keep out of it, and that therefore the only way to keep out of war is now to engage in economic war against them to prevent their starting a European DOUBTS WAR WOULD DRAW US IN

"On that theory, if our economic war fails we will be in military war, and I think that, if we make economic war, that conclusion is inevitable. I am not sure that even with the utmost economic pressure we could prevent European war if it were determined upon

by the aggressors.

"I also question the theory that we must take part in any European war. I am no military expert, but I do happen to have some experience with many nations in the World War. I venture to believe that this country or this hemisphere can escape involvement in a European conflict and we can do this without burying our head in the sand; we can still raise our voice against faithlessness and

in the sand; we can still raise our voice against faithlessness and brutality.

"You will hear it said that if we do not go in of our own volition our turn will come next. It is true that our barriers of sea water have been narrowed by science and invention. But they are still formidable. It is incredible that without almost complete domination of the water and sky of both the Atlantic and Pacific Oceans, a military attack in truly threatening force could be launched against this hemisphere from either Europe or Asia in the face of such resistance as this and other American, if not European, nations could offer.

could offer.

"Who has the wisdom or the boldness to advocate involvement of our country in any overseas war on the assumption that this apparent axiom is no longer true—and on what known fact or theory? If we believe we can defend this hemisphere then the whole argument for now waging economic war weakens.

CALLS FOR AN ADEQUATE DEFENSE

"Our defeat here certainly can never happen if we maintain a defense adequate to prevent it. It is far easier for us to maintain such a defense than it is for any of the threatening nations to build up an offensive force sufficient to overcome it. It was with exactly this idea that I began advocating our immediate rearmament several years ago.

"Just before the Ethiopian crisis, I learned of the extent of German and Italian rearmament and the unpreparedness of England, France, and ourselves. It was then that I confirmed myself in many of the opinions which I then expressed, some of which I am repeating here today. We must rely upon ourselves to protect this hemisphere. We must be ready to do it. It is not necessary to do

it on the Continent of Europe. If advocating protection of ourselves and our hemisphere is war mongering, then I plead guilty. "It is a pleasure to take up one branch of this argument upon which all seem to be agreed—that we should permit no American financing of foreign conflict. I was among the earliest to advocate that and Senator Johnson's bill not merely as a basis of discussion,

but as a firm conviction.

"We have learned by bitter experience that 'where the treasure is there will the heart be also.' By neither loans nor any kind of credit should we finance a nation at war—no matter how our sympathies may be involved.

WOULD BAR CREDITS TO ALL

"To refuse credit to all impartially is within our rights, as beyond all question it is true neutrality. One nation may become, by practice and location, dependent on another for supplies of one sort or another. But there is nothing in comity or custom that entitles any nation to rely upon another for loans. Refusal to finance foreign wars is clearly a means to keep us out of war. Since I do not understand anybody to disagree with this, I shall not labor the point.
"All of these efforts toward neutrality bear on the future of our

foreign commerce. If we serve notice now on the nations of the foreign commerce. If we serve notice now on the nations of the world—those with ships and those without—that the instant they suffer the misfortune of war—innocently or not—we will cut them off from any trade to the extent here proposed, how many of them will feel wholly confident in relying on us for necessary supplies in peace? Why should they not seek other suppliers, more dependable in both peace and war?

"We must realize that what we mete out, we will get back. From the time we become involved in war, England, adopting our rule, might shut us off from our vital war supplies of tin, rubber, nickel, and tea, except as we would come and get it in our own ships, some of it half way around the world. If she did that, we must not resent it as a treacherous and hostile act.

SAUCE FOR THE GOOSE

SAUCE FOR THE GOOSE

"What's sauce for the goose is sauce for the gander, although, if she threatened it, we might look about us now for more dependable sources or buy and store what we need.

"The bearing of unnecessarily harsh restrictions on the new reciprocal-trade treaties is also plain. If we are to avoid the commerce-destroying bilateral barter system and to attempt to break down trade barriers and restore the flow of free private commerce to a store the ground also avoid all possible new be reciprocal agreements, we should also avoid all possible new barriers to trade, such as any proposal to restrict all exports within unnecessarily narrow and, to some nations, impossible limits.

"There are many more nations now in the area of possible new world conflict than there were in 1914. That war grew partly out of a kind of economic war. But it is as nothing compared with the economic war that has been going on throughout the world with increasing intensity for many years. It reaches now to the

with increasing intensity for many years. It reaches now to the uttermost parts of the earth.

"The commerce of the world, upon which rests both the peace and prosperity of the world, is dying. It is being killed by increasing restrictions of barter, tariffs, quotas, and self-containment. With one hand, through Mr. Secretary Hull's efforts, we are attempting to restore it. With the other, through some of the extremist proposals and attitude on this legislation, we threaten to restrict it further. Such a course I regard as unwise.

OPPOSES RIGID SHIPPING BAN

"While I agree with the cash-and-carry plan, these thoughts lead

"While I agree with the cash-and-carry plan, these thoughts lead me to raise a question on the sanctions in these bills. They make shipment or transportation to belligerents a felony. What we are really trying to say is that we are ready to abandon our old rights as neutrals under international law. But in order to abandon them is it necessary also to abandon our commerce?

"Under the Peace Act it would be a crime to transport to a belligerent under the American flag even in a case where there is no risk at all. We might be abandoning much or even all of our purposes in such cases not absolutely to prohibit such shipments, but to serve notice on our people and the world that the American flag will not protect them?

"Should there be flexibility in these laws which in appropriate circumstances might be determined by the Secretary of State, we could then say, 'Ship at your peril,' rather than to say, 'You can't ship at all.'

ship at all.

"These are my considered views, and I hope the committee will recognize that I speak not as anti-German, anti-English, or anti-anything but only as an American. It is my deep conviction that no other attitude is permissible. The Nation should be controlled by the interests of all the people, not by the sympathies of some."

[From the New York Times of April 6, 1939]

TEXT OF Mr. STIMSON'S STATEMENT TO SENATORS ON NEUTRALITY Washington, April 5.—The text of Henry L. Stimson's statement before the Foreign Relations Committee of the Senate today at the first of its hearings on the Neutrality Act was as follows: "When your chairman honored me with this invitation to come before you, he said that the committee was to consider

come before you, he said that the committee was to consider the general landmarks of foreign policy at the present time and particularly the Neutrality Act.

"But when I came to reflect on it I realized that the problem of the present moment to which he referred is perhaps not so much a problem of normal foreign policy as a problem of national defense of the United States in a novel emergency. That's what it really is We are not sitting down to draft prescription.

defense of the United States in a novel emergency. That's what it really is. We are not sitting down to draft peacefully and philosophically a code of behavior for normal times, but to consider how we can best make the United States safe—or as safe as possible—in a totally novel and critical situation. "When I call it a crisis I do not mean to imply that it is merely a brief emergency. It may last for many long, anxious years or even decades. But its essential characteristic is that it is novel and revolutionary as well as extremely dangerous, and so it has necessarily upset many of the standards and rules by which we have been accustomed in times past to chart our course and guide our conduct in international relations.

INTERNATIONAL LAW IS TRACED

"A very few words can make this clear. For nearly four centuries mankind has been trying to build up a code of behavior within what is called the family of nations. That code has been based upon the foundation stone that every state in the family recognizes and respects the independent sovereignty of every other state. That has been the foundation of what we call international term. law. That has been deemed to be the principle upon which the world had the best chance of living in peace.

"And it is in our Western Hemisphere that that principle and

"And it is in our western Hemisphere that that principle and practice has reached its fullest flower of consummation. In every Pan-American conference from the beginning of their relations over a century ago the smallest and most insignificent state in size and power has been accorded an equal vote with the largest, and the disapproval of any such state is sufficient to protect it from the corporate action of all the rest.

"Of course, throughout the world controversies have periodically arisen which have caused nations to fight with one another. But the underlying principle of their conduct in the absence of war has been this principle of mutual respect. And the code of be-havior for carrying out their relations one with another in normal times has been aptly likened to the code of mutual respect and courtesy which prevails among gentlemen in ordinary life.

"I have only to describe this long existing theory and standard to indicate how it has been shattered by present events. Today three of the seven most powerful nations of the world have rejected this code of behavior with open scorn and contempt. They have adopted as their most conspicuous foreign policy a system of aggressive action against their neighbors. To that end they have developed a very skillful technique which during the past few years they have been practicing with great success.

"Under the name of unitetral action they have also proceeded to

"Under the name of unilateral action they have also proceeded to tear up all the net of promises, treaties, and codes which had been adopted under the old system of mutual respect and which stood in the way of their own aggrandizement and purposes. Threats, aggression, and treaty violation have gone hand in hand as the interlocking elements of this, their system.

CITES SERIES OF ASSAULTS

"In succession the attacks, all in violation of former treaties and of international law, upon Manchuria, North China, South China, Ethiopia, Spain, Austria, Czechoslovakia, and Lithuania, have made clear the revolutionary and widespread nature of the change with which we are now confronted. They have shown to even the most reluctant critic that this new system is not a matter of domestic government among the states which practice it, or ideology, as we now call it, but is a reversal of the whole system of international practice in the world.

"It is thus a matter with which the foreign policy as well as the national defense of almost every nation in the world is immediately concerned. I weigh my words when I say that I believe that our present Caucasian civilization is threatened by the gravest danger with which it has been confronted for 4 centuries.

"The problem is further complicated by the fact that these three powerful nations occupy strategically very favorable positions for their attacks upon most of their peace-loving neighbors. If there were only one of them, the problem for the whole world would not be so serious. But the three are acting skillfully together, and geography has placed them with such relation to the lines of communication and the consequent national defense of the other nations as to make common action in such defense prescrival in imperative if it is to be successful.

the other nations as to make common action in such defense practically imperative if it is to be successful. "This is the novel situation which confronts the world today

"This is the novel situation which confronts the world today and I think the mere statement of it will indicate how it has affected some of our former customs and traditions. For example, take our old attitude toward the question of aggression in war which has been the basis of our attitude toward neutrality.

"In the former world we had a doctrine that in considering the controversies of our neighbors across the Atlantic or the Pacific we could entirely disregard the question of aggression and treat both sides with perfect impartiality without trying to make any inquiry into the rights and wrongs of the origin of their conflict. But today the fact of systematized aggression stares us in the face and we know only too well who the aggressors are. We pick up our newspapers every morning with apprehension to read the most recent evidence of their policy. They boast of it. It is the life and breath of their principal policy to which they have applied the appropriate name of an axis. We also know only too well who their victims are, both present and potential. We only have to read about some of the occurrences to the south of us to realize that even we are within the zone of their orbit.

ISOLATION "A LITTLE SHOPWORN"

ISOLATION "A LITTLE SHOPWORN"

"All this suggests another former tradition which begins to look a little shopworn in the present situation—the isolation, so-called, of the United States. Too many Americans have been brought up to think that in case of trouble in the world it wouldn't be necessary for us to do anything but sit still and let nature take its course. It looks a little differently now. The axis is moving much too rapidly and the world has become far too small and interconnected and interdependent. I have had official occasion to study the protected position of our country; its superb natural resources; its unmatched opportunity for self-containment in the maintenance of its defense. No one is more keenly alive than I am to this great advantage or to the comparative security of this country.

"But the real question before us today is one of method. How shall these great advantages be most effectively used, not only

with regard to our own safety for this present year of our Lord 1939, but for the future, for the protection not only of ourselves but of our children and our children's children and of the institutions of our country? Shall we be content to sit idly in this present security, which may be only momentary, or shall we use these great advantages carefully, moderately, but firmly and above all intelligently to help protect the world, which includes ourselves, from its imminent and continuing danger?

"By reason of our present security we can do this more safely than can any other nation. And the fact that we are known to be ready to do so will not only tend to slow down the axis, the members of which know very well that language, but—what is even more important—will at the same time encourage their intended victims not to make surrenders which will ultimately endanger us.

BACKS PRESIDENT'S DICTUM

BACKS PRESIDENT'S DICTUM

"For myself I agree with the President that there are methods which are 'short of war but stronger and more effective than mere words.' I have taken occasion to study and ponder over such possible methods.

"This country is said to supply about one-third of the known raw meterials of the world and to account for more than one third of the

materials of the world and to account for more than one-third of the known economic and industrial life of the globe. For the past 2

known economic and industrial life of the globe. For the past 2 years we have allowed these matchless resources to be used in very large part to stimulate the activities and aggressions of our potential enemies. That, I am bound to say, does not strike me as a very intelligent behavior.

"I know that it is sometimes said that an economic weapon is a dangerous one. In the case of ourselves I have been rather inclined to doubt its truth. If it is, we are certainly in a safer position to use it than any other country in the world. And when it comes to the danger of irritating aggressor nations, why the very fact that we are a democracy irritates the axis. Economic action would do no more and it has the possibility of most effective restraint for, after all, the chief hope of today lies in the fact that each of the three members of the axis are in a notoriously vulnerable economic condition.

LAG SEEN IN NEUTRALITY LAW

"The foregoing is a very cursory statement of the conditions of today bearing upon our neutrality law and in the light of which it must be considered. The first act was drawn nearly 4 years ago, and events have traveled more rapidly during those 4 years than ever since the Great War. Their rapidity today is greater than ever. On its face that statute was evidently drawn under the influence and traditions of the past rather than to face conditions as they eviet at present.

On its face that statute was evidently drawn under the influence and traditions of the past rather than to face conditions as they exist at present.

"On its face it assumed that it would never be in our own peremptory interest to distinguish between an aggressor and its victim. On its face it assumed that it would never be in our own peremptory interest that an ill-prepared foreign nation should be able to defend its liberties by purchasing arms from us after it had been aggressively attacked. By this assumption the act violated one of the oldest traditions of the United States. On its face it was evidently designed to curb narrowly the discretionary power of the Executive in dealing with foreign conditions by making the operations of some of its chief provisions automatic and inflexible.

"In all these respects it apparently assumed that the Congress in 1935 and 1937 was able to know exactly the course which the people of the United States would wish their Government to follow under the conditions of 1939. Too meticulous foresight is often perilous, particularly in the drafting of unchangeable commitments. Every lawyer is familiar with the fate of a client who insists on having his will drawn as if the Lord Almighty had vested him with exact information as to what the condition of the world and his estate would be at the time of his death. And we all know that the Lord Almighty has an embarrassing habit of bringing to confusion such rigid efforts.

"It is this rigidity of the act which seems to me its chief danger. I believe that in all such laws the President should have more discretion. I am a Republican and the present administration is Democratic, but I have always tried to limit my partisanship in the zone of foreign affairs. I am a strong believer in the system of representative government, and from my observation I have come to the belief that in no sphere of government action is representative action so essential, so effective, or so safe from abuse as in the conduct of foreign relations.

conduct of foreign relations.

HAS FAITH IN MAN AT HELM

"I am not impressed with the fear that in that zone Presidential "I am not impressed with the fear that in that zone Presidential discretion is likely to be abused. It is my observation that in no sphere of political action is the sobering effect of terrific responsibility upon one man so marked as in the sphere of our country's relations with the outside world. Certainly in the case of the two wars in which we have been involved within my lifetime the Presidency was the most cautious and conservative element in the country, clinging to every effort for peace until it was clear either that the people were determined upon war or that no other course than war would preserve our safety.

"Today we find in the light of hindsight that this act has automatically placed in the hands of foreign nations, some of them possibly our future enemies, the decision as to with whom this possibly our future enemies, the decision as to with whom this country shall carry on some of its trade and commerce. Today we find that it compels us to treat alike the peaceful and suffering people of China and the militaristic enemies who by conquest are trying to turn China into a reservoir of potential future aggression against the rest of the world. We find that it compels us to be an effective party to this aggression on the pain of otherwise depriving China of the means for her own defense. "Recently we found that by depriving the loyalist government of Spain of the right to buy arms for defense against the rebels who were being supported by Mussolini and Hitler, it made us a strong factor in the overthrow of the very government which the United States had recognized as legitimate. It seems entirely likely that should a general war come in Europe this spring this Neutrality Act might put us in the position of facilitating a result of that war which would make the United States the next victim of attack.

SAYS LAW PAINTS US AS TIMID

"Finally the psychological effects of such a statute may be even more widespread and disastrous than its physical results. The American people are not insensible to cruelty and aggression. Nor are they so unintelligent that under the conditions of today they cannot distinguish an aggressor nation from its victim. On the contrary, being served with the most free and enterprising press in the world, they are probably better informed of the facts necessary for such a determination than any other people. Moreover, they are not a constitutionally timid people, nor are they smitten with such an inferiority complex as to make them wish their Government to avoid decisions which are really necessary to their own future interest.

"Yet the form of this statute today tends to make the outside world believe each one of these fantastic falsehoods and to guide their own policy in that belief. Without going into the details of any new legislation, I believe that the greatest step to be taken and the one which would do more than anything else to give the American Government a helpful influence in preventing the threatened general war would be to make it clear beyond peradventure that these misconceptions do not represent the real present views of the American people."

Why Not Subsidize Our Cotton for Our Own People, Protect Our Own Markets, and Stop Bellyaching About Lost Foreign Markets? Let's Face the Real Facts

EXTENSION OF REMARKS

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 31, 1939

Mr. FULMER. Mr. Speaker, during the past few days much has been said in the press and otherwise about Secretary Wallace's proposal, which, apparently, he has been able to sell to the President, about subsidizing for export 8,000,000 bales of the 11,000,000 bales of cotton that is now in the hands of the Government under the loan program.

The trade-mark argument on the part of the enemies of any kind of a farm program is and has been that because of the farm program and because of the activity on the part of the administration in trying to assist farmers we have lost our foreign cotton markets.

WHY WE ARE LOSING OUR DOMESTIC AND FOREIGN COTTON MARKETS

There are several good reasons why we have lost a great portion of our foreign markets. First, foreign countries have been increasing their production for years, and during the last few years certain Americans have become interested in foreign production, those interested in producing cotton in foreign countries being able to buy farm machinery much cheaper than our people can; they, having improved their cottonseed and their methods of farming, naturally will continue to increase their production until they are able to take care of their needs.

The foreign countries have not only done considerable research and experimental work to improve their quality and production of cotton, but they have profited wonderfully from the millions that we have spent in research and experimental work, having secured the services of many of our experts, who are rendering great assistance along this line in foreign countries.

Perhaps there may come a time when we will have to place a tariff against the importation of foreign cotton.

I make this statement for the reason that Russia and certain other countries are in a position to increase their production rapidly and tremendously. If Japan gets hold of a good slice of the rich lands of China, Japan will not be worried about buying cotton from the United States.

In the next place, exports have fallen off for the reason that a great many of these countries have been using entirely too much money making preparation for war.

Again, one of the main reasons is the operation of the tariff wall that we have built around the United States, which will not permit these countries to export their goods for the purpose of buying our cotton.

Here is another good and valid reason why we are losing our foreign markets. If you will do a little investigating you will find that some of our large cotton factors in this country are investing in Brazil in cotton gins and machinery. In 1933 the value of these investments was \$68,081; in 1934, \$558,305; in 1935, \$847,197; in 1936, \$663,161; in 1937, \$631,942.

I want you to remember that these cotton gins in Brazil, as well as all cotton gins in foreign countries, are equipped with high-density presses, manufactured in the United States, which would mean the saving of millions of dollars annually to cotton farmers in the South, if we had high-density compression in this country.

It is a strange thing to me that I do not hear any of these people, the Secretary, or the enemies of farm legislation, speculators and gamblers on the cotton exchanges, or anyone else deeply interested in cotton saying anything about protecting our own markets or utilizing cotton in the way of new uses for cotton.

WHY NOT SUBSIDIZE FOR OUR OWN MARKETS?

If we are unwilling to protect our own markets; that is, preventing the importation of jute, which comes from India, a large, competitive cotton-growing country, to the United States, to the extent of pound for pound, taking our perfectly good American market to the extent of 2,000,000 bales; and, for instance, the importation of newsprint coming in from Canada to the extent of 2,800,000,000 tons, taking the place of cotton and our own pulp products, as well as other fibers that are coming in in competition to cotton, why not subsidize this cotton, or a large part of it, for the purpose of competing in our own markets with these products, and in the interest of millions of our own people, who are today without sufficient bedding and clothes to take care of their needs?

This would put idle spindles to work in the United States, would give employment to thousands of unemployed, and it would tend to increase purchasing power, because of the actual demand for our cotton, all of which would do more to bring about recovery than perhaps anything that we have attempted up to this time.

Oh, no, you would rather take care of exporters and clothe the rest of the world, while one-third of our people go around half naked and millions are begging for W. P. A. work and relief.

I want you to seriously take into consideration these figures from the Department of Agriculture:

Domestic consumption of cotton

	Dutes
1926	7, 190, 000
1927	6, 834, 000
1928	7, 091, 000
1929	6, 106, 000
1930	5, 263, 000
1931	4, 866, 000
1932	6, 137, 000
1933	5, 700, 000
1934	5, 361, 000
1935	6, 351, 000
1936	7, 950, 000
1937	5, 748, 000
1938	13, 391, 808
16 months and in a Ten 01 1000	

¹6 months ending Jan. 31, 1939.

Foreign consumption

	Butes
1926-27	10, 121, 000
1927–28	9, 709, 000
1928–29	10, 556, 000
1929-30	11,857,000
1930-31	11, 346, 000
1931–32	10, 368, 000
1932-33	10,601,000
1933–34	11, 544, 000
1934-35	14, 149, 000
1935–36	15, 211, 000
1936–37	17, 771, 000
1937–38	16, 042, 000

You will note from these figures that we consumed in the United States in 1926, 7,190,000 bales of cotton, and in 1937, 11 years later, 5,748,000 bales.

Take a second look at these figures and you will note that over the past 11 or 12 years the consumption of American cotton has remained on a steady level. In fact, much less cotton was consumed in the United States in 1937 than in 1926.

What I want to call to your attention is that the consumption of cotton in foreign countries during the same period has increased from 10,000,000 to 16,000,000, an increase of 6,000,000 bales.

However, in the face of these facts it appears, as previously stated, that the Secretary of Agriculture and those who have been blessing out the farm program, are more interested in helping these foreign countries than they are in giving consideration to our own people and to the increasing of the consumption of our own cotton in the United States,

RED CROSS COTTON

Some years ago I had passed a bill in Congress turning over to the National Red Cross 800,000 bales of cotton and 45,000,-000 bushels of wheat to be distributed to the poor and needy.

Why not use, at least during the next 2 years, 2,000,000 bales of our surplus cotton along this line, manufacturing the same into clothing, mattresses, and bedding for our people, millions of whom are living in poverty and misery?

WHY NOT SUBSIDIZE FOR OUR OWN PEOPLE?

I have suggested to my committee, as well as the Department, that we should subsidize at least 3,000,000 bales during the next 2 or 3 years, placing the manufactured goods therefrom on a competitive basis with foreign products and for new uses.

WE SHOULD DEMAND RESULTS

For years and years the Department has been working on new uses for cotton. They found out years ago that considerable cotton can be utilized in road building in the place of jute and in a great many other instances; but some days ago, when I questioned the Secretary about actually doing some of these things, he stated that he did not believe that the time was quite ripe, but that they were working on these important matters.

JUTE REPLACING OUR COTTON

In the case of jute, I am submitting figures which will bear out my statement as to the amount of cotton that we could use if we would consume cotton instead of jute, and I challenge the Secretary of Agriculture or any other citizen of this country to deny the fact that we can use cotton in every instance where jute is now used, unless it is in the manufacture of rugs.

Estimates of the quantities of cotton that would be consumed if jute and hard fibers were replaced entirely by cotton

[Bales of 478 pounds net]

Bags:	
Mill feed	248,000
Fertilizer	74,000
Sugar	62,000
Potatoes (white)	56,000
Wheat (bran and shorts)	50,000
Flour (all kinds)	19,000
Other (for other products and sundry purposes)	111,000
Total	620,000
10001	020,000
Bagging for wrapping bales of cotton (12,000,000	
bales)	135,000
Textile wrappings (bales covering manufactured	
goods)	90,000
Wool carpets and rugs	95,000
Twine and cordage (including tying United States	50 00000
mails)	75,000
Road building	100,000
Rags for U. S. Navy (low-grade cotton)	8,000
Other	85, 000
Other	85,000
Total	588, 000
Grand total	1, 208, 000

IMPORTED HARD FIBERS	
Binder twine and ropeOther (mostly twine and cordage)	550,000 600,000
Grand total, hard fibers	1, 150, 000
Grand total, jute and hard fibers	2, 358, 000 Tons
Newsprint (pulp imported from Canada)	

You will note from the statement that imported jute burlap bags are now being used in the United States for sacking mill feeds, and if we would use cotton bags, we would be able to consume 248,000 bales of cotton.

I consider it a shame and a disgrace to have farmers plow under and cut their production of cotton while in the meantime you are forcing them to buy their fertilizer in jute bags which will equal the amount of 75,000 bales of cotton annually.

JUTE BAGGING

Just think, we have 11,000,000 bales of cotton stored in warehouses under Government loans. In the meantime we are covering our cotton with jute imported from India, a great cotton country, taking the place of our own good American cotton annually to the amount of from one hundred and twenty-five to one-hundred and fifty thousand bales.

JUTE FOR ROAD BUILDING

We appropriate annually Federal funds to match State funds for the purpose of building roads, out of which you are paying for jute burlap to the extent of 100,000 bales of cotton, which can be used instead of jute.

TYING THE MAILS OF THE UNITED STATES WITH JUTE TWINE

Jute twine and jute cordage are used for tying the mails of the United States. Yet almost daily we hear on the floor of the House this statement: "America for Americans."

If we were able to utilize our own perfectly good cotton for twine and cordage purposes, we would consume over onehalf million bales of the very same cotton that Mr. Wallace wants to subsidize in the interest of foreign countries.

NEWSPRINT IMPORTED FROM CANADA

There is just one more item on this list that I want to call your attention to, and that is the newsprint manufactured out of pulp coming in from Canada to the extent of 2,800,000,000 tons.

COTTON PULP

A test was made at the University of North Carolina out of whole cotton, stalks, bolls, leaves, lint, and cottonseed. It produced 52 percent cellulose; lint cotton, it was found, will produce 92 percent. Cotton will make the best paper of any product that has ever been tested up to the present time.

PROPOSING NEW LEGISLATION

If I had my way about it, I would see to it that a certain amount of cotton is mixed with pulp that is now being manufactured into paper and paper bags and for newsprint, which would not only give us a better quality of paper and paper bags, but a much better quality of newsprint than that which is being imported from Canada.

I am now working on a bill along this line. If we could do this, we would be able to consume an additional three to four million bales of cotton.

Give to our cotton farmers their own market and give us an opportunity to consume our own cotton along the line that I have been suggesting, and you will not have to vote millions for subsidy payments to farmers and you will be able to cut your relief rolls millions and millions annually. The thing that is necessary to bring back real recovery is purchasing power in the hands of from thirty to forty million people who are interested in and who are actually producing agricultural products.

THE SECRETARY AND MANY MEMBERS FROM SOUTH NOT INTERESTED

However, apparently, the people that I have been talking about are not interested in increasing the consumption of our own cotton in our own country.

They are perfectly willing to sit idly by and permit the paper interests and rayon to increase their output by leaps and bounds, they having taken our own cotton markets, as stated by Secretary Wallace some days ago, to the extent of four and one-half million bales in the last few years.

MILLIONS INVESTED IN PULP AND PAPER MILLS

Mr. D. G. Moon, consulting engineer, representing the pulp and paper interests of the South, gave out a statement at Savannah, Ga., some days ago, as follows:

The South has already invested and estimated two hundred million in developing its newest industry, making paper from pine trees.

More than twenty-seven million was spent in paper and pulp mill construction last year, and twenty-one million or more will be spent in 1939.

Approximately one hundred million has been spent since 1935. Consumption of paper is increasing annually at the rate of 1,000 tons daily.

It is high time that Members from the South become posted about these matters and demand that something be done to protect our own markets and the utilizing of our own products, all of which will bring about employment, increased purchasing power, and recovery.

SWEETPOTATO AND CORN STARCH

It has been proven by the Department of Agriculture, that if we would put a proper tariff on the importation of potato starch and all other starches, cassava and sago flours, which are being imported into this country, it would mean millions to the farmers of the South, in that we can manufacture out of sweetpotatoes, also out of corn, perfectly good starch, and these other products to take care of the needs of this country.

In the South we can grow millions of bushels of sweet-potatoes. Just think what this would mean as an additional cash crop, selling the No. 1's for food and the No. 2's and culls to starch factories, to that great class of innocent producers of farm products, who are prohibited from becoming independent citizens, financially, and from enjoying the good things of life, to which they are clearly entitled, because we absolutely refuse to give them their own markets for their own products, and refuse to take advantage of what we have already found out in connection with research work, as referred to, in the way of new uses for, especially, our cotton and many other farm products in this country.

The following letter received from the United States Tariff Commission on this subject should prove interesting:

My Dear Mr. Fulmer: I have your letter of January 20, asking us to make some estimate of a tariff to be placed on imported starch so as to enable the manufacturers of domestic potato starch to compete with foreign starches.

to compete with foreign starches.

Under the Tariff Act of 1930 potato starch was made dutiable at 2½ cents per pound, and all other starches not specially provided for, at 1½ cents per pound. Tapioca, sago, and arrowroot starches are duty free. The terms tapioca and sago starches are considered synonymous with cassava and sago flours, respectively. In the trade agreement with the Netherlands, effective February 1, 1936, the duty on potato starch was reduced to 1¾ cents per pound and the duty-free status of tapioca and sago starches was bound. In the trade agreement with the United Kingdom, effective January 1, 1939, arrowroot starch was bound duty free.

The principal starch produced in the United States is that obtained from corn. Production of cornstarch has averaged 2.500.000.000

The principal starch produced in the United States is that obtained from corn. Production of cornstarch has averaged 2,500,000,000 pounds annually during the last 10 years. Approximately two-thirds of it is converted into sirup, sugar, and dextrines, and one-third is sold for use in the food, laundry, textile, paper, and other industries. Potato starch is produced mainly from cull and surplus potatoes in Maine and the output varies from 10,000,000 to 30,000,000 pounds annually. It is used principally in the taytile industry.

Potato starch is produced mainly from cull and surplus potatoes in Maine and the output varies from 10,000,000 to 30,000,000 pounds annually. It is used principally in the textile industry.

The output of sweetpotato starch at Laurel, Miss., has increased from 140,000 pounds in 1934 to over 1,500,000 pounds in 1938. Most of it is used by cotton mills and a small proportion by laundries. A report issued by the National Bureau of Standards March 23, 1935, indicates that it is as satisfactory for use in papermaking as the commercial corn and cassava starches commonly used. Joint tests made by the Bureau of Engraving and Printing and the Bureau of Chemistry and Soils show that dextrine made from sweetpotato starch can be used as an adhesive for postage stamps, labels, and envelopes. Details concerning these uses are obtainable from the bureaus named.

The Tariff Commission is now engaged in the preparation of a survey dealing with the economic and competitive factors pertaining to starches and their derivatives. It is outside the functions of the Commission to state what tariff would be necessary to enable domestic starches to compete with imported starches. It is hoped, however, that the report will throw some light upon these matters.

Sincerely yours, RAYMOND B. STEVENS. Chairman.

ONE MILLION BALES

Instead of subsidizing our cotton to foreign countries, as proposed by the Secretary, I am wondering why the Secretary does not urge the President to put into operation section 22 A of the amended Agricultural Adjustment Act of the Seventy-fourth Congress, Public, 320, page 26, entitled "Imports," which I am inserting in my remarks at this point:

IMPORTS

SEC. 22. (a) Whenever the President has reason to believe that any one or more articles are being imported into the United States under such conditions and in sufficient quantities as to render or tend to render ineffective or materially interfere with any program or operation undertaken, or to reduce substantially the amount of any product processed in the United States from any commodity subject to and with respect to which an adjustment program is in operation, under this title, he shall cause an immediate investigation to be made by the United States Tariff Commission, which shall give precedence to investigations under this section to determine such facts. Such investigations shall be made after due notice and opportunity for hearing to interested parties and shall be conducted subject to such regulations as the President shall specify.

(b) If, on the basis of such investigation and report to him of findings and recommendations made in connection therewith, the President finds the existence of such facts, he shall by proclamation impose such limitations on the total quantities of any article or articles which may be imported as he finds and declares shown by such investigation to be necessary to prescribe in order that the entry of such article or articles will not render or tend to render ineffective or materially interfere with any program or operation undertaken, or will not reduce substantially the amount of any product processed in the United States from any commodity subject to and with respect to which an adjustment program is in operation, under this title: Provided, That no limitation shall be imposed on the total quantity of any article which may be imported from any country which reduces such permissible total quantity to less than 50 percent of the average annual quantity of such article which was imported from such country during the period from July 1, 1928, to June 30, 1933, both dates inclusive.

(c) No import restriction proclaimed by the President under this section, nor any revocation, suspension, or modification thereof.

(c) No import restriction proclaimed by the President under this section, nor any revocation, suspension, or modification thereof, shall become effective until 15 days after the date of such proclamation, revocation, suspension, or modification.

(d) Any decision of the President as to facts under this section shall be final.

You will note that under this section if the Secretary of Agriculture would become interested in our own markets, and our own people, many of whom, as stated, are absolutely naked today and sleeping on straw mattresses, he should be able to persuade the President to put into execution this splendid provision of law whereby he would be able, in the case of jute, to give to cotton farmers of the South a market for one even million bales of perfectly good American cotton.

Oh, no, when we talk about these imports from Canada, India, and other countries, we are told these people have to live and that it would interfere with our trade treaties.

PROPOSING TO WASTE THOUSANDS OF DOLLARS IN SOUTH AMERICA

Some days ago when we had up for consideration the agricultural appropriation bill, the appropriation subcommittee in charge of this bill offered an amendment carrying \$295,000 to be used by the Department of Agriculture in establishing laboratories in South America, having in mind the spending annually of thousands of dollars in research work in South America.

The statement was made by the committee that this line of work on our part would give us an opportunity of exporting a considerable amount of our farm products to South America.

In other words, this was another amendment and an appropriation in the name of the farmer.

I opposed this amendment at that time for two reasons: First, on account of the fact that we are not getting actual results for the thousands of dollars that we have been spending in the United States for research through the Department of Agriculture and other research activities.

Secondly, because while the amendment was offered in the name of the farmer, this type of research, if worth anything at all to the United States, would be in the interest of the handlers and manufacturers of rubber goods, for instance, the three large, monopolistic, price-fixing automobile-tire manufacturers. According to the information that I have, we need not worry about research work in any line except what

should actually be done for agriculture. Listen to these headlines carried in the Wall Street Journal some days ago:

Rubber. Rubber, a versatile industry, with 3,200 products already in use, expands research program seeking even broader markets.

I am told that out of the thousands of mattresses bought by the Army and Navy, they do not buy cotton mattresses, but I understand that their mattresses contain a considerable amount of rubber.

Listen to these headlines in the Wall Street Journal:

Wool and Cotton. Wool and cotton losing steadily to rayon in

As previously stated, apparently these people who are continually "bellyaching" about our foreign markets, even to the extent that they would subsidize our cotton in the interest of foreign countries at the rate of 2 cents per pound, are not concerned about the real facts, as indicated in these headlines, which are carried in a New York paper.

SOMEONE IN THE DEPARTMENT SHOULD BE INTERESTED

There should be someone in the Department of Agriculture, perhaps the Assistant Secretary, Mr. Brown, of Georgia, coming from a cotton State, who should be willing to stand up and demand in the face of these facts a program in line with that which I have been talking about, which is really the only program that will save the cotton industry for the South.

SOUTHERN MEMBERS OF CONGRESS

It would appear to me that many of the Members of Congress representing the cotton South, with these actual facts staring them in the face, should attempt to do something along these lines, if we ever hope to be able to rehabilitate cotton farmers and save the cotton industry for the South

WARNING TO OTHER SECTIONS OF THE UNITED STATES

I want to warn the Members from other sections of the United States that they should be just as eager to help solve the cotton problems of the South for the reason that if we are to continue to give up our cotton markets for the importation of foreign goods continuing the cutting of cotton production and consumption of paper and rayon, naturally, we will be forced into dairying, producing of wheat and other grains, and the raising of hogs and cattle, all of which will tend to destroy many sections of this country.

JAPAN, ITALY, AND GERMANY

Japan used to buy lots of our cotton. Today Japan is the largest producer of rayon in the world, producing about 550,-000,000 pounds, of which 300,000,000 pounds is cheap, shortstaple rayon, which is used so as not to force Japan to buy our cotton.

Germany and Italy are doing the same thing.

The world makes 925,000,000 pounds of short-staple rayon fiber now, and production is still growing, using wood pulp and cheap labor.

Is there a Member here from the Cotton South that does not know that the pulp interests have bought up thousands of acres of pine areas that are growing into wealth annually protected by Federal aid for fire protection while farmers' pine trees, pulpwood, have been and are now being bought by these pulp interests for less than the cost of cutting and delivering at these pulp mills. The sad story is there is very little being done to assist farmers to do that which they are unable to do themselves, that is, reforesting their cut-over woodlots and their submarginal lands which are being forced out of agricultural production under the farm program.

MANY MANUFACTURERS OF COTTON NOT INTERESTED

Many of the manufacturers of cotton are not worried about the replacement of our cotton with rayon and paper, in that they are now using rayon in mixtures with cotton and a number of cotton mills are changing from cotton to

What about cotton farmers?

As usual, they are working long hours, operating as individuals, unable to organize, producing farm products to feed and clothe the world, and at a price that is bringing poverty and misery to millions of our people.

I TOLD YOU SO

With the present trend of "do nothing" by the Agricultural Department and the Congress in the way of protecting the farmers' markets and the increasing of the consumption of their cotton that is being replaced by foreign imports and by other products, as previously stated, the years may not be many before the few of us who have been fighting the farmers' battles will be in a position to say, "I told you so."

The Natural Resources Bill

EXTENSION OF REMARKS

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Monday, April 10, 1939

ANALYSIS AND BRIEF IN SUPPORT OF H. R. 3121 BY HON.
JOHN M. COFFEE OF WASHINGTON

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein a systematized explanation of a bill to set up a National Natural Resources Corporation. Because of the widespread interest in the measure, I believe that a careful reading of the analysis I have prepared will be very helpful in assisting the readers to arrive at a full understanding of this very vital and important subject.

In connection with the statement I have prepared I have sought and received assistance from the Peoples' Lobby, Inc., Benjamin C. Marsh, executive secretary. This organization is engaged in a laudable endeavor to acquaint the people of America with governmental problems, and to suggest constructive means by which the conservation cause's problems can most readily be solved.

The statement is as follows:

I. ANALYSIS OF BILL

PURPOSE OF BILL

Section 1: States "that the purpose of this act is to provide for the public operation of the coal, electrical energy, oil, and natural-gas industries in the continental United States, and of their products. It is declared to be in the public interest that these industries be operated as a national unified system."

Section 2: Creates the National Natural Resources Corporation,

to be governed by a board of directors of five, appointed by the President, with the approval of the Senate, "without reference to political affiliation from among the persons best able for the task." Members are to give full time—the chairman receiving a salary of \$15,000 a year, the other four members \$10,000.

Employees are given full power to organize and to bargain collectively.

lectively.

Sections 3 and 4: Define the duties and powers of the Corporation, and the board, which may by resolution, create subsidiary corporations for convenience of operation and management.

PROCEDURE

Section 5: Prescribes procedure of the corporation.

It shall acquire the assets or stock of companies engaged in the production of coal, oil, water power, and natural gas, and of equipment for the use thereof, if possible by negotiation, with the assent of holders of three-fifths of any class of securities, being binding on the entire class, but it is empowered, if negotiations fail, to exercise the power of eminent domain.

It is to use loans made by any Government agency, to any con-cerns affected, "as a means of acquiring title to property involved,

upon equitable terms."

It is stipulated "fair compensation shall be determined on the basis of past and probable future earnings of the private companies, rather than on the basis of valuation of the physical plants and resources thereof."

Holders of securities of private companies are to be compensated by securities of the Corporation, for which the Treasury is to issue bonds at not over 3-percent interest, the income therefrom to be subject to Federal, State, and local taxation.

The capital stock of the Corporation is \$100,000,000. Section 6 prescribes operation of the Corporation.

"The Corporation shall operate coal mines, oil wells, water-power plants, and natural-gas fields, and plants for the manufacture or

distribution of the products thereof, and plants for the manufac-ture of equipment and appliances needed for the use thereof, ac-quired, insofar as shall be necessary, to meet the domestic needs and supply foreign markets."

It is to adjust production, determine prices to be charged, and create agencies for retail distribution.

Section 7 exempts the Corporation from all taxes.

Section 8 ends private operation of concerns affected, after 18

Section 9 creates an Advisory Joint Congressional Committee on Natural Resources to be composed of five Representatives and five

Section 10 requires an annual report to Congress, including a financial statement, and excludes the Corporation from the jurisdiction of the Comptroller General.

II. BRIEF FOR THE BILL

1. THE WASTE OF NATURAL RESOURCES UNDER PRIVATE EXPLOITATION The National Resources Board in its report, December 1, 1934, stated:

"Laws that forbid collective action between competitors have promoted waste, and in the case of the petroleum industry the law of capture has been strongly anticonservational in its effect."

Discussing the general waste in mineral production, it com-

mented:

"Surplus plant capacity has been the chief factor in promoting rulnous competition, which, in turn, has brought on wage reductions, loss of capital, and physical waste of resources."

tions, loss of capital, and physical waste of resources."
It also reports:
"In oil and gas the wastes are proverbial. At the present time in one field enough gas is being blown into the air to supply all domestic consumers in the United States. In bituminous-coal mining the avoidable loss is placed at 20 percent. Such wastes are seldom the fault of the individual operator, who has small choice under existing competitive conditions."

Concerning one of our sickest industries, it stated:
"Bituminous coal has suffered greatly from overexpansion, and some form of stabilization is needed to protect labor and capital and prevent waste of the resource."

The Bituminous Coal Commission reports that in February 1939

The Bituminous Coal Commission reports that in February 1939 there were 11,628 code member producers of bituminous coal.

Government regulation of the development and operation of

these natural resources and of the distribution of their products has failed.

Under N. R. A. the codes governing the four natural resources covered by this bill were largely drafted by the controllers of these industries and were not successful in protecting the consumers of the Nation.

The Bituminous Coal Commission has not succeeded in protecting consumers nor in stabilizing the industry.

2. KNOWN SUPPLIES OF COAL, OIL, WATER POWER, AND GAS

The Energy Resources Committee of the National Resources Committee reported in January 1939:

"No amount of confusing legalistic discussion of limitation of powers can obscure the reality of the choices before us.
"To protect the general welfare in our time, in an industrialized and urban economy, means above all else to build and maintain in good order a sound economic structure.

"In an industrial civilization the energy resources constitute the foundation of that structure."

The committee reports "briefly, our reserves may be stated as

"(a) Coal of all ranks, 3,000,000,000,000 tons, or the equivalent of 2,500,000,000,000 tons of bituminous coal, in comparison with 1937 production of about one-half billion tons and accumulated production through that year of 23,000,000,000 tons.

reduction through that year of 23,000,000,000 tons.

"(b) Petroleum in proven natural reservoirs, 15,000,000,000 barrels, in comparison with 1937 consumption of one and one-fourth billion barrels. These proven reserves are equal to about 4,000,000,000 net tons of equivalent bituminous coal.

"(c) Proven natural-gas reserves, from sixty to one hundred trillion cubic feet, in comparison with 1937 consumption of about two and one-third trillion cubic feet. The reserve is equivalent to three or four billion net tons of bituminous coal.

"(d) Recoverable oil from oil shale has been estimated at 32,000.

three or four billion net tons of bituminous coal.

"(d) Recoverable oil from oil shale has been estimated at 32,000,000,000 barrels, or the equivalent of 21,000,000,000 net tons of bituminous coal. This oil, be it noted, is recoverable only at a cost
far above the present cost of natural reservoir oil. In fact, it is
probable from present techniques that coal will provide liquid fuels
at lower cost than shales.

"(e) Feasible undeveloped.

(e) Feasible undeveloped water-power sites of the United States, when a market for their output exists, are estimated to be capable

when a market for their output exists, are estimated to be capable of producing six times as much energy as those now developed, but only a little more than twice the electric energy produced in 1937 for public use by fuel and water-power plants combined (64 percent by fuel plants and 36 percent by hydro plants).

"All our water power, including both that already developed and that feasible of development, could produce energy annually equivalent to only about one-fourth of the energy contained in all mineral fuels consumed in the country in 1937 for all purposes. Thus it can be seen that water power can supply only a fraction of our energy requirements. The mineral fuels must bear the main burden." burden."

Of coal reserves it states, "More than half is represented by low-grade bituminous coal and lignite."

It reaches the conclusion:
"The fields of remedy in a conservation program seem to lie (1) in promoting greater efficiency in the production of mineral fuels

from the standpoint of recovery; (2) in promoting greater economy in the use of fuels; and (3) in placing a larger share of the energy burden on lower-grade fuels and water power.

"These responsibilities must rest primarily upon the Federal Government, for the Federal Government is the only agency which represents all national interests and the only agency which can effectively cope with interstate problems. The energy resources industries are thoroughly interstate in production as well as in the use of their products."

3. UNIFIED OPERATION OF SOURCES OF ELECTRICAL ENERGY IS ESSENTIAL

Hon. Gifford Pinchot, foremost conservationist, years ago described the efficient type of organization with the name "giant

"Giant power seeks the cheapest sources of power and hence Giant power seeks the cheapest sources of power and hence the cheapest rates. It proposes to create, as it were, a great pool of power into which power from all sources will be poured and out of which power for all uses will be taken."

The National Resources Board, in this report, after citing prodigious wastes, exonerated the individual:

"Such westes are seldom the fault of the individual operator."

"Such wastes are seldom the fault of the individual operator, who has small choice under existing competitive conditions."

They are the fault of the Nation, however, which will suffer from

such wanton waste.

4. CHEAP RAW MATERIALS ARE ESSENTIAL

The National Resources Board, in 1934, stated:
"The future of our industries depends on an abundance of cheap
metal and cheap fuel."
The present bill deals with the Nation's energy resources.
The Bureau of Internal Revenue reports about 852 corporations

extracting and refining petroleum and other mineral-oil products

Gross income____

 Gross income
 \$3,716,885,000

 Deductions
 3,492,258,000

 Net income
 224,627,000

The annual reports of the 20 major oil companies give their total assets December 31, 1936, as \$8,257,557,108, of which the Standard Oil Co. of New Jersey claimed \$1,841,849,697.

On December 31, 1937, the total reported assets of these 20 major oil companies were nearly nine thousand million dollars.

In 1937 their net profits aggregated almost \$566,000,000, of which Standard Oil Co. of New Jersey reported nearly \$148,000,000, or about one-fifth

about one-fifth.

In 1931 these 20 companies had a net loss of \$41,000,000!

There were in all, 19,345 companies in the petroleum industry in 1936, of which 2,450 were producers, 240 pipe-line transporters, 570 refiners, 335 natural gasoline plant operators, and 15,750 marketers—jobbers, etc.

At the hearings on Senate Resolution 295, "High cost of gasoline" (1924), it was testified that these 20 big concerns then had approximately 87 percent of the business; owned or controlled more than 99 percent of the interstate trunk-line pipes, through which nearly four-fifths of the crude oil produced is transported; and owned or produced over half of the production, at that time, of all crude petroleum.

The Interstate Commerce Commission gives the following data about the 59 carriers by pipe line, which it regulates, for 1937: Investment in carrier property_____ \$802, 945, 910

 Operating revenues
 248, 645, 057

 Operating expenses
 99, 641, 087

 Total pipe-line taxes
 38, 562, 724
 Net income_____ 102, 796, 351

This Commission reports that class I railways (all major ones) paid for coal in 1937 (including a small amount for transportation) \$218,176,000, and for fuel oil \$67,401,000.

5. UNIFIED OPERATION AND ECONOMIC PLANNING FOR NATURAL RE-SOURCES ARE IMPOSSIBLE UNDER PRIVATE OR COMPETITIVE OWNERSHIP

Ownership is the essence of planning, and under private ownership of natural resources, particularly, of these four competing natural resources, economic planning, or even attempted control, is impractical.

Under private ownership waste may be prevented through governmental control, but such prevention is almost certain to be merely negative, resulting in nonproduction of electrical energy

Public control can prevent waste, but only public ownership can

provide plenty.
As the energy resources committee state:

As the energy resources committee state:

"Bituminous coal, petroleum, natural gas, anthracite coal, and water power—in descending order of relative contribution to the Nation's energy supply—these are the energy foundation stones of our industrial civilization. A policy for any one of these resources is bound to affect its relative position with respect to the others. It is difficult in the long run, therefore, to envisage a national coal policy or a national petroleum policy or a national water-power policy without also in time a national policy directed toward all these energy producers—that is, a national energy resources policy."

Under private ownership these four God-given sources of energy are competitive and wasteful. Only under public ownership can they be cooperative and coordinated for public service.

The committee reports:

"Of the 1937 production of electricity for public use, 36.1 percent

"Of the 1937 production of electricity for public use, 36.1 percent was derived from water power; 51.3 percent from coal, mainly

bituminous; 7.8 percent from natural gas; and 4.4 percent from oil, with a very small amount from waste fuels such as sawmill refuse. Use of fuel for generating electric energy represented only a small fraction of the total market for coal, oil, and natural gas; a small fraction of the total market for coal, oil, and natural gas; but most of the water-power output was used for this purpose. The proportion of electric energy for public use derived from water power has ranged from 32 to 40 percent since 1920. The proportion derived from natural gas and oil has increased at the expense of the proportion derived from coal, although the actual amount of electric energy generated from coal for public use has steadily increased and in 1937 was more than twice what it was in 1920."

6. CONDITIONS OF PAYMENT FOR NATURAL RESOURCES

The National Resources Board in its 1934 report reminds: "Basically, absolute ownership still resides in the State (either individual Commonwealth or Nation) and under the police power the State may constrain the private use of land within bounds set by the public interest."

The provision in the bill, "fair compensation shall be determined on the besis of past and probable future earnings of the

The provision in the bill, "fair compensation shall be determined on the basis of past and probable future earnings of the private companies, rather than on the basis of valuation of the physical plants and resources thereof," has equity, both legal and in economics.

Bankrupt concerns have no commercial selling price.

Nearly all major concerns in the extractive industries, as well as small ones were on the verge of bankruptcy, or over, in early

The collapse of consuming power of the masses caused the power of these concerns to produce profits to collapse, also.

Consuming power was developed by enormous Government expenditures, largely through borrowings, and is maintained only by Government expenditures.

Government expenditures.

A complete cessation thereof, for even 3 months, would paralyze production and profits of coal, oil, water power, and gas concerns.

How much more than zero is their net worth?

The National Bituminous Coal Commission in its second annual report (1938) states: "The average per-ton costs of the commercial mines during this period—April to December 1937—including only the items specified in the yardstick of costs which Congress has laid down in the act, and exclusive of interest, income taxes, and bad debts, amounted to \$2.077 a ton. The average realization obtained during the same period was \$1.964 per ton.

"At this rate the commercial mines were losing over \$37,000,000 a year."

While some mines then and since, doubtless, showed a profit, this was chiefly due to suspension of antitrust laws under the Guffey Coal Act, which ended wildcat production.

Capitalizing present and prospective losses does not constitute

or create a selling price, even when government seeks acquisitute or treate a selling price, even when government seeks acquisitute. It is not consistent with democratic conceptions of government, either, that corporations should capitalize succor extended to them by government as a basis for permanent exploitation of consumers or for gyping government—that is, the taxpayers of the

consumers or for gyping government—that is, the taxpayers of the Nation—when government takes over.

Public assumption of heavy corporate debt, whether prudently, honestly, or dishonestly incurred, is neither an economic nor legal corollary of public ownership.

Ability to earn a profit without government subsidy or help is essential to prove any net selling price, and few natural-resource concerns, covered by this bill, have recently demonstrated that ability.

Dr. John H. Gray and Jack Levin, in their book, The Valuation and Regulation of Public Utilities, state:
"When the courts insist upon remunerating utilities upon the when the course maste upon remuterating unities upon the basis of fair value or present value, they are inventing a concept unknown to the market place and foreign to economic analysis. Applied as a legalistic concept in the protection of the private-property rights of holders of public monopolies, it circumvents any effective approach to the problem of securing necessary public services at the minimum cost required to induce performance of the services.'

This holds equally true as to acquiring public ownership.

These valuation experts also state:
"The debatable questions of desirable social policy, under a democratic form of government, can best be determined by the legis-

This is preeminently true of the supreme legislative body of this Nation—the Congress—on procedure in acquisition of natural resources.

7. MAKING ELECTRICAL ENERGY AVAILABLE TO CONSUMERS

This bill specifically states that the corporation shall not only acquire and operate coal mines, water-power plants, etc., and "plants for the manufacture or distribution of the products thereof," but also "plants for the manufacture of equipment and appliances needed for the use thereof."

The high prices charged by private manufacturers of refrigerators, separators, and other essential equipment and appliances to permit the fullest domestic utilization of electrical energy has much reduced the usefulness of Federal investment in energy-producing undertakings.

producing undertakings.

Only about one-fifth of the farms of America are electrified now.

This bill seeks, in the only effective way, to meet the further needs of the housewives and the homes of America, and to lighten daily household tasks in millions of American homes, in cities, and on

The Energy Resources Committee concludes:

'Coal, oil, natural gas, and water power must serve our needs, each on, oil, natural gas, and water power must serve our needs, each in its proper place and each contributing its best share to the total of national welfare. But the free play of undirected competition cannot be relied upon to resolve unaided the maladjustments in these industries that have disturbed our national economy. We should begin to use our heritage of abundance more wisely."

The National Natural Resources Corporation, this bill creates, is a vital next step in using "our heritage of abundance."

8. INTERNATIONAL COOPERATION

The bill opens the path to more friendly international relations and cooperation.

Mr. Ludwell Denny in his book, We Fight for Oil (1928), stated:

Mr. Ludwell Denny in his book, We Fight for Oil (1928), stated:
"Rightly or wrongly, we are actively preparing for the AngloAmerican war which our naval men believe will be fought to determine commercial supremacy. The American people are now less
opposed than formerly to such preparedness against Great Britain.
They think—justly or unjustly—that Great Britain at the Coolidge
Geneva Conference tried to trick America into permanent naval
inferiority and refused American pleas for equality.
"To understand this attitude, fostered by United States officials,
one must start with the Washington Arms Conference."

He also pointed out:
"The struggle is not alone between American and British cani-

"The struggle is not alone between American and British capital. It is between American capital and the London Government. Of the two dominant British companies, the London Government has close unofficial relations with one and has direct controlling ownership of the other. That makes oil an international explosive."

While events of the past decade have obscured this conflict, they

have not eliminated it

Peaceful relations between all nations will be much more attainable, with public ownership, not only of oil but of all other natural resources.

resources.

Such resources must be put under international control and made available at fair prices to all nations seeking them for peaceful purposes, and all nations need them for such purposes.

We have learned we cannot achieve peace by exorcising war—

peace must be planned for.

International economic planning is as impractical as national economic planning, with private ownership of basic natural resources.

Senator James Hamilton Lewis

EXTENSION OF REMARKS

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1939

Mr. RANKIN. Mr. Speaker, we are told that "When sorrows come, they come not single spies, but in battalions."

Again we find the flag on the Capitol at half-mast, which reminds us that the Grim Reaper is ever busy at his appointed work.

This time he has hurled his unerring dart at a distinguished Member of the United States Senate, and has entered upon his inexorable scroll the name of James Hamilton Lewis, one of the most lovable, most colorful, and most attractive men it has ever been my privilege to know.

Able, affable, learned, and alert, a master of English, and a genius at repartee, he was one of the most effective debaters who has ever adorned the Senate of the United States.

He was my friend; for the last few years I had been rather intimately associated with him. A year or two ago I had a spell of illness, and during the time of my recovery I spent a good deal of time sunning in the park near the Senate Office Building, and often came in contact with Senator Lewis, who was taking the same treatment. In addition to his many other admirable qualities, I found him to be a profound philosopher. Such men are becoming rare, while the need for them is growing.

Senator Lewis was once referred to by Speaker Thomas B. Reed as "the rainbow" because of his superb eloquence, bubbling humor, sparkling wit, attractive personality, and un-

usual, if not gorgeous, apparel.

He was a gentleman of the old school in both conduct and appearance. He was the last Member of the United States Senate to wear a beard, which helped to attract to him the attention of the Nation-and about which a great deal has been written. It would be interesting to trace the history of

the wearing of beards on Capitol Hill and its association with the various changes in the life of the Nation.

During the Revolutionary War there was not a single general in either army or a single Member of the Continental Congress who wore any beard at all. Their pictures are all displayed in the rotunda of the Capitol. Anyone who desires to do so can verify this statement. Not one of them wore even a mustache.

Soon after the Revolution men began to grow beards, and by the time the Civil War came on it was a common practice. I have been unable to find the picture of a single general in either army during the Civil War who did not wear a beard. The nearest to an exception to that rule I have found was General Beauregard, of the Confederate Army, who wore a moustache and goatee. Some one has said that soldiers in the Civil War wore beards because it was inconvenient for them to shave. But the same conditions prevailed in the Revolutionary War where all the generals were clean shaven.

Men who had not worn beards prior to the Civil War period began to grow them. Neither Jefferson Davis nor Abraham Lincoln wore a beard prior to that time, but when the war came on they both followed the trend and both grew beards, which they wore to the ends of their days. Lincoln was the first bearded President.

Forty years ago practically every man in both House and the Senate wore a beard, as did members of the Supreme Court and large numbers of men in private life who had served as soldiers in the Civil War.

About the turn of the century the custom began to wane. until there were only two disciples of that fashion left in the two Houses-the gentleman from Massachusetts [Mr. TINK-HAM] and the able Senator whose death we mourn today, the Honorable James Hamilton Lewis, of Illinois.

To a man like me, who grew up among Confederate soldiers, there was always something dignified, profound, and patriotic, if not patriarchal, about a flowing beard that inspired reverence and respect. No man ever wore his classical appearances more becomingly than did the distinguished Senator from Illinois.

Time will move on; his place will be taken but not filled by someone else.

Statesman, scholar, gentleman, and friend, his memory will linger in our hearts until time shall be no more. I could not express my estimate of him better than to use the oftrepeated words of Shakespeare:

He was a man, take him for all in all, I shall not look upon his like again.

Colorado to Representative Edward T. Taylor

EXTENSION OF REMARKS

HON. JOHN A. MARTIN

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Monday, April 10, 1939

RESOLUTION BY THE SENATE OF THE STATE OF COLORADO

Mr. MARTIN of Colorado. Mr. Speaker, the State of Colorado is justly proud of the fact that Representative EDWARD T. TAYLOR, of that State, is now serving his sixteenth consecutive term in the National House of Representatives, a record of continuous service not equaled by more than 7 or 8 of the 8,000 men who have been honored with a seat in Congress since the adoption of the Constitution.

The State also deeply appreciates the fact that her son is chairman of the great Committee on Appropriations, the most powerful and important of all congressional committees, at a time when expenditures of eight to nine billion dollars are being made annually. This remarkable-I may say extraor-

dinary record of service in Congress was immediately preceded by 12 years of service in the State Senate of Colorado. As convincing proof of the industry and prestige of Mr. TAYLOR in the Colorado State Senate is the fact that during his term, Colorado then being a comparatively young State, with its laws still in the formulative process, he was the author of more statutes and constitutional amendments than perhaps any State legislator in the history of the Nation.

Mr. Speaker, as a testimonial to Mr. Taylor's especially long and distinguished public career in both State and Nation, the Colorado State Senate has just done him the honor of unanimously passing a resolution of felicitation, sponsored by all members regardless of party affiliation, to be presented to him here in the city of Washington, together with a gavel, appropriately inscribed, as a further token of the esteem and affection in which he is held by his successors at the State capitol in Colorado. Mr. Taylor has been the recipient of many gavels, but none, I undertake to say, can compare in beauty and historical significance with that accompanying the resolution. It is made of woods and metals from original equipment of the Colorado State Capitol Building.

The resolutions and gavel were also accompanied by a personal greeting signed individually by all the members of the Colorado State Senate.

I deem it an honor to have had these tokens of the very high regard in which Mr. TAYLOR is held in Colorado forwarded to me for presentation to my colleague. This presentation was made this morning in the office of the Speaker of the House of Representatives and in the presence of the Speaker, Mr. BANKHEAD, of Alabama, and the majority leader. Mr. RAYBURN, of Texas, and his Colorado colleagues in Congress, Mr. Lewis, Mr. Cummings, and myself.

All present at the ceremony made fitting responses to Mr. Taylor's acceptance of these tokens and wished him continued health, happiness, and service.

Mr. Speaker, by leave of the House, I submit herewith a true copy of Senate Resolution No. 15, referred to, the original, due to the fact that it is signed by the officers of the Colorado State Senate, having been delivered to Mr. TAYLOR.

Senate Resolution 15

Whereas the Fourth Congressional District of the State of Colorado is represented in the National Congress of the United States

of America by the Honorable Edward T. Taylor, and
Whereas the said Honorable Edward T. Taylor is the present
chairman of the Committee on Appropriations in the National
House of Representatives, and as the chairman of the said Appropriations Committee, the said Congressman Taylor presides over
the meetings of this most important committee of the National

the meetings of this most important committee of the National House of Representatives; and

Whereas the said Honorable Edward T. Taylor is the first Congressman from west of the Mississippi River to hold such important post in the National Government for as long a period of time as the said Congressman Taylor has held such position, and he is one of but two Congressmen from west of the Mississippi to have ever held the chairmanship of said committee; and

Whereas the said Honorable Edward T. Taylor is now serving in his thirty-first consecutive year as a Member of the National

whereas the said honorable Edward T. TAYLOR is now serving in its thirty-first consecutive year as a Member of the National Congress from Colorado; and
Whereas previous to his election to the National Congress of the United States of America, the said Honorable Edward T. TAYLOR served for 12 years as a member of the honorable Senate of the

State of Colorado; and
Whereas the said Edward T. Taylor has a hobby of collecting
gavels which have been presented to him by organizations
throughout the domain of the United States and its continental
and insular possessions; and

Whereas the people of the State of Colorado, and more particularly this honorable senate of the thirty-second general assembly, are appreciative of the public service which the said Congressman EDWARD T. TAYLOR has rendered to his fellow men throughout his

many years of active participation in community, State, and national affairs: Now, therefore, be it

Resolved by the Senate of the Thirty-second General Assembly of the State of Colorado, That the honorable Senate of the Thirty-second General Assembly of the State of Colorado have designed and made an appropriate gavel to present to the said Honorable Edward T. Taylor for his use in presiding over the Appropriations Committee of the House of Representatives of the United States of America; and be it further

Resolved, That the said gavel be so designed that when it is made it will carry the impression of the seal of the State of Colorado; and be it further Resolved, That a copy of this resolution, together with the gavel herein referred to, be forwarded to the said Congressman Edward T. Taylor with the congratulations and felicitations of this headership heddy. honorable body.

The Social Security Act

EXTENSION OF REMARKS

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Monday, April 10, 1939

Mr. PITTENGER. Mr. Speaker, hearings have been under way before the Ways and Means Committee of the House of Representatives for a period of over 9 weeks in connection with old-age assistance and pensions. They have now been concluded, and announcement has been given publicity to the effect that the committee expects to have a report before Congress by May 1. Over the district I represent there is a feeling that the present Social Security Act is inadequate, cumbersome, and that it should be materially changed. I refer to the old-age assistance and old-age insurance clauses in the act. In my opinion those sections should be abolished and in their place old-age pensions should be provided in accordance with testimony before the Ways and Means Committee. The new pension law should be on a national basis and provide for a removal from gainful occupation at the age of 60 years. A tax should be collected that would make it possible to accomplish these objectives and give to aged people an adequate income, so that younger people can replace them in industry.

The present Social Security Act is complicated and expensive to administer. Its tax features, in my opinion, are handicaps to any recovery from a depression, which many believe to be the worst in all history. I think that the huge reserve funds that are planned to be raised under the existing law are unsound, and while good in theory, they just do not work out in practice. If the Ways and Means Committee should decide not to repeal the present law, then the tax under the present law should be eliminated, and a pay as you go policy substituted. Whatever the policy of the committee, the present payments to old people are inadequate and should be increased. I am not so much interested in the name on a bill, or in the number of the bill, but in the results that it will produce. You may call it No. 2 or No. 11, and I will support it if it provides a substantial pension of \$50 or \$60 per month for elderly people who reach the pension age.

I have before me a letter which is typical of many I have received regarding the national old-age pension legislation. This party is a wide-awake citizen in my district. He, like many other substantial people, recognizes a duty to our aged people. He sees the necessity of change in the existing social security law. This is what he says:

I am writing you in behalf of the elderly people living here

* * * who are now on the relief pension roll receiving a scant
\$15 per month and practically no aid of any other kind to assist
in their livelihood. * * * It is unbelievable and most heartbreaking to think in a Nation as wealthy as this that poverty to
such an extent really exists. I have personally made a survey of
this situation here and find that these elderly people are poorly
clad, half starved, and no money with which to buy fuel to keep
Old Man Winter out of their shacks.

In this connection I have the comment of a businessman who believes in the national old-age pension plan, and in writing me he says:

I believe that a good national pension system without red tape would do a great deal to reduce the crime bill, as it would have a tendency to create more employment for the young people, and I am convinced that the sooner we adopt a system of this kind the sooner we will snap out of the confusion and uncertainty of our eco-We hope you will give this serious consideration.

So, Mr. Speaker, there is real need of legislation along the above lines. You may call it Townsend or general welfare or something better, if possible, but the principle of a national old-age pension is sound and ought to be enacted into law. This will be one step toward recovery from the depression. We have from eleven to twelve million people out of work in the United States. The unemployment problem has not been solved. It is with us now as it was in 1933. There are probably more unemployed now than there were in 1933. Conditions have become worse instead of better under various experiments that have been tried. If you want to call the pension plan an experiment, then I say try it, for it cannot be worse than some of those we have had the past 6 years.

This pension plan alone will not restore prosperity, but it will help. People are beginning to realize that we cannot go on increasing taxes to feed Government bureaus and increase the burdens on business and industry and get anywhere. The money that is now wasted, if properly used, would take care of the old folks.

We need economy in Government; a decrease in tax burdens, so that business can operate at a profit; and when that happens there will be pay rolls and jobs instead of continued unemployment. Some of the very laws that now burden industry and which had for their purpose to help the laboring man are proving a real detriment to him and are retarding recovery. I have before me an editorial from one of the leading newspapers in my district. It says:

Leaders of the national administration are beginning to realize that rigid rules for the benefit of labor can defeat their own pur-pose. They are taking steps now to undo some of the damage that has been done.

I call attention to this editorial, Mr. Speaker, to show if the old-age pension plan is to succeed, there must also be sound Government policies in other directions to create employment in order that this program may work out successfully

Army Day Address

EXTENSION OF REMARKS

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Monday, April 10, 1939

ADDRESS BY HON. ANDREW J. MAY, OF KENTUCKY, APRIL 6, 1939

Mr. MARTIN of Iowa. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. Andrew J. May at the Army Day banquet of the Military Order of the World War, held in Washington, D. C., April 6, 1939:

Mr. Toastmaster and others, to me it is a great honor to be in-vited here tonight to address this meeting of the Military Order

of the World War, and I deeply appreciate it.

Nearly 25 years ago, a shot rang out and a European crown prince fell a victim of an assassin's bullet and in a few days the armed fell a victim of an assasin's bullet and in a few days the armed forces of militaristic Germany ruthlessly invaded Belgium on the road to Paris. Thank God they never reached it! For more than 2 years thereafter this peace-loving Nation, known around the world as the "land of the free and the home of the brave," tolerated the destruction of our commerce on the high seas, and the sinking of our ships of commerce with the destruction of the lives of thousands of defenseless peaceable American citizens, in a vain effort to keep out of war. Clinging tenaciously to the wise policy and sound advice of the Father of our Country, we hoped in vain for "peace with all nations and entangling alliances with none," but when patience ceased to be a virtue and there was no alternative, we reluctantly went to war, and the world knows the alternative, we reluctantly went to war, and the world knows the result. Brave soldiers, symbolized by this great organization, shouldered arms, went to the front, sacrificed, suffered, fought, and thousands died, in what we then believed to be a world crusade to preserve for us and our children the great blessing of freedom and democracy, and regardless of what we then believed, it seems now almost the irony of fate that these words "freedom and democracy" become more vital as we view the situation throughout the world and behold the approaching storm signals from the four corners of the earth. In matters of peace and the desire of our people for freedom and liberty we are no different today than we were a century and a half ago; with the exception of certain groups of people who have sought refuge here from the persecutions and oppressions of the Old World and yet have been so ungrateful that in many places they are in conspiracy against and are seeking by subversive methods to overthrow our form of government, we are

LXXXIV-App-87

just as loyal and patriotic. I, for one, believe that we should stop giving exclusive attention to Old World dictators until we have properly disposed of these enemies within our own gates by depor-

properly disposed of these enemies within our own gates by deportation or other appropriate methods.

Let's get rid of the termites that seek to undermine our Government. They condemn and publicly and openly denounce our country, and yet, if we moved to deport them and send them back to the country whose alien theories they would impose upon us, they would resist to the last inch of ground, and in the end would require the entire police force of the United States and part of the Army to hurdle them on a boat bound for any one of these foreign lands from whence they came. This statement does not refer to the multiplied thousands of immigrants that have come to make their homes with us and live in obedience to our laws and support our homes with us and live in obedience to our laws and support our Government and its institutions, but America has no place for a

When I stood yonder on Constitution Avenue this afternoon with our Secretary of War and his assistant, the Chief of Staff, and other distinguished members of the General Staff and watched go by with matchless precision those highly trained units of the Regular Army and civilian components, it did not impress me as an army of matchiess precision those highly trained units of the Regular Army and civilian components, it did not impress me as an army of aggression or an instrument of forceful conquest, but it did mean to me, and I am sure to all those who saw it, the result of arduous duty well performed by a great Secretary of War and his aides, all of whom have followed his brilliant leadership, a leadership unexcelled in the annals of modern times for effective military achievement, which has been made possible only through well planned and organized coordination of effort and sympathetic cooperation by that matchless soldier and military statesman, Chief of Staff Gen. Malin Craig, and all those distinguished men who have worked with him, forgetting not that great man of peace that occupies the position of Commander in Chief, and a wise and patriotic Congress. It did mean to me that for the future we may know that today (Army Day) American democracy was on the march to higher and nobler achievements and that under God and this sort of leadership and statesmanship, not found elsewhere on this earth except amongst Americans, the shameful and ignoble surrender of Munich shall never occur in the Western Hemisphere. It cannot and will not be permitted here, else America must cease to be the "Land of the free and home of the brave." This is no threat or challenge to any other nation or people on the globe, not even to those who are compelled to live under arrogant and oppressive dictators, but it does mean an admonition to all who would dany to mean and wanner whether them. nation or people on the globe, not even to those who are compensed to live under arrogant and oppressive dictators, but it does mean an admonition to all who would deny to men and women, whether they be black, brown, or white, rich or poor, Protestant, Catholic, gentile, or Jew, the God-given right to life, liberty, and the pursuit of

be black, brown, or white, rich or poor, Protestant, Catholic, gentile, or Jew, the God-given right to life, liberty, and the pursuit of happiness.

It did mean to me peace, tranquillity, and protection of 130,000,000 peace-loving Americans whose right to worship God according to the dictates of their own conscience has not yet been denied them. It was a proclamation to me and to you and the whole world that America stands for the American "good neighbor" policy—a policy that means that a real, genuine neighbor is one who believes and insists that "a good neighbor is one who will do unto him." The good-neighbor policy is equally applicable to nations as to individuals, and the same sacred principles of justice and right underlies both relations. A good neighbor is not one who, because of some advantage he possesses, will cross the division fence and by force and arms, rock or dynamite the neighbor's castle in which his family reposes, or by brute force drive him and his family from their homestead into darkness and despair. Likewise, I do not believe that a nation which goes out to bomb and dynamite helpless women and children of a neighboring nation from the air is playing the part of a good neighbor; nor do I believe, or do you believe, that a nation that by sheer force and desire for the possessions and property of the people of a neighbor nation is engaged in the habits and practices of the good neighbor when he invades or makes conquest of his neighbor nation. Nor is it the act of a good neighbor to forcefully close the doors of a church against the faith and hope of a sin-sick soul, whether he be Catholic, Protestant, or Jew, or whether he acknowledge obedience to the Prince of Peace or bow in humble supplication before a graven image of wood or stone.

But what of the times? Today the whole world is crying "Peace,"

wood or stone

But what of the times? Today the whole world is crying "Peace," and yet nearly every country on the globe is feverishly preparing for war. Under these conditions what is the wise course for us? Our duty is plain. We must provide adequately for our own protection, and to do that we must put our own country in a position to maintain, protect, and foster its own cherished institutions. To do this we must become independent of outside sources and markets for the strategic and vitally necessary raw materials necessary to carry on a prolonged struggle with either a foreign or domestic foe,

carry on a prolonged struggle with either a foreign or domestic foe, or both, if necessary. This can never be done by transforming our system of government from a republic to a collectivist state, nor can it be done if we break down the self-determination of the individual citizen or socialize American industry.

We need not do either, and, on the contrary, we have our national-defense plans all formulated so as to coordinate and unify the efforts of both government and industry, with both harmoniously working together, for everyone knows that no matter how efficient and capable our armies, their efforts are all in vain unless we have that ever necessary second army, industry, in full cooperation with the fighting men at the front. The front army must have not merely arms and ammunitions in abundance, but they must have the patriotic and loyal support of all the people all

the time, and that mighty force of workers and producers back of the lines must and will keep the wheels of privately owned and privately operated industry rolling out the materials and supplies necessary to insure victory for our arms at the front, thus believing the people's Congress has wisely enacted laws to encourage and develop essential facilities for mass production by private industry of our needs in time of war. Other laws are now in process of enactment, and, except for the right of the Senate to debate, will soon be enacted into law. With these new statutes and the necessary appropriations, the sound, conservative, and modest program of our War Department is speeding toward a happy and successful conclusion that will put us in position to promote and preserve peace throughout the Western Hemisphere and insure that the Stars and Stripes shall continue to fly unafraid, at the mast of all our ships of commerce in the market places of all the earth. With this combined effort of government, labor, and industry the roaring factory wheels, the singing dynamos, and the ringing hammers of our millions of expert mechanics and skilled laborers marching peacefully and contentedly to and from the American mines, mills, and factories under the supervision of our wise and capable labor and industrial leaders that never have and never will desert in time of need, I respeat to you and to all the world, "Millions for defense, but not one cent for tribute or conquest." tribute or conquest.'

Status of Puerto Rico

EXTENSION OF REMARKS

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1939

ADDRESS BY HON. RAFAEL MARTINEZ NADAL, PRESIDENT OF THE SENATE OF PUERTO RICO

Mr. IGLESIAS. Mr. Speaker, Puerto Rico is an organized territory, an integral part of the United States under the supreme authority of Congress. The Treaty of Paris, between the United States and Spain, of 1899, in article II, provided that-

The civil rights and political status of the native inhabitants of the territories hereby ceded to the United States shall be determined by Congress.

The treaty contained no promise or declaration regarding the political status of the inhabitants of Puerto Rico affected by the cession, but left the matter entirely to be decided by

Mr. Speaker, under leave to extend my remarks in the RECORD, I include a speech by Hon. Rafael Martinez Nadal. president of the Senate of Puerto Rico, together with the letter of transmittal, as follows:

SENATE OF PUERTO RICO, San Juan, P. R., April 6, 1939.

Hon, SANTIAGO IGLESIAS. Resident Commissioner from Puerto Rico in Washington,

House Office Building, Washington, D. C.

Sir: In compliance with a resolution passed by the Senate of Puerto Rico in the sessions held on March 30, I have the honor to enclose herewith a certified copy of the speech of the Honorable Rafael Martinez Nadal, president of the senate, delivered in the sessions of this body held on the 24th of the aforesaid month, with the request that you ask its reading on the floor of the House of Representatives of the United States and that it be inserted in the CONGRESSIONAL RECORD. CONGRESSIONAL RECORD.

Respectfully yours,

ENRIQUE GONZÁLEZ MENA, Secretary of the Senate.

I, Enrique González Mena, secretary of the Senate of Puerto Rico,

That in the minutes of the session held by the Senate of Puerto That in the minutes of the session held by the Senate of Puerto Rico on the 24th day of March 1939 (the fortieth day of the third regular session of the fourteenth legislature) there appears the following statement made during said session by the president of this upper bouse, the Honorable Rafael Martinez Nadal: "Before proceeding any further I wish to make a few remarks which I want to have spread on the minutes.
"It is high time that I tell you what my real feelings are because of the ill-treatment that we are receiving from the Congress of the United States and from the national administration. Not

from the Congress alone, but from the national administration as

"While they make boastful utterances about democracy in the United States and feel authorized to combat those who they believe threaten democracy in the world, Puerto Rico is being treated not as under a republican form of government, but rather as under a Fascist government. Politically, our liberties have been curtailed for 40-odd years, and we have been unable to rule our own destinies. That is what they do to a people of our culture and our civilization; a people who for 40-odd years have endeavored to assimilate the purest principles of democracy; a people that have governed themselves judiciously, wisely, and prudently. But in spite of all the proofs we have given of having assimilated the principles of democracy and earned the attributes of true citizens of a republic, we are kept in a state of political subjection, and they are reluctant to grant powers to our legislature. It is not permitted to consider any legislative matter which may have the slightest shadow of unconstitutionality, but, on the other hand, we receive ukases from the Department of the Interior of the United States with bills drafted in Washington, ordering us to approve them just as they have been prepared, "While they make boastful utterances about democracy in the ordering us to approve them just as they have been prepared, regardless of whether or not they violate all constitutional principles of the United States or all the constitutional principles of

ciples of the United States or all the constitutional principles of our Organic Act.

"When these bills are sent to us, they come to us with the threat that if we do not pass them just as they have been drafted, there will be no more money for Puerto Rico. In the opinion of the national administration, all that is necessary to promote the happiness of Puerto Rico is to send us a few million dollars every year, so that the administrator of the P. R. R. A. can play politics in the island, and spend a large percentage in cement, roots, etc., and the truth is that almost the entire amount that is so 'generously' sent to us is again returned to the United States for the purchase of palls cement, lumber, rods, and galvanized group and erously sent to us is again returned to the United States for the purchase of nails, cement, lumber, rods, and galvanized iron, and only a small, a very small amount is left here for Puerto Rican labor. And the Congress passes laws which destroy the industrial, agricultural, and commercial wealth of Puerto Rico. Three or four million dollars are sent to us, and ten, fifteen, or twenty million dollars are taken from us.

agricultural, and commercial wealth of Puerto Rico. Three or four million dollars are sent to us, and ten, fifteen, or twenty million dollars are taken from us.

"They enter into trade agreements with Cuba, a foreign nation, an independent republic, not constituted by American citizens.

* * For Cuba are all the advantages, advantages in the tariff on pineapples and on sugar. For Puerto Rico are all the discriminations, all the disadvantages. A new trade agreement is now being prepared—not by the Congress but by the administration—which serves no other purpose than to improve the condition of the sugar producers of Cuba and injure the sugar producers of Puerto Rico. Trade agreements are entered into with Switzerland which help to ruin our industry still more. Trade agreements are entered into with England which destroy the agricultural coconut industry of Puerto Rico. Trade agreements are entered into with Switzerland which bring about lower prices, reduce the revenues from all needlework done in Puerto Rico, and thus cause the destruction of this industry. Even the Philippines are operating their needle industry to a better advantage than we are. The Wage and Hour Act is applied to Puerto Rico, but it is not applied to the Philippines. So that, while we are being oppressed, means are provided to foreigners for their development. The Costigan-Jones Act, passed by the Congress, condemns our people to starvation, condemns our agricultural laborer to failure to find a place to work, and to find what to eat. And the time will come when our agricultural workers will not find a place to work. But there is something which is more serious still. The administration and the Congress, knowing that our major, our greatest problem, is the overpopulation of the United States to promote the happiness of Puerto Rico, instead of making international agreements with Santo Domingo, Venezuela, and other countries of Latin America which have large areas of lands, instead of entering into agreements to enable our surplus population

who fiee from the power of Hitler than for the American citizens living in Puerto Rico, who are starving because of lack of work caused by the laws of the Congress of the United States.

"This is what I have been wanting to say for some time. This is what for months I have kept deep within me upon seeing the ill-treatment that we are receiving from the American Nation.

"From Washington they veto the bills that we pass in our legislature; from Washington they issue orders to the commissioners of the departments of our government. The Director of the Division of Territories of the Department of the Interior governs and directs in Puerto Rico, and our acting Governors cable Washington to find out what they have to do. And even to solve local municipality. to find out what they have to do. And even to solve local municipal conflicts cables are sent to Washington to find out what to do.
"Under these conditions all our struggles here are unnecessary if

"Under these conditions all our struggles here are unnecessary in later we are to come here and suffer the policy of the whip as prac-ticed by the Government of the United States. In my opinion, I consider all this useless. What is the use of killing ourselves in electoral campaigns to come here? It is not worth while to exert ourselves or to make any sacrifice to attain these positions. With a few little millions as red beads they want to win us over as they would the Negroes in the Zulu Islands, while they destroy all our

sources of wealth without providing other sources in their stead, while they destroy our longings to make our people happy, while they render our efforts useless. It is not worth while to come here. It is not worth while to struggle.

"What we ought to do is for all of us Puerto Ricans to get together once and for all and for all of us legislators to say that we

are de trop here. Let them come and take charge and make Puerto Rico happy, because we are unable to do so ourselves. It is only a comedy that we are playing here.

"Politically we have the Governors appointed by the administra-tion, surrounded by continental Americans who like to discredit Puerto Ricans and everything Puerto Rican, and to the shame of Puerto Rico there are Puerto Ricans who also lend themselves to this work of discredit. Really, men like myself, who have been struggling for 30 years in the public life of our country, cannot help but feel bitter discreted and discillusioned.

help but feel bitter, disgusted, and disillusioned.
"We loathe to see so much treachery and we feel disillusioned at having sacrificed so much in these struggles, because all this is not

having sacrificed so much in these struggles, because all this is not worth the sacrifice of the youth and the life of an honest man.

"I have taken advantage of this opportunity to say all this, to unburden myself. I could not keep these things to myself any longer. This is what I had to say to my friends of the senate. This is what I had to say to my country from this chair of the presidency of the senate. If, because I have said this, they want to destroy me, let them do so. That is their established practice; that is how they maneuver; they build up new leaders and destroy the old ones. They will say in Washington, 'Every friend of Martinez Nadal must be put out from every department, from every office.' All right; put them out. They will throw them out. But in the meantime, as long as I continue to fight and to be honest, nobody can put me out of the heart of the Puerto Rican people."

And for transmittal to the Resident Commissioner of Puerto Rico

And for transmittal to the Resident Commissioner of Puerto Rico in Washington, the Honorable Santiago Iglesias, in compliance with a resolution adopted by the Senate of Puerto Rico on the 30th day of March 1939, I issue, sign, and seal this certificate in my

Secretary of the Senate of Puerto Rico.

BUREAU OF TRANSLATIONS,
San Juan, P. R., April 6, 1939.

I, George W. Roberts, chief of the bureau of translations of the
Legislature of Puerto Rico, do hereby certify the foregoing to be a
full, true, and correct English translation of the original Spanish.

GEO. W. ROBERTS,
Chief, Bureau of Translations.

War Propaganda

EXTENSION OF REMARKS

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, April 10, 1939

STATEMENT BY WALTER WINCHELL

Mr. WOODRUFF of Michigan. Mr. Speaker, under permission to extend my remarks in the RECORD, I submit the following statement from Walter Winchell, the well-known radio news commentator. In view of the fact that the air, the newspapers, and the magazines are filled with insidious war propaganda, I submit this statement from Mr. Winchell in the belief that it should at this time be brought to the attention of every American citizen:

Once again Europe is rolling the loaded dice of destiny. Once again her miserable diplomats are pointing down the one-way street to war—as the only avenue to peace. And once again America is asked to play her role of the great international sucker!

is asked to play her role of the great international sucker!

The time has come for us to pause and consider. If we must have another Unknown Soldier, let us not ask him to die for an unknown reason. And just what will be accomplished by dying in the mud? He will not increase America's resources; the last war nearly ruined the Great Plains. He will not increase America's wealth. In the last war we loaned our gold and were gold-bricked in return. He will not increase our liberties—for no man may protest slaughter after it starts. The truth is that external disaster never solved internal trouble. We must develop our youth—not sacrifice it. America must learn that her sons abroad will bring monuments to her glory, but her sons at home are a monument to America's common sense. The future of American youth is on top of American soil—not underneath European dirt.

Hon. Bertrand H. Snell Honored by New York Delegation

EXTENSION OF REMARKS

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1939

ADDRESS BY HON. DANIEL A. REED OF NEW YORK, EULOGIZ-ING MR. SNELL'S SERVICES TO THE COUNTRY AND THE REPUBLICAN PARTY

Mr. CULKIN. Mr. Speaker, on Wednesday, April 5, 1939, the entire New York delegation, with Minority Leader Joseph W. Martin, of Massachusetts, as guest, gathered in the Speaker's dining room to honor their former beloved colleague the Honorable Bertrand H. Snell, minority leader of the House from the Seventy-second through the Seventy-fifth Congress, and a Member of Congress from November 2, 1915, to December 31, 1938.

The following members of the New York State delegation were present or participated in the tribute and testimonial

which was given to Mr. Snell:

LEONARD W. HALL, First District; BRUCE BARTON, Seventeenth District: Ralph A. Gamble, Twenty-fifth District; Hamilton FISH, Twenty-sixth District; LEWIS K. ROCKEFELLER, Twentyseventh District; E. HAROLD CLUETT, Twenty-ninth District; FRANK CROWTHER, Thirtieth District; WALLACE E. PIERCE. Thirty-first District; Frances D. Culkin, Thirty-second District; Fred J. Douglas, Thirty-third District; Bert Lord, Thirty-fourth District; Clarence E. Hancock, Thirty-fifth District; JOHN TABER, Thirty-sixth District; W. STERLING COLE, Thirty-seventh District; JOSEPH J. O'BRIEN, Thirtyeighth District; James W. Wadsworth, Thirty-ninth District; WALTER G. ANDREWS, Fortieth District; J. Francis Harter, Forty-first District; DANIEL A. REED, Forty-third District.

In a brief but stirring address the distinguished minority leader, Mr. Joseph Martin, of Massachusetts, paid tribute to the high services Congressman Snell rendered the country and the Republican Party. Leader MARTIN made clear that the leadership of Congressman Snell made possible the congressional gains of the Republican Party in 1938. He stated that Mr. Snell had held the line firmly when the Republicans had but 89 Members in the House and were faced with an overwhelming majority on the Democratic side. Mr. MARTIN said that he had served with Mr. Snell as assistant minority leader and knew whereof he spoke.

At the conclusion of Mr. Martin's remarks, Mr. REED, chairman of the New York delegation, presented to Congressman Snell a silver service of exquisite design, suitably inscribed, as a testimonial to the high services of our former

minority leader.

Mr. Snell responded in fitting terms, testifying to the affection with which he held the members of the delegation. He predicted that the people would return the Republican Party to power in 1940, and that the country would then begin to move forward. He stated that the silver service would be one of his most priceless possessions, and would be retained by him and his family forever.

Pursuant to the permission of the House, I append hereto the eloquent tribute of Chairman REED to the character and personality of Congressman Snell and his splendid services

to the cause of popular government:

TRIBUTE OF MR. REED

There is nothing that delights me more than to see just such a gathering of men as we have here at this breakfast. It is an honor for any man to be chosen by a sovereign people to represent them in the Congress of the United States.

This honor, great as it is, becomes more pronounced when in addition to this a representative is the unanimous choice of his colleagues to a position of floor leadership of his party.

Today the New York congressional delegation rejoice to have with us two men who have been so doubly honored. We are delighted

to have with us our former distinguished floor leader. Bert Snell, and to also have with us our present distinguished floor leader, JOE MARTIN.

The position of floor leader in the House of Representatives in normal times is a trying and exacting responsibility, but in times of peril and world-wide unrest and ferment the duties and responsibilities of the office are a challenge to the physical and mental strength and capacity of the best of men. I feel that I express the sentiment of the New York Republican congressional delegation when I say that our party, as well as the Nation, has been fortunate to have had the sound leadership of Bert Snell and to now have the fine leadership which Joe Martin is at present giving us.

Now that we have the unexpected pleasure and honor of having with us our former minority floor leader, Hon. Bertrand H. Snell, I wish to express a few sentiments which his presence inspires.

[Applause.]
I just want to say at this point that Bert Snell served as a Representative in Congress for 24 years. Until he was chosen as our minority leader, he served on the Rules Committee, and finally

as its chairman.

In December 1931 Bert was elected minority floor leader—a position which he filled with ability, courage, and distinction until the expiration of his term in Congress, January 3, 1939.

Twenty-four years as a Member of the Congress of the United States is a long period of public service.

Bert, we as members of the New York Republican delegation, are proud of your long and honorable service to your State and Nation. The edifice we call our Government is the product of the toil, the service of men who such in his time during the sacrifice, and the service of men who, each in his time during the past 150 years, has rendered long, faithful, and unselfish service to his country. History tells us that the men who carved the marble blocks that were used in building the Parthenon, the most beautiful architectural gem in the world, were so blinded by the dust from the stone which they were cutting that they never saw, even in dim outline, the beauty and symmetry of the structure which their labor had reared on the hill in Athens.

labor had reared on the hill in Athens.

The same may be said of those who labor to build a strong and enduring Republic. The country furnishes few cases during the past 150 years where men have contributed 24 of the best years of their lives to national legislative service.

I venture to say, Bert, that when the quality and character of your legislative record is examined by future generations, and the methods you employed, the principles you pursued, and the end you sought to attain by your public acts, your record will place you among those who have nobly won the title American statesman, [Applause.] [Applause.]

I want briefly to call attention to a custom as old as Holy Writ. I refer to trophies. It is a custom that has had a survival value; otherwise we would not see the trophy room in high school, college, and university. There must be a spiritual and inspirational value in trophies, whether won in war or on athletic fields or for other

achievements.

achievements.

There is a most dramatic scene described in Holy Writ that will illustrate what your colleagues, by whom you are now surrounded, have in mind. A great battle impends between two contending armies, the Philistines and the Israelites. Each army occupies a hill and in between them is a narrow valley. The leading warrior of the Philistines is Goliath who dares any man among the Israelites to meet him in single combat. David accepts the challenge. Goliath was the blustering New Deal leader of the Philistines. They enter the valley and approach each other. Thousands await the outcome in breathless suspense. Goliath carries a long and heavy sword. David has only a slingshot, but his aim is accurate. He hurls a small stone into the head of Goliath and the blustering giant falls. the blustering giant falls.

David grasps the sword, severs the head of his opponent, holds it in one hand and with the other lifts high the sword of Goliath. The Philistines, terror stricken, fiee from the pursuing Israelites like leaves before a hurricane.

The sword of Goliath was deposited in an Israelite temple as a trophy to instill courage in those who might see it in the years to come. David grew old and met with reverses and discouragement. Finally he was pursued by hostile forces and had to fiee for his life. He sought refuge in an Israelite temple and asked the priest for some weapon with which to defend himself from his enemies. The some weapon with which to defend himself from his enemies. The priest said, "There is no weapon here except the sword of Goliath." David cried, "Give it me; there is none like that." The priest went to the alter of divination, took it from the protecting robes in which it was wrapped, and handed it to David.

As David grasped the sword he thought of his great victory, of

As David grasped, and handed it to David.

As David grasped the sword he thought of his great victory, of his old friends, of the things he had accomplished in the vigor of his youth. From the moment he touched that old trophy he was a revitalized man. He faced his enemies, he met every obstacle, and conquered every foe. The trophy of his youth became the inspiration and strength of his advancing years.

We, your colleagues from New York State, appreciate the valiant and invaluable public service you have rendered. We love you for your fighting spirit, your strict adherence to sound principles of government. The Republican Party is stronger numerically and spiritually this very day because of the type and character of your leadership. [Applause.]

Today we present to you a trophy, and with it our affection and our appreciation. We hope and we pray that your path may be smooth and your life happy. If by chance a cloud of discouragement should ever disturb your peace of mind, just haul out this trophy, and when you see it, it is our fondest hope that the sight of it and the names engraved upon it may stir memories of old

days, of old friends tried and true, and of battles won, and of worth-while things accomplished; thus will you face life with renewed vigor, determination, and confidence that victory in every fight will be yours. [Applause.]

Strangled Business

EXTENSION OF REMARKS

HON. WALTER G. ANDREWS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, April 10, 1939

EDITORIAL FROM THE CHICAGO TRIBUNE OF APRIL 8, 1939

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Tribune of Saturday last:

> [From the Chicago Tribune of April 8, 1939] STRANGLED BUSINESS

The President takes his advice on financial matters from Marriner Eccles, chairman of the Federal Reserve Board. Mr. Eccles believes, in the face of 6 years of failure, that recovery can be achieved through excessive Government spending. He admitted the other day before a Senate committee that most of the people in the country disagree with him and with the President on this point. Nevertheless the New Deal continues to spend at the rate of \$3,000,000,000 a year in excess of its revenues and this in spite of the fact that the tax rates are now so high that business is stagnant.

In Washington there is obviously a will to believe that high taxes have no discouraging effect upon the Nation's prosperity and productivity. The extent to which this fallacy is accepted was indicated recently when 50 Senators signed a bill setting up tax schedules which would come into force with the declaration of war. These taxes are intended to take all personal income above a subsistence level and to take all corporate income in excess of a 6-percent return.

The title of the bill as it was introduced by Senator Bone, of Washington, is a fancy one, containing references to the promotion of peace, the discouragement of war profiteering, and the desire to keep democracy alive; but a better title would be a bill to destroy democracy and assure the defeat of the United States in war. An army without supplies is certain to be routed and this in war. An army without supplies is certain to be routed and this tax proposal would guarantee a minimum of production on the farms and in the factories. The bill would make it imprudent for any business to expand its productive capacity to meet the war need. It would make it impossible to reward speed and efficiency in supplying the Nation's needs in a time of the greatest peril. It would so disorganize the Nation's economy that inevitably a military dictatorship would be imposed on the country from which it might never be freed.

That lunatic bill bears the signature of 50 Senators, 1 more than a majority. While many of the signatories look upon the

that fundic bill bears the signature of 50 Senators, I more than a majority. While many of the signatories look upon the bill as a measure to prevent Mr. Roosevelt from rushing us into war in Europe, others, including the administration Senators, would get us into war to put the law into effect. It is the latter who are guiding the fiscal policies of the Nation today. In the circumstances it may be a miracle that the country is no worse off than it is.

These men have blindly accepted Mr. Roosevelt's spending and taxing program all these years, and it is charitable to believe they did so because they didn't know any better. The abject failure of the pump-priming campaign has not brought them to their senses. The demands of every responsible business organization in the country, whether speaking for big business or little business, have been pigeonholed as idle vaporings.

The President and his followers all this time have been wonderone who has anything to do with business. The stagnation continues because present taxes are so high and the prospect of higher taxes is so clear that nobody with money to invest will risk it in the certainty that if the venture succeeds the Government will hog the profits, and if it fails the investor will suffer all the less all the loss

Today the Federal Government takes nearly a fifth of the profits of business before anybody whose money created the enterprise of business before anybody whose money created the enterprise gets anything. Through the personal income taxes the tax collector takes his fat share of whatever is left. The more money a man has to invest in industry and trade the higher is his tax rate and therefore the greater the discouragement to him to put his idle cash to work. Accordingly, the banks are overloaded with deposits, investors are seeking tax-exempt securities, and there are 10,000,000 unemployed in the land.

The Government which has created all this misery through its fiscal policies now refuses to take even a first step toward remedy-

ing the situation. It demands more expenditures rather than less, and refuses to do anything to lighten the burden. As long as this attitude continues there will be no substantial recovery in this country.

Business Recovery Would Come

EXTENSION OF REMARKS

HON. JAMES SECCOMBE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Monday, April 10, 1939

ADDRESS BY E. T. CAUSER, OF CANTON, OHIO

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable E. T. Causer, of Canton, Ohio:

"Let Vice President Garner head the administration for 3 months and business rocovery would come," states the Pittsburgh Post-Gazette in an editorial. We might add, "Let President Roosevelt step down and out of the President's chair and business recovery would be assured," since it seems to be definitely assured that Mr. Roosevelt, under the guidance of his little "brain trust," does not seem to possess any willingness to cooperate or act toward the achievement of recovery.

BRIGE BARTON has remarked that when President Roosevelt leaves

BRUCE BARTON has remarked that when President Roosevelt leaves the White House on a fishing trip or a jount to his Georgia retreat there is always a noticeable improvement in business, but that with his return there is invariably the attendant slump occasioned by new ideas and new "lambastings" for business or commercial groups. "Mr. Roosevelt asks for constructive ideas," continues the Post-Gazette. "We have one. We suggest that he leave on a long fishing trip or take a real rest at Warm Springs, and that during his vacation he turn the powers of the Presidency over to Vice President Garner."

"With this change Mr. Garner would definitely bring us on the road to real recovery before the President returned."

Our suggestion would preclude the possibility of the usual upset upon the President's return, and we believe would mean the end of the influence of the Cohens and the Cochrans, whose ideas for the overhauling of the American form of government meet with such widespread disfavor.

such widespread disfavor.

Outlining the serious situation that brings about its equally serious suggestion, the Post-Gazette says:

"The many assurances made by Secretary of Commerce Harry Hopkins and Secretary of the Treasury Henry Morgenthau, Jr., that the administration would cooperate with business in every way to help recovery seem to have 'gone with the wind,' but we must not blame these men, for they would not have made such promises without Mr. Roosevelt's approval. Washington correspondents say that the White House clique, which is against our form of government, got to work on the President and changed his mind. First, promises were made that taxes on business would be reduced. This would have been most helpful; many industries, especially those of medium and small size, might have been able to expand and employ more people, instead of cutting down the working force, as so many have done and may have to do again.

and employ more people, instead of cutting down the working force, as so many have done and may have to do again.

"Then there were promises that the undistributed-profits tax would be eliminated, and that the capital gains would be revised. This certainly would have helped business materially. But, though nearly all experienced businessmen have urged the administration to make these changes in our tax laws, Mr. Roosevelt objects.

"The only real help the President has agreed to give, at least up to this moment, is to permit the amendment by Congress of the pay-roll tax imposed by the social-security law. This was to have increased next January. The administration is now willing to let the tax remain as it is. This, however, is of no help to a business which is at the present time either losing money or just about breaking even.

"A reduction in this tax would, of course, also reduce the tax which the worker has to pay and which is deducted from his pay each week. Wage earners would then have a chance to save more

each week. Wage earners would then have a chance to save more or to spend more.

"There is no necessity whatever for collecting a huge reserve for social security. And to tax pay rolls means to tax many concerns which are losing money. This invariably means a reduction in the number of employees or the closing of plants.

"What is most unfortunate is that Congress actually wishes to cooperate with industry and to find ways of helping business, since this in turn would help employment. But the President seems to have other views. And so, unless Congress will act independently of Mr. Roosevelt, hardly anything will be done during this session of Congress.

of Congress.

"With war clouds gathering in Europe, it is most important for us to get our house in order. It is tragic, therefore, that the President will not take the advice of those who have had experience and who know that certain changes in our tax laws, certain amendments in

the Wagner Act, and a cessation of Government competition with private business would definitely result in recovery and the reemployment of millions of men and women."

H. R. 2

EXTENSION OF REMARKS

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

STATEMENT BY WILLIAM H. McMASTERS, OF CAMBRIDGE, MASS., BEFORE THE WAYS AND MEANS COMMITTEE, APRIL 7, 1939

Mr. CLASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following supplemental statement of William H. McMasters, of Cambridge, Mass., president of National Old Age Pensions, Inc., to the Ways and Means Committee of the House of Representatives, sitting on matters of social-security legislation on April 7, 1939:

Mr. Chairman and gentlemen, in asking your permission to submit a very brief supplemental statement on the basic merits of H. R. 2. now before your committee, I feel that I am not transgressing upon the accepted rules of American debate. Due to the procedure of your committee, I was granted the privilege of opening the arguments for this particular bill after Congressman Hendricks, its sponsor, formally placed it before your committee in hearing. Naturally I would like to meet in final rebuttal any adverse criticism and arguments made against the legislation processed.

may I take the opportunity to commend the members of the committee for the patience and graciousness with which all witnesses were treated. While it is to be expected that citizens shall be given courteous treatment in their contacts with all public officials, I think it is only fair to say that I have never seen a hearing more ably or more courteously conducted. Now that the public hearings are concluded, I am particularly anxious that substantial social and economic advancement worthy of such extended efforts shall be forthcoming in your recommendations.

First, in rebuttal, I feel that the rather curt dismissal of H. R. 2 by Chairman Arthur J. Altmeyer, Chairman of the Social Security Board, as bad legislation, calls for an equally curt reply. His very position as a highly paid public official is the best available answer to his statement that the bill is impracticable and unequitable. Its practical side rests upon the fact that the regular distribution of money is the best method for the distribution of wealth. Dr. Altmeyer's own salary, for example, offers a concrete illustration.

of money is the best method for the distribution of wealth. Dr. Altmeyer's own salary, for example, offers a concrete illustration. It comes from taxation and I assume that he spends it as a member of an orderly social system should spend it. The fact that he serves a useful purpose in his official activities is only incidental. The whole community is taxed in order that Dr. Altmeyer personally can live in comfort and dignity. He produces nothing in material wealth. He does not work at manual labor. The money that he spends, however, is not questioned. It passes current in trade and every dollar of it is of value in accelerating business as it moves from one place to another.

Dr. Altmeyer and the money that he expends because of taxation levied against the wealth producers of our Nation holds exactly the

Dr. Altmeyer and the money that he expends because of taxation levied against the wealth producers of our Nation holds exactly the same place as a member of our democratic scheme as any person 60 years of age, unable to find employment, provided an intelligent government decides to correct the financial status of the latter. My contention is that we still expect to function as a democracy. The only difference between Dr. Altmeyer and some participant under the benefits proposed in H. B. 2 is that his reward for fortunate circumstance furnishes him about 10 times as much per year as is proposed for the beneficiaries under H. B. 2. So much for the

nate circumstance furnishes him about 10 times as much per year as is proposed for the beneficiaries under H. R. 2. So much for the practicability of taxing the whole community for the benefit of others who might not otherwise be able to exist.

Next, as to the equitability of H. R. 2, that Dr. Altmeyer questions so dogmatically. The whole proposal is founded on the rules of equity. We are a democracy. All men are created equal. While democracy does not create them equal, democracy strives to preserve that equality. If equality falls, democracy fails. It is becoming more and more apparent every year that employment for all of our that equality. If equality fails, democracy fails. It is becoming more and more apparent every year that employment for all of our population cannot be found. Employment has been the established means of distribution of wealth. Now that this system is beginning to fail us, there must be some newer method devised through national legislation that will take care of all those who fail of employment or who fail in other ways of getting a reasonable amount of wealth on which to live in dignity and comfort.

This newer method is found in the basic plan of H R 2. It is

This newer method is found in the basic plan of H. R. 2. It is the very essence of equity. It seeks to equalize the mental attitude and to provide for the comforts of all those reaching 60 years of age. No civilized nation ever existed in which every citizen produced his own livelihood. Civilization has created vast communi-

ties in which each citizen is dependent upon others. Under our present social set-up there is a noticeable failure of equity. I doubt whether equity will ever be achieved completely. But for any public official to say that H. R. 2 is inequitable and to maintain that the grants-in-aid provisions of the Social Security Act are founded in equity calls for a direct and vigorous challenge. I trust that I have couched that challenge in temperate language.

In a brief résumé of H. R. 2, I must maintain, after a careful reading of all the arguments and alleged arguments made against it by all types of economists and others, that it offers the only solution to our present problem of old age. It suggests a system of taxation that will take funds out of business monthly for the desirable purpose of putting them back into trade in succeeding months while providing a dignified living to millions of our elderly citizens. It is predicated on the fact that in a highly intricate social structure we can distribute wealth only by distributing money.

While I would not advocate the complete redistribution of money among our entire population by arbitrary law and while H. R. 2 makes no such drastic proposal, I insist that the slight tax H. R. 2 makes no such drastic proposal, I insist that the slight tax requirements to keep our elderly men and women as useful and mentally hopeful members of society, will readily be absorbed in the vast capacity of this Nation of ours to improve the morale and general prosperity of our entire population through increased production. I am resting my final arguments upon the proposition that the United States of America is a government of the people in its highest sense. Only those who question that premise can have any serious fault to find with the proposals contained in H. R. 2.

Works Progress Administration

EXTENSION OF REMARKS

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Monday, April 10, 1939

LETTERS CONCERNING W. P. A. APPROPRIATIONS

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include letters from the Governor of the State of Kansas, Board of County Commissioners of Harvey County, and mayors of Sedgwick and Whitewater, Kans., relative to appropriations for the W. P. A., which supplement my remarks in the Appendix of the RECORD, page 1232.

The letters follow:

SEDGWICK, KANS., March 29, 1939.

Hon. JOHN M. HOUSTON.

House of Representatives, Washington, D. C.
DEAR MR. HOUSTON: Your letter of March 23 in regard to relief needs in the vicinity of Sedgwick has been overlooked by me and beg your pardon for not answering sooner.

At the present time I do not see a need for any additional funds in this immediate vicinity. There will be other jobs come up as the hay and harvest season comes on which will take care of the unemployed until late fall.

Yours very truly,

H. E. HICKERSON, Mayor.

WHITEWATER, KANS., March 28, 1939.

Hon. JOHN M. HOUSTON.

Honson, M. Houston,
House of Representatives, Washington, D. C.
Dear Mr. Houston: In reply to yours of the 23d in regard to additional relief funds, it would appear to me in this vicinity the need for relief is going to be greater than in any of the past years at this season.

Due to a big slump in business, low farm income, and an early spring and open weather, business and farms are not going to absorb but very little, if any, of W. P. A. labor in the next 10 weeks or until about the middle of June.

Very truly yours,

FRED BREISING, Mayor.

NEWTON, KANS., March 29, 1939.

Newton, Kans., March 29, 1939.

Hon. John M. Houston,
House of Representatives, Washington, D. C.
Dear Friend Jack: Your letter of March 23 was presented to the board yesterday.

We are at the present time not seriously pressed for work for relief clients in this county.

The shelterbelt program is at the present time taking care of about 46 men and have asked Mr. Thompson, Topeka, Kans., for 50 more, which will take practically all men that are employable in this county that are out of work.

As far as Harvey County is concerned any cut in W. P. A. would not affect us to any great extent. We probably would not lose over 10 men at the most

We expect to have the county park project started by July, and now have at the present time four W. P. A. projects working.

As a matter of fact, Harvey County is in better condition this year than it has been for the past 3 years.

You may use your own judgment as to whether we need an additional appropriation of \$150,000,000 for W. P. A.

Yours respectfully,

HARVEY COUNTY BOARD OF COMMISSIONERS,
By R. B. HOBBLE.

By R. R. HOBBLE.

TOPEKA, KANS., April 5, 1939.

Hon. JOHN M. HOUSTON,

Hon. John M. Houston,

House of Representatives, Washington, D. C.

Dear Congressman Houston: I regret that there has been delay in answering your recent letter, but I am sure you will understand the situation which always attends the closing days of a legislative session. I appreciate your interest in writing me about the problems involved in the additional appropriation by Congress for W. P. A. This is, indeed, a serious problem, requiring careful study, and is, of course, primarily a congressional problem, to which, I feel sure, the present Congress will give adequate consideration.

No doubt Congress believed that some sound economies could be made in W. P. A. expenditures when the President's original recommendations were reduced. The Members, I am confident, did not intend that all the reduction should be taken from the needy unemployed who are on W. P. A.

ployed who are on W. P. A.

There are evidences of excessive administration costs and of political extravagances and waste in some States and communities. Overlapping and duplicating agencies and personnel now admin-ister various phases of relief and assistance to the needy and unemployed. In the same States and the same counties there are Federal agencies, State agencies, and county agencies administering closely related relief activities. Without question, the Congress believed that the duplicate agencies could be consolidated and the

believed that the duplicate agencies could be consolidated and the personnel of high-salaried officials be reduced. Such efforts would greatly relieve the effect of the reduction upon W. P. A. clients. I am confident that the Congress intended the Works Progress Administration to make savings where they should be made. These are some of the questions which Congress must study most carefully in considering the proposed increase in W. P. A. appropriations. I realize that continued relief expenditures are absolutely necessary in order to care for our social-welfare problem in a decent and wholesome manner. At the same time, the general taxpayers, already overburdened, must receive all possible help. The relief problem cannot be solved until private industry begins to reemploy those now out of work. The permanent solution should be our ultimate aim.

Again I want to thank you for asking my opinion about this most

important matter.

Sincerely,

PAYNE RATNER, Governor, State of Kansas.

Agricultural Relief

EXTENSION OF REMARKS

HON. CHARLES HAWKS, Jr. OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, April 10, 1939

RESOLUTION OF COMMITTEE ON RELIEF AND PUBLIC WELFARE OF THE WISCONSIN COUNTY BOARDS ASSOCIATION

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following resolution recently adopted by the committee on relief and public welfare of the Wisconsin County Boards Association:

Whereas it is apparent that the American farmer cannot continue to operate under conditions as exist at present; and

Whereas such farm legislation as has been passed by Congress has been of assistance to some sections of the country it has placed other sections at a disadvantage through the encouragement of the production of certain commodities in sections where such commodities were not produced heretofore, thereby failing to help agriculture as a whole; and

whereas if the purchasing power of the American farmer is placed at the proper level in accordance with the American standard of living, the problem of industrial depression will automatically be solved by reason of increased purchases of materials and services by the American farmer; and Whereas history bears out the fact that prosperity depends entirely upon the ability of the farmer to purchase and consume the preducts of industry; and

the products of industry; and

Whereas the assurance to the farmer of a minimum price of not less than the cost of production would tend to minimize the spread between producer and consumer, which condition is recog-nized as one of the present evils retarding the return of prosperity to America; and

Whereas it appears that such conditions as exist at present can

Whereas it appears that such conditions as exist at present can best be remedied by securing to the producers a minimum price of not less than the cost of production: Therefore be it Resolved by the committee on relief and public welfare of the Wisconsin County Boards Association, That this committee heartly endorses the cost-of-production bill, H. R. 2372, as introduced by Congressman William Lemke, as well as other identical bills, and urge passage by the Congress of the United States.

Resolved further, That a transcript of this resolution be forwarded to the President of the United States, to the Secretary of Agriculture, and to all Members of the House and Senate representing the State of Wisconsin in Congress.

Cotton-A Roosevelt Contradiction

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, April 10, 1939

Mr. REED of New York. Mr. Speaker, under the authority of the Reciprocal Trade Agreements Act of 1934 the Roosevelt administration has negotiated 20 agreements for the promotion of foreign trade. If the objectives of this act have been accomplished, it is natural to expect that the volume of our foreign trade has expanded in commodities important to this country.

The largest single item and the most important commodity exported by the United States is cotton and a large area of this country is dependent on its welfare. Therefore, it is interesting to note that there was a sudden drop of 31.1 percent in the volume of our cotton in the year 1934 under 1933. Exports were at approximately the same levels in 1936 and 1937 although a number of agreements were effective in those 2 years. Thus, it is obvious that the trade agreements have not helped the exports of this very important commodity. Was the stabilizing of cotton exports at this lower level due to decreased consumption abroad or to other factors? It is not due to a leveling off of cotton consumption in foreign countries, for consumption increased approximately 3,000,000 bales during this period.

In the 5-year period of 1926-30, of the total cotton consumed in foreign countries 45 percent was of American growth. Foreign consumption of American cotton stayed well over 40 percent of total foreign consumption through the crop year 1933-34, but in the crop year 1934-35 consumption of American cotton abroad dropped to 29.9 percent and continued to decrease until in the crop year 1936-37 American cotton represented but 23.4 percent of total foreign consumption. Furthermore, total cotton consumption in foreign countries increased every year from 1931-32 to 1936-37, and in every year except 1931-32 was above the 1925-30 average. It is also true that consumption of American cotton remained relatively constant until the crop year 1934-35 and that since then it has materially decreased.

Thus we find that foreign cotton consumption in the crop year 1936-37 was 24.9 percent above the 1925-30 level, that consumption of foreign cotton was 73.9 percent above the 1925-30 level, but that consumption of American cotton was 35.2 percent below the 1925-30 level. These conditions are in a large measure due to the Roosevelt policy of scarcity and price pegging. In the 5-year crop period 1933-38 American cotton production averaged 12,891,000 bales or 15.6 percent below the 1925-30 level; foreign production averaged 16,181,-000 bales, or 40.8 percent above it; and world production averaged 29,072,000 bales and increased by 8.6 percent of the 1925-30 level.

The New Deal administration reduced acreage from 35,-891,000 acres in 1932-33 to 29,383,000 acres in 1933-34, but because of the high yield per acre, production was slightly over the year previous. Even with this large American crop, foreign production increased from 10,937,000 bales in 1932–33 to 13,651,000 bales in 1933–34, or by 24.8 percent because of price-pegging operations of the Roosevelt administration.

The American crop for 1934–35 was but 9,636,000 bales, or 26.2 percent below the 1933–34 crop. This was due to a further decrease in acreage of 8.6 percent, but even more to an 18-percent decrease in average yield per acre. During the crop years 1935–36 and 1936–37 there was a slight increase in yield per acre. In the crop year 1937–38 this country had a slight acreage increase and the highest average yield per acre, as well as our largest crop, in history. This enormous American crop with a 9-percent increase in foreign production for the second year in succession brought about the world's record cotton crop.

Thus, after 5 years of cotton-crop control, we find a 42.2-percent increase in foreign production and this country with the largest cotton crop in its history. During this same period cotton consumption abroad has not increased enough to take care of the increased foreign production, and our cotton exports have consequently decreased.

It is impossible to reconcile the contradictory policies of the Roosevelt administration. The State Department is lowering tariffs, which makes it possible for foreign goods produced by labor paid low wages and worked long hours to more readily compete with domestic goods in our own home market. The State Department tells us that they are doing this for the avowed purpose of expanding our foreign market, since these foreign goods create dollar exchange with which foreigners can buy our products, such as cotton, which they need. However, Secretary of Agriculture Wallace, under the direction of President Roosevelt, is pegging cotton prices, restricting acreage, fixing marketing quotas, and doing all in his power to raise cotton prices to the point where foreign users of cotton can buy foreign growths of cotton cheaper than they can American cotton. These actions have increased foreign cotton production by 77.5 percent in the last 5 years, decreased foreign consumption of American cotton by 35.9 percent, and encouraged the importation of cotton textiles to this country from abroad. How does this policy help American agriculture, industry, or labor?

The acreage restrictions create farm unemployment. The higher prices of raw cotton, along with higher wage rates, increase the domestic costs of cotton manufactures. The lower tariffs, with higher costs of production in this country, make it possible for foreign goods to more readily enter our markets and undersell American-made products. The sale of foreign products in the place of American goods creates industrial unemployment. Unemployment means loss of income with which to buy goods of both foreign and domestic

origin, which means more unemployment.

Col. John Francis Hamtramck

EXTENSION OF REMARKS

HON. RUDOLPH G. TENEROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1939

Mr. TENEROWICZ. Mr. Speaker, while we are celebrating the one hundred and fiftieth anniversary of the birth of the Congress of the United States, it would seem fitting for us to pause and pay tribute to the memory of one of our patriots and heroes of the American Revolution. It seems important to me that the men, women, and children of our country should review at this time the history of our early struggle for independence and learn for themselves just how dearly we bought and paid for our democratic form of government, and how our pioneer fathers paid with their life's blood for every privilege we have had and are now enjoying in this great country of ours.

April 11, 1939, marks the one hundred and thirty-sixth anniversary of the death of one of these distinguished and noble

patriots, a man who served his adopted country and fought for its freedom and independence for 26 consecutive years at our country's inception and when its days were darkest. Mr. Speaker, I refer to Col. John Francis Hamtramck, for whom my city has been named, and of which I have had the honor to serve as mayor for four terms, resigning the post to become a Member of the Seventy-sixth Congress.

Col. John Francis Hamtramck was born of French parentage in Quebec, Canada, August 14, 1754, and died in Detroit, Mich., April 11, 1803, and is buried there in Mount Elliott Cemetery. His father, Charles David Hamtramck, a native of the Duchy of Luxemburg, settled in Quebec and married Marie Ann Bertin, a French girl of the town. History is very obscure pertaining to records of his personal life, but it does record, however, one son named John Francis born in Fort Wayne in 1798, and at the time of his death, his wife, Rebecca, and two daughters, Julien and Harriet, survived him.

Here was a man whose spirit was fired with a love of freedom. He was aware of the ideals for which the Colonies were fighting, and when a mere boy decided to cast his lot with us in our fight for independence. His role in our early struggle gives him a permanent place in American history and makes us deeply indebted to him. His intense love of independence and zeal for our ideals prompted him to leave his own country when still a lad and enlist with the Revolutionary Forces of the American Colonies under the command of General Washington. He must have shown unusual bravery and leadership, as at the age of 19 years, on November 21, 1776, he was commissioned a captain in the Fifth New York Regiment. He served in other regiments during the Revolutionary War, and it was during this period that he met Gen. Anthony Wayne, with whom he was to see further service for his adopted country in what was then termed the great Northwest Territory.

At the outbreak of the American Revolution England owned Canada and claimed by reason of conquest the great Northwest Territory. This area comprised all of the territory north of the Ohio River and east of the Mississippi River, including

a part of the Allegheny Mountains.

It was the plan of the British to attack and give battle to the Colonies along the Atlantic coast and to carry on warfare from within the interior. General Hamilton, with his British forces, was dispatched from England to accomplish this purpose. He made Detroit his headquarters and base of operations. His mission was to incite the Indians against the Americans and enlist their services in the British cause. General Washington was well aware of this situation and very much concerned, because he depended on some of his supplies of meat, grain, and salt to come from this area. Powder was brought up the Mississippi River for the use of our forces. It was imperative that this action on the part of the British be stopped.

Allow me, Mr. Speaker, to pause here and pay tribute to the patriots who made possible the earlier victory of the Colonies by meeting and overcoming the menace that threatened the Colonies from within. To such men as Gen. George Rogers Clark, who captured General Hamilton by surprise; to men like Brig. Gen. Simon Kenton, Daniel Boone, Benjamin Logan, James Herrod, General McIntosh, Col. Josiah Harmar, General St. Clair, and Gen. Anthony Wayne, under whose command we find Brig. Gen. Zebulon Montgomery Pike, Ensign Meriweather Lewis, Lt. William Clark, brother of George Rogers Clark, Lt. Frederick Claiborne, Maj. Thomas Hunt, afterward commandant at Detroit, Lt. John Whistler, and Col. John Francis Hamtramck. It was their bravery, foresight, endurance, and love of liberty that made them forever honored and revered by patriotic Americans.

Following the close of the American Revolution and the surrender of the British, Colonel Hamtramck continued in the service of his adopted country. History shows that he was commissioned a major and stationed at Fort Pitt in 1786, where he served under Colonel Harmar. His command of the French language and the understanding manner with which he handled the Indians made him a valuable officer. He was assigned the task of making peace with the various Indian tribes, by whom he was admired because of his fair dealing. Early in life and during the Revolution Colonel Ham-

tramck interested himself in surveying and was valuable to the Colonies in acquainting the commanders with local situations. He built and completed Fort Steuben and was its first commanding officer. He next accompanied Colonel Harmar to Vincennes, where he built Fort Knox, and was left there in command.

Whenever the Colonies were in need of a leader experienced in military pursuits and capable of governing a community, Colonel Hamtramck was usually chosen. The new frontiers were without law and order, and in many instances, due to Indian uprisings and the general lawlessness of frontiersmen, he was called upon to decide matters of a judicial nature and also to render and execute orders until his commanding officer arrived.

In December 1790 Hamtramck wrote to General St. Clair suggesting to him that the territory gained by the Colonies could not be held permanently unless the northern posts and Detroit were taken from the British. The English were using Detroit as a supply base for the hostile Indians and kept them furnished with food and ammunition.

General St. Clair suffered defeat in an effort to capture some of the British posts in the Northwest, and in 1792 General Wayne organized his legion and was sent into the Northwest by General Washington to capture the northern posts from the British and to establish order. Hamtramck became a major in General Wayne's first sublegion and 1 year later was promoted to lieutenant colonel. In his official report of the Battle of the Fallen Timbers, General Wayne made special mention of certain officers, as follows: Brig. Gen. James Wilkinson, in charge of the right wing of the legion, and Colonel Hamtramck, in charge of the left wing, "whose brave example inspired the troops." After the battle the army marched to the junction of St. Marys and St. Joseph Rivers, where General Wayne decided to build a fort. The fort was built under the direction of Colonel Hamtramck and called Fort Wayne. He was also placed in command there.

The winters of 1794 and 1795 were extremely harsh and food was scarce. Colonel Hamtramck placed the garrison on half rations in order that the starving neighborbood Indians might be fed. Colonel Hamtramck was sent from Fort Wayne to Fort Miamis in 1796, and on July 11 of the same year he arrived at the city of Detroit to receive its surrender from the British. He was commissioned colonel, placed in command and remained in that capacity until the time of his death, on April 11, 1803.

The life of Colonel Hamtramck was one of strictest discipline and devotion to the cause of liberty. The hardships he endured and the hazards he encountered left no doubt in the minds of his associates that he was a true patriot. His heroism and self-sacrifice made him one of the most illustrious characters in early American history.

The following letters may show in some degree his intellectual versatility and in what degree the Federal Government relied upon his mature judgment. In one letter signed by the Secretary of War, when Colonel Hamtramck was commandant at Detroit, we read:

J. F. HAMTRAMCK.

Sir: You, sir, will consider yourself as having the general direction of all vessels and boats belonging to the United States on the Lakes, and will give the superintendence of them to Mr. Brevort, who is to consider himself in all things relating to his command as acting under your immediate orders. He should regularly report to you every circumstance necessary for you to know relative to freight, public or private.

HENRY DEARBORN.

And again in another letter from the War Department:

J. F. HAMTRAMCK

SIR: I wish you to take the first convenient opportunity for examining the mouth of the Cuyahoga River and the others east of it within 30 or 40 miles with a view of establishing a small post for the purpose of securing a shorter and safer route from Detroit to Pittsburgh through what is called New Connecticut; and a halfway stand between Niagara and Detroit by water, where small vessels and boats might with safety call on their passage from one to the other of the last-mentioned places.

I have been informed that there is better water at all times at the mouth of a river about 30 miles eastward of Cayohoga than there is in that river. Particular regard should be paid to the safe and convenient entrance of the mouth of the river from the lake, and the exact depth of water, also the probable healthiness of the site.

tion I will thank you to make a report of the result thereof to this office together with your opinion on the subject generally.

* * While on this tour it may be well to call at Sandusky and examine the depth of the water at the entrance of that bay. It may probably be convenient for Mr. Jouett to accompany you for the purpose of visiting the Indians about Sandusky.

* * You will also please give me your opinion relative to the establishment of a small post near the mouth of the Miami of the Lakes on one of the tracts of land ceded by the Indians near the mouth of the Miami by the Treaty of Greenville.

* * There are two tracts which join each other, one of about 12 and the other 6 miles square. The principal part of each tract is on the northerly side of the river, but each tract extends across the river and includes land on the southerly side. The depth of the water at the mouth of the Miami and up the same as high as the mouth of the Oglaize should be noted, and also the size and burthen of boats which can pass up and down said river to Fort Wayne or near it. You will also please to inform me whether in your opinion any suitable site can be found for the principal military post near Detroit on the main, which would be preferable to the one now occupied. Although there may be reasons in favor of an island for the site of a post, yet if the island should not be sufficiently out of the reach of an enemy's shore it might not be prudent to place a principal garrison on such a place, unless a communication could be secured by a permanent or temporary bridge with the main. If the island claimed by Mr. McComb or others (Grosse Isle) should ultimately prove to be the property of the United States, it may become a question whether a military post ought not to be established on it. I should like to know the width of the distance of the island from our own shore with the depth of water on each side, together with the probable number of acres of land the island contains, the quality of the soil, the growth of timber, et

Any information you can give me relative to the quantity and quality of the lands in the vicinity of Detroit, belonging to the United States, and what proportion of it is claimed by individuals and the probable number of inhabitants within the county which includes Detroit, will be very acceptable * * and also noting the quality of the soil generally as well in the vicinity of Detroit as that of the cession made by the Indians near the mouth of the Miami before mentioned.

I am, etc.,

HENRY DEARBORN, Secretary of War.

What broad knowledge and understanding he must have had in order to be trusted by his government with such responsibilities. Here was a man who was a soldier, an officer, a pioneer, and frontiersman; a judge and jurist; an engineer and surveyor of land and water; a builder of forts and outposts of civilization; a counselor and conciliator holding the respect of the Indians and his superior officers. His achievements were many, and he was able to accomplish difficult tasks because he possessed the necessary qualifications. What a contrast his life exemplifies in comparison with those who complain that their country is not doing enough for them. Here was a patriot who asked nothing in return except that he be permitted to serve his adopted country.

On this the one hundred and thirty-sixth anniversary of the death of Colonel Hamtramck I think it fitting that we should not only reflect on the sacrifices made by him, his patriotism, and his courage and life spent in devotion to the cause of a free territory, but we need to look inward into our own souls and discern, if we can, what part of ourselves we are contributing to our country so that she may continue to grow for the next 150 years and make as great strides forward in the future as she has in the past.

America was built by patriotic men and women of courage, endurance, and foresight. They entered into our early struggles to build a thriving community. Their eyes overlooked the apparently insurmountable barriers, the hardships, and they kept on fighting for a brighter tomorrow. They did not worry about how little they had—they knew how great the things were they sought, freedom and liberty. Colonel Hamtramck did not dream his life away—he determinedly fought his way through life to realize his ideals.

Little did he dream what wealth the Northwest Territory, which comprised the States of Michigan, Ohio, Indiana, Illinois, Wisconsin, and part of Pennsylvania, would contribute to the Union, wealth in commerce, produce, and wealth of manpower. Little did he know he was clearing the wilderness to make way for the building of one of the greatest industrial areas on the face of the earth; that these waters of the Great Lakes that he was sounding for shoals and recording for depths for the United States War Department would one day be a gateway to the sea for ships laden with steel, automobiles, tractors, airplanes, and produce to be shipped to all corners of the world.

The passing of Col. John Francis Hamtramck, who had served the United States continuously for 26 years, called forth sincere tributes from his fellow officers and superiors. Capt. Thomas Pasteur, then in charge of Fort Wayne, said that his "virtues as a man and military abilities as an officer cannot be read or doubted." He issued orders for the proper observance of the occasion, as follows:

In memory of his name and worth, do order that on the morning of the ensuing day (the 1st of May) that minute guns be fired from 6 until 7 o'clock; that the garrison flag be holsted at half mast each day for 1 week and requests the officers of the garrison to wear the emblem of mourning such as crepe or a substitute for it on their left arm and the hilt of their swords for 2 months.

Henry Dearborn, Secretary of War, regretted "the loss of such an experienced and valuable officer." The officers who served under Hamtramck erected a monument above his grave on which they had inscribed the tribute quoted here:

> Sacred to the Memory of
> John Francis Hamtramck, Esq.,
> Colonel of the U States Regiment of infantry, and

Commandant of Commandant of
Detroit and its Dependencies.

He departed this life on the 11th of Ap' 1803,
Aged 45 Years, 7 Months, & 28 days.
True Patriotism,
And a zealous Attachment to rational Liberty
Joined to a laudable Ambition,
led him into Military Service at an early
period of his life.

He was a Soldier even before he was a man:

He was a Soldier even before he was a man;
He was an active participator
in all the Dangers, Difficulties and Honors
of the Revolutionary War;

And his Heroism and uniform good conduct procured him the Attentions & Personal Thanks of the Immortal Washington.

The United States in him have lost a Valuable Officer & a Good Citizen, And Society an Useful & Pleasant Member: to his Family the Loss is incalculable; And his Friends will never forget the memory of Hamtramck.

This humble Monument is placed over his Remains by the Officers who had the Honor

to serve under his command— a small, but grateful Tribute to his Merit

and his Worth.

Colonel Hamtramck was first buried in the churchyard of St. Anne's on St. Anne's Street, in 1803, a street then only 30 feet wide—later to become what we now know as Jefferson Avenue, the church being located between Larned, Griswold, and Shelby Streets. Rev. Gabriel Richard, vicar general of Detroit, accorded the rites of the church. Hamtramck was buried with full military honors.

When Detroit was destroyed by fire in 1805, the church was swept out of existence and only the cemetery remained. In May 1817 the body was transferred to the new St. Anne's Church grounds, the present property of the Bagley estate on Congress Street. Father Gabriel Richard again officiated, transferring and placing the original marker over the grave.

For 40 years Hamtramck's tomb remained there. The desecrating hand of time loosened the bricks and fearing the doubtful identity of the grave, Mr. Elliott asked and obtained permission from Bishop Lefebre to remove the remains to the present burial plot in Mount Elliott Cemetery.

On July 11, 1866, the grave was officially opened, the remains placed in an oaken casket, deposited in a brick vault, and again surmounted by the massive stone tablet of his brother officers.

In 1897, on October 18, the Sons of the American Revolution held a ceremony marking the grave of Colonel Hamtramck in Mount Elliott Cemetery, Detroit, Mich.

Richard Storrs Willis, who officiated at the dedication for them, spoke in part as follows:

Mr. President and compatriots, we gather over the hallowed dust of Col. John Francis Hamtramck with a blended feeling of pride for his conspicuous services to the Republic, and of patriotic regret

that the community generally is so little informed of the valiant revolutionary soldier who slumbers here.

The name of that soldier to the majority of the heedless many, absorbed only in the present and reckless of the historic past, is the name of the former township to which his own name was given. It is the name of the township, not of the man.

Our grateful office today is to evoke from the ashes of the silent dead the memories of the intrepid spirit which once animated them. The official and touching tribute carved in stone on his grave would seem amply to suffice as a general record of his military career and the distinguished position he held with those among whom he lived and fought.

among whom he lived and fought.

It would, therefore, seem superfluous, on this occasion, to rehearse what is already doubtless known to many here present, and can be known to all.

Let those who pass here pass heedfully and thoughtfully. Let them remember that here lies the man who won the battle of Miami: the intrepid officer of flery courage, who, in the savage conflicts, of constant occurrence in those early days, was a terror to the Indians.

And then let their mind revert to the banks of yonder shining river, where, near the verge of the stream, still stands the once humble home of Hamtramck. Exteriorly, with its more perishable sheathing worn and dilapidated, but interiorly a veritable log cabin, with its heavy timbers still as sound and firm as the fame of its former occupant. Let them read there the mute lesson, the distinctive American lesson, that the lowlest surroundings and conditions debar not from national reputation and the laurels of the Republic.

Colonel Hamtramck, knightly soldier and gentleman, in thy grave with the spirit of Washington and the sentinel souls of the devoted officers haply hovering over thee, and the benediction of the church breathing near, the Sons of the American Revolution

On Memorial Day, 1929, the Catholic Woman's Clubs of Detroit placed a granite replica of the original stone over Colonel Hamtramck's grave. The original stone had become weatherbeaten and the wording very indistinct. At this ceremony the Honorable William Bradley officiated on behalf of the city of Detroit and I officiated as mayor of the city of Hamtramck before a large gathering of citizens from both

In conclusion, Mr. Speaker, on this the one hundred and thirty-sixth anniversary of the death of Col. John Francis Hamtramck, I think it fitting that we rededicate our lives to the service of our country in these troublesome and trying times and try to emulate the life of this great patriot, to the end that our country will remain the most liberal on earth and our Bill of Rights and our Constitution our most cherished possessions

This is the path we have marked out for ourselves. His deeds and accomplishments are our inspiration. He died young in years but rich in service to his country. life serve as an inspiration to all who have their country's welfare at heart, and my sincere hope is that his spirit may live again in the minds and souls of all our people.

> Till the future dare forget the past, His name and fate shall be An echo and a light until eternity.

The Unemployment Problem

Meeting the unemployment problem, with its related economic difficulties, by a broad program of cooperation between government and the public; on a scale large enough to create 9,000,000 jobs in the regular channels of industry, commerce, and agriculjobs in the regular chainless of industry, commerce, and agriculture at once and assuring the continuance of the new jobs for 3 years. The unemployment problem thus would be solved for 3 years, and the income of the Nation would be increased by \$20,000,000,000 a year of primary buying power. Congress would be given 3 years in which a joint congressional committee on permanent recovery could make an exhaustive study of what must be done to bring into balance the essential factors of an economy of abundance; and to shape the necessary legislation accordingly.

EXTENSION OF REMARKS

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, April 10, 1939

Mr. HOOK. Mr. Speaker, so many proposals for business recovery have been brought forward in recent years that a weary public mind no longer gives willing attention to any. Meanwhile the unemployment problem is slowly crowding to the front and compelling recognition as the central factor in the recession. Until the people are put back at work in the lines where their training and skills can be used efficiently, there will be no basic recovery.

THREE POSSIBLE POLICIES TO BE CONSIDERED

(1) To accept the optimistic prophecies of "early recovery" through the liquidation of present inventories, and the subsequent revival of manufacturing—without stopping to reflect that 7 months of industrial operation at the 1937 rate would build up even larger undigested inventories again; or

(2) To assume that the present level of unemployment is "normal"—that 10,000,000 unemployed need not worry us so long as 30,000,000 are employed; increase the appropriations for W. P. A. accordingly; expand the made work and the dole programs to prevent actual starvation, but leave from 15 to 20 percent of the total population at bare subsistence; or

(3) To adopt a plan that will aim at putting every person who is able to work and wants work, back at regular jobs where their productive capacities will be united with the existing industrial plant and the commercial or agricultural organizations of everyday society; where they will produce goods that have an immediate cash exchange value in the channels of trade; using a Government subsidy to the workers thus employed, instead of appropriating Government funds for unemployment or made work.

THE LOSS TO THE NATION CAUSED BY UNEMPLOYMENT IS COLOSSAL

Compare the present army of 10,000,000 unemployed with the 8,454,918 workers in factories in 1935, when the wage earners were paid \$9,836,044,674. If the 10,000,000 idle persons are worth as much to society today as the eight and a half million who work, then the actual loss in purchasing power is approximately \$10,000,000,000 in this year. This loss is more than the entire Budget of the Federal Government.

To this indirect loss must be added the direct governmental expenditures for W. P. A. and unemployment insurance, as well as a considerable part of the cost of direct relief, which would be met by the relatives of those now on relief, if the family breadwinners were regularly employed.

A fair estimate of the Government's cash outlay arising from unemployment would be two and half billion dollars.

A GOVERNMENT PROGRAM THAT WOULD STOP THE LOSS CAUSED BY UNEMPLOYMENT

The depression of 1930 and the recession of 1938 have reduced the incomes and spendable savings of the masses of people so profoundly that government will have to be the moving force to start all industry and all collateral reemployment at one and the same time. Nothing less than universal teamwork can overcome unemployment as it exists today. What the automotive industry was unable to accomplish in 1936-37 is beyond the power of any other line of employment. It is a delusion to think that a program of public works or a house-building program will solve unemployment. Either program might start boldly enough, but it would be many months before the money thus spent would filter into the channels of commerce far enough to provide employment for domestic workers or professional people or salesmen or the thousands of other occupations only dis-tantly connected with road building or construction. This "lag" would completely absorb the momentum of the original program before action was communicated to the whole economic structure.

The unemployment problem affects so many people of such diverse occupational training or aptitudes that no one industry, no matter how big, will be able to drag the whole industrial, commercial, agricultural, professional, and white-collar occupations along with it. No partial remedy will meet the present need.

The proposed governmental program which follows, if set up for a minimum term of 3 years, is sweeping enough to overcome the entire unemployment problem as it exists. The net cost to society would be far less than any plan of Nationwide relief or made work. This program is logical and defensible from a business or a political standpoint:

First. Exempt from taxation such part of industrial earnings as are used in extensions, improvements, or renewals of the plant. A precise definition of these purposes could be prepared by a committee of businessmen.

Second. Provide means for the extension of credit to finance the increased stocks of raw materials and finished inventories that would arise from the expansion of employment. This would meet the demands of small business and big business. Similarly, the needs of the railroads for betterments that would result in economy of operation or improvements of service would be met. Loans for building construction are in the same category.

Third. Inasmuch as the two planks above would fall short of the goal of creating 3,000,000 new jobs in manufacturing and 6,000,000 new jobs in collateral occupations, the Government should stimulate employment by offering to pay a definite percentage of the wages of persons given new jobs in conformity with quotas set up in each class of industry or service occupation. The grand total of 9,000,000 new jobs would completely absorb all unemployed persons able to work and wanting work. The allocation of new-job quotas among different occupations would be in proportion to the numbers actually employed in such occupations in reasonably healthy times. Payment of the Government contribution would be made direct to the workers on certification of their names through administrative agencies to be prescribed by law. The establishment of an annual wage, with standard hours of employment, would be a part of each contract between the Government and the employer.

Fourth. A comprehensive plan should be instituted for training young workers for industry and retraining older workers who find their skills obsoleted because of new machines. Lack of such vocational training and retraining has kept hundreds of thousands of individuals practically unemployable since the depression started. Complete reemployment is not possible without means of vocational training.

Fifth. As a means of completely "mopping up" unemployment, encouragement should be given to (a) self-help agricultural-industrial cooperatives where marginal workers that cannot meet the demands of industry because of age or physical disability may make a portion of the things they consume, and (b) limited programs of public works, by States with Federal aid, primarily designed to serve regions where industrial or commercial reemployment cannot be had because of the absence of industrial plants.

Sixth. A joint congressional committee should be set up, with a staff of clerks and technical experts, to make a careful study of the industrial, agricultural, and commercial factors which enter into the economic structure, and ascertain what must be done to bring into balance all the essential elements of an economy of abundance. The plan thus evolved should be ready to lay before Congress prior to the expiration of the 3-year term of the temporary plan.

The only way to overcome unemployment is to create enough jobs in enough different lines or occupations to provide chances for every kind of training, ability, or aptitude, to get work.

Furthermore the new jobs must be opened up in all occupations at one and the same time if the necessary balance between increased production and increased purchasing power is to be attained.

NINE MILLION JOBS ENOUGH

Ten or twelve million people being registered in the unemployment census, or indicated by the enumerative count, or estimated by authoritative agencies, does not mean that ten or twelve million jobs are required to take care of them. In thousands of families the younger and older members register for work when they are seeking jobs only until the breadwinner of the family is once more on a regular pay roll. Nine million new jobs, it is believed, would absorb all the people in America who want regular jobs and are able to work.

Nine million new jobs can be created within the horizon of the existing industrial and commercial and agricultural organization in 3 months if the interdependent elements of production and consumption are brought into action at one time and in the right balance. NEW JOBS MUST BALANCE EACH OTHER

The 9,000,000 jobs would have to be distributed among the established occupations in essentially the same ratio as each line of work bears to all other lines in healthy times. Thus there is a definite ratio between the number of people needed on farms to produce the foodstuffs and the industrial or white-collar classes of the cities. Similarly there is a constant ratio between the suppliers of raw materials and the workers who fabricate the finished product. The number of workers engaged in taking ore from the iron range, the crews on the vessels that transport it to Cleveland or Erie docks, the trainmen needed on railroads to haul the ore to the mills or the steel to market must be determined by the activity of the steel mills. In much the same way there is a balance between the automobile factories and the number of truckers employed in hauling away the finished cars, the number of salesmen in garages who find customers, the clerks in finance companies who handle the installments, the insurance agents who write the risks, the lawyers who try the damage suits, and the hospitals that patch up the injured in accidents. In the immediate neighborhood of the factories the number of people employed in making automobiles determines even such seemingly insignificant matters as the number of waitresses hired by the quick-lunch counters on the side

The importance of this relationship between occupations has been underestimated or overestimated repeatedly in the past 8 years when the unemployment problem has been under discussion. Clearly the dominant element in making employment for the army of potential workers in the Nation is the number of people who find work in factories; but the continued employment in factories is impossible unless the goods which are manufactured can be sold.

MASS CONSUMPTION IS NECESSARY TO MASS PRODUCTION

The same mass production which makes mass employment possible must be joined with mass consumption. It is the pay roll of one occupation which makes the bulk of the "effective demand" for the products of other occupations. It is an error. however, to assume that one industry, even though it should be the giant automotive industry, can go into production regardless of the stagnation of other lines, and by its own financial strength and merchandising genius start the entire business world to spinning at top speed. That effort was made gallantly in 1936-37. The sale of cars, however, came to an abrupt halt in 1937, when the reserves of the automobile companies, the capital of the sales agencies, and the credit of ultimate consumers was absorbed. With the textile industry, the building industry, the mining industry, the transportation lines, and industry as a whole paying less wages than in 1929 and employing fewer workers, the market for new cars had to suffer.

If employment in all occupations had been increased in healthy balance, at the same time, so that pay rolls in manufacturing, transportation, mining, building, agriculture, professional and other services had flowed into trade channels simultaneously, the delicately adjusted organism we call business would have carried out its normal function of exchanging goods and services.

The statistical relationship existing between 11 lines of work is shown by the following figures gathered from the 1930 census and the census of manufactures for 1935. The number of persons reported in each occupation is given:

Agriculture	10, 471, 998
Forestry and fishing	
Extraction of minerals	984, 323
Manufacturing (census of manufactures, 1935, including	
salaried workers)	8, 454, 918
Other mechanical and building industries	7, 655, 734
Transportation and communication	3, 843, 147
Trade	6, 081, 467
Public service (not elsewhere classified)	856, 205
Professional service	3, 253, 484
Domestic and personal service	4, 952, 451
Clerical occupations	4, 025, 324

The above figures show how futile it is to expect one factory or one line of work—whether automobiles or home building or railroads or highways—to offer work and wages to enough people to enable them to buy the products and services of the people in all other occupations. New jobs and new pay rolls must be created in all occupations at the same time if one is to provide the "effective demand" for the goods or services of the other.

KEY TO REEMPLOYMENT IS MANUFACTURING INDUSTRY

Undoubtedly the key to the creation of 9,000,000 new jobs rests with the manufacturing industry, because there is where physical goods are fabricated and handled and counted and shipped. In the complex economic organization of today at least three persons are needed to perform services outside of factory walls for each one at work inside. Transportation, sales, and advertising, finance, insurance, legal advice, scientific research, engineering, invention, medical, religious, and educational service, domestic and clerical service call for three times as many workers as the machines in the factories. A parallel situation is found in military affairs where it is said three men are required behind the lines for each man in the trenches.

W. P. A. CANNOT SOLVE THE UNEMPLOYMENT PROBLEM

Although the W. P. A. and its predecessor the E. R. A. relieved human want on a vast scale and managed a tremendous program of made work, it is not designed as a plan to do away with unemployment. Reemployment must come through new jobs in the everyday occupations of society where goods and services that have a cash exchange value are produced.

Nor does any plan of relief protect the industrious and thrifty worker in preserving his hard won savings when a recession strikes him. It is a mistake to assume that everybody out of work immediately goes on relief. The W. P. A. rolls today carry only 2,000,000 workers. Eight million of the ten million unemployed are carrying on without public aid of any kind. When their savings are gone—if economic conditions are allowed to drift—the numbers on direct relief and made work must increase. The self-respecting eight million will resent being forced "on relief." Their resentment may become very important to business and politics.

MADE WORK DOES NOT CREATE COLLATERAL EMPLOYMENT

Although the employment of men and women on made work brings about a distribution of Government money direct to consumers and to that extent stimulates consumer buying and wholesale and retail trade, such made work does not create the maximum of collateral or related occupational employment in the ordinary channels of industry and commerce. It does not restore the balanced occupational relationship that is the basis of healthy prosperity.

As a recovery measure a program of public works falls short because the product has no immediate exchangeability. Highways, sewers, or schoolhouse repairs may be desirable additions to the community equipment but they cannot be dropped into the channels of trade and made to circulate. When Government money goes into a highway it becomes a frozen asset. Although the wage dollar may enter the channels of finance and circulate, the product is static.

On the other hand when a dollar is paid for the manufacture of a pair of gloves or a pair of overalls or an automobile, the goods circulate in trade channels just as surely as the dollar does in money channels. Compared with industrial production, a public-works program has only half the circulating quality of the investment.

Broadly speaking, business cannot return to normal as long as 20 percent of the available working force of the Nation remains unproductive, or engages in work that does not circulate. It is impossible for 80 percent of the workers to carry the unemployed 20 percent on their backs and also meet the entire business overhead.

A RECOVERY PLAN THAT WOULD BE COMMERCIALLY PROFITABLE TO THE PEOPLE AND POLITICALLY POPULAR

Congress could establish by statute a National Reemployment Commission charged with the task of creating 9,000,000 new jobs—3,000,000 in manufacturing and 6,000,000 in related occupations. The Government would agree to pay 40 percent of the wages of each worker in the new jobs, and the payment would be made direct to the workers. The names

of the workers would be certified by the employers to administrative agencies—State or community committees—then relayed to headquarters where checks would be issued.

The National Reemployment Commission would set up State committees to deal with the 169,111 manufacturing industries that report to the census of manufactures the reports, which have been made for years, provide a satisfactory basis for determining the quotas of new jobs for each line of industry and for each individual industry.

County, municipal, or community committees would be set up and charged with the task of enumerating all employers outside of the census of manufactures list. Work in offices, clerking in stores, other kinds of selling, trucking and delivery, garage service, specified kinds of farm work, domestic service, and a thousand and one other kinds of jobs would be cleared through the community committees. These community committees would become the active agencies to stimulate the building of homes and might act as a liaison in obtaining Government loans or guarantees for the purpose.

The community committees, made up of local citizens who would serve without pay or at a modest per diem, would bring the responsibility for reemployment to the doorsteps of the people. Every citizen would have a satisfying part to perform in meeting the most important economic problem that troubles human society. The public would learn that it is responsible for its economic conditions as well as for its political control.

FIGURING THE COST

In 1935 the wage earners, plus the salaried employees in manufacturing (in the 169,111 plants that report to the Census of Manufactures) were paid \$9,836,044,674. There were 8,454,918 employees.

If 3,000,000 new jobs were created in manufacturing, and the Government contributed 40 percent of the wages of the new jobs, it would require approximately \$3,900,000,000 to meet the new pay roll, of which the Government would supply \$1,560,000,000.

If 6,000,000 new jobs were created in collateral occupations (assuming the wages to average the same as in industry) and the Government contributed 40 percent of the wages, it would call for \$3,120,000,000 of Government money to meet its share.

The grand total Government contribution to employment would be somewhat more than four and a half billion dollars a year.

THE PROFIT TO SOCIETY WOULD BE A NET OF FIFTEEN BILLIONS A YEAR

Each 40 cents contributed by the Government for new jobs would bring forth 60 cents from the employer. Thus the total wage fund, in manufacturing, would be increased by approximately \$4,000,000,000 a year, which would be added to the buying power of the masses.

A fair estimate of the value of the goods produced by the new jobs in the factories would be \$18,000,000,000, of which \$8,000,000,000 would represent new value arising from the processes of manufacture. When this eight billion of newgoods value is added to the new pay roll of four billions, it makes a total of \$12,000,000,000 of new buying—and there-

fore new consuming-power for the people.

The new jobs in occupations collateral to manufacturing would produce a pay roll of \$7,800,000,000 at the same average rate of wages as paid in industry. Combining this \$7,800,000,000 with the \$12,000,000,000 arising from manufacturing makes a grand total of approximately \$20,000,000,000 new buying power. This is equal to one-third of the estimated national income in 1936. Even more important is the fact that it is primary buying power in the hands of the masses. If it were treated as economists frequently treat such additions to national buying power, it would be multiplied two and a half times in considering its effect on the business of the Nation.

The effect on every line of human activity that would come from pouring \$20,000,000,000 of new buying power into the current of business cannot be measured in words.

The contribution of four or five billions of Government funds would be a marvelous investment.

TRAINING AND RETRAINING FOR INDUSTRIAL WORK

Every year brings new machines into use which displace workers who thus find themselves with an obsoleted skill or experience. If they find work again, it is lower paid. Frequently they become unemployable. From a different angle young persons without industrial skill or experience find many jobs closed to them. In attacking the unemployment problem in a broad way the training and retraining of workers will prove profitable to individuals and to society. Much of the practical training will have to be done in factories, where machines are available, but where the trainees cannot deliver the output of regular workers. The Government could make an additional contribution to the wages of the trainees. Handling the education of workers in this manner would be a fundamental aid to stability of employment. Functioning through State and community committees, as a part of the general reemployment effort, it would arouse healthy enthusiasm among the citizenship.

SELF-HELP COOPERATIVES FOR AGED OR PHYSICALLY HANDICAPPED WORKERS

If the industrial and commercial forces of the Nation are fully employed, there can be no ground for objecting to the establishment of self-help cooperatives for unemployables. Mr. Ralph Borsodi is blazing a trail that might lead to a tremendous reduction in the money cost to the public of maintaining such persons. The workers can preserve their self-respect, find satisfaction in work that is worth while, and at the same time make many of the necessities of life. The organization of such self-help agricultural-industrial cooperatives could be made a part of the responsibility of community reemployment committees.

HOW WOULD THIS RECOVERY PROGRAM AFFECT THE PRICES OF GOODS?

As industry swung into increasing production the tendency of prices of goods in competitive lines would be downward. When a factory operates at or near capacity the overhead cost per unit of product declines. Prices can be reduced without cutting the customary margin of profit.

HOW WOULD WAGES BE AFFECTED?

Real wages would be raised. Even if the dollar wage remained stationary the cost of living would tend downward as an abundance of goods entered the markets.

The dollar wage could be protected in the contracts which would be executed by the National Reemployment Commission with factories that participated in the recovery plan.

EXPORTS WOULD BE ENCOURAGED

American exporters would find themselves in far better condition to meet competition in neutral markets. German economic aggression directed against American export sales in Europe and South America is a policy of that Government.

FARMERS SHOULD SUPPORT THE RECOVERY PLAN

The goods farmers buy doubtless would be reduced in price, while the market for foodstuffs would expand. It is conceivable that the increased demand would absorb American agricultural production.

In addition to those indirect advantages, farmers are employers of labor, and the new jobs created under this plan would be treated the same as new jobs in industry. Improvements to buildings and fences could be made to great advantage.

WHAT ABOUT OVERPRODUCTION?

There might be surplus production in some lines during the first months of the recovery plan, while the buying power of the masses of people was being built up. Liberal credit arrangements should be made to carry the goods until the market absorbed them.

In the larger sense of surplus production there is no likelihood of making more of the good things of life than the American people would enjoy if they could buy them. So long as one-third of the population has less to eat and wear than the most meager living requires, the bogey of overproduction can be ignored.

The market for any article can be broadened more effectively by increasing the incomes of the masses of consumers than merely by cutting prices. The limits of price cuts are

much narrower than the possibilities of enlarging the incomes of a nation of industrious people located on the richest continent of the globe.

Patriotism

EXTENSION OF REMARKS

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, April 10, 1939

ARTICLE BY WESLEY S. GOFF IN THE JACKSON (MICH.)
CITIZEN-PATRIOT

Mr. MICHENER. Mr. Speaker, pursuant to the privilege given to me to extend my remarks, and in keeping with a request from a constituent, I include herein an article written by Mr. Wesley S. Goff which appeared recently in the Jackson Citizen-Patriot, Jackson, Mich.

The article is entitled "Patriotism" and is typical of many similar articles appearing in the press throughout the country. The article is as follows:

[From the Jackson (Mich.) Citizen-Patriot]

It was my privilege recently to see a gentleman produce things out of thin air, as it were. He was a magician of no mean ability and he kept his audience wondering how he did some of his tricks. In fact he had us all mystified. This magician, of course, was modern charlatan. We in his audience knew that his performance was only legerdemain and skillful sleight-of-hand.

was only legerdemain and skillful sleight-of-hand.

The thought intrudes from time to time that in the past decade "we the people" have been seeing some high-grade legerdemain in our national life. We as a nation have run the gamut of human emotion. We have charted a course of high idealism only to founder in a sea of defeatism. The sons of their fathers have acquired a futility complex which prevents them from in many cases doing or attempting to do the things that should be done if our Nation is to endure. A great man once said that this Nation counter has

attempting to do the things that should be done if our Nation is to endure. A great man once said that this Nation cannot exist half slave and half free. It is true, and yet at the present time a large group of our citizenry are mental slaves to an ideology so strange and foreign to the principles of the founding fathers that could they but see us today they would perforce turn over in their graves in sheer despair.

We have today a great variety of "isms" from which to choose to light our way. The only "ism" which we may safely choose is patriotism, than which there is no substitute. As a nation we must "pray God and keep our powder dry." We must realize that in its finality, true patriotism is nothing more nor less than good citizenship and a firm determination to keep our country worthy of all the blood and tears that have been shed to preserve for us those things that many value so lightly in this high-pressure age.

No thinking person would want to return to the so-called "horse and buggy" days with their manifold lack of modern comforts to which all are now so accustomed. Those were not the joy and pride of yesteryear. No. The mental and spiritual stratum in which our forefathers lived developed the kind of men and women who were not quitters, who hewed to the line, and who never once thought of the possibility of defeat. It was told a score or so years ago of a great army being trained to go out and win a war and save the world for democracy, and never trained in the technique of retreat. Mayban we need some training now again.

Mayhap we need some training now again.

And so let us each in our small way give our Nation a new birth, rather than a new deal, that we may take up again the cross of service, and with it march triumphantly toward the dawning of a new and better day.

Neutrality, Peace, and Aggression

EXTENSION OF REMARKS

HON. KEY PITTMAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES Tuesday, April 11, 1939

ARTICLES FROM THE WASHINGTON POST OF APRIL 8, 1939

Mr. PITTMAN. Mr. President, I ask unanimous consent to have printed in the RECORD four articles published in the

Washington Post of Saturday, April 8, 1939. The first appears under the heading "Yellow Light Policy," by Livingston Hartley; the second is by Walter Lippmann and is entitled "Peace in Our Time"; the third is by Mark Sullivan and is entitled "Neutrality—Pro and Con"; and the fourth is by Barnett Nover, entitled "The Latest Victim." There being no objection, the articles were ordered to be

printed in the RECORD, as follows:

[From the Washington Post of April 8, 1939] "YELLOW LIGHT POLICY"-HOW IT WORKS AGAINST WAR (By Livingston Hartley)

(By Livingston Hartley)

The President and Secretary Hull have repeatedly stressed how another great war abroad must damage us even though we escape involvement. More ominous is the Gallup poll finding of January 28 that no less than 57 percent of our people now believe we could not escape involvement. And equally significant is the warning of Mr. Hoover, in a political speech on February 2 attacking the administration's foreign policy, that popular indignation over wholesale air attacks on European cities might well sweep America into the conflict. Few who have observed the rising tide of American feeling against the Hitler regime in recent months would disagree with Mr. Hoover here.

Since we have no political commitments outside this hemisphere.

Since we have no political commitments outside this hemisphere, the whole field of action is open to us to protect our stake in peace beyond the Atlantic. This may be divided into three alternative

lines of policy.

There are some who favor taking a definite stand on this issue and showing a clear red traffic light to the war makers. From a purely theoretical standpoint, a case can be made for such a policy. Due to the great potential strength and the vast resources of the United States, it can be argued that it would be far more likely than not to assure peace at the cheap cost of action confined to words and paper.

IS ISOLATIONISM MAKING FOR WAR?

But from a practical point of view, this policy appears out of the question. Great as is our stake in European peace, it is not as great as the stake of the European powers, and we cannot reasonably be expected to incur risks voluntarily for its preservation as far reaching as those they are compelled to face. And there is little likelihood that American public opinion would be willing to adopt the overseas commitments firm pursuit of this

course would entail.

The extremists of the opposite camp would show a green traffic light to the war makers by passing laws which would assure them that the United States will place no obstacle in their path whatever they might do.

This policy is tempting to some of our people, since it appears This policy is tempting to some of our people, since it appears to set up legal bulwarks around the peace of the United States. But it automatically promotes aggression abroad by clearing the path as far as the United States is concerned, and, by playing into the hands of the war makers, makes it more probable that Europe will be engulfed in war. For this reason, unless a majority of our people are wrong and Mr. Hoover's warning has no valid foundation, this policy gives America a decisive push along the road

Pursuit of this policy under present world conditions tends directly to smear the hands of its sponsors in blood. And we can have no assurance, according to the views of a cross-section of public opinion and the judgment of many of those well qualified to judge, that the blood will not be American as well as European.

HOW OUR PRESENT POLICY AIDS PEACE

Our neutrality legislation has so far followed this green light policy in relation to export of arms and airplanes to belligerents. policy in relation to export of arms and airplanes to beliigerents. It has aided the well-armed aggressors abroad to achieve their aims through force by denying such exports to the less militarized nations who stand in their path. Should this part of the 1937 Neutrality Act be left unchanged by Congress now, it will both make war abroad more probable and assist Hitler to dominate Europe, and perhaps the eastern Atlantic, by reducing the defensive capacity of Britain and France.

Finally there is the yellow traffic light policy which our Govern-Finally there is the yellow traffic light policy which our Government has developed more and more in these recent darkening years. This implies no commitments abroad of any kind, maintaining entire freedom of action for the future. It merely sets up a warning to the war makers that if they cross the road which divides peace from war the American traffic light might change color. It makes the United States a "question mark" in world affairs, a factor upon the quiescence of which no aggressive government can count, and which, because of our great power, must exert a restraining influence upon the most warlike dictator.

Were the United States only another Italy, this policy would have little effect. But since the United States stands preeminent in intrinsic national power, since it is so well endowed with

nent in intrinsic national power, since it is so well endowed with the economic resources the European powers must obtain from outside to wage an extended war, and since the dictators know that the United States could, under most conditions, decide again the issue as it did in 1918, this policy can function as a sturdy

bulwark of peace.

Even in its psychological influence, it is a powerful deterrent to war. The series of pronouncements the President and Secretary Hull have made, setting forth America's belief in peace, law, and decency and her opposition to the use of force, send their influence far and wide. In the overseas democracies they encourage those who favor a firmer stand to halt aggression. In Germany they are

reported on good authority to be read by Hitler in full. Their meaning is brought home to the German people by the violent campaign of the controlled Nazi press against the United States.

UNITED STATES-GERMAN HOSTILITY A DETERRENT TO WAR

Here we find the strange paradox that the international friction

Here we find the strange paradox that the international friction between the United States and Nazi Germany is more of a contribution than a danger to peace. Marked by mutual recriminations and withdrawal of ambassadors, it makes known to the German people the innate antagonism of powerful America and makes them more loath than they otherwise would be to follow their Fuehrer into another World War.

The more this psychological pressure for peace can be supplemented by concrete measures to make successful aggression abroad more difficult, the more effective a deterrent to war it will be. Measures which build up the resisting power of the Atlantic sea powers while peace yet reigns, such as selling them American airplanes, are a direct contribution to this end. And measures which would enhance their resisting power during war are a most practical and valuable means of making war less likely.

Here is where provident neutrality policy can do so much to insure that our yellow traffic light will never be forced by circumstances we cannot control to turn stark red in the midst of overseas hostilities, to insure that the history of 1914 to 1917 will not

seas hostilities, to insure that the history of 1914 to 1917 will not

be repeated.

We have an opportunity now to do a great deal to achieve this purpose by one simple change in our neutrality law. We can place arms and airplanes on "a cash and carry" basis, the same basis on which the President is now empowered to place oil, steel, and other products as essential as armaments for war, as is proposed in the Pittman bill.

TURNING SCALES FOR PEACE

This cannot recreate the neutrality dangers of 1914 and 1917, because such exports would neither be American property nor be carried abroad in American ships, and their sale would take place within our borders, out of reach of belligerent intervention. But it would contribute so directly to the resisting power of the European netting which seek to block aggression as to reduce materially nations which seek to block aggression as to reduce materially the probability that the war makers will subject them to assault.

In the critical condition of Europe today, such a development of our yellow traffic light policy may turn the scale for peace. And that, we must admit, is the only sure and certain safeguard of the peace of America.

PEACE IN OUR OWN TIME (By Walter Lippmann)

During the hearings this week before the Foreign Relations Committee the defenders of the existing neutrality legislation gave the impression that they have given up all hope of averting a world war. Let us hope that this is a false impression. But the fact is that they are talking as if they regarded war as inevitable, as if nothing could be done, as if nothing should be done to prevent war. They talk like men who are hopeless, fatalistic, passive, and resigned before as tupendous and horrible a cotastropha as even threatened the world.

stupendous and horrible a catastrophe as ever threatened the world.

There is no doubt that Senators Borah, Johnson, Clark, and Nyre desire peace. But in the face of a situation which threatens to destroy peace throughout the world, they are, in effect, saying that they think nothing can be done and that, insofar as they can ob-struct it, nothing shall even be attempted which could avert the tragedy. They are brave, honorable, and sincere men. But the fact is that not one of them has as yet suggested a single constructive idea, a single principle, any policy, any program for doing anything now to prevent the outbreak of a world war.

WAR UNAVOIDABLE; IS THAT UNITED STATES' STAND?

NAR UNAVOIDABLE; IS THAT UNITED STATES' STAND?

Can it be that they really feel they represent the will of the American people, or that they are protecting the interests of the American people, when they put the world on notice that they think war unavoidable, when they declare that they will tie the hands of the President if he tries by the means within his power to prevent war? Do they intend to insist that this Nation must sit still and that it can do nothing until hell breaks loose, except try to decide whether the flames of hell will be hotter in one corner of hell than in another?

If this is not what they think, if they care enough about peace to do something to preserve it, if they do not trust the President of the United States to conduct the foreign policy of this Nation, then the very least they can do is to offer some policy of their own which is intended to prevent war. They are denying to the President his constitutional authority and constitutional responsibility in the conduct of foreign relations. If they think that is justifiable, proper, and necessary, though it subverts the American constitutional practice since the foundation of the Republic, then to prove their case they should come forward with a constructive policy of their own. They should say what they would do to prevent a world war. Falling that, they should confess they do not know how to prevent war, or that they have no hope of preventing it, or that they will not try to prevent it.

This is the crucial question from which American opinion cannot afford to let itself be diverted. Senator Borah and his associates talk as if the issue before Congress were whether the United States will go into or stay out of the next war. That is not the issue. The issue is whether there is or is not going to

United States will go into or stay out of the next war. That is not the issue. The issue is whether there is or is not going to

be another world war.

TWO WORLD WARS INVOLVED UNITED STATES

That is the question before us. The question is whether the power and influence of this Nation can be used now, now before

it is too late, to prevent the war, to prevent the hideous conse quences of a war, to prevent our having to make the horrible choice which will confront us if war breaks out—the choice which

will haunt us as long as it lasts.

For let us have no illusions about it. If there is another world war, it will not be fought in Albania alone or in the Polish corridor or in the African desert. It will be fought on every continent and in every ocean and with every weapon of destruction that the ingenuity of man has devised. It may be that Mr. Nye and Mr. Borah can write a law which can keep us out of it, but let them not be too sure.

not be too sure.

There have been two world wars since the American Constitution was adopted. The United States has been involved in both of them. Mr. Nyz seems only to remember the World War of 1914–18, and he remembers that we sold munitions to the Allies and became entangled in the war, and loaned money which has not been repaid, and lost men and got a wretched peace. But if he would remember the other world war, that of Napoleon, he will recall that in that war we adopted his policy. We had an embargo. We had such a strict embargo that it ruined New England and nearly caused secession, and, in spite of the embargo, we were drawn into the war and were invaded and the Capitol in Washington was burned.

It ought, therefore, to be fairly evident to any man that Jefferson's embargo was no more effective against entanglement in a world war than was Wilson's neutrality.

world war than was Wilson's neutrality.

DIPLOMACY NEEDED TO PREVENT CONFLICT

There is no guaranty against entanglement in a world war except successful diplomacy which prevents the war. Fire escapes may be necessary. But the important thing is not to have a fire. Lifeboats are excellent. But it is safer to keep the ship from foundering on the rocks. A bombproof shelter is a good thing if you have to be bombed. But it is better to prevent air raids. No one ever prevented fires, shipwrecks, and bombardments by devoting his whole attention to fire escapes, lifeboats, and dug-outs.

by devoting his whole attention to fire escapes, lifeboats, and dugouts.

There will be time to decide how we shall protect ourselves if and when a world war breaks out. But there may not be much time left to do all that it lies within our power to do in order that a world war shall not take place. There is some time, however, and we have much power. The decision has not yet been taken. The die is not yet cast. And as we have great authority in the world, great resources and great strength, surely it is the part of prudence and wisdom and elementary common sense to do what we can, soberly, resolutely, calmly and unitedly, to save ourselves from the ordeal of living through another world war. We have gone through that ordeal once in our generation. How shall we answer to our own consciences; what shall we say to the youth of the world who stand in mortal jeopardy; what shall we plead at the bar of history, if we do not do what we can to prevent the horror that hangs over us?

NEUTRALITY: PRO AND CON-PITTMAN'S PROPOSAL (By Mark Sullivan)

What America is doing right now—in the Senate committee hearings and generally—is making up its mind whether, in a war in Europe we will be of help to Great Britain or to Germany. That is not what we say we are doing. We say we are deciding how best to be neutral. And we mean that. No one is in bad faith. No one is trying any trick. All the same, we are deciding whether we will be of help to Britain or to Germany. We can see this if we look at the existing neutrality law and then at the changes proposed in it. proposed in it.

The existing neutrality law has several provisions dealing with different subjects. The principal one is the one dealing with arms. This provision is—I condense: No arms made in America shall be sold to any nation at war, under any conditions. From the moment war is on, no arms shall leave America.

That looks like neutrality. It is neutrality. Before any judge it can be defended as neutrality. Righteously we can raise our eyes to heaven and declare that we treat all nations at war absolutely

Nevertheless, that provision is a help to Germany. It is a detriment to Britain. For it deprives Britain of an advantage she

Britain has merchant ships and a navy to protect them. In a war, Britain could send ships to America and buy our arms and carry them home, if our law permitted her. But for our existing neutrality law Britain at war would have access to the enormous supply of arms we could make, the greatest supply any nation could make. But by our neutrality law we deprive Britain of that

Germany, on the other hand, has no merchant ships and no navy that she could use in time of war with Britain. What ships and navy Germany has would be sealed by the British Navy the day war is declared. Our neutrality law deprives Germany of nothing. By our neutrality law Germany is enabled to fight a Britain confined to what arms Britain can make herself (or get from nations having less scruple than us). But if we did not have our existing neutrality law Germany would be obliged to fight a Britain equipped with all the magnificent supply of arms our manufacturers could provide.

(Pause at this point to reflect on the paradox inherent in any neutrality law we can pass. In words, it may be the most neutral law ever penned by the hand of man. But in actuality it will work to the advantage of one nation or another. There is no such

thing as a neutrality law that will bear with absolute equality on

every nation at war.)

Consider now the changes proposed to be made in our neutrality law, upon which the Senate committee is at work. I deal here with only one—the one that has a kind of authoritative standing. It is proposed by the chairman of the Senate Foreign Relations Committee, Mr. Pittman, of Nevada. Senator Pittman would change our existing law so as to make it read, in effect:

"America will sell arms to any nation whatever, provided the purchasing nation pays cash for them and carries them home in her own ships."

"America will sell arms to any nation whatever, provided the purchasing nation pays cash for them and carries them home in her own ships."

This looks like a perfect neutrality law. It treats all nations the same. Besides, it tends to keep America in a neutral state of mind. The provision about paying cash prevents any American seller of arms and America as a whole from becoming a creditor of a nation at war. Hence it prevents us from having an interest in seeing one nation win. Thus it takes away from us any temptation to join the war in order to help our debtor win.

It looks like a perfect neutrality law in every respect. It seems to treat all nations the same. But consider:

Germany could not come to America and buy our arms. She probably has not the cash, and she certainly has not the ships, or would not have them during a war.

Britain, on the other hand, has the cash and the ships, and the navy to protect the ships. Britain at war could rely upon America as an unlimited source of arms.

I have spoken only of the provision of the existing neutrality law that applies to arms. Another provision applies to goods other than arms—to foodstuffs, cotton, steel, and the like.

The existing law permits nations at war to buy this kind of goods on the cash-and-carry basis. In this provision of the existing law, Senator Pittman would make no change.

This provision, both in the existing law and in the proposed one, would work to the advantage of Britain. For, as in the case of the arms provision, Britain alone would have the ships to take advantage of food and other ordinary goods from America.

In all this, we face the question: As between Britain and Germany, which do we prefer to be of help to? The Roosevelt administration wishes to be of help to Britain. Most Americans agree.

We can be of help to Britain and at the same time remain neutral) by saying that any nation at war can buy from us if she pays cash and carries the purchases home in her own ships.

From another point of view, if we wish to be very moral, a

THE LATEST VICTIM-MUSSOLINI AND ALBANIA (By Barnet Nover)

(By Barnet Nover)

In the past few years both Hitler and Mussolini have won spectacular victories in the foreign field. But Mussolini's triumphs have always been achieved the hard way.

The conquest of Ethiopia, intervention in Spain, and now the invasion of Albania have involved actual war measures and have cost Italy much blood and treasure. Hitler's victories have been far less expensive. The reoccupation of the Rhineland, the absorption of Austria, the seizure of Czechoslovakia and Memel, were brought about through intimidation alone.

In each instance, however, Mussolini unwittingly helped clear the path for his partner. It was Europe's preoccupation with the Ethiopian war that made it possible for Germany to militarize the Rhineland. It was the circumstance that Mussolini was kneedeep in his Spanish adventure that permitted Hitler to destroy the independence of Austria. And it was, in part, the existence of the Berlin-Rome axis that paved the way for Munich and its

of the Berlin-Rome axis that paved the way for Munich and its

grim aftermath.

Now Mussolini apparently has no choice but to serve as the trail blazer for the Third Reich. That is the basic significance of his otherwise inexplicable action in suddenly pouncing on Albania to secure through force what he had already won through political,

financial, and economic means.

Nothing more clearly demonstrates, than does this wanton attack on a weak and backward nation, how much Mussolini has

become the prisoner of the axis.

Albania has been for all intents and purposes an Italian protec-Abania has been for an intents and purposes an Italian protectorate since 1926. To be sure, by no means all Albanians relished the role assigned to their nation. Again and again the feud spirit which is strong in that country flared up in opposition to a monarch believed to have become Rome's pawn. But this opposition always managed to be put down and Italy's hold on Albania steedility grow steadily grew

The roads that were built across the trackless mountains of the little Adriatic state were largely designed by Italian military engineers for Italian military purposes. The harbor works built at Durazzo and other Albanian ports with Italian loans far beyond Albania's capacity to repay, had Italian strategic purposes in the

background.

Almost 60 percent of Albania's meager trade was with Italy and its banking system was basically in Italian hands. Moreover, by the 1927 treaty of alliance, Italy was practically given the right to use Albania as a base of operations in the event of war.

ITALIAN PEOPLE DISLIKE THE AXIS

Why, then, has Mussolini gone to the trouble of brutally under-lining the obvious and with so great a flourish seizing what was his already?

The prestige reason cannot be ignored. What Hitler has done, Mussolini must also do. But that cannot be the only reason. No

Mussolini must also do. But that cannot be the only reason. No amount of propaganda has been able to hide from the Italian people the fact that Hitler has played Mussolini for a sucker. The Italian people, by and large, are not enthusiastic about the axis.

The axis has enabled the Third Reich to expand to ominous dimensions. Italy has only casualty lists, a bankrupt treasury, tightened belts, and vague promises of future gains to show for her efforts. And the fact that a very powerful Germany now adjoins the Brenner and is within striking distance of Trieste and the Adriatic has only added to Italian disquiet.

Brenner and is within striking distance of Trieste and the Adriatic has only added to Italian disquiet.

The addition of Albania to the Italian Empire would have a slight strategic value for Italy. In possession of both sides of the narrow Strait of Otranto Italy would seemingly be in a better position than she is now to control the Adriatic. But yet Albania was already in Mussolini's pocket before the attack on Zog's kingdom began. And with modern long-range artillery and modern bombing planes capable of making that strait a very unhealthy place for an enemy, even if Albania were neutral, the transformation of Durazzo, Valona, and other Albanian harbors into Italian ports and naval and seaplane bases should not make any material difference in the situation. situation.

On the other hand, it is doubtful whether Albania can be made On the other hand, it is doubtful whether Albania can be made a base for Italian commercial and political penetration of the Balkans. Such penetration would cut athwart the plans of the other member of the axis. Germany already takes a large part of the exports of the Balkan states and supplies them with a considerable percentage of their imports. Germany's economic situation is hardly such that she can afford to turn over those hard-won markets to Italy as a gesture of amity.

ALBANIA ATTACK AN ANSWER TO BRITAIN

The real reason for the sudden and brutal attack on Albania is to

be found elsewhere.

The real reason has much more to do with the needs of the axis than with the direct needs of Italy. Because of the efforts of Great Britain and France to create an antiaggression combination, Germany finds her plans of further expansion in danger. In the meantime, Italy has run up against formidable French opposition to her plans of dominating the Mediterranean.

For Germany to continue to go forward in Europe Hitler must dispure the slowly developing a system reserves in the slowly developing a system of the slowly developing a system of the second statement of the slowly developing a system of the second statement of the slowly developing and statement of the slowly developing a system of the slowly developing and slowly developing a system of the slow

For Germany to continue to go forward in Europe Hitler must disrupt the slowly developing antiaggression bloc or at least prevent it from growing. For Italy to make any progress in the achievement of her imperial ambitions it is necessary, Mussolini feels, to prevent the encirclement of Germany, through whom alone, he believes, Italy can achieve what she is after.

The attack on Albania is thus a warning to Yugoslavia, Greece, and other nations not to fall in with the plans of Great Britain and France.

and France.

and France.

It is also much more than that. It is also a notice to Neville Chamberlain that Mussolini's attitude regarding appeasement is no more cooperative than Hitler's has proved to be.

To appease Hitler, Chamberlain consented to the partition of Czechoslovakia. We know what happened.

To appease Mussolini, Chamberlain agreed to the destruction of republican Spain. Republican Spain has now been destroyed. But Italy's troops are still in the Iberian peninsula, and the Italian garrison in Libya has been increased, despite treaty pledges to the contrary. Now, also in defiance of the Anglo-Italian Treaty of 1938, Italy is upsetting the status quo in the Mediterranean.

Eden was right.

Eden was right.

F. H. A. and Prosperity

EXTENSION OF REMARKS

HON. JAMES M. MEAD OF NEW YORK

IN THE SENATE OF THE UNITED STATES Tuesday, April 11, 1939

EDITORIAL FROM THE CHICAGO DAILY TIMES OF MARCH 27, 1939

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "F. H. A. and Prosperity" published in the Chicago Daily Times of March 27, 1939.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Chicago Daily Times of March 27, 1939] F. H. A. AND PROSPERITY

If any measure of the Roosevelt administration can be said to enjoy almost universal public approbation, it is the Federal Housing Administration.

F. H. A. is based upon a happy blending of Government and business. Private financial institutions provide the money (and collect the interest) for F. H. A. loans. The Government insures the lending institution against loss. The Government recognizes

both the social desirability of better housing and the economic benefits of an active building industry.

benefits of an active building industry.

Would-be home owners, those who own homes and wish to repair or modernize them, real-estate dealers, property owners whose holdings increase in value by building in the neighborhood, banks with idle capital, building contractors, building tradesmen, building supply dealers, and all the industries feeding them share in the benefits of the F. H. A. inspired construction activity.

Despite this, authorization for an increase of a billion dollars in the total F. H. A. insured loans which can be outstanding at any time squeezed through a House committee in Congress last week by the bare majority of one vote. According to reliable word from Washington, the measure faces a serious fight on the floor.

This apparently incomprehensible circumstance arises primarily from the fact that building and loan institutions throughout the country resent the F. H. A. limitation of 5 percent interest upon such loans and fear that competition for these investments may drive the rates even lower.

drive the rates even lower.

FIVE PERCENT NOT BAD FOR SAFE LOAN

It is beside the point whether 5 percent is a "fair return" upon loans of this nature. Considering that the Federal Government is insuring such loans in a manner as virtually to eliminate any element of risk, 5 percent doesn't seem unreasonable to us.

What is of vital importance, however, is the whole effect of the F. H. A. program. In many ways the whole hope of a deep-rooted recovery of our entire economic system revolves about a sweeping revival of the building industry. In the face of that a temporary 1 or 2 percent difference in the return upon a billion dollars is a ridiculous quibble. ridiculous quibble.

To appreciate the key position held by the construction industry in our hopes for recovery it is necessary to look back over the past a bit. Just to make it a thumbnail sketch, lets stick this side of 1870—about the time the Nation recovered from the effects of the

Civil War.

From 1870 to 1914 was a period of tremendous expansion in merica. The West had been tied to the East by railroads, and all America. its vast mineral and agricultural wealth gave a tremendous stimulus to every type of industry. Our population was increasing at a prodigious rate.

All of our energies were at work in building a nation. Cities doubled and redoubled in size. The railroad and shipping industry expanded enormously. Every cent of our available capital was kept at work providing bigger and bigger industrial establishments.

WORLD WAR GAVE US BIG BOOM

Then came the World War. Our industrial pace, after a few Then came the World War. Our industrial pace, after a few months of slump, again was stepped up to an ever-growing capacity to supply fighting nations with war supplies and the rest of the world with goods normally supplied by those at war. This constantly increasing demand for production capacity, extending several years after the war, until other nations recovered, again kept all our capital at work—and men, too.

The automobile, with its huge stimulus to steel, rubber, and a score of allied industries, the job of building a million miles of highways, and radio, then picked up the task and carried us along until the formula ran its dizzy course in 1929.

Today the job of building our Nation is basically complete.

Today the job of building our Nation is basically complete. opulation is increasing yet but at a crawl compared to prear days. Other nations are industrially self-sufficient or ap-Population is war days. Other nations are industrially self-sufficient or approaching it. Foreign markets are tied up with nationalistic jealousies and monetary exchange difficulties. The markets for automobiles and radios are sharply reduced because so many persons already own them.

sons already own them.

What, then, is to put idle money and idle men to work? The only giant unsatisfied need, offering hopes of pulling all industry with it, is for new housing. Others may come along. The gradual forcing of greater buying power into many more hands eventually may do the trick. But the immediate hope lies in housing. F. H. A. is the spark plug of this recovery movement. In Illinois alone the volume of applications for loans has reached \$70,000,000 monthly. Nationally the demand is for hundreds of millions. It is utterly inconceivable that Congress could let anything now serve to choke off this growing stream of recovery with all that it means to the Nation.

Christopher Columbus and the Dominican Republic

EXTENSION OF REMARKS

HON. HENRY F. ASHURST OF ARIZONA

IN THE SENATE OF THE UNITED STATES Tuesday, April 11, 1939

ADDRESSES OF HON. THEODORE F. GREEN, OF RHODE ISLAND, IN THE DOMINICAN REPUBLIC

Mr. ASHURST. Mr. President, the junior Senator from Rhode Island [Mr. Green] recently headed a delegation of LXXXIV-App-88

Members of Congress, as the guests of the Dominican Republic, on the occasion of the opening of the tomb of Christopher Columbus.

While there he delivered a number of addresses. I am asking that two of these be printed in the Appendix to the RECORD. One was delivered in the cathedral where Columbus was buried and the other before a special joint session of the Dominican Congress. The latter Congress comprises the fifth senate of an American republic, including our own, which Senator Green has addressed within 9 months.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS OF HON. THEODORE F. GREEN, OF RHODE ISLAND, IN THE CATHEDRAL OF CIUDAD TRUJILLO, DOMINICAN REPUBLIC, MARCH 19,

My fellow Americans of North, Central, and South America, it is a thrilling experience to be here in this the first permanent European settlement in the New World—in this city founded by Columbus, where still are to be seen the remains of buildings associated with him, his son, and his brother. It is especially thrilling to stand here in this the oldest cathedral in the Western Hemisphere, by the spot where the great discoverer was buried, and where his mortal remains still lie.

He loved this place so dearly that he named the island after his beloved homeland, and his dying wish was that he might be brought from Spain and buried here.

brought from Spain and buried here.

Could there be a more appropriate place to erect an international, all-American monument to that intrepld soul? Was it not natural that this place should be unanimously chosen for the site of the great tribute of 21 American nations?

Christopher Columbus is to us Americans more than the daring adventurer and more even than the successful discoverer—lovers of adventure and discovery though we still are. He has become in our imagination a mystical figure symbolizing idealism. On one of his long voyages, when he passed sleepless nights on deck, his sailors, fearfully watching him, whispered, "He is drunk with the stars."

And so he was. Such inspiration to dream of great and noble

And so he was. Such inspiration to dream of great and noble things to be achieved and such power to realize them in spite of almost insuperable obstacles are seldom found together, but they were the characteristics we revere in this man. I like to think that they are characteristic of the nations of America today, and they help to bind the American republics together, in spite of overseas efforts to split us apart.

Columbus has become a symbol of the American unity we are striving to achieve—a great and noble cause only to be realized by the persistence he showed in sailing a chartered course in both

This hoped that a fitting monument may be completed here by 1942—the four hundred and fiftieth anniversary of the discovery of this continent. From then on may it serve as a monument not only to Christopher Columbus, but also to lasting pan-American unity and peace.

ADDRESS OF HON. SENATOR THEODORE F. GREEN, OF RHODE ISLAND, BE-FORE A SPECIAL JOINT SESSION OF THE CONGRESS OF THE DOMINICAN REPUBLIC MARCH 20, 1939.

Mr. Vice President, Mr. Speaker, Members of the Senate and Chamber of Deputies, it is with keen appreciation of the honor you have conferred that I accept your invitation to address this joint session of your Congress. Had my colleagues in the Senate of the United States known that I was to have had this privilege, I feel sure that they would have sent you their cordial greetings. The feeling of friendship and of community of interest between my country and her sister republics of the Western Hemisphere has been increasing rapidly in recent years. So I feel justified in bringing you cordial greetings also from the administration and people of the United States.

There has, I know, been a corresponding change of feeling toward us on the part of the governments and peoples of the other coun-

us on the part of the governments and peoples of the other countries on this continent, including the Dominican Republic. This has been due principally to the good-neighbor policy of our great President, Franklin D. Roosevelt. He has expressed not in words, but in acts, the statesmanlike view that all of the 21 nations which trees their bigstructure of the statesman of the stat trace their history back to the common origin of Christopher Co-lumbus founding a permanent settlement here have certain common principles of government and also certain common interests which set them apart from other nations. The New World is separated from the rest of the world not only by the Atlantic and Pacific Oceans but also by this community of principles and interests. Common action should protect these against any threat from across either or both of those oceans. This common action should not be determined by the dictation of any one of them besed on not be determined by the dictation of any one of them based on size or wealth or special interest. It should be the result of the willing help of good neighbors, great and small, rich and poor, each eager to do what she can in the common cause of Pan Americanism—that cause for which the Dominican Republic under the

leadership of General Trujillo has been an ardent advocate.

It is not enough that we should not injure each other. We should help each other. It is not enough that we should forget any past grievances or be at peace with each other. We must plan how best to preserve that peace in a world full of war and threats of war. Most of the American nations, including the Dominican

Republic and the United States, had to fight to win their independence. We must keep it at any cost. Let us all work together and no power or combination of powers overseas can take that

and no power or combination of powers overseas can take that independence from us.

I thank you for this opportunity you have given me of addressing you and for all the many courtesies we have received from the officials and people of your country on this visit of ours to help erect a worthy monument to Columbus. I trust many of you may from time to time visit Washington, where I can assure you a warm welcome. May the Dominican Republic long live and prosper.

Aliens and Employment

EXTENSION OF REMARKS

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES Tuesday, April 11, 1939

ARTICLE FROM THE NEW YORK TIMES OF APRIL 9, 1939

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Aliens Seen Adding to Job Problems," published in the New York Times of Sunday, April 9, 1939.

There being no objection, the article was ordered to be

printed in the RECORD, as follows:

[From the New York Times of April 9, 1939]

ALIENS SEEN ADDING TO JOB PROBLEMS—THOSE IN UNITED STATES ILLEGALLY KEEP CITIZENS FROM PROCURING WORK, SOMERVELL HEARS—PROPOSED BAN BACKED—IMMIGRATION HEAD HOPES ALBANY WILL PASS BILL ON THE FOREIGN-BORN

Many of the 10,975 W. P. A. workers dismissed in this city last week would be able to find jobs if the legislature passed a bill making it a misdemeanor to employ any person who was in the United States illegally, Rudolph Reimer, commissioner of immigration and naturalization at Ellis Island, declared yesterday in a letter to Lt. Col. Brehon B. Somervell, local Works Progress Administrator. Administrator.

Administrator.

The letter was sent by Mr. Reimer in his personal capacity and not as a Federal official. It pointed out that a bill prohibiting the employment of aliens here illegally had been approved by the assembly and was now awaiting action in the senate at Albany. "Since we require a native-born child to produce working papers before the employer is permitted to place the native-born child on the pay roll, it is not unreasonable to require the alien to show affirmatively that he is not in our country illegally." Mr. Reimer said. "I am convinced that the people of New York State want the looks in our State for those who are legally here or who are its jobs in our State for those who are legally here or who are its citizens

The impossibility of patrolling adequately the Canadian and Mexican borders and the Atlantic and Pacific Oceans and the Gulf of Mexico was cited by Mr. Reimer in support of his contention that "many thousands" had come into the country illegally and

now held jobs here.
"Judging from the inquiries made at Ellis Island for advice how "Judging from the inquiries made at Ellis Island for advice how to purge the alien of illegal entry, the statement that there are many thousands employed is not an exaggeration." Mr. Reimer told Colonel Somervell. "This is further evidenced by the fact that there are 12,664 visitors now in the United States whose departure our department at Ellis Island has been unable to verify. No one knows the exact number."

Certificates of arrival are issued on application at Ellis Island, Mr. Reimer observed, and these could be used by employers to establish the residence status of their employees and to insure against the employment of "bootleg aliens, stowaways, ship jumpers, students, and visitors who have overstayed their allotted time."

Federal Grants-in-Aid To the States

EXTENSION OF REMARKS

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES Tuesday, April 11, 1939

RADIO ADDRESS BY HON. PETER G. GERRY, OF RHODE ISLAND, APRIL 10, 1939

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address on the subject of Federal grants-in-aid to the States, delivered by the Senator from Rhode Island [Mr. GERRY] on April 10, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In the first place, I desire to express my thanks to the Evening Star and the National Broadcasting Co. for making possible this broadcast.

The question which I am to discuss is giving serious concern to many of us in Congress. Its importance is not generally recognized, but I believe it should challenge the thought of all of us. In the short time that is allowed, it is my intention to speak of the Federal grants-in-aid to the States.

At the outset it should be made clear that there are some cases where it is quite reasonable that these grants-in-aid should be extended. For example, the depression, at the beginning, dealt such a staggering blow to our people that Federal assistance had to be given promptly if the country and its citizens were to meet the emergency. That is not a part of my discussion tonight. I am endeavoring to confine myself to what should be considered the normal activities for the Federal and State Governments.

It might be well in the beginning to define the term "Federal".

and activities for the Federal and State Governments.

It might be well, in the beginning, to define the term "Federal grant-in-aid." It has been described by a student as "a mechanism to effectuate a national policy or to promote the performance of a service on a Nation-wide scale." A more realistic and descriptive definition might well be that it is a gift or bribe by which the National Government induces the States to do what the States otherwise could not or would not or. wise could not or would not do.

service on a Nation-wide scale." A more realistic and descriptive definition might well be that it is a gift or bribe by which the National Government induces the States to do what the States otherwise could not or would not do.

But it cannot be denied that the practice has grown and is still growing by leaps and bounds. Where in 1920 there were \$47,000,000 paid to the States, in 1936 the amount had exceeded \$334,000,000. This does not take into account the several billions of dollars granted to the States for relief purposes.

Some of these grants are so firmly entrenched that it will be very difficult to uproot them. Perhaps the best hope lies in checking the ever-increasing list of new services.

In addition to the tremendous increase in payments by the Federal Government, two significant changes in practice must be noted. The first is the substitution of the outrigit grants for the old principle of the so-called matching of State funds dollar for dollar with the Federal funds. The second—and it is to be observed that it is incorporated in two extremely important measures pending before Congress—is the proposal to make the grants to the States not on the basis of population or the amount that the State itself is willing to contribute, but upon a formula that seeks to establish the financial need of the States.

Someone may ask, "Isn't the Federal Government much richer than the several States, and isn't it desirable to have it help the States out?" In answer to such a question, it must be said and said again that the Federal Government has no funds of its own; and when Congress decides to make one of its alleged presents it sends the tax collector out to tax its citizens, among them the bridge in the policy under the gift likes the program or not, its people are taxed, and if frills and furbelows are added they are taxed more. Here the remoteness and alcofness of the Washington bureau has its deadly effect. When a city or State is paying directly for a service the voters are quick to ask whether the service

that a tax may be imposed for every mile they may travel on the

State's roads.

These are examples selected at random. They bear witness to the existence of the problem and the efforts the States are being put to in order to solve it.

There is in this program an application of the policy of the redistribution of the wealth of the States. The men and women who work in the mills of my State would be somewhat surprised to learn that more is taken from them in taxes for every dollar that is given back, on the theory that theirs is a wealthier State.

I know that they have always been under the impression that it was never easy to provide the pecessary funds and to pay for the

I know that they have always been under the impression that it was never easy to provide the necessary funds and to pay for the services they desire. It will hurt them more when they find the Federal Government, to provide grants to other States, taxes their industries so heavily that they can no longer give them employment. Nor will the people much longer be misled that they do not pay the taxes when as a matter of fact the food they eat and the clothes they wear are subjects of taxes. Tenant and landlord, employer and employee foot the bill. Hidden though it may be the true situation is bared by the slightest examination. Let advothe true situation is bared by the slightest examination. Let advo-cates of new Federal grants tell us who is to provide the additional aid when increased taxes drive more industries out of existence. And let them be mindful that when the so-called rich States bear burdens that are too heavy, the whole country pays the penalty in diminished prosperity and a weakened Nation.

Examining some of the activities for which grants are made, let us see whether the States themselves could not carry on many of them and whether some could not be eliminated entirely. Here are a few of them: Forest-fire prevention, forest-planting stock, agricultural experiment stations, resident instruction in land-grant colleges, agricultural extension work, vocational education, vocational rehabilitation, State marine schools, public-health services, child and maternal health services, and highways, and this last includes roads in every State on which the mail might ever be

carried.

It is absurd to claim that all of these are so charged with national interest that the Federal Government must take money from one State to hand that money to another State. Every man knows that even the States which want such activities would not want to have so much money spent if their people were paying State taxes for the services. And the most extreme advocate of Exchange transfer would be laughted the score if he claimed that the Federal grants would be laughed to scorn if he claimed that the administration of such services is watched as closely by the people as it would be if the services were paid for and administered on a

purely local basis.

Over and above the existing activities, more is sought. In the last Congress there was a request for a mere fifty millions to aid the States in the eradication of noxious weeds. There were others to aid the States in paying for State tuberculosis hospitals, to help the States pay for State highway controls, to give the States money for kindergartens, to give them money for open-air health camps, to provide for demonstration centers for adult civic education, to provide for the establishment of engineering experiment of engineering experiment. vide for demonstration centers for adult civil education, to provide for the establishment of engineering experiment stations at the land-grant colleges, to aid workers' education, and to aid business and economic research in the schools of business of State universities. There were also proposals for Federal aid for improvement of the treatment of prisoners and supervision of parole and scaling and scaling the spinions of toll probation, and, finally, Federal aid for the elimination of toll bridges.

I do not know how much the individual States would benefit

I do not know how much the individual States would benefit under some of these gifts, but if my State, or any other State, wants them, I think generally it should follow the course of providing for what it wants, and for which it will pay, and not ask the Federal Government for a so-called grant to meet the obligation entailed. The theory behind all of these demands seems to be that they are too expensive for the States but still within the means of a National Government which has been annually in the red for billions of dollars—this last year alone by four billion. Is there no recognition that there are some expenditures which the Federal Government cannot afford? But these demands are pittances in comparison with what would be involved eventually under the

comparison with what would be involved eventually under the national health bill and the Federal education measure.

A Federal education bill has been pending for most of the time since I first came to Congress, more than 25 years ago. I have opposed them all and I shall oppose this one, changed as it is in

form from its predecessors.

Like the bills of former years, this one is supported by the educational associations and some of the more publicized educators. It is to be remembered that the legislation will involve the spending of more money and the creation of more jobs, and so their attitude is not astonishing. Experience has taught legislators not to be astonished when they find a group applauding a program under which that group would benefit financially. It would be surprising, but none the less founded in reason, if the educators stood forth and opposed the bill for the dangers that lurk within it—the menace of Federal control over education, an essentially State function.

We are treading on dangerous ground. Ignoring for the moment all the serious questions of finance and taxation and the dangerous consequences that are entailed therein, the measure itself is fundamentally bad. It is my conviction that if the gates are opened by the Federal Government in the matter of education, there will be no way to prevent it from entering into any purely local enterprise. local enterprise.

There is no more reason for the people of Rhode Island paying for the education system of the people of Florida than there is for that State paying for the costs of the fire departments throughout the State of California. One seems to be justified no more than the other. Each is absolutely contrary to every conception that has existed of the functions of our State and National Governments. To those who suggest that it is of national interest that the people in all the States be given equal educational opportunities and equal fire protection, I say it is decidedly in the national interest that the several States control and pay for their own education, and that the municipalities have fire departments and that they themselves pay for the upkeep.

selves pay for the upkeep.

The present education bill, somewhat like its predecessors, calls for a relatively modest start. The first appropriation would be for \$75,000,000. In the sixth year, however, the cost would be two hundred and eight millions. Does any sensible man think that thereafter the cost will be lowered? Is it not more to be expected that it will be increased and that these increases will continue until all pretense of grants is abandoned, and the Federal Government eventually will take control? This may not be the inevitable consequence, but it is the very probable one.

The sponsors of these education bills, well aware of the hostility in the public mind to Federal control of the schools follow.

tility in the public mind to Federal control of the schools, follow the procedure of making a request for a relatively modest grant, as a start, and minimize all suggestions of Federal supervision. But in the background there is the idea that with Federal aid once given, control eventually must follow. Beware the bureau bearing gifts. To become eligible for the grants the States must make certain commitments, and so even at the beginning, with the sponsors denying Federal control, Washington, holding the purse, is to decide whether the gift is to be made or withheld. purse, is to decide whether the gift is to be made or within the Call this cooperation or call it control; in either case the ultimate power is in Washington and away from the people. If the money is not to be squandered, Federal officials, with reason, feel that they must have a check. Given that check, the Federal Government is exercising control over the fund. There is no alternative conclusion.

Ingrained in the minds of our people is the conviction that education is a purely local function, to be administered by the people in the community with the State exercising general supervision. If this bill is enacted, that principle, little by little, will be destroyed, and the authority will not be in the community but in Washington. So it is, I say, that, apart from all questions of costs and unjust taxation, the adoption of such a proposal is dangerous and vicious.

Let me devote a little time to some of the features of the na-onal health bill. With some of its objectives there is no one not tional health bill. in sympathy—to improve the health of our people, to give better care to mothers and children, and to assist the crippled. All of these have a universal appeal. They were not just thought of by those who have recently joined a social-reform program. But under the bill vast sums are to be spent; and when our Government's expenses each year are exceeding receipts by billions of dellers with no promise for improvement it is essential for us

ment's expenses each year are exceeding receipts by billions of dollars, with no promise for improvement, it is essential for us to examine the costs of the program and find, if we can, where the money is coming from and how it is going to be spent.

In the first year the cost will be \$80,000,000. In the third, assuming what experience gives us no right to assume—that the original cost for some services will not increase—the cost will be some \$225,000,000. Let us repeat the figures. Eighty million in the first year and two hundred and eighty-five millions in the third. Can a government, which even now cannot meet its expenses, pay for such programs? The old principle of the State matching Federal grants, dollar for dollar, is abandoned under the proposal. While there is to be scale participation, outright grants are to be made by a variety of formulas under the various provisions of the measure, and the chief test is to be the financial resources of the State. How will the measuring be done, and who will do it? The State. How will the measuring be done, and who will do it? The bill answers this question by providing that the standard is to be the per capita income of the people of the States, and this will be decided by the Secretaries of Labor and the Treasury and the Chairman of the Social Security Board.

The adoption of such a program will give new scope to a type of

The adoption of such a program will give new scope to a type of lobbying which recently has assumed great importance. Amid demands for statutory making of freight rates, with geographical areas seeking differentials for wages and hours, the sectional lobbyist now plays a prominent role. What man believes that grants for relief were made entirely on the basis of the needs of the State? And who is there who expects that, if this program is adopted, benefits will be conferred purely upon the basis suggested? In determining financial need, is there anyone versed in politics who thinks that as time goes on pressure will not be exerted?

It is all very well to say that we should be an \$80,000,000,000 country, but we must be realistic. The fact remains that we are not such a country now. Assuming that all the services offered by new proposals are good and destrable, we must know where the money is coming from to pay for them. We should likewise determine whether many of the activities suggested should not be handled by the State governments. I say, unhesitatingly, that our State executives and our State legislators should be on guard against the encroachment of the Federal Government. They must be alert and active if they expect to preserve and retain their sovereignties against the steady advance of the Federal power.

Trade Barriers Between States

EXTENSION OF REMARKS

HON. H. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Tuesday, April 11, 1939

ARTICLE FROM THE BENTON COUNTY TRIBUNE, OF FOWLER, IND.

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article from the Benton County Tribune, of Fowler, Ind., entitled "National Union Endangered by Trade Barriers Between States." The article is by Mr. William Bruckart.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Benton County Tribune, Fowler, Ind., of March 24, 1939] NATIONAL UNION ENDANGERED BY TRADE BARRIERS BETWEEN STATES

BOOTLEGGING OF MILK AND CREAM CALLS ATTENTION TO CONDITION
THAT HAS BECOME FLAGRANT—PROPER GOVERNMENT FUNCTIONS
USED TO ACCOMPLISH UNSCRUPULOUS ENDS

(By William Bruckart)

(By William Bruckart)

Washington.—City officials and newspapers of Washington, D. C., have worked themselves into a terrible dither lately over a new kind of bootlegger—a bootlegger of milk and cream. This city, like every other city, has tight regulations concerning milk and cream that enters the National Capital. They are regulations designed to protect the health of those who reside here. Moreover, maintenance of such regulations are an entirely proper function of government, because there can be nothing more important than health.

According to the charges filed and upon which arrests were made, a dairy four or five hundred miles from Washington, inspected and licensed by the State of its location, brought in a truckload of refrigerated cream without first having obtained a permit to do so. The city officials, prodded perhaps by local dairies and nearby milk producers, threw a couple of men into jail and barked and squawked all around the place because of this bootlegger. The local press reports indicated the city officials had made asses of themselves over the whole matter but that is of no particular concern to this discussion. discussion.

The incident is very important as illustrative of a condition that is rapidly endangering the national Union of States and is, therefore, a matter for analysis here. Frequently great national issues lie around or are kicked around for months before somebody inadvertently sets a match to the powder; and it happened to be local officials who struck the match.

BARRIERS TO TRADE BETWEEN STATES HAVE BECOME FLAGRANT

BARRIERS TO TRADE BETWEEN STATES HAVE BECOME FLAGRANT
The thing called to national attention by the cream bootlegger is the existence through the Nation of barriers or obstacles to trade between the States. It has become flagrant. Selfish interests have been operating first in one State, then in another. Laws have been passed utilizing proper Government functions to accomplish unscrupulous ends. These have bred retaliatory measures. Other States have passed laws to "get even" with those acting ahead. State officials, State trade and civic organizations have threatened and have been threatened right back until now we have throughout the United States thousands of people sticking out their tongues in the most childish fashion at other thousands of people. Each group saying in sign language or otherwise, "You're another." "You're another."

It is serious business, and there is no doubt in my mind but

It is serious business, and there is no doubt in my mind but what the condition bodes ill for national unity. It takes no expanded imagination to think of the time when we might have 48 little nations, snarling and frothing at the mouth as crudely and quite as unintelligently as they do throughout Europe.

Now, it is one thing, and a very proper thing, to use regulations for the preservation of health, for the protection of property, for the support of government, or governmental policy. It is quite another, and dastardly, thing to make use of those regulations to prevent the flow of commerce and the products of farm and factory. It is such things as that from which memorally is made. factory. It is such things as that from which monopoly is made. If the now rather ill-famed monopoly investigation is worth its salt (which it has not demonstrated thus far), it could demonstrate its value by examining into trade barriers between States.

PROPER LEGAL POWER USED, BUT IT IS USED SELFISHLY

Representative HALLECK, of Indiana, has been engaged for weeks in digging up facts about these trade barriers. He told me the

other day that he intends to try to break them down, either by constitutional amendment or by national statute. There are plenty of difficulties confronting him, he admits, because all of these things have been done by using entirely proper legal power, but by wings the eldebly. but by using it selfishly.

these things have been done by using entirely proper legal power, but by using it selfishly.

To illustrate, Mr. Halleck referred to that oft-repeated assertion that "the power to tax is the power to destroy." Indeed, it is! The power to tax for government revenue is, and always has been, used. But there are many instances of record where that taxing power was employed to levy such high rates of tax that the tax collector took everything produced. The business was destroyed. And it is the same thinly disguised use of proper power that is getting the Nation into an awful mess, now. This choking of trade is going on despite the constitutional provision which says emphatically that no State may levy tariffs against importations from other States. The bright law makers, and their henchmen, have got around that in the manner mentioned above.

Mr. Halleck supplied some facts to show how widespread the condition has become. He mentioned, moreover, that the Nation is so blanketed with a variance of laws on most subjects that it seems almost a hopeless job to untangle them.

For example, there are 170 different State laws dealing with the labeling and grading of farm products. A good ear of corn in one State won't be recognized as a good ear of corn in another. My friend, the ordinary Irish potato may be accepted as No. 1 in one State and find biverels of the state and force in the state and find biverels of the state and force in the potato may be accepted as hottle of

My friend, the ordinary Irish potato may be accepted as No. 1 in one State, and find himself as No. 3 in another. A bottle of one State, and find himself as No. 3 in another. A bottle of beer in Missouri, tax paid and respectable there, becomes virtually a bottle of slop in an adjoining State. Wines from grapes grown in California cannot possibly be as good as wines grown from grapes in Oregon, because the Oregon law says so and lays a burdensome tax to prevent Oregon citizens from having their stomachs corroded or something. Cement entering Florida, for a time, was not as good as cement produced in Florida and Florida was prepared to tax it—until the case got to the Supreme Court of the United States. of the United States.

STATES DIFFER AS TO WHAT CONSTITUTES A TRUCK LOAD

Take another and less known condition—less known because fewer people come in contact with it, but it enters into the cost of the things you buy, just the same. I refer to State laws about load limits of trucks. I don't have any love for trucks; they are so doggoned big these days that I want to take to the timber when I see one of them coming head-on along the highway. But they have rights. Yet, there are no two States as far as I can learn that have the same regulation about the size of a truck's load. The trucks can be regulated because they use the highways. load. The trucks can be regulated because they use the highways, and yet one State says 120,000 pounds is a load and another State says 18,000 pounds is a load. The others have laws specifying a load at varying sizes in between, and there you are! Just what is a load, anyway?

The truth of the matter is that local interests are to blame in most cases. They are taking advantage of situations to further their own selfish ends. And where are they leading to with this polyglot of legislation?

polyglot of legislation?

The whole thing seems a bit incongruous to me. Here, on the one hand, Mr. Cordell Hull, the very able and valuable Secretary of State, has been moving heaven and earth to get rid of trade barriers between nations. Reciprocal-trade treaties, he calls his method. Some of them seem to work badly and some others appear to be producing results, but no one knows yet whether the whole system should be kept or thrown out. That question does not belong here. It is the national policy of breaking down obstacles, jarring loose log jams, so that our products may move into other nations that is important to be considered when within our own boundaries every known means is being used to block shipments and sales between States. I cannot figure it out unless shipments and sales between States. I cannot figure it out, unless some folks are strict followers of the Biblical injunction not to let the left hand know what the right hand doeth.

NATIONAL GOVERNMENT POLICY TO BLAME FOR CONDITIONS

I have been wondering, therefore, what has actuated the selfish interests of the country to start on this spree of battling among themselves. There must have been some reason behind that. At least, I have come to believe there is. I believe that the condition fundamentally springs from National Government policy which for years now has been in the direction of destroying the rights of individual States. Little by little the Federal Government rights of individual States. Little by little, the Federal Government has torn away the rights of the States—and the States, with pain reduced by Federal money, have permitted it.

Suddenly, however, the States and their citizens have discovered their whole jurisdiction is enveloped in creeping paralysis. We have all noted resentment in the last few years at the encroachment of Federal regulation upon individual rights and freedom. ment of Federal regulation upon individual rights and freedom. When these things were realized by the rank and file of the people, there developed a new disease as a counterirritant, the disease of knocking the other fellow off. It will take more than socialized medicine to correct it. The National Government's policies, having started it, will have to assume the blame and will have to find a way to remedy the condition. I hope Mr. HALLECK, and those he has enlisted to help him, can find the proper prescription for the civic than the civic that the civic the civic the civic than the civic than the civic than the civic the civic than the c

War and Peace

EXTENSION OF REMARKS

HON. ERNEST LUNDEEN OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 11, 1939

RADIO ADDRESS BY HON. HAROLD KNUTSON, OF MINNESOTA, MARCH 30, 1939

Mr. LUNDEEN. Mr. President, I ask unanimous consent to insert in the RECORD a radio address delivered by Hon. HAROLD KNUTSON, a Representative in Congress from the State of Minnesota, on March 30, 1939, on the subject Shall We Repeat 1916-17?

On March 4, 1939, Representative Knutson became the senior Representative of all time for the great State of Minnesota. I am glad he still holds to the policy he followed on April 6, 1917-the Washington, Jefferson, Jackson, and Lincoln policy, a policy of American statesmanship.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Frequently I am asked if I would change the vote cast by me on April 6, 1917, against America's participation in the World War, in view of what has since happened. To one and all my reply is, "A thousand times no.'

thousand times no."

As I view it, nearly all of our present economic and political ills are due to our having participated in that tragic drama. Our participation in the war resulted in an orgy of inflation which was followed by a deflation that was most disastrous to agriculture and to all lines of industry and business. This deflation was later on followed by another spectacular inflation which culminated in the stock-market debacle in October 1929, throwing millions out of work. What has since happened is too painfully vivid in the minds of all Americans to need repetition at this time.

The thousands of bank failures that wiped out the life savings of our people, the many suicides, the tens of thousands of farm and home foreclosures, the innumerable business failures that took place during the decade following the signing of the armistice, all were in a large measure due to the war. Then, too, the staggering national debt that we must carry for the next three or four generations is altogether because of our taking part in that war.

On April 6, 1917, when the resolution to declare war was before

On April 6, 1917, when the resolution to declare war was before the House, I had this to say: "I shall vote against a declaration of war because I feel that we have no business meddling in European war because I feel that we have no business meddling in European affairs; I shall vote against this resolution because it will mean entangling alliances that may at a future date endanger the Monroe Doctrine and embroil us in another holocaust such as they now have in Poland and Flanders; I shall vote against war because it is my understanding that it is the plan of the General Staff to send hundreds of thousands of our boys into the slaughter pens of Europe, many of them to be shot to pieces or rendered incapacitated for life; I shall vote against entering the war because it will impose upon our people a burden of taxes that will weigh down generations yet unborn; lastly, I shall vote against war because I know that a majority of the common people, who will have to do the fighting and pay the bills, do not want it."

At that time those of us who opposed America's entrance into the war were crucified upon the cross of hatred and misunderstanding because we dared to stand for what we conceived to be our plain duty and for the best interest of our people.

I ask, How many realize that 436,065 of our boys have died as a result of their service in that war?

I ask in all sincerity, Was it worth the price?

Back in 1917 we were told that it was to be a war to end all wars. How many wars, big and small, have been fought since the Treaty of Versailles was signed? So many we cannot offhand recall them all.

Back in 1917 we were told that it was to be a war to make the

Back in 1917 we were told that it was to be a war to make the world safe for democracy. Is it not true that democracy is at a lower ebb today than at any time in the past 150 years?

We have been paying the tragic price of the World War for the last 21 years. The direct expense of our actual participation was nearly \$40,000,000,000, but this was not all. In the years following the war we have paid out additional billions in bonuses, pensions, and other items directly or indirectly resulting from the war effort. Now we are launched on another spending spree preparing for a repetition of the last ghastly war epic. Billions are being poured out of the Public Treasury in the name of preparedness.

Preparedness for what?

Preparedness for another foreign war if we follow our present senseless policy of intervention in the affairs of Europe and Asia.

We must remember that the problems of other continents will have to be settled by the peoples there. There is nothing that we as a nation can do to provide a settlement for their problems. To do otherwise means we will entangle ourselves for years to come in foreign conflicts; that we would have to police the world and have an intolerable burden of armaments to support this policy of intervention.

vention.

The time has come for a drastic reorientation of American foreign policy and a reorganization of our defense establishment. We cannot avoid war if we continually inject ourselves in foreign controversies, nor can we avoid war unless we make our military policy one of defense instead of preparedness for another foreign war.

The Army and Navy should be organized in a single department of military defense. The present set-up is based on our World War plans for sending our Army and Navy overseas. We hear a great deal these days about defense, but it is "defense" by fighting a foreign war that we are now spending over \$4,000,000 a day on.

The time has come to declare a new policy of defense which means defense and not foreign wars. No one objects to the expenditure of the necessary sums for defending the Nation against attack, but in the interest of peace and economy we cannot continue our present program.

The present defense set-up means duplication of effort, compe-

The present defense set-up means duplication of effort, competition between the Army and Navy, a huge military and naval machine, a tremendous tax burden, a program which takes us farther and farther from our shores—witness the latest example offered by the Navy's request for a base at Guam—6,800 miles from our west

coast.

Why do we need an Army and Navy establishment based on the idea of foreign war? Who is going to attack us? How can we be attacked? There has been no satisfactory answer given by the Roosevelt administration to any of these questions. Military experts cannot explain away the fact that our geographic position makes us secure so long as we stay this side of the ocean and mind our own business. Indeed many of the admirals and generals have on many occasions frankly stated that the United States is safe from attack either on the Pacific or the Atlantic.

If we want a peace and economy program, if we want to avoid the tragic mistakes of 1917 and 1918, if we want to keep from bankruptcy, I believe that the following policies are necessary:

First. Strict neutrality.

Second. A military defense policy limited to defense and laid down by Congress now.

Third. Putting our own house in order and providing economic security for the American farmer, laborer, businessman and youth.

Fourth, Giving the people the right to vote on foreign war when

Fourth. Giving the people the right to vote on foreign war we are not attacked.

I want to emphasize this last point. The people who are going to bear the burdens of war should have the right to decide whether or not they want to engage in another bloody catastrophe three or seven thousand miles away. They do the fighting, the dying; they will have to pay the bills.

Let's not repeat the mistakes of the past and allow ourselves to drift or be led that one they foreign was

Let's not repeat the mistakes of the past and allow ourselves to drift or be led into another foreign war.

Let the people speak their minds now in support of the program that I have outlined. Let them tell their representatives that they want peace, neutrality, the right to vote on foreign wars, and a new military policy. That is the only way to avoid a repetition of 1917. Let's save our democracy at home.

The danger to our country and its institutions lies not across the seas, but, rather, it is right here in our own midst. This danger has its roots in unemployment, in poverty, in unequal op-

danger has its roots in unemployment, in poverty, in unequal opportunity, in discrimination. These are fertile breeding grounds for a dissatisfaction that may burst into flames that will consume us. Our job is to eradicate these evils before they get beyond control.

World Mission of the United States

EXTENSION OF REMARKS

HON. W. WARREN BARBOUR

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Tuesday, April 11, 1939

EDITORIAL FROM THE BERGEN EVENING RECORD, HACKEN-SACK, N. J., APRIL 10, 1939

Mr. BARBOUR. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial by Hon. John Borg, publisher, which appeared in the Bergen Evening Record, Hackensack, N. J., April 10, entitled "Uncle Sam's Real World Mission."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Bergen Evening Record, Hackensack, N. J., April 10, 1939] UNCLE SAM'S REAL WORLD MISSION

Revision of Europe's map by the German-Italian axis bullies, reprehensible as their methods are to liberty-loving Americans, goes merrily on its way its wonders to perform. Albania's 1,000,000 hillbillies have now been valorously conquered by Italy's 44,000,000. Britain and France have delivered their innocuous diplomatic protests, and another chapter of history is temporarily closed. The tests, and another chapter of history is temporarily closed. new Roman empire has again expanded.

Where the lightning of Nazi-Fascist superculture will strike next Where the lightning of Nazi-Fascist superculture will strike next in southeastern Europe is still a secret, but a good guess would be Yugoslavia, with its unmiscible population of Serbs, Slovaks, and Croatians totaling 15,000,000. Its comic-opera army could resist a German-Italian mechanized invasion from the north, south, and west for perhaps a day. Neither Britain nor France could effectively prevent that absorption even if they then decided to risk their own empires by going to war over it; so they will probably find it expedient once again to confine themselves to dignified diplomatic protests. Hitler and Mussolini will again reply that they are merely protecting racial minorities from dictatorial oppression, which in both Albania and Yugoslavia would not be entirely untrue.

Rumania's turn would probably come next, for it, too, has racial minorities whom the axis Santa Clauses would want to protect. The restoration of Transylvania to Hungary would be its bait to provide the corridor for Germany's invasion of Rumania, but Hungary would ultimately have to pay the price of her cupidity by becoming a German province like Czechoslovakia. And neither Britain, which has invited both of these prospective victims of German kultur to join the stop-Hitler encirclement, nor France can effectively aid them any more than they did the martyred Czechs. Diplomatic protests would doubtless be presented, but in the meantime more national patients will have died under the axis surgeon's knife.

And so the future map of Europe may be more clearly visualized. Germany in the central-eastern area seems destined ultimately to control 120,000,000 people from the North and Baltic Seas to the Black. Italy is on her way to become again mistress of the Mediterranean, Mare Nostrum. Both have increased vastly their human and material resources for the inevitable imperial show-down. As they have absorbed contiguous lands and nearlies the potntialise.

man and material resources for the inevitable imperial show-down. As they have absorbed contiguous lands and peoples the potentialities of Britain and France have been correspondingly diminished. But a latent danger in a major war will be sabotage or an explosion of their acquired subject minorities from within.

All of this interests the American people but is not realistically their problem. The empire lust of the German-Italian axis is a British-French headache, for they have what the axis partners want. America owes them nothing, but they owe us \$10,000,000,000 cm which they have welshed. We mobilized 4,000,000 American boys, spent \$25,000,000,000, and must spend another twenty-five billions before that altruistic foreign adventure to make their world safe for dymocracy is finally liquidated. They won that war and exfor democracy is finally liquidated. They won that war and expanded their empires at Germany's expense while we held the bag and were called Uncle Shylock when we tried to collect those debts of honor. Uncle Sam did, however, get a liberal education out of that experience with our so-called sister democracies. And if he now fails to profit by it, he should have his head examined.

Americans must not be deluded by propaganda that our national security is directly menaced by the impending Armageddon between the holy havers and the unholy grabbers of Europe. The winners of that international holocaust will be bled so white in human and material resources that they will be glad to lick the hands of the humanitarians who will be called upon to bind up their wounds. Freedom-loving Americans instinctively are opposed to the dictatorial axis partners, but experience and common sense should keep them aloof from alliances with the empire democracies. Realistically they are unsound risks, for as now constituted both the British and the French Empires are facing decline and change.

the British and the French Empires are facing decline and change. Soon or late they must share peacefully their acquisitions of the sword with the menacing swords of Germany and Italy or fight. If they diplomatically surrender a few morsels, they merely feed the hunger of the axis wolves that threaten them and automatically start their empires on the toboggan of dissolution. If they fight and win, they are unlikely to retain their status as democracles in the process; they will be hopelessly bankrupt, and their far-flung pieces will be food for any empire-hungry nation that keeps itself out of the European mess. That's when smart, opportunist Japan will grab, unless Russia is free to checkmate her. If Stalin keeps out until Europe is impotent, he'll have a united Russia and an undivided army to settle the score with Japan for Asiatic supremacy.

united Russia and an undivided army to settle the score with Japan for Asiatic supremacy.

As for the United States, it owes the world nothing and wants nothing from it except a peaceful America in which to work out its manifest destiny. Common sense tells it to mind its own business and prepare for the day when its world mission may be to salvage white civilization. But that mission of altruism and mercy cannot become effective until both the grabbers and the havers are prostrate in the welter of their own lust for power, pelf, and empire. pelf, and empire.

The National Committee to Keep America Out of Foreign Wars

EXTENSION OF REMARKS

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 11, 1939

OUTLINE OF AN ORGANIZATION

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include an outline of an organization sponsored by 50 Members and former Members of the House of Representatives, known as the National Committee to Keep America Out of Foreign Wars. On behalf of the Committee, I extend invitations to all interested individuals or groups who may wish to cooperate and affiliate with the efforts of this Nation-wide committee to keep out of

THE NATIONAL COMMITTEE TO KEEP AMERICA OUT OF FOREIGN WARS INSPIRED BY AMERICAN PRINCIPLES, IDEALS, AND TRADITIONS

The facilities of the President and the New Deal administration to disseminate war propaganda and hysteria and to prepare the youth of America for another blood bath in Europe are so enormous that it is essential to form a national organization to counteract these un-American, provocative, and dangerous policies with every resource available, and to conduct an open and militant campaign of education through organization, the press, and the radio to keep America out of foreign wars unless attacked.

We, 30 Members and former Members of the House of Representatives, have therefore associated ourselves together through the formation of the National Committee to Keep America Out of Foreign Wars, and pledge our best efforts to carry out its aims, purposes, and

objectives.

PURPOSES

1. To provide a national, nonpartisan, nonprofit, and nonsectarian organization through which the American people can express their determination to keep out of foreign wars and to promote

peace and good will toward men.

2. To counteract the inspired propaganda emanating from the White House and spokesmen of the New Deal, which has created mass war hysteria throughout the Nation by inflaming the fears and passions of our people and incited hatreds against foreign pations. nations.

3. To maintain the American policy of nonintervention and peace and against entangling alliances, war commitments, and policing and quarantining the world with American blood and treasure.

4. To uphold adequate national defense and the Monroe Doctrine.

5. To check the propaganda and activities of all foreign nations in this country which seek to entangle us in Old World quarrels and to fight their battles.

and to fight their battles.
6. To expose propaganda emanating from within, such as communism, which seeks to have the United States go to war with Japan and Germany for the benefit of Soviet Russia.
7. To combat the spread of nazi-ism, fascism, and communism in America and be Americans for America, regardless of race, color, creed, or politics.
8. To oppose racial and religious persecution.
9. To take the profit out of war and make public the activities and propaganda of the war profiteers, munitions makers, and other selfish interests.
10. To resist the activities of the internationalists, interventionists, and other groups who would have the United States use

tionists, and other groups who would have the United States use force and compulsion in international disputes; to exert its influence to prevent the Congress from delegating its war-making

powers to the President.

11. To give the right to the American people to vote in a national referendum as to whether American citizens should be conscripted for service outside the Western Hemisphere. (Not to be confused with the Ludlow amendment, providing for a national war referendum.)

12. To preserve our American system and constitutional govern-ment, and to devote our energies to solving our own economic problems, restoring confidence, and providing employment for the American people.

NATIONAL COMMITTEE TO KEEP AMERICA OUT OF FOREIGN WARS.

Officers: Hamilton Fish, New York, chairman; Harold Knutson, Minnesota, first vice chairman; John J. O'Connor, New York, second vice chairman; Samuel B. Pettengill, In-diana, third vice chairman; Royal C. Johnson, South Dakota, secretary; Walter L. Reynolds, treasurer.

Executive committee: Allen T. Treadway, Massachusetts;
J. Will Taylor, Tennessee; Roy O. Woodruff, Michigan;
Albert E. Carter, California; John M. Robsion, Kentucky;
Pehr G. Holmes, Massachusetts; Martin L. Sweeney, Ohio;
Jesse P. Wolcott, Michigan; Leo E. Allen, Illinois; J. William Ditter, Pennsylvania; Charles A. Plumley, Vermont;
Dewey Short, Missouri; Ralph O. Brewster, Maine; Usher
L. Burdick, North Dakota; Frank Carlson, Kansas; Francis
H. Case, South Dakota; Edward H. Rees, Kansas; Paul W.
Shafer, Michigan; John C. Schafer, Wisconsin: Homer D. H. Case, South Dakota; Edward H. Rees, Kansas; Paul W. Shafer, Michigan; John C. Schafer, Wisconsin; Homer D. Angell, Oregon; Robert B. Chiperfield, Illinois; Robert J. Corbett, Pennsylvania; Carl T. Curtis, Nebraska; Henry C. Dworshak, Idaho; Leland M. Ford, California; Robert A. Grant, Indiana; Forest A. Harness, Indiana; Frank O. Horton, Wyoming; Ben F. Jensen, Iowa; Robert W. Kean, New Jersey; Frank B. Keefe, Wisconsin; Earl R. Lewis, Ohio; William J. Miller, Connecticut; Harry Sandager, Rhode Island; Andrew C. Schiffler, West Virginia; James Seccombe, Ohio; Henry O. Talle, Iowa; Oscar Youngdahl, Minnesota; Carl G. Bachman, West Virginia; John M. Baer, North Dakota; Edward Keating, Colorado; Ralph A. Horr, Washington; Fred S. Purnell, Indiana; James Simpson, Jr., Illinois; Bertrand H. Snell, New York.

H. R. 5324-National Housing Act Amendments

EXTENSION OF REMARKS

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 11, 1939

LETTER FROM NATIONAL RETAIL LUMBER DEALERS ASSOCIATION

Mr. SMITH of Washington. Mr. Speaker, as one of the sponsors of the original Federal Housing Act of 1934 and subsequent reenactments and modifications of the same. I am, of course, supporting the proposed pending amendments offered by the Committee on Banking and Currency. In this connection I append a letter bearing date of April 10, 1939, which I have received from the National Retail Lumber Dealers Association:

> NATIONAL RETAIL LUMBER DEALERS ASSOCIATION, Washington, D. C., April 10, 1939.

Re: National Housing Act amendments. Hon. Martin F. Smith,

HOUSE Office Building, Washington, D. C.

MY DEAR CONGRESSMAN: I am informed that the Rules Committee has voted a rule to bring up H. R. 5324, amending the National Housing Act, on the floor of the House Tuesday, April 11.

The building industry generally, including contractors, building-trades men, material supply dealers, and manufacturers of all classes of materials, has acclaimed the National Housing Act as one of the finest pieces of legislation ever written to restore confi-dence in the building industry, and the record of its accomplish-

ments speaks for itself.

In reviewing H. R. 5324, which you are going to be asked to vote on tomorrow, we want to congratulate your Banking and Currency Committee for doing such a good job, and we hope you will follow through on its recommendations.

TITLE I

Of particular interest to us is extension of title I, providing for modernization and repair, and new construction loans up to \$2,500. Title I has been a most important factor in helping to bring back

Title I has been a most important factor in helping to bring back building recovery. Over three-quarters of a billion dollars worth of business has resulted from it, and the committee's decision to extend it should be wholeheartedly approved.

Your committee has decided to allow the Administrator to make a charge of "up to 1 percent" for operating expenses under title I—which would mean that he can establish a charge of 1 percent by regulation if he so desires. A Senate subcommittee has recommended a flat charge of one-half of 1 percent. From our recent canvass of a number of lending institutions, we feel that a flat charge of one-half of 1 percent would be more attractive and would encourage more title I business than a 1-percent charge.

TITLE II

We are glad that your committee has recommended extension of the 25-year amortization period for small homes under title Π . This has been especially beneficial to those in the lower income group because in many cases it has made their payments on a small house less than they would have to pay for rent.

The way the question of increasing the mortgage-insurance fund has been treated certainly has our approval. The additional billion dollars which can be made available on request will give the F. H. A. over \$2,000,000,000, a safe margin of security for some time to come.

While we realize there has been some controversy in regard to refinancing of existing construction, we frankly think your committee has acted wisely in extending this provision of the act. We say this because, as a result of our close contact with the building industry we have come to realize how sensitive the present building demand is, and we believe that nothing in any way should be done to disturb continuation of existing financing arrangements. We are doing everything in our power to encourage building, in the hope that it will gain the momentum of which we are all so hopeful. The public does not have complete knowledge of how the Housing Act works, and any report in the newspapers to the effect that the F. H. A. program had been restricted might have a disastrous effect on the public, regardless of whether there was anything to worry about or not. We are optimistic for a big year, and we know that if building can get a good start, all business will benefit. We should use every effort at our command to prevent a set-back like we experienced in 1937.

If you will help support your committee's recommendations, you will certainly do your part in this program.

Sincerely yours, While we realize there has been some controversy in regard to

Sincerely yours,

FRANK CARNAHAN, Secretary.

Finance and Credit

EXTENSION OF REMARKS

HON. SAM RAYBURN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Monday, April 10, 1939

ADDRESS BY CHAIRMAN JESSE JONES, RECONSTRUCTION FINANCE CORPORATION

Mr. RAYBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I present a very able and interesting address made by the Honorable Jesse Jones, Chairman of the Reconstruction Finance Corporation, delivered on Sunday evening, April 9, as follows:

day evening, April 9, as follows:

I appreciate the privilege afforded me by the New York World's Fair Commission to speak to the country on finance and credit. The finance and credit exhibit in the Federal Building at the New York World's Fair illustrates the many phases of our financial system and the many ways in which our Government serves in this field. Time will not allow a discussion of the fundamental principles of our finances, so I will confine my remarks to a brief outline of private credit by and through Government agencies.

The credit resources of our country are mobilized through the Federal Reserve System, established under Woodrow Wilson 25 years ago, and while the Federal Reserve banks are owned by private banks that are members of the System, both national banks and State banks, they are intimately connected with the fiscal policies of the country through close cooperation between the Federal Reserve Board of Governors and the Treasury.

Long-time farm-mortgage loans are made by Federal land banks

Long-time farm-mortgage loans are made by Federal land banks established 22 years ago. Short-time credits for farmers and stockmen are provided through Federal intermediate credit banks, established soon thereafter. These and some other credits for farmers and stockmen are now made under the direction of the Farm Credit Administration, established in 1933.

The Home Loan Bank System, organized in more recent years, aids in financing homes, through loans to or discounts for members of the system, composed largely of building and loan asso-

The Federal Deposit Insurance Corporation, insuring bank deposits, was established in 1933.

These are accepted as permanent agencies for credit and finance. As a result of the depression, which began in 1929 and which still persisted, Congress created the Reconstruction Finance Corporation in January 1932 to provide emergency financing facilities for financial institutions and to aid in financing agriculture, commerce, and industry.

The depression persisting, the R. F. C. law was amended in July 1932 to provide direct unemployment relief to States, and to make loans for self-liquidating projects.

The law has been amended many times under the Roosevelt administration, first on the 9th of March 1933, to enable us to save banks from failure through putting capital in them. This

act of Congress authorized other heroic treatment for our banks and for Government financial assistance to the country.

Many credit agencies have been created under the Roosevelt administration. They include the Home Owners' Loan Corporation, which saved a million homes from foreclosure; Federal savings and loan associations, to encourage savings, and assist in home financing; the Federal Emergency Administration of Public Works, to create employment through loans and grants for construction purposes, principally public projects; the Commodity Credit Corporation, to make loans on farm commodities in cooperation with the R. F. C. and the Department of Agriculture; the Federal Housing Administration, to insure mortgages on residential properties, and to aid in financing the construction of new homes; the Export-Import Bank, to assist in financing the exportation of agricultural and manufactured products; the United States Housing Authority, for rebuilding blighted areas in cities—slum clearance.

clearance.

While these agencies must be administered in conformity with the statutes creating them, their Administrators, nevertheless put as broad an interpretation on the law as possible, where employment and business can be stimulated.

They have authorized probably \$20,000,000,000 in credits to promote the economic stability of the country. There will be very little ultimate loss to the Federal Treasury from this great volume

of credit.

I shall speak particularly of the Reconstruction Finance Corporation, of which I have the honor to be Chairman. It was created by Congress in January 1932 with a capital of \$500,000,000, and authority to borrow with Government guaranty for additional requirements. The original act of Congress limited and specified the classes of enterprises to which loans might be made. They include particularly banks, insurance companies, agriculture, building and loan associations, mortgage loan companies, and railroads. The law has since been broadened to include almost every field of business activity.

The law has since been broadened to include the business activity.

The R. F. C. has authorized more than \$10,000,000,000 in private credits, never having outstanding at any one time as much as \$3,000,000,000. Beneficiaries of these credits have been almost entirely people of relatively small means or business interests. Three billion one hundred million dollars of this amount has been supported to agriculture in one form or another. We have made authorized to agriculture in one form or another. We have made more than 3,000,000 commodity loans to 1,500,000 farmers, averaging

authorized to agriculture in one form or another. We have made more than 3,000,000 commodity loans to 1,500,000 farmers, averaging less than \$400 per loan. These loans have been made on cotton, corn, wheat, tobacco, turpentine, resin, wool, mohair, hops, figs, dates, raisins, prunes, peanuts, butter, and pecans in 39 States. One hundred and fifty thousand stockmen have received loans averaging \$1,600, and 131,000 farmers and landowners have benefited by our loans to drainage, levee, and irrigation districts.

One billion one hundred and thirty-eight million dollars was loaned to banks, principally in 1932 and 1933, to enable them to meet withdrawals occasioned by the fear of depositors for the safety of their deposits. A billion went to pay depositors in over 2,200 banks that failed. One billion one hundred million was invested in the capital of 6,140 banks through the purchase of their preferred stock, capital notes and debentures. All this aid to banks benefited no less than 40,000,000 depositors, and hundreds of thousands of bank stockholders. Eight hundred and twenty-seven million went for loans to railroads, and 742,000,000 for the purchase of securities for self-liquidating projects—bridges, tunnels, aqueducts, dams, and so forth.

We have authorized loans to 632 drainage, levee, and irrigation districts in 32 States. These loans resulted in cutting the taxes and water charges to the landowners in these districts to one-third of what they previously were.

We have aided 10,000 business institutions through loans. Eighty-five percent of these loans have been for \$50,000 or less, 40 percent for \$5,000 or less. We have authorized loans to more than a thousand building and loan associations, to enable them to meet withdrawals without the necessity of foreclosing on their borrowers, and to save some of them from failure. We have aided in the construction of new homes through the purchase of F. H. A. insured mortgages. We have aided more than a hundred thousand home owners in the purchase of electrical applianc

Our loans for mining, milling, and smelting ores and for development of ore bodies and deposits containing gold or silver have furnished employment in this field. Our self-liquidating loans have provided a great deal of employment, both in the construction of the projects, and the production, fabrication, and transportation of materials necessary for them. A large amount of our loans to railroads was translated into work for hundreds of thoughput of workers skilled and workfilled.

sands of workers, skilled and unskilled.

The foregoing recites briefly the many steps taken by our Government to augment credit ordinarily provided by banks, and other private institutions that lend money.

I am reasonably familiar with the operations and problems of each of these agencies, and am glad to be able to say that, in my opinion, upon the whole, they have been administered in a manner comparable to private business.

The R. F. C. occupies the middle ground between Government and private banking, filling the gap when private lending for any

reason is unable to meet the needs of a worthy situation. The R. F. C. is flexible, entering when necessary, and withdrawing when its services are not needed.

when its services are not needed.

Our Nation's banks were never in a stronger position than they are today. They have never had more loanable funds available to deserving borrowers, and they have never been more anxious to lend; so, if you need credit, apply to your bank or to the R. F. C. Although Government owned, we have operated as a private enterprise. Our expenses have been less than 1 percent, which we have paid from earnings. We have also paid interest on the money we have borrowed to lend from earnings, and have accumulated an operating surplus of more than \$200,000,000. In the opinion of our Board this will be sufficient to cover any probable losses

Our experience in this national peacetime emergency has again proven the inherent strength and unity of our great country; that the American people have the resources and the courage to meet any situation that may confront them.
